POLITICAL NOTEBOOK

New Year G[illegible]

The Union Government's decision to raise the issue prices of wheat .nd rice in the public distribution ystem (PDS) by 20 per cent and 23 to :0 per cent respectively has come in he wake of a steep hike in the prices of everal essential commodities. This is he government's New Year gift to the eople.

Such a development once again akes a mockery of the Congress-I's re-election promise to roll back prices ıthin hundred days of assuming office he government's contention is that y this exercise the Rs 2500 crore expenıture on foodgrain subsidy through ae PDS would be offset by 50 per cent ı the 1991-92 budget. The fact is that ontrary to the official claims, this ove would have only a marginal apact on the estimated Rs 7800 crore udgetary deficit. What is of supreme portance is that the step would adverely affect a vast number of the vulnerble segments of our people dependent ı the PDS for their s[illegible]nce in the idst of grinding po[illegible]

The very purpose of the New Year ive by the Centre and the States to vamp and strengthen the PDS by uing 2.4 million additional new ration rds in the backward areas will be feated by this latest government ecision. No doubt this has been taken ıder pressure from the World Bank/ IF. It is common knowledge that the Bank-Fu[illegible]icials had quite forcefully urged t[illegible]rnment of India to have the exp[illegible]re on the PDS substantially [illegible]ed as part of the general line of c[illegible] on subsidies.

In any [illegible]lation of the Bank-Fund the tee[illegible] millions of the country concerned have little relevance. They are to be kept outside the planning process.

India with its steadfast commitment to the cause of ushering in an egalitarian society cannot pursue such a course. That is precisely why the latest price hike in the PDS scheme deserves to be unequivocally opposed. Not only does it run counter to the government's professed objective of extending succour to the poorest of the poor, it will in effect further fuel inflation which is running at 13 per cent, a figure that was beyond expectation during the presentation of the budget.

Structural adjustment should not lead to abandonment of basic principles. Hence the Bank-Fund prescription needs to be rejected outright. Instead what is essential is to evolve a fresh economic strategy based on the *swadeshi* spirit for the upliftment of the weakest components of the Indian populace. Reliance on the alien Fund-Bank approach cannot take us far in the light of the Latin American experience.

[illegible]rse than the Disease

N.C.

Distortions and pre[illegible] abou[illegible] our school textbooks. These [illegible] to occa[illegible]nal outcry which has the desired [illegible].

There have been co[illegible]ersies o[illegible]rescribed textbooks. These have [illegible]e parti[illegible]y frequent as polarisation in pol[illegible] along c[illegible]nal lines have become sharper. [illegible]y be reca[illegible]d that when the Janata Governm[illegible]me to power in 1977, there were sharp atta[illegible]articularly by the then Jana Sangh, against [illegible] textbooks published by the NCERT on the gr[illegible]hat these had a Marxist bias. There was a ful[illegible] acrimony over a project on Indian history pre[illegible]d by the Indian Council of Historical Research (I[illegible]R) and this got entwined in a tussle for the control of the ICHR itself. The National Integration Council appointed a sub-committee to scrutinise history textbooks prescribed for schools: this had a marginal impact insofar as some of the more glaring inaccuracies were rectified.

In the last two years the question of history education itself has virtually become part of the wider political issue, with its focus on the high-tension politics of the Babri mosque-Ram Janmabhoomi. This turned out to be the key issue in the 1990 politics in which the National Front Government lost the support of the BJP which, with its President on the Ram *rath yatra*, clashed with Mulayam Singh's police attack in Ayodhya.

Since then the BJP version of the early history of India has got wide currency as the party made striking headway by capturing the governments in four Hindi States—UP, Madhya Pradesh, Rajasthan and Himachal Pradesh—after the 1991 poll. Since education is a State subject, it is possible that the reorientation of school textbooks to be prescribed in these four State is likely to reflect its point of view.

It is in this background that the Minister for Human Resources Development announced in Parliament's last session the Union Government's the decision to set up a National Advisory Committee composed of eminent historians, headed by Dr S. Gopal, to deal with the contemporary history of India since independence. As soon as the Committee's personnel came out in the press, some of them disowned the idea and have withdrawn from t Committee, though Dr Gopal has valiantly trie defend the project and denied that it is managed the government.

◆

IT is obvious Arjun Singh's announcement of t project is part of the campaign against the BJP which the Congress, at least the bulk of it, interested. No doubt to combat communalism the plane of education and culture it would necessary to project a secular approach to the pa As a political leder opposed to the BJP, it is obvi that he is keen on roping in some emine intellectuals in a bid to ward off the BJP inroad the intellectual and ideological plane.

At the same time one has to guard agai prescribing remedies worse than the disease. A book on Indian history written on the initiative the government—even if it keeps its word not change a line—will appear in the eyes of the pub as being pro-government, and therefore oneside What is surprising in this entire controversy that neither the government nor the historia agreeing to take up the government-sponso project seem to realise how sensitive is the subj itself.

Interpreting history at the behest of a politi establishment in power is a long-standing mala Its blatant manifestation is to be seen in t totalitarian systems under which individuals political leaders, eminent intellectuals, gr military commanders among others—have b made non-persons or fiercly reviled, and in m cases rehabilitated with the change of regim History books written on the initiative of government will have limited relevance—o limited—for future generation of scholars providing an insight into the line of thinking c particular establishment. With all the efforts our distinguished authors, they will hardly comma the respect of being objective.

A simplistic counter-question is being posed

Teaching of History and Political Control

DHARMA KUMAR

Arjun Singh has announced in Parliament that he is setting up a National Advisory Committee to consider (and perhaps arrange for the writing of) "the contemporary history of post-independence India". The terms of reference of this Committee are unclear but apparently it is also to prepare curricula for school and university education. This seemingly innocuous announcement reinforces two very dangerous current tendencies.

The first is to use Indian history as a political resource. Politicans whip up public passions by dwelling on past injustices, real or imaginary; in a country as old as ours no group need be short of grievances. Now that "historical injustice" establishes a claim to state benefits, the demand for the manufacture of usable history is increasing.

There are other motives at work such as individual or group vanity, guilt and the desire to efface inconvenient facts. One can see them all at work in the States. In Maharashtra, one historian was threatened with dismissal for not being sufficiently adulatory of Shivaji, and in Gujarat, another is in trouble for trying to establish facts about Swaminarayan. Conditions are probably much worse in other States—at least there is organised protest in western India.

Some historians apparently feel they can counter the politics they dislike by using the government themselves, a dangerous illusion. The thought that the "objective and impartial" history of Modern India can be determined by a few academics and ultimately by MPs is frightening, besides being comic. On the contrary, historians who care for the health of their subject should keep politicans out of history education.

This is particularly important now, when the old political order has broken down, and politicians are casting about for new weapons. This does not mean that the historian should abstain from political action himself, or even from using historical arguments in political discourse. But it is an argument against joining the official establishment and helping to impose an official history in any guise, and against allowing politicians and bureaucrats to tell historians what to write and history teachers what to teach. Nor should historians fool themselves—choosing the historians to do these tasks is a very effective form of control.

The social sciences and history are particularly vulnerable to political interference, but other subjects can suffer too. True, we are unlikely to have a screaming match on topology in Parliament, but the sciences too are threatened by central control.

Today official boidies at the Centre and in the States prescribe curricula and commission textbooks. Since our examinations test only rote learning, the government powers of thought control are reinforced. It is a great comfort to recall that decades of Marxist-Leninist teaching in Eastern Europe had little effect, but what a waste of our children's time and of the nation's money! And much of the money flows into private pockets—it is rumoured that the author of an officially prescribed school text can make Rs 6 lakhs a year.

Politics and corruption apart, the centralised control of textbooks and curricula greatly harms the quality of teaching. The freedom to design curricula and to choose and write texts is vital to good teaching. People say to me: "That is all very well for the Delhi School of Economics, but what about the teacher in Moradabad?" This patronising attitude is part of the problem. Teachers in small places need access to libraries and collegaues in larger institutions, who will help with reading lists and so forth; they do not need to be told exactly what to teach. They also need a choice between different textbooks and there are thousands of teachers and others who can write sound and interesting textbooks.

Of course, incomplete and tendentious books will also be produced (typically the Advisory Committee does not include a single school teacher). But the remedy is not to establish an official monopoly but to expose error and prejudice, and support those who do so, whatever their politics. Nor should these exposes be confined to academic journals. Parents should read their children's textbooks and protest loudly when they are bad and journalists should publicise the errors and rank-nonsense that are now officially prescribed.

Is it true, that the Tamil Nadu schoolchildren learn that Tamil is a cure for leprosy, as I have been told, or was it TB? ■

The author is a Professor of Economic History at the Delhi School of Economics.

In the light of the controversy over the sharing of Cauvery waters by Karnataka and Tamil Nadu we publish the following two pieces. The second one contains excerpts from the speech the Congress-I MP from Tamil Nadu, Mani Shankar Aiyar, had delivered in the Lok Sabha on December 13, 1991.

—Editor

Storm over Cauvery

NIKHIL CHAKRAVARTTY

The fall-out of the Cauvery water dispute between Karnataka and Tamil Nadu has a very serious lesson for Indian democracy. It brings out the dangerous potentialities for national disintegration.

If one were to go by the average reaction of citizens in other parts of the country, particularly in our northern States, one gets the impression as if some squabble has been going on between two neighbours about sharing the waters of a common river, and that such things come up and then go down in different parts of the country from time to time, and that's nothing to worry about. This attitude would lead to dangerous complacency, because this particular dispute as it has been allowed to snowball, needs to be examined against the background of the climate of crisis that pervades all over the country today.

One need not have to go through the entire history of the Cauvery water dispute to focus on the dimension of the present explosive situation. The Tribunal entrusted with the responsibility to decide on the respective claims of Karnataka and Tamil Nadu to the waters of the Cauvery was set up by the Government of India with the consent of the two State Governments concerned. The obvious implication of this is that both the governments had agreed to abide by the Tribunal's award when it would finally come. Pending its final decision, the Tribunal has given an interim award, which by law and common sense is binding on both the State Governments. Tamil Nadu accepted it, but the Karnataka Government not only protested against it, it promptly issued an ordinance virtually nullifying it, an irresponsible move which was struck down by the Supreme Court.

At this stage instead of calling for calm acceptance of the interim award of the Tribunal, the Karnataka Government with Chief Minister Bangarappa in the lead took the dispute to the streets. A Statewide bandh was called by the State Government itself to demonstrate its protest against the Union Government's gazetting of the Tribunal's interim order—a routine step which, if not done, would have been tantamount to defying a judicial authority. During the bandh itself there was largescale violence which spread fast in the next few days. What was officially made out to be a protest move against the Centre has actually turned into full-blast pogrom—killing, arson and looting—against the Tamil-speaking minority pockets, with a substantial number of them fleeing in panic across the border into Tamil Nadu. Where the news of such anti-Tamil pogrom has inflamed passions, and Chief Minister Jayalalitha has almost hinted that her government would not be in a position to protect the Kannadigas in Tamil Nadu. In other words, reprisal and counter-reprisal are openly being talked about by people in authority, that is, the very people who are bound by the constitutional obligation to protect the minorities—whether communal or linguistic—within their own States.

◆

WHAT are the implications of the ghastly turn in the Cauvery water dispute? For one thing, the provocative postures have been initiated at the instance of the Karnataka Government which is manned by a party that is ruling at the Centre, and this party claims, both in the season of elections and out of it, that it alone is the national-level party while its opponents are subject to regional pulls. In reality, the record of the Karnataka Government is thoroughly chauvinistic. Had Karnataka today been under a non-Congress Government there is little doubt that the Centre would have threatened it with President's Rule.

Secondly, it is an open secret in Bangalore that Bangarappa is exploiting the Cauvery water dispute to whip up passions to ensure his own survival as the Chief Minister. His position within his own party is tenuous, and he wants to reinforce his position by presenting himself as having mass public support so that he could not be removed. In reality, he would have by now lost his Chief Ministership had there been democratic functioning within the Congress party.

Thirdly, the rabble rousing in Karnataka by people in office has the danger of being taken up by its neighbours, and thereby a virtual civil war situation may emerge which would be beyond the control of any authority. There is no move whatsoever even at the party level to bring about a normal approach to the issue in dispute. Rather, the rejection of the Tribunal's interim order by the Karnataka Government, had split the Congress party in Tamil Nadu, leading to the resignation of its leader from the Union Government.

Since then there is no sign of a return to a common sense approach to the issue on either side. Those who point to communal vote-banks of different political parties would find in the Cauvery dispute the emergence of blatant regional chauvinism as an equally pernicious vote-bank.

Fourthly, the Cauvery water dispute has brought to the forefront the paralysed state of affairs at the Centre. It needs to be noted that the Prime Minister of the country happens to be the President of the Congress party. While it is a welcome change from the previous dispensation in which Chief Ministers were appointed or sacked on the *fatwa* from the supremo of the party—in fact, Bangarappa got to that seat by one such fiat—it is ridiculous and dangerous if the high command of the party practises passivity to the point of total unpresence. Throughout the escalation of this crisis there is no palpable sign of any intervention on the part of the central leadership of the Congress party. Non-intervention in the present critical context is as bad as conniving at a throughly unscrupulous action hurting the nation's interest. Not a very shining example of upholding national integration.

Lastly, the Cauvery dispute brings out the need for a hard look at our constitutional structure. Interminable disputes between States over the sharing of river waters have marked the four decades of the functioning of our Constitution. Can't certain mandatory ground rules be enforced in such disputes? In this context, certain proposals made by Rajiv Gandhi when he was the Prime Minister, could perhaps be gainfully pursued.

Very often such a subject of common concern is recklessly exploited by the pressures of parties in power in one State or other, and the Centre is often seen in the public eye as being a party to such squabbles. The classic case of Haryana and Punjab in dispute over the sharing of water has contributed substantially to the Punjab crisis which has today ended up in armed militancy. A judicious approach to this vexed question accompanied by its strict adherence in every case has to be part of our endeavour towards genuine federalism in our Constitution.

We have the Inter-State Council. Why can't such disputes be tackled by such a body and settled finally and irrevocably, with every State authority pledging to abide by its verdict? As the Haryana-Punjab dispute as also the current one between Karnataka and Tamil Nadu brings out, these are no longer a tug-of-war item between two neighbouring States. The poison that is being spread today is no longer a matter of mere bilateral concern between Karnataka and Tamil Nadu. It threatens to pollute the entire democratic fabric of our republic. ■

Plea for a National Water Policy

MANI SHANKAR AIYAR

Here on the floor of the House, in the month of July, I charged the Government of India with conniving with the Government of Karnataka. Today I wish, in all humility, to withdraw that charge.

In gazetting the Interim Order of the Cauvery Water Disputes Tribunal, the Government of India has vindicated the honour of this Parliament. It was Parliament which passed the Inter-State Water Disputes Act.

In gazetting this Order, the Government of India has vindicated the honour of the Constitution because the Constitution provides that all State Governments must obey the law of the land.

In gazetting the Interim Order of the Cauvery Water Disputes Tribunal, the Government of India has not provided water to Tamil Nadu, nor denied water to Karnataka; the Government of India has merely rendered justice as the forums of justice have determined what is just and what is right.

What the Government of India has done by gazetting the Order of the Cauvery Water Disputes Tribunal is to vindicate the honour of the democratic institutions of this country.

I appeal to the Government of Karnataka not to waste its time politicising this issue. I appeal to the Government of Karnataka to think carefully about what its interests are, what the issues involved are, and to go before the Tribunal and argue its case, just as, I am sure, the Government Tamil Nadu will continue arguing its case before the Tribunal. It is for the Tribunal to make a determination about what is right and what is just.

At no point has any honest, decent or good Tamilian attempted to stop the right of Karnataka to have recourse to other legal measures available, whether it be placing the facts before the Tribunal, whether it be a matter of going to the Supreme Court. Of course, it is the right and, furthermore, it is the duty of the Government of Karnataka to do everything possible to defend its interests. And then, even after a decision comes out of the court, it is the duty of the Government of India, equally the duty of the Government of Tamil Nadu, to see to it that our friends, our brothers, our sisters, our fellow-citizens of Karnataka are not adversely affected.

There is no interest of Tamil Nadu that will be served by harming the interests of Karnataka. There is no interest of Karnataka that will be served by harming the interests of Tamil Nadu.

I want to know how many citizens of India live in the delta, and how many citizens of India live along the rest of the course of the Cauvery. Approximately three times more Indian citizens live in the delta than along the rest of the course of the Cauvery.

The second thing I want to ask is about the food that the Cauvery delta produces, the other agricultural produce that the Cauvery delta produces: where does it go to? Does it go to Sri Lanka? Does it go to Pakistan? Is it all consumed in Tamil Nadu? It is our contribution to the granary of India. We are not talking about food production in Tamil Nadu or food production in Karnataka. We are talking about food production in India and the rice bowl of India is the Cauvery delta.

In the old district of Thanjavur alone, the density of population is so great, the dependence of people on agriculture is so great, that in just that one district there are no less than three parliamentary constitutencies plus one segment of a fourth parliamentary constituency. That is the extent to which not the people of the Cauvery delta, not the people of Tamil Nadu, but the people of India—first and foremost, the people of India—depend upon that water.

V. Dhananjaya Kumar (BJP, Mangalore): The population in the Cauvary basin in Karnataka is 1.5 crores, nearly one-half of the total population of Karnataka.

Mani Shankar Aiyar: I have no desire whatsoever to harm any of their interests. I believe that it is entirely possible, while the Tribunal is sorting out the judical issues involved and while the Prime Minister is engaged in protecting the interests of the people of Karnataka and the people of Tamil Nadu by holding these talks between the two Chief Ministers, I believe it is possible for men of goodwill, men of intelligence and people of experience like Dhananjaya Kumar and H.D. Devegowda to get-together to see what we can do to make the best of the present situation. Here, I have the following suggestions to make:

First, I would plead with the Government of India to ask the Tribunal to expedite its final award, so that this anguished issue can be put behind us as quickly as possible.

Second, I would plead with the Government of India to set up a Cauvery Delta Rehabilitation Authority immediately so that by making effective use of the water that is available to us under the interim award, we are able to put into practice, in the Cauvery delta, systems of water conservation and systems of agriculture practice which will make the farmers of my constituency match up to the reality that no longer are we going to get abundant water in the Cauvery basin: we are going to get a limited but assured supply.

Third, I would plead with the Minister of Water Resources to avail of this opportunity to realise the dream that Rajivji had placed before the National Development Council, which was to have a National Water Policy. Instead of having this kind of debate, which is just creating ill-will, if we have a National Water Policy, if we realise that the water is a national resource, if we realise that the Cauvery does not belong to Kerala or to Karnataka or to Tamil Nadu or to Pondicherry, but that the Cauvery belongs to India, and it is India which is going to benefit from a rational use of the Cauvery waters, then I think this kind of river water dispute will at least be diminished, if not toally eliminated.

Then, I have only two more points to make. I would plead with the Minister of Water Resources to start work very urgently and very quickly on linking the rivers of peninsular India through the Mahanadi to the Godavari, to the Krishna, to the Pennar and to the Cauvery. If we were to link these, there would be a garland of prosperity in peninsular India. Then, it will not matter where a river has started and where it ends. All of us will have plenty of water in abundance, and the water that is now being wasted by simply flowing to the sea, will cease to flow into the sea.

Finally, and this I regard as the single most important point I wish to make in this intervention, I plead with the Government of India to recognise that Karnataka, through the Interim Award, has achieved a very, very major breakthrough.

That breakthrough is that, for the first time, the ayacut which is presently under the irrigation system of Karnataka has received legitimacy. That is a very major breakthrough. Now that it has achieved that legitimacy, I would plead with the Government of India to extend the maximum possible assistance to Karnataka in the coming Eighth Five Year Plan to be able to make the very best use of the water supply that is with Karnataka as well as the irrigation system they have already built up, and to so modernise it and to so utilise it that agriculture in Karnataka flourishes in the thousands of years to come as it has flourished in my delta in the thousands of years that have gone by. ■

Zionism is Definitely a Form of Racism

HARI SHARAN CHHABRA

Now that the UN General Assembly, under pressure from the United States, has revoked its 16 year old resolution equating Zionism with racism, one would believe that the time has come when the South African Government could persuade Washington in getting repealed the 1967 resolution of the General Assembly which described apartheid as a "crime against humanity".

But what did the November 10, 1975 General Assembly resolution on Zionism say? It simply said:

> Zionism is a form of racism and racial discrimination.

This would lead one to briefly discuss the meaning of the terms racism and racial discrimination.

◆

RACISM has been variously described as "hatred or intolerance of another race or other races", "a doctrine that human abilities are determined by race" and "belief in the superiority of a particular race".

Racial discrimination is defined by the International Convention on the Elimination of Racial Discrimination, duly endorsed by the UN General Assembly in 1965, in the following words:

> .... the term racial discrimination shall mean any distinction, exclusion, restriction or preference based on race, colour, descent or national and ethnic origin, which has the purpose or effect of nullifying or impairing the recognition, employment or exercise on an equal footing of human rights and fundamental freedoms...

In this regard Zionist history and origin carry many seeds of racism and racial discrimination. One can quote dozens of Zionist leaders who employ racist language. An early Zionist, Moses Hess, in his book *Rome and Jerusalem* observes:

> Every Jew has the making of a Messiah, every Jewess that of a Mater Dolorosa... only the Jews could rise to the height on which life and death seem equal... the great teachers of the knowledge of God were always Jews.

Another early Zionist, Norden arrogantly claimed that Jews were "more industrious and abler than the average European, not to mention the moribund Asiatic and African". Another chauvinist Jew wrote: "Jews are the aristocracy of history."

The founder of the World Zionist Organisation, Theodor Hezel, asserts:

> Our race is more efficient in everything than most other peoples of the earth.

If all this is not racism, what is it?

The oft-quoted correspondence between Mahatma Gandhi and the Zionist philosopher, Martin Buber, is quite revealing on the "superior race" theory of the Jews. When Gandhiji observed that the Zionists were looking for a sanction in the Bible for the demand for a Jewish state in Palestine, Buber shot back:

> ... the Bible tells us, and our innermost knowledge testifies to it, that once more than three thousand years ago our entry into this land (i.e., Palestine) took place with the consciousness of a mission from above to set up a just way of life through the generations of our people... No other nation has ever been faced at the beginning of its career with such mission. Here is something from which there is no forgetting and from which there is no release. (Martin Buber, *Israel and the World*, New York, 1963, p. 229)

◆

THE present-day Zionist leaders are even more arrogantly racists. Here is what Ben Gurion, the first Prime Minister of Israel, had to say:

> I believe in our moral and intellectual superiority, in our capacity to serve as a model for the redemption of the human race.

Israeli atrocities in occupied West Bank and Gaza smack of nothing but racism and racial discrimination. There is so much of evidence that the Jewish rulers in occupied Arab territories consider Arabs as an inferior lot of humanity.

One must not also forgot how in 1948 the Israelis hounded the Palestinians out of their homes. A cruel example of this was the massacre of Deir Yassin on April 9, 1948 in which 250 old men, women and children were savagely murdered and their mutilated corpses put on public display. The most terrifying incidents in Hulah, Ramleh and Lydda forced lakhs of Palestinians to flee from their homes. This is all racially discriminatory.

The Jewish settlements on Arab territories have so much of racist content. So is the eviction of the Palestinians from the homelands during and after

(Continued on page 13)

Of Doctors and Death Penalty

VIMAL BALASUBRAHMANYAN

The debate on whether or not capital punishment violates human rights seems to be in the news again. Side by side, there has also emerged the argument that hanging is a barbaric method of execution and that the state should introduce a more humane method of carrying out the death penalty. In June 1991, a petition filed in the Supreme Court, by a lawyer, called for abolition of hanging and adoption of a less cruel form of execution, such as cyanide injection.

In the first place, juxtaposition of phrases like 'humane' and 'execution' seems to be a contradiction in terms. Further, the suggested so-called humane method of execution is going to require the active participation of health professionals who will be the instruments for administering the injection. The views of health professionals on human rights in general and death penalty in particular are therefore worth examining in this revived debate on capital punishment.

The June/July 1990 issue of the *Medico Friends Circle Bulletin* was entirely devoted to the theme of health professionals and human rights. The section on death penalty points out that in 1969 the American Psychiatric Association had submitted to the US Senate its resolution condemning the death penalty. A proposal to introduce 'lethal injection' as a method of execution led the American Medical Association to debate the ethical issues involved during the late 70s. And in 1981, the World Medical Assembly declared that it was unethical for doctors to participate in death penalty. In 1988, Amnesty International (which has consistently campaigned for the abolition of death penalty) widened its endorsement of the WMA declaration to cover all health professionals, not just doctors.

According to Amnesty's 1989 report, *When the State Kills*, medical bodies in over 20 countries are now on record as opposing the involvement of doctors in carrying out executions.

◆

RELATED to this is the broader question of health professionals being forced to carry out various other kinds of human rights abuses. For example, a report in the *Listener* (September 13, 1990) states that over 300 military and police doctors have played an active role in torture during the 70s and 80s in Argentina, Brazil, Chile, Paraguay and Uruguay.

Ironically, it is because of more intensive vigilance by human rights groups that medical involvement in torture has greatly increased in recent years. Ruling authorities now feel the need to devise more and more 'sophisticated' forms of torture—for example, methods which will leave behind no visible physical evidence of ill-treatment. Health professionals are therefore enlisted to 'administer, monitor and regulate' the newer forms of torture. And victims have reported that often the role of doctors was to simply keep them alive for continued suffering.

Obviously it is very important for professional medical bodies to take a stand on these emerging new dimensions of torture and human rights as a whole. The Tokyo declaration of the Word Medical Assembly (1975) and the UN's Principles of Ethics for Prison Health Personnel (1982) are examples of worthy initiatives, but clearly they need to be adopted and codified by the official guardians of medical ethics in individual countries.

For example, the British Medical Association has been active on this issue and its 1986 report on medical involvement in torture had underlined "erosion of professional independence" as the major reason why doctors in the security forces are increasingly involved in carrying out torture. Because of the ambivalence of professional ethical bodies, doctors involved in human rights abuses are able to claim that they were "only obeying orders".

In our own country, none of the august medical organisations have taken a stand on any of the socio-ethical dimensions of health and medicine which have been debated in recent years. In fact individual doctors who have courageously raised their voice on social issues have actually been victimised by hospital authorities.

That an activist group like the MFC feels deeply committed to the question of doctors and human rights is not surprising. That none of the Establishment medical bodies have so far raised it is also not surprising. ■

Planning versus Market

J.D. SETHI

Right from the beginning of planning in India there has been an ongoing and somewhat farcical debate about (a) plan versus market; (b) public sector versus private sector; and (c) regulation versus liberalisation. On the whole the performance of every category has been below expectation and even perverse in some cases because it covered up the real political power struggle. Yet the focus remains on battered old issues and battles conducted from old bunkers as if the generals are discussing strategies of today and tomorrow on the principles of yesterday's wars.

It is even more farcical that liberalisation which began eleven years ago and got a shot in the arm under compulsions of terrifying fiscal and balance of payment crisis is not yet half way through. The irony is that only an unmitigating crisis forced the Indian Government to accelerate reforms.

There has been a terrible mix-up of issues. That is why there is no clarity yet. What were presented as three alternative pairs for making choices were put forth and are still treated as equivalent of one another. Planning versus market was equated with public versus private sector on the one hand and with regulation versus liberalisation on the other. Although related to one another the alternatives involved in each of the three pairs are distinct. Apart from this mix-up one other reason for the protraction of the debate and slow decision-making has been politics taking precedence over economics. The New Economic Policy precisely repeats the same mistake of not making clear distinctions where distinctions are required.

The objective of this article is to straighten out some of the aforementioned issues while keeping a broad focus on the role of the market in terms of its own autonomous role as well as in relationship with other issues.

◆

FROM the ouset of the Second Five Year Plan the debate was seen as a choice between alternatives: between the market system and a system of command and fulfilment. Neither planning nor market was clearly interpreted. There was a consensus in favour of planning but there was no clarity whatsoever in defining the role of market.

The author, a noted economist, is a former member of the Planning Commission.

For two hundred years economic theory grappled with the meaning of the role of market both in political and economic terms. In economics, market was viewed as a coordinating system; the coordinator being some invisible hand and utility maximisers. Since there was no system of complete free competition, the mediating role of the non-market agencies, particularly the state, in a limited fashion, was brought in to remove the market imperfection on the one hand and to correct the ravages of capitalism which rested on market principles. The compromise left many issues unresolved. The problem as to whether the coordinating agency violates or corrects the market price is deeply controversial.

The second important aspect of the market was more sophisticated. Market was considered as a democratic value in itself because it corresponded to the value of utility, the maximisation of the consumers' choices which when combined with the principles of liberal democracy, ensured the self-fulfilment of man. However, since the principle of diminishing marginal utility, through its sheer logic, implied a perfectly equal distribution of wealth and income, the principle was modified in the name of economic rationality, productivity and technological development. Inequalities of income and wealth were accepted within the market mechanism on the one hand, and liberal democracy on the other. The ravages of capitalism based on market principles were to be corrected by the welfare state. The developed world settled on democracy, welfare state and state mediation as accompaniments of the market.

Third, the market mechanism found a powerful support in its role as an efficiency promoting device. The enormous success of the market mechanism against the non-market system gave it a big boost so much so that it has now become the guiding principle for change in the communist system in the Eastern Europe. The planning system of command economy got discredited all over the world on grounds of efficiency as well as on the rationale that it could not bring about a better allocation of resources than the market.

Instead we opted for prejudices, axioms and the trial and error method. Planning was given the role which the market assumedly could not perform. It was argued that the shortage of savings and the stock of capital which was unfavourable to manpower could be achieved through planning. Unfortunately planning was equated with the state, including the fiscal system and the public sector. This was a bad calculation as the public sector contributions to savings over four decades has become negative notwithstanding billions of rupees invested in it and budgetary surpluses turned into deficits.

Another reason behind planning was the need for structural changes without which the market could not bring about and without which even the market could not function efficiently. The market system would not succeed without the creation of the institutional structure such as financial institutions which require state intervention and promotion. Structural deficiencies were most pronounced in the infrastructure such as transport, education, communication. These sectors could not be easily handled by the market on proven grounds of finance, management, technology, etc. It can be legitimately claimed that this very role of planning, namely, the building up of the infrastructure has been largely achieved.

To ensure that the new industrial base was not destroyed by import of superior and relatively less costly products and to ensure also that adequate resources were channelled into investment of priority sectors which were chosen to build that base, an enormous and complicated set of regulations, controls, licensing quotas as well as discretionary fiscal and monetary policies and mechanisms were piled up one upon another over many years. Even those who insisted upon giving the market its proper role for its rationalisation and optimisation qualities agreed that some controls were necessary precisely to make the market perform its function. But the lines of distinction were not drawn.

Industrialisation which required setting up of the large scale capital goods sectors could not be taken up by the private sector as it did not have the resources. Besides, it was thought prudent to leave this critical sector with the state till such time as it could be safely handed over to the market. But this sector was allowed to violate commercial principles and thus showed continued losses. It is doubtful if there would be any takers of losing undertakings. The proposal to disinvest twenty per cent of investment in the public sector is devoid of market principles.

For not very good reasons all the justifications for planning overloaded the public sector rather than create the mechanism for the cooperation of both the private and public sectors to satisfy market principles. Indeed the private sector was consistently denounced and the political elite created a prolonged and artificial climate of conflict. Planning became the enemy of the private sector and indirectly of the market forces instead of becoming partners. Failures have been enormous and costly. The public sector has ceased to save; it has become inefficient; its growth rate has been slowed down; its capital output ratio is so high that no economic principle can justify it, and so on.

◆

IT became a matter of faith than logic that planning the public sector would be instrumental for self-reliance whereas the private sector would have the tendency to depend on external resources and advanced technology. The biggest failure of Indian planning has been in the defeat of this very belief. Public sector undertakings have remained more dependent on foreign resources and technology. In fact no public sector project has been established in India which did not have large external components. The public sector undertakings do not even coordinate with one another let alone with the private sector undertakings and prefer to rely on outside help. In this the role of the international agencies like the World Bank had been very critical. All the bilateral and multilateral aid which has gone to the public sector has been tied to the import of technology, raw materials, management, etc. from the donor country.

The Indian planners relied on only one distinction, that is, between the organised state economy and organised market economy and ignored the vast network of customary and informal economy. Whether the Indian planning was supposed to eliminate, improve or integrate this customary economy with either the state economy or the market economy was one of the unasked questions. The state intruded into the customary economy in many ways just as it did in the case of the market economy but it was never able to integrate the three sectors. In fact, the real dual economy of India is that the modern state economy and modern market economy stand on the one side and the rest of India on the other. The Indian planners assumed conflict only between the state and the market economies and left a customary economy out of calculations. The adjusting process became murky with illegal activities linking all the three.

The failure of planning in reducing regional disparities, both in development and benefits, has also raised the question of planning versus market. Although the economists and the Planning Commission talked a lot about multi-level planning, economy and planning power was never decentralised to conform to the model of multi-level planning. The Indian state was never ready to relinquish any power. Those who suggested some kind of freedom to market forces in areas where planning had failed were dismissed.

◆

THE Indian Marxists have been less than honest in ignoring the fact that Indian planning has distorted the whole market price structure in India. That Marxist economist of all seasons, Sukhamoy Chakravarty, wrote:

> Indian planning may be rightly criticised for not making sufficient use of the price-theoretic dimensions in the implementation process. But it is not permissible to draw from this observation any far-reaching conclusion regarding the replacement of 'planning' by the 'market'.

No one of India or elsewhere ever talked about replacement.

Although the Planning Commission had little to do with regulations and controls, it forced the government to reduce the role of the market, particularly by subjecting the entrepreneurs to many rules, regulations and controls in the name of achieving the plan objectives. Indeed when the plan objectives and increasing regulations diverged the market was falsely blamed. It was not realised that there has to be a limit to these regulations because beyond a point not only could they create distortions but also artificial scarcities.

The activities of the Commission led to massive concentration of power in the hands of the government and became increasingly hostile to liberalisation and decentralisation. The problem has been and remains that if the Commission continues to remain on its own beaten track either liberalisation would be reversed or it will degenerate into anarchy. If there is any institution which bears the heaviest responsibility of blurring the distinction between planning, public sector and regulations it is the Planning Commission. Finally the Commission pursued and supported such irrational centralisation on decision-making that from one plan to another not only has it generated disparities but pitch-forked the conflict between Centre and the States, too.

Most significantly, in the proportion of each Five Year Plan the Commission opted for maximum and not minimum foreign aid in order to show up a bigger and bigger plan. The same applies to the Commission's role in pushing up fiscal deficits. Instead of reducing unnecessary activities the Commission was anxious to enlarge the size of each plan, almost twice that of the previous one. Therefore, what began as a battle (unnecessary though) between planning and market degenerated into a scramble for resources for both plan and non-plan expenditure for the state sector.

The Indian Planning Commission performs many roles, some negative, others positive. Negatively, it legitimises the conflict between planning and market and also between the private and public sectors without ever reconsidering the need to shift the battle lines. More particularly, by dividing the government expenditure between plan and non-plan, the Commission set in motion a process by which no control could be exercised on the acceleration of non-plan, largely consumption, expenditure. Besides, the Commission established the tradition of annual step up of plan expenditure without even scrutinising, let alone dismantling programmes and projects, which became unnecessary, from the previous plans. People employed in the scheme in the first plan are still in position without knowing what they are doing.

Positively, the Commission performs the important function of allocating resources on the basis of agreed national priorities. However, that function too has been consistently undermined by successive Prime Ministers, particularly Rajiv Gandhi who had no hesitation in calling the Commission a pack of jokers. In fact the many decisions about major resource allocation shifted to the Prime Minister's Office. The Planning Commission always knew the cases of government's corrupt practices resulting from decisions in the PMO and from specific regulations and controls but it never dared to expose them.

◆

THE Nehru-Mahalonobis model of planning was put forward as an economic instrument for ushering in a socialistic pattern of society. Clearly there was something phoney and unreal about it. Even the big business, though voicing these objections, did not feel threatened by it. In one of the FICCI meetings, G.D. Birla advised businessmen to go along with Nehru. Nehru preferred to define socialism and left the field for those who proclaimed socialism from housetops also to serve the interest of Soviet foreign policy. Their infiltration in the government undermined the possibilities of open cooperation between the government and the private sector. A climate of conflict was artificially created which choked many channels of development.

But according to J.R.D. Tata, the main element that transformed the private sector's image was Jawaharlal Nehru's introduction of his kind of bureaucratic socialism. He had great regard for the Soviet system, and there was no point arguing with him.

> I remember once I told him that the public sector was badly run and it should make a profit for the country, he got angry and told me: 'Don't talk to me about that dirty word profit.'

Tata said:

> It was an economic dictatorship by the government. It involved obtaining licenses and permits. For everything you had to go to the minister or the bureaucrat.

At no time did the economists sit back and ask the question as to what constituted the Indian state which was supposed to plan and run the public sector *as against* the market economy. Even the most relevant question, namely the size of the state, was not asked. In India the state has expanded several times faster than the rate of expansion of any other sector. Whether all that was necessary for planning was never questioned until it was found that the consumption expenditure of the government came to be financed by deficits creating a terrifying fiscal crisis. More importantly, instruments of state planning, namely the bureaucrats and politicians, developed their vested interests and joined in a conspiracy to subvert planning and fleece the public sector.

The objective of reducing the concentration of economic power was falsely conceived and even more falsely implemented. The MRTP Act has in fact resulted in the slow down of industrial growth as well as massive increase in the concentration of economic power because of its restraint on entry. It is difficult to believe that any market system would have generated larger inequalities of income and wealth.

Intellectually the Marxist economists provided the proverbial fig leaf for the Nehru-Mahalanobis model. They quietly buried the infructuous debate on market socialism which distinguished Marxist economists such as Lange, Kalecki, Dickinson and other joined in and found it impractical. Gorbachev wanted to put it into practice but socialist hardliners defeated him. Had India seriously fashioned out a logically consistent and rational model of market socialism with mass mobilisation behind it and not mixed up issues, the result may have been different. But now it is a dead issue.

◆

THE failure of planning should not push us in the direction of singing praises for the market system and ignoring its incapacity to meet social objectives. In fact the Indian private big business operating through the market has been an integral part of the Indian state sector throught the support of financial institutions. The nationalised banks and other financial institutions controlled by the government own a large part of the private undertakings. The failure or success of one equally belongs to the other. The state economy is also a part of the private economy in the sense that the infrastructure is run as if it is on behalf of the private sector. In fact the distinction between state economy and private economy is largely false. Rules and regulations were designed to give economics and political power to a small group of people divided between the private and public sectors. The state robbed the citizens and the powerful citizens robbed the state and all this was called planning.

There is no economy in the world without a public sector or some planning indications, financial or physical. Even Singapur, the suggested model for the developing countries, invests forty per cent of total investment in the public sector. But at the same time in all successful economies, a public sector unit is either privatised or scrapped if it makes persistent losses. Scandolously losing public sector units must be privatised if new fiscal and management crises are to be averted How to handle or not to handle the public sector is not an issue of ordinary policy. Unless it is run on corporate principles, it will remain a drag on their economies and also defeat the social objective.

Even Barber Conable, the World Bank chief, in his World Development Report 1991, has said that it is the "market's friendly hand" as distinct from some invisible hand as well some form of intervention together guarantees efficiency. According to him, alongwith the market forces the government is supposed to perform the following functions: namely, faster climate of competition, making investment in infrastructure and institutions, making investment in people and integrating the given economies with the global economies.

We are not a monolithic polity or economy and yet the idea of the corporatist state has not sunk deep into the psyche of the Indian middle classes. A corporatist state is one in which the dominant plural interests are so arranged and balanced as to produce an efficient and just model. In case of India, these interests are the business, the politicians, the bureaucrats, the managers, the professionals, and the workers. This combination of elites will have to come to a proper understanding with those ruling elites who come under the category of the producing classes. A state run by these interests will have to identify interests with their interests of the nation in general.

◆

ONE advantage of the new industrial policy of delicensing and liberalisation is that it may lead to the break up of the nexus between the bureaucratic and the business elites. It may generate efficiency both in the private and the public sector. The competition between the state economy and the market economy may become a reality. The need for privatisation of the public sector is generally accepted because the public sector has not only moved into an areas in which it had no role to play, but also because it is losing in those very areas where there was clear justification of its operation. However, the way privatisation has been conducted may not allow the break-up of the nexus. It will be a highly tortuous process. The private sector is likely to grab as much as it can and ultimately the advantage may be distributed between the old culprits.

Without decentralisation of political power it is difficult to imagine how a market economy would function efficiently and independentally of the state monopoly sector. Neither the private sector nor the public sector is ready to decentralise. Privatisation without decentralisation will not change the situation in any significant way.

The Finance Minister has in his budget speech proposed that the country should have a second look at the largely neglected Gandhian concept of trusteeship. Ever since independence it is for the first time that someone in the government has accepted the need for experimenting with trusteeship. Whether the statement was a rhetoric or a search for a genuine alternative to both public sector and private sector exploitation should be put to test. Along with the trusteeship sector there should be a cooperative sector as well as a sector of small independent producers. Therefore, if the balance is to be achieved between planning and free enterprise, between market economy and the state economy, not only is there the need to make a shift in favour of the private sector but within the private sector new formations should be introduced.

The trusteeship sector, cooperative sector and the sector of independent producers together can act as countervailing force against both monopolies of the private and the public sector and unleash the productive activities and the capacities of the people. In such a structure, the role of the Planning Commission will be restricted and also changed qualitatively. It is futile to continue to debate on planning versus market on hackneyed old lines which flowed from the failed coup of the Nehru-Mahalonobis conspirators. ■

CHHABRA: Zionism and Racism

(Continued from page 7)

the June 1967 war. The UN Relief and Works Agency reported that the Israeli army forced a large number of Palestinians out of the West Bank by bombing the refugee camps.

A testimony of the Israeli racist policies is provided by Dr Israel Shehak and his League for Human and Civil Rights. He calls the Israeli regime as the most cruel and repressive. Its racist features are: imprisonment and torture, mass expulsion, collective punishments, dispossession through promise and deceit and the enslavement of the Palestinian population.

The case of Rabi Meir Kahane, an American Jew who came to Israel in 1971 and has ever since been propagating the cult of racist hatred against the Palestinians, needs to be noted. His solution to the "Arab problem" is: "Throw them out." No wonder he was elected to the Israeli Parliament in 1984 on a racist plank.

◆

THE growing cooperation between Israel and South Africa is a clear case of Zionism and racism being one and the same thing. After the 1967 war there appeared a telling editorial in *Die Berger,* the mouthpiece of the Nationalist Party, which said:

> It is in South Africa's interest that Israel is successful in containing her enemies, who are among our own most vicious enemies; and Israel would have all the world against it if the navigation route around the Cape of Good Hope should be out of operation because South Africa's control is undermined.

It was not surprising when *Die Vaterland,* another South African ruling party newspaper, wrote:

> Israel's survival in the Middle East is a fundamental part of our security. ■

GARDEN FRESH ASSAM
TEA

India is the world's largest producer, exporter and consumer of tea. The country produces from the ordinary to the best teas, yet the Indian consumer does not get to drink the best. That is why APEEJAY, which is the 4th largest tea producer in the country, has decided to introduce its selectively picked high quality pure Assam tea direct to the consumers.

This is pure Assam tea from our own tea gardens. Make it the way you normally make your tea and it will give you a superb flavour and liquor. Drink this tea for 3 months and you will never want your old brand again.

Assam Frontier Tea Ltd.
Empire Plantations (India) Ltd.
Singlo (India) Tea Co Ltd.

Reflections on Soviet Events

LAJPAT RAI

This article was written before the formal dismantling of the USSR following the resignation of Gorbachev from Soviet Presidentship.

—Editor

The August coup will be remembered as one of the great watersheds of history. It was a moment which defined everything and everybody—what is what and who is who. The "Gang of Eight" was united in the belief that only the iron-fisted authority would work in the Soviet Union, as it had worked in the past. The putschists were the chosen men of Gorbachev, his trusted men, who talked the Gorbachev line in public while they plotted against him in private. In seeking to save the Union through conspiracy and coercion, they have destroyed it. As someone has said:

> By planting the flag of socialism on a tank turret, they discredited it forever in the country.

In basing their intrigues upon the Communist Party Central Committee apparatus, they betrayed millions of Communists who thought they were participants in the building of a new socialist dispensation. It led to the disintegration of the traditional communist world which still could have a chance to be a world in which reason, freedom, democracy, pluralism, justice and humanism prevailed, or at least had a chance to prevail. That chance has been eliminated. What is left now in the Soviet Union, or better the Soviet disunion, are the ethnic, social and political conflicts, economic crisis, chauvinism and clashes of hundreds of special interests.

Yeltsin behaved sensibly, honourably and with great personal courage. He seems to be at his best when facing the enemy and at his worst without one. Having saved Gorbachev and the Constitution, Yeltsin turned his attention once again to demolishing them. He has supported the republican independence movements primarily as a weapon against the Centre. He seems to believe that he can put the pieces back together more advantageously by using Russia's enormous weight and the market forces as his instruments. He is not above using crude threats, such as open talk of "border adjustments", and may by doing so bring catastrophe upon every-one.

The Russian Federation is a complex ethnic fabric, containing 16 autonomous republics, five autonomous regions, and 10 national districts. Many are small but a few are large and sit on vast natural wealth. While the "Goons of August" finished off Soviet socialism or whatever was left of it, Yeltsin may end by stifling the aspirations of the Yakuts, Bashkirs, Kalmyks, Tartars and a number of others in the name of stability or whatever. But the long term futility of such a ploy is obvious. A social paroxysm is also threatening in the destructive wake of the failed coup. Already shouts are being heard in the Moscow streets like "clear out the Communists". McCarthy seems to have arrived in the Russian capital.

An incredible human being, Gorbachev is up and running again. The cry—"Gorbachev is finished"—is a bark without many echoes. Gorbachev's original plan involved a substantial economic, political and social restructuring of the Soviet Union. He envisaged the creation of a more pluralistic and decentralised politics and was particularly concerned with making the state bureaucracy responsible to public policy, law and popular mandate. This necessitated ending the absolute control of the state by the ruling cliques within the CPSU and providing real political opportunity for outside these narrow circles. On the economic front, he wished to privatise large sections of agriculture and industry and transfer the bulk of the public sector to control by regions and republics. His historic accomplishments have been immense. But he was not a good judge of persons. Virtually all his political allies either deserted or betrayed him. As has been said he was trying to "make a revolution without the revolutionaries".

From the start he relied upon the intelligentsia to be the partisans of his *perestroika*. They, however, gradually decided that completing the bourgeois revolution was more attractive and safer than making a socialist one. As they foresook him, Gorbachev fell back on the party bureaucrats, who at least mouthed the same words. He was guilty of having faith on them. And once they betrayed him he had no option but to disband the party with the trust that "authentic social forces" will organise themselves once again. Also, Gorbachev grossly underestimated the power of nationalism. Perhaps *perestroika* should have come first and *glasnost* later. A well fed nationalist is likely to make less trouble than a hungry one. Ideologically, he unwittingly created a vacuum, which could be filled only with the ideas and aspirations of Western capitalism.

II

THE events of the USSR can be viewed with mixed feelings. One cannot help applauding the courageous democratic forces that have taken to the streets. The people of the Soviet Union are up to decide their own fate and it is thrilling indeed to see them take their first fledgling steps towards democracy. Unfortunately, the reforms that should have taken place many many years ago never happened and now we are left with two equally bad choices. On the one hand, there was an ossified, discredited, stagnating political system that did not see the need for reform until too late. On the other, there is a revolution getting out of control, with no guiding ideology or programme other than narrow nationalism, ethnic aggrandisement, sectarianism, and a naive and unrealistic romance with capitalism.

There is a frightening spectacle of a nation with 27,000 nuclear weapons falling apart into fragments. The old ideas and values are shattered and the new ones have taken over. Many have begun to believe that capitalism is all milk and honey. They are mesmerised by the glitter of American wealth and power, especially what they saw of the latter in the Middle East war.

Deprived of even the simple comforts for the last so many decades, they long for the luxury goods they see on the television and the Hollywood films. Hollywood has turned out to be a more potent subversive force than the CIA. They do not see the sudden rise of inequality, the vast unemployment, the homelessness, the continuous recession in trade like what is happening in Poland and Germany.

What did the Soviet Union lag in? Many things. In retrospect the Soviet commissars committed the mistake of feeding the people with slogans and abstract ideas while they wanted better living standards and material comforts. There is always a limit to the burden the people will carry for a revolution. In the Soviet Union that limit had been crossed for many years, without the commissars knowing this. Politically, one policy which led to and accelerated the decline of the USSR was the misguided policy of "parity"—trying to match every costly missile system tit-for-tat. With the gross national product one-third that of the United States, it took almost three times the effort just to keep up with the West. Parity gave the illusion of strength while bleeding the economy white and delaying the badly needed reforms. The Soviet people also paid heavily for the sake of what was called "internationalism". They were manipulated to make unbearable sacrifices for the Chinese, the Vietnamese, the Cubans and many others in the Third World, because it was right ideologically and according to the tenets of Marxism-Leninism. They suffered but for a cause or so they thought. And then came along the votary of *perestroika* and his colleagues and told them that it was all a waste, that they were all dupes, that Soviet communism was a fraud, and their sacrifices were for nothing. How would anyone feel if after suffering for five decades uncomplainingly he was told that it was all a bad joke, a complete fraud? Wouldn't he go berserk? And this is what has happened all over the Soviet Union.

Gorbachev could not understand this. The long-suffering Soviet people were thus deprived of their guiding star, the idea of a just and classless society. That their own society was neither just nor classless made this idea even more precious for them. The yawning ideological void is now being filled with dreams—dreams of a golden world full of cars, refrigerators, washing machines, coloured TVs and the VCRs. But it takes hard labour and time to get them. No wonder some people, especially the disoriented youth, are looking for short cuts; hence the resurgence of crime in the country.

III

THE great Russian revolution is dead, at least for the time being and there are few in the Soviet Union to weep over it. It seems to take two factors to crush a revolution, the external pressure of capitalism (a capitalism which proved to be less moribund than these so-called socialist systems sired by the traditional Communists) and an internal vacuum which might have hoped to find popular support. A revolution has no option but to confront the external enemy. The question, however, is: can it create a society its people will voluntarily defend? The void where the people should have been, which lay at the centre of the Soviet Union for decades, was the product of many years of rot—of official lies (told blatantly to friends and foes alike), censorship, corruption, legal and illegal murder and the domination of the many by the few. Actually, the rot was there at the very beginning—in the ideology of the role of the vanguard party, in the party's authoritarian structure, in the lie of the so-called democratic centralism, in the distrust of the people. It took this rot seventy years to work its way through the whole society, and then came the collapse.

These events in the Soviet Union call attention to the dangers inherent in the one-party system. They call attention as there still are people who stick to it like the Chinese, the Cubans, the North Koreans and others of their ilk in the capitalist countries like our own CPI-M. The dogmatic Communists abhor the multi-party system or any other form of pluralism as the Devil abhors the Holy Water. To paraphrase Tolstoy's statement with regard to the Russian landlords: The Communists will do anything for the people except to get off their backs. The Soviet party held a complete monopoly of power for more than 70 years. And this power was without any checks and balances, that could postpone or curtail its operation. Under such circumstances the natural tendency was to award the most important posts in the government and the economy to "trusted people" which usually meant party members. In this way the highest paid and the cushiest jobs went to the cronies. A slogan current among the youth and students was: "Let us join the party. It is there that careers are made." With this came the various forms of privilege—special stores, chauffeured cars, best housing, *dachas,* vacation spas, elite schools for children, etc.

Many people outside thought that while there was less freedom in the Soviet Union there was more equality. There was neither freedom nor equality for the Soviet citizens, nor did they have a reasonable standard of living in the European context. In the vast areas of the interior Third World conditions prevailed, with millions living below the poverty line. The self-appointed vanguard party, without any mandate from the people, calling itself the Leninist party, by definition became an "ever-correct" party. It could never go wrong as it was based on the infallible doctrine of Marxism-Leninism. The party became the universal caretaker binding all other organisations and every step taken in the life of the people with its directives. Actually, the Soviet regime was transformed into an implacable dictatorship over the toiling masses. It was not a dictatorship of the proletariat but over the proletariat. The Soviet leaders proved to the hilt the old aphorism: "Power corrupts, and absolute power corrupts absolutely." And when absolute power is joined with an ideology it becomes deadly.

The Soviet society thus became amorphous, inarticulate and incapable of initiative from below. It was completely at the mercy of the bureaucrats. And what these corrupt and fattened-with-privilege bureaucrats built over the years in Russia was not socialism but bureaucratic collectivism, or at best a bastardised form of socialism which their forefathers—Marx and Engels—would never have accepted as their offspring. As the noted Academician Yuri Abalkin has written in *Pravda:*

> One should clearly understand that we have not been building socialism and have not lived in socialist society. Otherwise we have to admit that a society in which the food problem is not solved, the housing problem is not resolved for the last seventy years, that society in which democratic institutions of a law-based state are absent can be called socialist.

To this can be added the following: a society in which the economy was stagnant except for a brief early period, where corruption was rampant, and inequalities were endemic, where the party rode roughshod over the people, and where the soulless bureaucracy ruled the roost, where the people were totally alienated from the leaders, the government and the state and where a single party rule became an instrument of oppression—could such a society be called socialist? No wonder the people are rejoicing over the banning of the CPSU which they see as their oppressor. They are gleefully demolishing the larger-than-life statues of the Communist leaders (not excluding those of Lenin) which they regard as the symbols of the Communist Party rule.

IV

THE situation in the Soviet Union is far from resolved, although the traditional ruling apparatus seems to be mortally shattered. Sixty years of life under the Stalinist police state and four decades of stagnation and declining living standards and economic dislocation led to the complete alienation of the people from their self-perpetuating rulers, and like all power-drunk rulers the Communists never knew that it had happened. This led to the emergence under Gorbachev of a class of professionals—budding entrepreneurs and managerial elite—who came to believe that the country could be saved and the economy restored only by turning the state into a vehicle for privatising national resources, promoting privileges and incentives for private businesses, especially the foreign ones.

But the problem for the "privateers" is that there is no risk-taking capitalists capable of reorganising the economy and replacing the disintegrating bureaucratic apparatus. And the foreign investors will not make large scale long term investments under a ruling elite that lacks decisive control over the society. The result is likely to be economic chaos. Moreover, the Soviet break-up is preparing for a further rupture in trade and supplies, leading to great shortages of goods and disruption of industry, like those of the early 1950s. The West is hungry to devour the choice economic sectors—energy, minerals, timber, space programmes, etc. while undermining the rest of the economy through exports like West Germany did to East Germany. The new dispensation promises the Russian people decades of sacrifice for the free market just as Stalin sacrificed generations of Russians for building a pseudo-socialist society. How much and how long can the people suffer? However, the difficulty facing the present Soviet leadership is that the attempt to. shift away from the bureaucratic command economy and introduce elements of market economy have resulted in the worst of both the worlds. As production fell catastrophically over the past four years all the leaders have come to realise that they cannot go back on the old system. But they also know that trying to introduce a Western-style market economy carried enormous risks including a potential unemployment up to 40 million. They are trapped and find themselves on the horns of a dilemma.

Western countries were quick to oppose the August coup. They are also keen to see that Gorbachev survives—and with him the Soviet Central Government. There is particular concern about control mechanisms over the huge Soviet nuclear arsenal, which remains only second to Washington's overkill capacity. Initial concern in Europe about how to deal financially with a crumbling Soviet Union has given way to a widespread enthusiasm about the prospect of dealing with the individual republics. The counter-coup has changed the West's image of the Soviet Union from a great riddle to an immense market. European vultures slowly circle the Soviet caracass. Numerous business people, opportunists, academics and consultants are hawking themselves around the Baltics, the Ukraine, Georgia and elsewhere in a mad rush to be in the first. The aid discussions in the G-7 meet and after have moved much closer to acceptance of some kind of financial packet even though know-how and emergency food provision remain the top items on the agenda. A number of "lifeline teams", designed to deal with food shortage this winter, are being prepared with transport and distribution companies being brought in to transform the Soviet food supply system in the process.

The Soviets' acceptance by the IMF, though not yet as a full member, shows a new willingness by the West to consider a Marshall Plan-style package. Even the complete capitulation of the Soviet Government is not enough for London which, like the White House, is pressing for arms cuts and the new reform package before financial aid is given. Western leaders have not been keen, meanwhile, to admit that their very reluctance to provide financial aid to Gorbachev at the July G-7 summit may have been a major factor in the coup. Neil Kinnock has accused the ruling Tories and their Washington allies of aiding and abetting the Russian coup, by insisting that "Moscow build a house before being allowed access to the bricks". The "Marshall Plan" for the Soviet reconstruction is not far off; there is hardly any doubt as to what is going to emerge out of this reconstruction.

V

WHAT are the prospects for peace in the world? The events in the Soviet Union hold great, promise as well as grave dangers. On the one hand, Gorbachev's bold initiatives have vastly reduced tensions and have helped to end the Cold War. The arms race has been reversed considerably. The dangers, however, arise from the fact that there is now no counterweight to the United States, which remains an imperialist state with worldwide hegemonic ambitions. Whatever was the character of the Soviet Union (whether it was socialist, a degenerate workers' state, or just plain bureaucratic capitalism) no one can deny that it served to blunt and even neutralise the adventurism of the Pentagon. A victory by the Vietnamese people would have been much more bloody and, according to some, even impossible without Soviet aid. The recently published "Declassified Documents" show that the USA had elaborate plans to use nuclear weapons against the Vietnamese people (Operation

Vulture in 1954 and Operation Duck Hook in 1969) but they were all cancelled because of the fears of Soviet retaliation. Also the existence of the Soviet Union accelerated the growth of guerrilla movements in Asia, Africa and Latin America. It was because of the Soviet Union that the Cuban revolution was stabilised despite all the efforts made by Pentagon over the years to destablise it. However, without the Russian counterweight, the CIA will treat the entire world like it has been treating Latin America where there is no counterweight. The infamous Monroe Doctrine, which condemned the peoples of Latin America to two centuries of poverty and misery, will now be extended to the world. What happened in the so-called Gulf war, and is happening even now, amply proves the point made above.

VI

WESTERN politicians and the so-called mainstream media have been telling us *ad nauseam* over the past months that the crisis in the Soviet Union and the collapse of one-party rule represent the death of socialism and the triumph of capitalism. Unfortunately, many of the Left seem to have accepted much, if not all, of this argument. Even some with impeccable anti-Stalinist record feel the same way because they still viewed the Soviet Union as an alternative to capitalism.

This, however, was and is a totally wrong view. Far from being an alternative, the society that Stalin built was simply a variant of capitalism that could be called bureaucratic capitalism. This system replaced the capitalist contradiction between social production and the private appropriation of profits with that between the social ownership of means of production and minority control over the investment of the surplus production. Actually, Stalin's rise to power was part of a counter-revolution that demolished 1917. It was a Russian Thermidore. The goals of a socialist revolution were abandoned in favour of building an industrial power capable of competing militarily with the West. This meant the subordination of the needs of the people to the goal of increased production. Just as in the West, a tiny minority controlled the economy, exploiting the mass of the population with the aim of accumulating capital. Such a society was, unfortunately, accepted as a socialist society by the loyal Communists and sympathizers all over the world. And the Soviet rulers mouthed the slogans of socialism for decades while exploiting and oppressing the mass of the population.

The August coup's defeat has given sections of working class greater confidence in their ability to

1. What is the trend of production and farm-groupwise income from potato in Lahaul-Spiti?
2. Its relationship with other crops in different size groups of farms?
3. What are the crop's credit requirements?
4. How far and how can cooperative help in better marketing of the crop?

Since Lahaul-Spiti exports 70 per cent of its production as seed potato every one interested in this major vegetable crop needs to find out answers to those questions by reading-

intervene on the political stage. And the collapse of the Communist Party has swept away a powerful ideological block. Now that the old Staninist ideology has been abandoned, a major barrier to the building of a genuine socialist opposition has disappeared. For this reason the socialists should not be mourning the death of Stalinism. The task before them is to disentangle the real Marxist tradition from the Stalinist distortions that have obscured it for three generations.

Socialism is not dead. After all social progress is not an intellectual exercise, driven by the fine words of utopian thinkers. It is a by-product of brutal necessity. As long as there is suffering and oppression, there will be resistance to it. This struggle against social inequality and for social progress is the engine driving the world history forward. The yearning and struggle for socialism will end only when there is genuine social equality on earth. The people through their struggles and ripening understanding will succeed in establishing some more attractive form of socialism—a democratic socialism without cults, without dogmatism, without an infallible party or doctrine. ■

PUBLIC SECTOR

Ensuring Viability of MOU System

EHTESHAM HUSSAIN

The Memorandum of Understanding (MOU) system has attracted criticism from several quarters. The most important concern has been the degree of trust and relationship between the government and public sector undertakings (PSUs). It is generally felt that the MOU system has not succeeded in eliminating 'back seat driving' by the people in the government.

With the liberalisation of the economy and stress on competitiveness, the Government of India in 1986 started the scheme of signing the Memorandum of Understanding (MOU) with the Central public sector undertakings (PSUs). The system has to provide operational freedom and flexibility to the PSUs as also to bring into sharper focus the concept of performance accountability. But due to recent criticism about the role and utility of the MOU system, it has become a matter of debate by the PSU managements whenever an opportunity arises to understand the relationship between the PSUs and the government.

In 1991-92 the Department of Public Enterprises (DPE) has selected about 104 new enterprises to sign the MOU of which five are chronic loss-makers with high social obligation. Twentythree PSUs have refused to sign the MOU due to the lack of clarity of conditions by both sides. The reasons differ in each case and this is likely to give a setback to the attempts made by the government to improve the functioning of these enterprises through the MOU. Even the trade unions and the DPE are locked in a row over the implementation of the MOUs. While the DPE has charged the Unions with being indifferent to the MOUs, the trade unions have refuted the allegation and said that labour has no hand in the formulation of the MOUs.

Twentythree PSUs had signed MOUs in 1990-91 against 18 in 1989-90. These account for roughly 75 per cent of the total investment made in the sector and 80 per cent of the turnover. The format of the MOU was radically changed in 1989 after a two year study of the system adopted by the other countries including France and South Korea. The format adopted is a mix of the two models catering to the Indian public sector. A major shift from the first model adopted in 1988 was that the MOU would not specify targets. The PSUs will be asked to define their own efficiency yardstick in consultation with their parent Ministries. The MOU will state that the unit will have to perform better in the area of efficiency adopted by it. For instance, if profitability is adopted as a yardstick the company will have to earn higher profits as compared to the previous year.

Given such transformations in concept the MOU should be the harbinger of a fundamental change in the PSU culture. But all the PSU Chief Executives do not view the MOUs as the ultimate answers to their problems. Actually, the problem is that MOUs involve two unequal sides. Both the company and the government are required by an MOU to adhere to specified targets or schedules but heads of some concerns complain that their Ministries do not clear projects according to the MOU schedule. Further, companies can be hauled up if they fall short of the goals, not the Ministries. The government officials counter that Ministries are responsible to Parliament for the companies that fall within their ambit. As for complaints about interference, those who defend the MOUs say that this depends entirely on the rapport a company head is able to establish with the Ministry. Moreover, company managements propose their own targets to the Ministry before an MOU is finalised and may be tempted to understand targets to which they commit themselves on paper.

Although the Chief Executives of the PSUs have collectively taken the view that in practice the necessary devolution of authority to public enterprises has not been effected through the MOUs, they are of the opinin that the entire concept of the MOUs should undergo a review so that the PSUs are run on commercial and business lines. In 1989 the government set up a committee to evaluate the effectiveness of the MOUs. The need for such a panel has arisen as at present there is no mechanism in the government to gauge the functioning efficacy of the MOUs between the PSUs and the administrative Ministries. In fact, it is argued that without a mechanism of this type the whole concept of the MOUs will be defeated in its purpose.

◆

THE policy of the Government of India on the public sector has been more or less consistent. There have, however, been differences according to the perceptions of each individual. Actually, there are many reasons to justify the introduction of the MOU system in the PSUs. Under the Central Government alone there are as many as 230 PSUs with investment of Rs 470,000 million and more than twice the number of enterprises in the state sector. Instead of meeting the insignificant target fixed by the Planning Commission, these enterprises incurred colossal losses. According to a study completed by the Institute of Public Enterprises (IPE) for the Ninth Finance Commission and the Planning Commission, these enterprises have negative profitability at the net marginal levels. Out of 230 PSUs, 57 incurred losses in 1988-89 and about 300 out of 754 state enterprises have suffered losses in 1986-87. The financial statements of the Central PSUs for 1988-89 reveal an accumulated loss of about Rs 10,000 million against reserves and surpluses of about Rs 120,000 million thereby showing that the accretion in the net worth was almost conspicuous by its absence.

If the public sector can have a net profit of say Rs 80,000 million to Rs 100,000 million a year the government's finance would be in great shape, its developmental activities can be pursued without big budget deficits and large borrowings from domestic and external sources. The task is not that difficult. The country's 40 year old PSUs are capable of meeting the challenge provided they are allowed to function professionally and their objectives are clearly defined.

In a recent press conference, Moosa Raza, Chairman of SCOPE, announced that the SCOPE Executive Board recommended for further strengthening of the MOU system and elimination of government interference in it. Stressing that the government should acquire technical expertise and appreciation of the MOUs, Raza said that the Board was of the view that the government should not leave any lacunae in fulfilling its part of the MOU system.

There is a move to amend certain clauses in the MOUs. It has been said that the government interference with the PSU managements is so strong that the PSUs are required to follow as many as 800 guidelines from the DPE alone. Actually what the PSUs want is total autonomy like their counterparts in the private sector. The MOUs are no substitute to real autonomy. And, it would be impractical to expect accountability from a management denied the enabling oxygen of operational freedom.

To operationalise the MOU, the responsibility for installing the operating system including charting out the information flow and providing information could be entrusted to autonomous bodies such as the Standing Conference of Public Enterprises (SCOPE) and Institute of Public Enterprises (IPE). Such bodies would work as research units of public enterprises responsible for developing the appropriate performance evaluation system, obtaining relevant informations, and processing them for the requisite analysis; and advising the PSE Boards and the task force on various issues concerning performance evaluation.

So, the MOU system has to be made comprehensive if results are to be achieved and the government while concerning itself only with the issues included in it should also abide by its commitments. It is argued that there is a need to bring about parity between the two in letter and spirit. The boards of the PSUs should be vested with more power and autonomy. It is believed that the success or failure of an MOU entirely depends on the degree of trust between both the parties and any overstepping by any party may jeopardise the agreement. ■

SPWP: Successor to CPSU

ROY MEDVEDEV

In the "years of stagnation" noted historian Roy Medvedev was expelled from the Communist Party of the Soviet Union, his books on Soviet history were banned and he was considered a dissident. He was later not only rehabilitated but also elected a member of the Central Committee of the CPSU at its last Congress and also to the Soviet Parliament. In the following article which he wrote for Pravda *of December 17, 1991, he explains the programme of the Socialist Party of the Working People (SPWP) of Russia adopted by its Organising Committee on Octobebr 26 for the forthcoming Congress of the party.*

—Editor

As a member of the Initiative Group for setting up a party of socialist forces of Left orientation, as a People's Deputy of the USSR and now as a member of the Organising Committee for conducting the first Congress of the party, which should be held in Moscow on December 21-22, 1991, I receive an enormous amount of letters and telegrams (not to speak of telephone calls), which goes to show not only the timeliness of founding the SPWP but also the need to explain certain problems connected with its aims and objects and methods of work. It goes without saying that in this article I can undertake to do this only partially.

In the hundreds of letters and telegrams we have received our initiative has been heartily welcomed. P.V. Manchenko, V.P. Ptukhin, M.P. Chumak and other comrades from the Korenovsk Improved Seeds State Farm, who have already set up a cell of the SPWP in their locality, say:

> We support your initiative to create a Russian party of the Left forces of socialist orientation on the basis of the progressive forces of the CPSU. This is the only way for upholding and realisation of socialist ideas, for preserving the active forces of the party of Communists.

Yu.B. Kozhevnikov writes from Kaluga:

> With all my heart I welcome the founding of your party. I am ready to join the ranks of the defenders of socialism and to help in the creation of the party. I have talked about this with my comrades (about 15 persons) and none has refused to cooperate.

From Karelia V.M. Dorovsky writes:

> We have already set up a party organisation of the SPWP. Members of our organisation are employees of industrial enterprises, workers, engineers, technical personnel and pensioners Eighty percent of them are members of the CPSU.

There are letters also from individual members of the CPSU. Z.V. Aleksandrova from Saltykovka township in Moscow district writes:

> Please accept me as a member of the SPWP. I support the ideological positions of the organisers of the party, its aims and objects and its chief programmatic ideas.

A number of correspondents, naturally, enquire about our attitude to other parties which have claimed to be true successors of the CPSU and which were set up in the recent months—the VKPB (Party of Bolsheviks), RKRP (Russian Peasants and Workers Party), NPSR (People's Socialist Party of Russia—"Rutskoi's party"), the Union of Communists of RSFSR and so on. A.P. Novoselv from Tomsk, a CPSU member since 1931, writes:

> Dear Roy Aleksandrovich, how do you evaluate active work to defend the Leninist heritage, to defend the Bolshevik programme of the CPSU, which is being carried on by Nina Aleksandrovna Andreyeva?

It is not always easy to answer these questions.

* *We shall consider our natural allies all those who fight for the renewal of socialism, for the defence of the working people.* However, polemics are inevitable with those who want to reanimate not only what is best but also what was the worst in the CPSU and our history, those who stand by extremely dogmatic positions and who do not accept the changes that have occurred in Soviet society, those who, as before, exhibit extreme intolerance to different trends in society and in the socialist movement.

Yes, our party declares itself to be a party of the working people.

* *We express the interests of those who live on wages, who live on their own labour,* whether it be a worker, an engineer, a peasant, an employee, a teacher or a representative of the creative intelligentsia.

* *We shall not represent the interests of the new classes of entrepreneurs that are arising in our country,* though we shall also not oppose their

lawful activities.

* *We stand for a multistructured society but with social property in the leading position.* The more so because a number of parties have already been set up for expressing and protecting the interests of entrepreneurs, traders and shopkeepers. We shall carry on a political competition with these parties through parliamentary and civilised methods.

* *We stand for pluralism of opinions, for freedom of expression and organisation.* In our statutes we speak about "democratic unity" but there is no mention of "democratic centralism".

* *We are against the separation of workers into some sort of a special class. More so, we are against the "dictatorship of the proletariat".* This does not, of course, exclude the possibility of cooperation and joint action, which is also understood by the most sensible representatives of other movements which have been organised on the basis of the CPSU. Yu.A. Gasparyan from Kiev writes:

> I am an inveterate Stalinist, just as you are an inveterate anti-Stalinist. But the situation today is such that we must lock for points of contacts, rather than sympathy for some personality or the other. While fighting against Stalinism, people who were carrying on this struggle did not notice how Leninism and socialism were being destroyed.

Many people ask us about our attitude towards the preservation of the Union.

* *Of course, the SPWP stands for friendship of peoples, for ideas of internationalism, but it is strongly opposed to the use of force in settling national conflicts.*

* *Although our party functions only within the framework of the RSFSR, we shall cooperate with like-minded parties and movements in other republics.* And we already feel that there is a responsive striving on their part.

Writer A.Ya. Mirarbayev from Samarkand in Uzbekistan:

> I strongly condemn all acts of lawlessness against the CPSU, I support your activity for the revival of a party of the working people. I support the decisions of the conference held on October 26 to found a Socialist Party of the Working People and am in agreement with its programmatic declaration. I shall with all the strength and means at my command try to realise the party's policy in life.

◆

IT is but natural that many Communists and people with socialist convictions are still biding their time; they want to know how any new party which declares itself to be communist or socialist will conduct itself in practice. Many find themselves disoriented and are suffering from disillusionment and even depression. They no longer want to join any party. There are not a few who even heaved a sigh of relief, because they had joined the party not because of any convictions but because this provided the only possibility of personal advance in almost any walk of life, even in a field very far removed from politics. There is here a certain positive process of cleansing. Very many Communists have preserved their primary units as organisations of the CPSU, counting not only on the removal of various types of bans, but also the rehabilitation of the party. A Communist from St. Petersburg writes to me:

> We from the 'bottom' are trying to preserve cells of the primary units to find out who is ready, taking into consideration the new circumstances (which we have still to carefully analyse), to continue the cause of genuine democracy, not the false and tragifarcical democracy which the "Democrats" are trying with foaming mouths day and night to force into the consciousness of the common people.

I am not giving here the name of my correspondent; he is working in a state organisation and is formally guilty of acting against the decisions and decrees that have been issued. Some of these groups are already coming out of their 'underground' and are joining one or the other party from among those I have mentioned earlier.

"Our group in Kurgan is small," writes a representative of this group, "as since the time of the dispersal of the Communist Party we have been functioning illegally under the provisional name of 'Marxists of Russia'."

Quite a few people want to know what is the attitude towards the newly arising communist and socialist movement of some of the former members of the Polit-Bureau and Secretariat of the Central Committee of the CPSU. I am not in possession of any comprehensive information on this score and shall therefore refrain from commenting. I cannot, however, restrain myself from saying that in almost all the letters we have received there is condemnation of the position of M.S. Gorbachev as the General Secretary of the CPSU until recently. A veteran from St. Petersburg, I.I. Solovyov, writes to me:

> I and my comrades would like to join the Socialist Party. We are the initiative group forming the 'Union of the Defenders of the Motherland' and we have contacts with former members of the armed forces. The majority of us have remained Communists and we should like to be represented at the SPWP Congress. I have been authorised to represent this group, which has now upwards of ten thousand members; and this is just the beginning. True, I have been told that if you decide to invite the former General Secretary to the Congress,

> then hundreds of thousands of *former members* of the forces will boycott *you* and will start a campaign against you in all available mass media. I am a former naval officer. I have fought for nearly 13 years. The captain leaves the sinking ship last of all, but our former General Secretary was the first to desert the ship.

I do not entirely agree with the tone of this letter. Even before the General Secretary not a few former leaders of the party, from Yeltsin to Shevardnadze, Yakovlev and Laptev— one could enumerate many more—had left the party. But one cannot ignore such feelings, which are not limited to the former war veterans alone. One cannot ignore this just as one cannot ignore seeing the collapse of the *perestroika* launched in 1985.

I am deeply convinced that *perestroika* was necessary, that our society needed the deepest-going reforms, as did Soviet economy and the CPSU. *However, the chief cause of its failure was that no one really prepared the conditions to make* perestroika *successful, no one really saw the reforms with any foresight. Our leaders were inactive just where they should have been most actively working, and they actively reconstituted institutions and social systems which they should have altered extremely slowly and carefully.* Unfortunately, this is going on even today during the transition to the market; as if the new and the former leaders do not understand that the introduction of market relations demands ten times more skilled regulating, more subtle, almost like a jeweller's work, leadership than in the notorious command-administrative system. *But the opportunity of carrying out cardinal reconstruction without worsening the economic, legal and cultural capital of Soviet society was missed. And in this I see the initiators of* perestroika *as being most to blame. It is not a serious attitude to throw the responsibility on the opponents of* perestroika, *because in any complex thing one has to take into account also "the resistance of materials".*

One of the correspodnents writes:

> My name is I. A Vennikov from Novokuibyshevsk. I have been a member of the CPSU since 1942 I am writing this to express my satisfaction at the formation of the Socialist Party of the Working People. The party has declared its adherence to Marxism-Leninism . What can I do to enlist the Communists of Novokuibyshevsk for work in the new party?

I must note here that our programmatic declaration speaks of socialism, but not of Marxism-Leninism. Of course, we do not reject Marxism with which the greatest movements of the nineteenth and twentieth centuries are associated, movements which changed the world on the whole for the better. We consider Marx a great revolutionary, politican and scholar. However, today we also clearly realise the utopianism and even mistaken nature of many ideas and theses of classical Marxism, which seemed so attractive in theory, but which turned out to be unrealisable in practice.

And there is nothing to be surprised at in this. This sort of thing usually happens in science. To take an example, in the nineteenth century biology and scientific Darwinism were almost synonymous. However, during the last 150 years the borders of biological science have extended to such an extent, in the process disproving many statements of Darwin, that we—while acknowledging his services as the founder of scientific biology—are developing today dozens of biological sciences, and not merely Darwinism.

As distinct from religion, science usually bears the names of its "founding fathers" only for the first few decades.

The same should be said about Leninism, in which the ideas of world revolution occupy too great a place and which gave too great a role to violence in methods of reconstructing society—and to direct violence at that. Lenin never concealed this, as he did not hide his adherence to class morality in the narrow sense of the term. He said that whatever is useful to the revolution is moral. Today we cannot accept this postulate; and even "yesterday" it was erroneous. But we still consider Lenin to be a great revolutionary. A revolutionary in the positive, not negative, sense of this word.

While we are on this subject, some of the participants in the founding conference called us Social Democrats, revisionist and so on. *It would be wrong to turn concepts such as "Bolshevism", "Social Democratism" or "revisionism" in to terms of abuse. Scientific socialism needs development, that is it also needs revision.* As we know, the Social Democrats advocate the reformist path of development. In conditions of capitalist society this means "betterment", modernisation of capitalism, extension of the social protection of the working people from the oppression of capitalists—something which in itself is nothing objectionable. But it does not remove the chief vices of capitalism. *In conditions of "real socialism" social democratism could mean the "betterment" and humanisation of socialist society, ridding it of all signs of barrack, equalising, totalitarian, state capitalism.* This basic difference is not understood today by that party in Russia which has adopted the name of "Social Democratic Party'.

We do not conceal the fact that the name "Socialist Party" is not a question of tactics for us. In our registration document in the section on "Main Aims of Activity", it is said:

* *Peaceful, constitutional extrication of Russian society from its profound economic political and spiritual crisis; the formation of a law-abiding democratic state on the basis of radical reforms, building a multistructured economy and a democratic society.*

This is our stand and we call upon only those people to join us who share our views and convictions on the whole, while not denying the right to form various types of movements and groups within the party. ■

(Translated by Ravi M. Bakaya)

Gorbachev's Remarkable Achievements

VLADIMIR RADYUHIN

The sense of anxiety that dominated Mikhail Gorbachev's farewell address as he formally relinquished his post on December 25 night could be attributed to concern about his own future. It was a feeling of a man who had to abandon a job half-finished.

The first and only executive President did accomplish the Herculean task of dismantling the most powerful and enduring totalitarian regime in modern history. But he had to go before a truly democratic society could emerge on the ruins of dictatorship. The old system has collapsed before a new one could take root, Gorbachev said.

He saw his country being swept by a wave of separatism and nationalism bordering on chauvinism. The power that fell from the hands of the Communist Party elite has been picked up by ex-party apparatchiks tickled at the prospect of becoming leaders of independent republics. Beneath the democratic garb they are a product of the communist system that taught them little more than the art of political intrigues.

Gorbachev must be feeling deeply uneasy about their ability to carry on his democratic reforms. The revolutionary way in which they brought him down in disregard for law and order is a dangerous symptom. Gorbachev has lost power because he tried to conduct civilised politics in an uncivilised country. Not once during his nearly seven years in power did he resort to undemocratic ways of power struggle. He remained true to his democratic principles to the very end and accepted the verdict of the Commonwealth of former Soviet Republics that had dealt the death blow to his idea of a single confederative state.

Gorbachev wished the new Commonwealth well and vowed to do his best to help it gain strength. There is, however, little he can do now. Hence his sense of alarm. His greatest concern is that the post-*perestroika* reforms stay within democratic and peaceful bounds. Notwithstanding his many failures, Gorbachev's greatest triumph was the remarkably peaceful character of his reforms. True, a few thousand people were killed in the ethnic violence but the price had to be paid for dismantling the totalitarian system that claimed about 10 million lives to assert itself in the 1917 revolution and the civil war that followed and scores of millions more to sustain itself for 70-odd years.

The future of what used to be the Soviet Union may not be cloudless but at least there can be no return to the communist tyranny. And Gorbachev is the man who drew the line to that past. He has set the standard of democratic leadership against which all politicians in this country will henceforth be judged. Hopefully, he can now lead the way in fostering standards of democratic opposition. ■

Kagarlitsky on Unity of Responsible Revolutionaries

The following is the interview of Boris Kagarlitsky, a prominent leader of the Socialist Party in Russia (that has now been turned into the Party of Labour through amalgamation with some other groups). The interview was given by Kagarlitsky, an elected member of the Moscow Soviet, to Sumit Chakravartty of Mainstream *at the Moscow Soviet building in the Russian capital in mid-November.*

—Editor

SC: Could you tell us something about yourself?

BK: About myself? Well, I am 33 years old, born in 1958. I got involved in Left-wing Opposition groups in 1978. There was a group which later became known as Young Socialists. I was in it. I was imprisoned under Brezhnev. Fortunately for me Brezhnev died during the period of our imprisonment and we were liberated. Later with the rest of the Socialists we participated in the democratic movement and I was one of the members of the Coordination Committee of the Moscow People's Front which was one of the most important non-official non-Communist organisations.

SC: But were you not a Communist?

BK: No.

SC: You were never a Communist?

BK: No.

SC: But you are a socialist?

BK: Yes. I never joined the Party, I never acted as a Communist Party member. In that sense I have a big advantage compared to most of the people who are now involved in politics. Those who were very loyal Communist Party members, functionaries and even bosses, now pretend that they were long time dissidents, anti-Communists and so on while in fact not having been a CP person I have the advantage of not having any need to be anti-Communist today.

Well, I participated in the formation of the Moscow People's Front and then got elected to the Moscow Soviet, that is, the Moscow City Council. And when the Socialist Party was formed I became one of the members of the Executive Committee of the Socialist Party.

SC: When was that party set up?

BK: In 1990, that is, last year. We now have five members in the Executive. Originally we had nine. Later we dropped some of them.

SC: What is the strength of the organisation?

BK: Well, in fact if you count the actual members in the party it is very weak and small. It has about 300 people.

SC: Mainly in Moscow?

BK: No, in different parts of the country. However, it has deputies in local governments in different regions but mainly in Moscow where we have a very strong presence in local politics.

SC: Why did you want to preserve the name 'socialist' which has become quite derogatory in the circumstances prevailing in this country at present?

BK: I don't feel that the word 'socialist' has been compromised. I feel that the press, the mainstream press as the non-official media, is now launching quite a huge anti-socialist campaign. But this has already started to backfire. If you speak to people who are really our social base, the workers, the people from the enterprises and so on, you never find any anti-socialist views in them. On the contrary, labels such as liberals are completely unattractive to the people. So in that sense all this talk about socialism being thoroughly discredited in the minds of the masses, I think, is a complete lie.

What is true is that the nomenklatura, the bureaucracy itself, had certain reasons to drop the communist and socialist rhetorics. So they decided to drop the socialist rhetoric, the socialist ideology or the socialist slogans. What is typical of the nomenklatura is that for many reasons it decided to drop the ideological explanations and legitimisation for itself. And of course this is very much presented in the media in the propaganda. So in this sense it is hard to be socialist here now. But I must say, only in this sense.

SC: You don't find any other problems?

BK: No.

SC: So there are no impediments in the functioning of your party as such, are there?

BK: No, there are plenty of problems with the authorities, especially now, that is, after the August events.

SC: You are not being discriminated against, are you?

BK: Well, we are very badly discriminated against. And it is getting from bad to worse. But that's a different story. We have problems with the upper class, with the upper layers of society, with the structures, with the authorities. However, we don't have problems with the people.

SC: There is no anti-socialist hysteria among the people?

BK: No. Maybe among some intellectuals probably. But even among the intellectuals it is now slowing down because the people are more and more capable of understanding that they are just cheated.

That is exactly why I think the Government of Russia is more and more attempting to use force, to use the strength of the administration while they are feeling that it is getting harder and harder to manipulate the people, to get the people to accept what they are doing. That is why they are increasingly interested in the use of force.

SC: Would you kindly further elaborate on the different streams of the socialist movement in this country at present?

BK: There are different trends. Some groups emerged from within the Communist Party. One trend was represented by the group called the Confederation of Anarcho-Syndicalists (CAS). They are rather popular among the students.

SC: What do they propagate?

BK: Self-management, anti-statist ideas. They are not anarchists in the proper sense. They are in favour of a weak state and a strong society.

SC: How strong are they?

BK: They are mostly strong among the students. They have some influence among the miners, the workers as well.

SC: You are speaking only of the Russian Federation in this case?

BK: No. Their movement exists all over the ex-Soviet Union including the Baltic Republics. But, of course, they are mostly in Russia.

Then there is a current which comes out of the Marxist Platform of the CPSU that is led by Buzgalin and Kalganov. And there are some other minor currents on the Left. The Left is, of course, rather fragmented in general. And now after the August events we all came to the conclusion that there is a need to form a strong and united party of the Left. Hence the Organising Committee of the Party of Labour was formed. And this is also supported by the trade union leaders in many cities including Moscow. This has created quite a new situation.

SC: Which groups have been brought under its umbrella?

BK: Well, the Anarcho-Syndicalists, the Marxist Platform of Buzgalin.

SC: Not the other wing of the Marxist Platform?

BK: No. In fact the Marxist Platform is split precisely on this issue. Some of them joined the Party of Labour while the others did not. The same thing happened, by the way, with the Socialist Party. Because we have a minority which doesn't want to join the Party of Labour.

SC: So these are the three streams in the Party of Labour: Anarcho-Syndicalists, Marxist Platform of Buzgalin and the majority of the Socialist Party?

BK: Yes. We are all going to merge into the Party of Labour.

SC: Are you having any Congress or Conference?

BK: No, I think in late November or early December we are going to have an all-Russian meeting of the representatives of the local Organising Committees of the future local branches to decide when we will have the founding Congress of the new party. The Socialist Party continues to exist as a party but in all possibility it is going to merge with the other groups quite soon.

SC: Let us now come to your general assessment of the prevailing situation in this country from the time of the August developments or even earlier.

BK: Well, what we are facing is a very dramatic period of transition from the late Communist system, whatever you may call it, a totalitarian system which eroded into some sort of democracy and finally to a new dictatorship which is anti-Communist, authoritarian, and more or less an ideologically motivated dictatorship. The irony of the situation is that what is remaining of democracy in this country is also mostly by-products of the erosion of the Communist totalitarian regime. So in that sense the elimination of the remaining Communist structures is also the elimination of the remaining democratic structures. They are inter-connected.

I think although there was no conscious decision of the Communist Party to bring democracy to Russia, in a way, the party really collapsed into democracy. But actually now with a new government in power we are losing freedoms with every passing day and that is one of the major issues now politically.

The new Russian Government, after eliminating the Communist Party, has a new target: the trade unions. So probably its next step will be the liquidation or at least manipulation of the trade union activities.

That is why now we feel that one of the main items on our agenda is about defending the trade union rights: the right to organise, defending the trade union properties from being just confiscated by the government, and so on.

Of course, the unions that we have got are not necessarily very good. They are very bureaucratically centralised, inherited from the old regime, and so on. But if the government's project on liquidation of the unions succeeds we will have no unions at all.

SC: Does this mean that the ex-Communists who were also part of the nomenklatura have just changed their colours and become democrats?

BK: Of course, of course. It is no accident that there are almost no dissidents in the new leadership.

SC: Would you also place the President of the Russian Federation in the same category?

BK: Well, he is one of the worst.

I think the whole ruling elite is a kind of mobilisation of the worst and most corrupt elements of the nomenklatura itself.

SC: When you say that the next target is the trade unions has there been any demonstrative act?

BK: Of course.

SC: Like?

BK: Well, the first decree of Yeltsin on de-Partyisation...

SC: That had come before the August coup?

BK: Yes. That had a special clause prohibiting the trade unions to operate at the enterprise level without agreement with the enterprise administration. Which means that only if the enterprise administration wants the unions to operate will they be allowed to operate. That was even before the August events.

Then there was quite a lot of anti-union propaganda in the official media and there were several attempts to de-syndicalise the enterprises. The unions are very worried also because they do not feel strong enough to resist successfully these offensives. They are very bureaucratised and it is very hard for them to face real life, real politics, real problems. You see, for years they had remained totally stagnant.

So although there are some dynamic sectors in the unions, some of the new leaders are very active and smart, not all of them are like that.

SC: Are these active leaders getting organised in any particular body?

BK: First of all, it is the Party of Labour which organises them. So that's why they are mostly supporters of the Party of Labour. Almost always they are also supporters of trade union reforms.

SC: But the Party of Labour is yet to be formed.

BK: It is already in the process of being set up. Its branches are being formed.

SC: Where do you have the maximum strength? In which particular area?

BK: Well, once again Moscow, of course. But it seems we are getting involved in building serious branches all over Russia. So I think it is going to be a national scale party.

SC: Are you having links with international socialist groups, the Socialist International for example?

BK: We are not Social Democrats. So that's why we are not going to have formal links with the Socialist International.

SC: But at the same time you are not Communist as well.

BK: Well, you see, the point is that we insist that the time has come, especially in the Eastern bloc countries, to build the new identity of the Left.

SC: Which should be Socialist?

BK: Yes, but neither Social Democrat nor Communist.

SC: That's quite interesting because this may help coordination of your organisation with some of the Leftist groups in India.

BK: Exactly so. Let me explain our position. On the one hand what we reject is communism. Of course, the principles of rigid, centralist organisation and the ideological consequences of this rigidity—I do not mean just the Stalinist version of communism but....

SC: The legacy.

BK: Yes. What I want to say is that the more civilised ways of being a Communist. For example, if you speak of the Bolshevik tradition it is a centralist, vanguardist creation. We reject vanguardism. Also Trotskyism is rejected. Luxemburgism is more attractive because Rosa Luxemburg's attitude towards continuous movement and so on is more positive. But anyway, not just the Leninist version but also the Trotskyite brand of Bolshevism is not working.

SC: Social-Revolutionaries are also out?

BK: What do you mean?

SC: You have a party of Social-Revolutionaries who are bringing out a paper called *Revolutoionnaya Rossia* (Revolutionary Russia).

BK: Some of them are also going to join the Party of Labour. At least some of their branches.

On the other hand, what we also reject is social democracy which is a kind of luxury for the rich. You can't be a Social Democrat in an underdeveloped or a semi-developed country or the Eastern bloc countries which are now sort of pushed back into underdevelopment. It is a luxury for the rich, efficient Western-style capitalist societies where they can afford having stable distribution policies with the labour movement both well organised and at the same time quite loyal and capable of accepting compromises.

The point about compromises is that it is not as if we don't want compromises. We have nothing against compromises but if you are serious, in the situation we have there is almost no space for real compromise where the rules of the game are those of a society in crisis, a society growing poorer and poorer. By the way, we now speak quite a lot about the Indianisation of the Soviet society. You know this famous point about Belgium and India? That is, one part of the population is getting more or less the Belgian living standards and ways of life and levels of modernisation while the rest is still India.

We reject the free distributionist and gradualist social democratic approach. Now people are debating quite a lot about the definition of revolutionary reformism, a new project, which means that you have to be neither vanguardist nor gradualist, you see. (laughs)

SC: You accept the role of the market? Are you in favour of the Chinese concept: market within state regulations?

BK: Of course, we are in favour of a regulated market. But we have to discuss: who is regulating? What kind of state is regulating the market? And how is it regulating the market? Because one of the slogans we have devised is: neither more state nor less state but a different state. It means that you have to restructure the state for sure, and you have to restructure the public sector together with the state; also subordinating it to certain ways of democratic control and democratic foundations of priorities of investments, for example.

And we accept the need not only for a certain existence of the market but also for the existence of a dynamic private sector in the economy.

But the privatisation drive which is now going on in Russia and East European countries is preventing the formation of the entrepreneuring private sector from below. You see, while they are privatising the big state firms keeping the centralist structures of the economy intact, keeping the monopolies, they are just turning public monopolies into private monopolies. This we consider to be a purely reactionary move. That's why we are against privatisation but not against private property.

SC: Now, as for these private monopolies which are being set up, you don't have enough capital, even if you set up conglomerates they will not be able to operate without coordination of links with the transnationals. Would that not amount to the transnationals taking over the major state enterprises?

BK: That is what's happening in Eastern Europe; not yet in Russia. But we are in favour of renationalising the public monopolies to concentrate public capital in the hands of the public sector.

SC: But then you have to change the public sector, restructure public sector units and go for self-management.

BK: Exactly. Restructuring the public sector, dismantling the big monopolies, and turning them into medium and small scale units which could operate within the framework of a coordinated public sector but with certain independence and also splitting it horizontally and bringing certain parts of the public sector under the control of the local governments, for example. Creating a public sector at different levels of public control.

SC: That means you are basically opposed to the growth of monopoly capital in the Soviet Union. You want privatisation of only the small scale sector?

BK: Yes. We want either privatisation of the small-scale enterprises or the growth of new enterprises from below: if somebody wants to create a new enterprise with new capital—private, cooperative whatever—create new jobs, produce new products thus adding something to the output, to the number of the goods and the jobs in the market, that should be encouraged. This is not encouraged by the regime which exists today.

SC: What is your attitude to Marxism as such? Are you for creative Marxist development?

BK: If you mean myself, I am a Marxist. But, of course, the Party of Labour is not going to be a Marxist party in the sense that it won't be any obligatory ideological formula and it is never good for Marxism to be an obligatory ideological formula. You just can't have 15 million Marxists. That's just history.

Of course, the Party of Labour, I suppose, is going to include different trends. The Socialist Party also never insists of being a Marxist party although the path of analysis on which its activities were based was, I think, mostly Marxist.

SC: I want to know your evaluation of the August events.

BK: Well, it was a great performance in the sense that...

SC: What about the mass upsurge?

BK: There was no mass upsurge. Listen, an usual demonstration in summer in Moscow comprises 200,000 people.. that is an ordinary event in June for Yeltsin and his people.

Now during the August events the maximum scale of mobilisation was about 20,000. Not only because the people were afraid but also because the great majority of the people including the ones who participated in the earlier demonstrations, first of all, were very apathetic and, secondly, didn't see any real difference between the Geh-Kah-Cheh-Peh (that is, the Russian abbreviation for the State Committee for Emergency) and Yeltsin because they were saying exactly the same things.

SC: But bringing out tanks on the streets of Moscow...

BK: No, the people were not afraid of the tanks. First of all, the guns were not loaded, there was no ammunition, even the officers had no cartridges in their pistols.

SC: Why did they do it then?

BK: Well, it seems like a kind of cover for the real coup d'etat which happened successfully. The whole thing was a kind of great performance.

SC: Do you then think that the Geh-Kah-Cheh-Peh was acting at the behest of Yeltsin?

BK: No, they were just manipulated and cheated as everybody in this country. So they were promised something and then they started to do something and then it so happened that they were betrayed by Gorbachev and by Yeltsin who were originally supposed to be their supporters.

SC: Then whatever you are saying does it mean that everything was manipulated from outside?

BK: No, no, it was not manipulated from outside, it was manipulated from inside.

SC: But Yeltsin and his friends could not have acted without coordination with the West.

BK: Well, I am not sure. Because the Western reaction was very interesting. The West was very surprised and on the first day Bush in his first reaction failed to condemn the Geh-Kah-Cheh-Peh. Why?

SC: Initially Bush was highly restrained in his reaction.

BK: Yes, Because initially he thought that it was really serious. He felt he would have to deal with these people; so he didn't condemn them.

SC: So that rules out the possibility of direct Western involvement in the whole operation.

BK: Yes. What happened was exactly the opposite. When Gorbachev realised that the West was not going to give money and when Yeltsin realised that without Gorbachev—in case he just kicks out Gorbachev—the West would be a bit reluctant to support him, they both needed some kind of event to attract Western sympathy and show the Western powers that they must seriously support, must give them something more real. Otherwise, certain things could happen.

In a way that was also the means of influencing Western decision-making.

SC: But don't you agree that there was, at least in a limited sense, some kind of spontaneous movement on the part of the people?

BK: Certainly not.

SC: What was the attitude of the workers? Were they indifferent?

BK: Absolutely indifferent and hostile to both sides.

SC: So who were there before the White House? Only intellectuals?

BK: Well, some of the political activists including some of the Socialist activists went there (near the White House) mostly because they thought that it was necessary to show up.

SC: I have spoken to some people on the events of those three days and they said they had some kind of premonition of a return to the Stalinist past.

BK: Well, there was Anatoly Baranov, a famous journalist, leader of the Socialist Party, who went to the White House and addressed the demonstrators saying: "Comrades, we came here to defend our enemies."

SC: You were also there?

BK: I was in Sweden on August 20. I came back to Moscow on the 23rd.

SC: As far as Baranov is concerned, was he critical of Yeltsin and at the same time supportive of the democratic movement against the coup?

BK: No, he said that both sides were scoundrels and hypocrites. After all, for technical record we had to stand on the side of the White House but in fact they are both criminals.

The point is that we had a lot of Deputies of the Moscow Soviet. Most of the people were involved in guarding and defending this building. And some went to the White House also for seeing what was happening.

Yeltsin's call for a general strike failed to attract a single enterprise to go on strike in Moscow.

SC: I see, now tell me, when you make a contrast with the past—the Stalin period or the Brezhnev period—don't you think that there has been a sea-change in the mentality of the people in terms of the democratic ideas that have got rooted in their minds?

BK: I think it is very limited. The further you go, the more you feel how limited the change is.

SC: What I wanted to ask you is that whether you feel that conditions now exist for the development of a real socialist movement based on democratic values?

BK: There are. But also very limited. I feel that formation of certain market structures in the country are ironically very important for the creation of a democratic labour movement and socialist movement. Because people have to face certain challenges, certain realities and socialism is not an alternative to Stalinism but it is itself an alternative to capitalism and the capitalist market. Unless people face some experience of capitalism and the capitalist market, it will be hard to mobilise and organise the people for socialism as there is no objective basis for organising the alternative. So the experience we are having right now is positive for the self-organisation of the workers, for example.

The situation has definitely changed now. The workers suddenly realised the real threat and started to organise. This threat was not there before the workers a year ago.

Now we are concerned over the threat to democracy. First of all, Yeltsin abolished most of the powers of the Moscow Soviet. That was the Decree 96 which has abolished most of the powers of the local Soviet.

SC: And who has been given those powers?

BK: The Mayor's office. The powers include most of the ways of controlling the budget, police, nominations, property, etc. Of course the very fact of the liquidation of the Communist Party and its press and so on was anything but democratic. Because whether you like the party or not, there should be certain democratic rules within which you have to operate. And if you want to liquidate a party it should be on the basis of a court case or at least a parliamentary case, not a decree. That's very much a kind of robbery rather than a political decision because one of the reasons why the Communist Party was liquidated was that it was rich, very rich and that's why it became attractive as an object of robbery.

SC: I asked one of the leaders of the Marxist Platform why not a single member of the CPSU resisted the placing of the CPSU headquarters under lock and key. I was told that this happened because "we didn't get any directive from the leadership". That means you cannot spontaneously act without the directive of the leadership! If this is the situation it is the exact product of a totalitarian regime.

BK: Yes, in that sense the party deserved this fate. Absolutely. The party deserved this fate, but anyway it was not democratic.

SC: It could have been done through voting in Parliament.

BK: Of course, it could have been voted in Parliament. Well, there were plenty of ways of doing it. But in fact it was specially done in this way to show to everybody that if you are dangerous you could be eliminated by one decree without any problem.

Now, you know that we have special powers for the President (of the Russian Federation), a decision not to have any elections for one year and...

SC: The President of the Union....?

BK: The President of the Russian Federation has announced that there won't be elections of any kind for one year in Russia. But the fear is that this is just the beginning. There won't be elections even later. So in general we are facing a very serious question and, I think, in a way some form of an authoritarian regime is emerging. It has already emerged.

SC: Because of the economic conditions?

BK: No, no. This kind of regime is not going to improve the economic situation. And the government is not interested in improving the economic situation. I mean the balance of forces is such that the new authoritarian regime is succeeding to eliminate the main obstacles towards its development.

Also the concrete economic programmes of the government cannot be realised by democratic ways, democratic means, you see. So it's not a problem of the economic crisis, it's the problem of the economic programme of the government. It is about lowering the living standards of the people; about dismantling the public sector which is the only working section of the economy, nevertheless; about dividing the public property between the few top-ranking bureaucrats and their clients. Of course, this programme is going to face enormous resistance and will be extremely unpopular.

SC: You mean the programme of defreezing prices and all that.

BK. Yes, all those measures. All that is extremely unpopular. So that's why it's nothing strange that the government needs authoritarian structures to get this programme realised.

SC: But at the same time, I have been here from 1974 to 1978 and seen the way in which the totalitarian system functioned. The people were totally apathetic to any social awareness, to involvement in any social activity, a total alienation of the people from society had taken place. But after the advent of democracy that alienation was removed.

BK: No, it wasn't.

SC: You don't think so?

BK: For a great majority of the people it wasn't. There were some periods when people felt more or less...

SC: Do the people feel that there would be a throwback into the past?

BK: No. The people feel that they are completely alienated from the decision-making. Now you speak to the people in the streets and you will find them frustrated, apathetic, they feel that nobody cares about them.

SC: But they are speaking out.

BK: No, they are not. They are very much afraid of speaking out because of the new regime.

SC: Is it mainly among the workers?

BK: Well, not only among the workers, among the intellecuals as well. Now more than under Brezhnev.

Now you see that room (pointing to the adjoining room in the Moscow Soviet): it is the office room of what is known as the Denunication Committee. You just speak to the people in that room. For some time they were getting 300 to 400 denuciations a day.

SC: You mean complaints?

BK: Yes, complaints against people who should be arrested, sacked, etc. for being critical of the regime.

SC: Complaints from people who are for the present regime against those opposing it?

BK: Yes.

SC: A kind of witch-hunt?

BK: Yes, of course.

SC: But then no Communist was lynched on the streets or persecuted that way?

BK: Nobody was lynched on the streets because people had no reason to hate the mass of the Communists. They didn't like the Communist Party...

SC: But people like Victor Grishin, for example, after what he has done to Moscow?

BK: Of course. But nobdoy knows where he is. Probably he could have been lynched. But if someone like Popov walks through the streets of Moscow now he has more chance of being lynched than say Grishin who has already been forgotten.

People who work in this Committee call themselves as members of the McCarthy Committee.

SC: Let me digress a bit. Where would you place Gorbachev. I don't think he has totally given up his idea of a socialist choice.

BK: I don't think he ever had such an idea. If you remember he was the first to devise those ideas—later on taken over by the Right-wing—about return to the road of civilisation and so on and so forth. And...

SC: When you say Right-wingers you mean Yeltsin and company? Because for sometime they were described as Left-wingers in the Soviet context.

BK: For sometime they manipulated the words Left and Right. But if you just see the newspapers now you will find that they all write that the real danger comes from the Left and radicals, the neo-socialists and the Communists.

SC: You were saying that Gorbachev used certain ideas which were later picked up by the Right-wingers.

BK: Those were picked up by Yeltsin on account of political rivalry—words such as European home, etc.—

then Gorbachev changed his tune and began to speak about the 'socialist choice', etc. He used the term 'socialist choice' for about eight months and then dropped and changed it.

So he is basically hundred per cent pragmatist. He would pick up any idea for personal gains. This is the kind of psychology of the leadership of the country in general. This is another product of the regime by the way. This sort of leaders that the regime developed could pick up any terminology, any ideology, you see.

SC: What do you think about the economic situation? How do you cross the hump? Yeltsin says things will start improving after autumn next year. But what is your general assessment? How do you propose to tackle the problem?

BK: The policies of the present government can do nothing but to increase the crisis. But more than that I have a lot of reasons to suspect that the government wants to deepen the crisis.

SC: Why?

BK: Because the crisis is being used as a tool for distribution of power and property and incomes.

SC: And also to extract aid from the West?

BK: Also that too, That shows that there are no objective reasons to try to come out of the crisis soon before they reach all the social targets.

So in a way their whole conscious approach is to get deeper into the crisis.

SC: That is also the objective of the mafia.

BK: Yes, of course. But the mafia is also closely linked to the government. And thus it is really hard to say who is increasing the tensions, the mafia or the government.

SC: But in the process the country would be absolutely ruined.

BK: Yes, that is true. But then there is still something to rob in the country even today. So it is a very barbaric way of self-colonisation, exploiting your own country. As if the ruling elite is a colonising force. But then it is also acting as a very incompetent colonising force, you see. It is thus ruining the country instead of imparting the stimulus for development.

But if you speak of the positive aspects, we must refer to the radical version of the new deal. The new deal is the only correct attitude in the sense that there was no crisis faced by any country in the world except the Great Depression of the thirties which could be really comparable to what is happening here.

Therefore, the Great Depression can give us certain lessons because that was really a deep crisis, specially in America.

So what we say is that the country needs something like the new deal but with more role for the public sector to play. That is the realtively radical version of the new deal: the public sector must be restructured and used as a locomotive to pull the economy out of the recession. That means that there should be some accumulation of capital in the main fields, the main sectors which are going to be the priority sectors to pull the economy out of the crisis, to ensure real economic growth. So we have to use the administrative ways of making the economy work. But the main thing is to concentrate real capital in the hands of the public sector.

SC: But these administrative ways could again be a throwback into the command administrative system.

BK: I am sure they would be. Because any government now would not be able to resolve the crisis with pure economic measures. And the present government is already using a lot of administrative measures and would use more. That's not because they like or dislike them but because the choice is not whether to use administrative measures or not, but which and how.

What is needed is a kind of combination of administrative and economic measures in the new deal. But the administrative measures could be fruitful only if you have a responsible and democratically based government.

Once again coming back to the new deal experiment, these measures could be acceptable only if they are based on democratic decision-making from below. We think that there should also be an important grassroots mobilisation which could limit the level of administrative involvement in the regulation of the economy. Because otherwise you have to go for tough steps which are both inefficient and undemocratic.

SC: Now that you don't have any party as such and Yeltsin has not thought of building a movement or a party while Gorbachev is totally inactive, do you think there is a future for groups like your party?

BK: Well, you see, we are now becoming one of the major factors in the political map of the country. Because, for example, the last public rally organised by the Confederation of Moscow Trade Unions on October 23—that is, trade unions and the Party of Labour—protesting against the government policies on wages and unemployment, etc. collected about 50,000 people. This was the biggest demonstration of Moscow trade unions. We were able to bring plenty of people. Why? Because I think people suddenly felt that there was somebody who really cared for their daily problems. Not just abstract slogans or general ideologies but their real problems.

Now one of the ironies of the situation is that the faster we grow the more we are becoming targets for repression or actions against us.

Just now there is a campaign in the press against us: there was an attempt to kill one of our deputies and he narrowly escaped, there were threats. The press branded us as the fifth column of the Communists and so on—all that stuff. All this creates a kind of psychological climate for repression.

But on the other hand, the government doesn't feel strong enough to use open repression. And probably will not be strong enough to do so.

SC: By the way, the Communists are also regrouping.

BK: Yes, I know there are two or three groups engaged in the process.

SC: Are you going to have some coordination with them?

BK: Well, it all depends on the type of organisation they are going to build.

SC: How far do you think the Indian experiment of working in mixed economy has relevance in the Soviet Union? Perhaps we need to have more interaction especially among economists.

BK: I also think so. The economists in our country are mostly Western-oriented.

SC: Yavlinsky is going to Harvard. Why couldnt he come to India? That would have been much more fruitful.

BK: No, I don't think so because in Harvard they pay him quite a lot of pocket money while in New Delhi that's probably harder.

Well, I could tell you that there is no way of bringing

Western remedies as this is not a Western-style capitalist economy. Quite a lot of stuff which is serious in Western terms is irrelevant in our case. I was the first among social science scholars who tried to attract the attention of our political community to the Third World problems saying that we are much closer to the Third World than to the West and, therefore, we need to study the Third World probably more attentively and so on.

I think that the Indian experience is important for us for two reasons: one, of course, is that India is a country with an important public sector which, whatever you may say about its performance, was essential for the development of India as a more or less stable economy compared to the record of some other countries which in some ways provide a more dynamic model and in other ways are unstable. So, it is a very important stabilising factor as far as I could understand.

Secondly, India is also a rare case of a stable democracy within a very difficult society which is in many respects comparable to our society—it is multicultural, multireligius and nevertheless, the country manages to keep intact its basic democratic structures.

And by the way it is, I think, interconnected: the stability of economic development which is guaranteed by the important public sector, and the stability of the country to preserve the democratic rules of the game. I think these two factors are necessarily interconnected. In that sense I think undermining the public sector in India is a dangerous political tendency because even with the drawbacks of the public sector in its bureaucratised form it has certain important roles to play though I think what the importance of the Soviet experience could be to the Indian Left is that the public sector needs restructuring, it needs participative management and decentralisation, that is, subordination to different laws of democratic decision-making inside and outside the enterprise including the local governments concerned. That could make it really decisive in national development. That is what we desperately need and what we failed to get from *perestroika*.

SC: After the collapse of the Soviet experiment there is a feeling that this is a blow to the Third World. What do you have to say to that in the context of the Left in India?

BK: Speaking about international contacts I think that now we are entering a period where we have to reshape the Left or shape the new Left not only in this country but in the international scale. As far as the Party of Labour is concerned, we are interested in developing links with the Left in the Third World countries and we are interested in developing links with different kinds of Left-wing parties, the different currents and trends, though I think the problem of shaping the new identity of the Left, the formation of new parties and movements is not only for Eastern Europe, in a way it is an international problem. We are very much reconstructing the existing parties and structures. But it would be very important to have connections with...

SC: All sections of the Left?

BK: Well, I would say different sections of the Left, not all because the world 'all' is an all-embracing term. It would mean that all, including the Stalinists and Maoists, would have to be approached.

SC: Stalinists are strong, very strong in India. But at the same time people like us are also not to be totally ignored.

BK: Well, it just means that we are not going to base our links on contacts with the Stalinists. The point is just the opposite. We are interested in the democratic Left, not with the Stalinist and Maoist Left.

SC: Including the Socialists?

BK: Well, we represent the socialist Left.

SC: No, we in India have a Socialist segment in the Left, a segment that is called Socialist like there is the Communist segment in the Left.

BK: That's why I don't say all sections becuase I am not sure whether it is possible to include, for example, the Stalinists in this dialogue also because they are not capable of participating in this process of self-transformation, they do not want to be transformed. So that's why I said different sections of the Left. First of all, the socialist Left, the labour-oriented democratic Left and the radical groups and forces which are kind of what could be called responsible revolutionaries, you see.

And I think we have plenty of things to learn from the Third World Left especially because in these countries the Left face certain problems which we are just now starting to face, for example, the problem of Western domination, the problem of foreign captial which was never our major problem, as you know.

SC: Now lastly one point: very briefly, could you say something about the nationality problem and how you want to tackle it?

BK: The nationality problem is traditionally one of the hardest problems for the Left. The Left always has problems with the nationality question because it is not a class issue. We have a principle which can be formulated this way: the democratic rights are the main rights; the national rights must be respected and realised but not through the abolition of the democratic rights, only through the framework of democratic practices. For example, if you want that the national rights of certain populations to be protected they should not be protected at the expense of the abolition of certain democratic practices which should be universal for everybody. That is one point.

Secondly, of course we support the right of self-determination but we insist that it could be realised only through the democratic processes. Self-determination through the democratic processes, through referendum, through votes and not through violence...

SC: But what is happening in Chechen-Ingushetia?

BK: That's why we support Chechen-Ingushetia against the Russian Government. That's exactly the case where you can say well, look they voted, they elected a lawful government, they have expressed their will. And now we have to accept that and if the Russian Government does not accept that then there is no guarantee that the government is going to accept the results of the vote in Russia. That's why we are definitely on their side.

SC: In conclusion, can you react very briefly to the lack of faith among the people. This is what I have found in my talks with different sections of the people. How would you overcome this very depressing factor—*bez vierie*?

BK: I think the people do not have to believe in somebody else. They have to act and start believing in themselves. That's the only way.

SC: Do you think that there is some element of hope?

BK: Well, there are always reasons for hope. ■

Cambodian Peace Process

B.B. PRADHAN

The Cambodian peace agreement, signed in Paris on October 24, 1991 by 19 nations, has formally ended the 21 year war and launched an unprecedented UN operation to arrange free elections in Cambodia. This has brought hope to the Cambodian people and all peace lovers throughout the world that gunfire will no longer be heard in the beautiful land of Angkor and that people's blood will not again be shed.

The Cambodians have not experienced peace for two decades. First, it was saturation bombing from American B-52 bombers seeking to destroy Vietcong camps during the Vietnam war. That ended with the overthrow of Prince Norodom Sihanouk and installation of Lon Nol in Cambodia.

In 1975 the Khmer Rouge captured power and led a bloody and mysterious revolutionary movement while isolating Cambodia from the world community. Pol Pot and his Khmer Rouge engineered forced separation of families, created slave labourers, carried out widespread torture and organised mass killing of more than one million people. Such was the tragedy and horror that Cambodia eventually came to be known as the 'killing fields'.

The Khmer Rouge were driven out by the Vietnamese on Christmas Day, 1978. They installed the Heng Samrin Government with their two lakh military troops. The Vietnamese invasion was not intended for the deliverance of the Cambodian people, but to replace the anti-Vietnamese Khmer Rouge leadership. So this did not end Cambodia's suffering; instead began a protected civil war, and that has been going on for more than 12 years.

The Cambodian civil war has been waged by four factions: the two non-communist and the Khmer Rouge who form the coalition government, led by Prince Sihanouk, Son San and Pol Pot respectively. Each group was supported by regional powers and a superpower. The non-communist factions receive support from China, the ASEAN and the United States. The Khmer Rouge receive arms from China. The fourth faction heading the Phnom Penh Government (of Heng Samrin and Hun Sen) was dependent on Vietnam for political, economic and military support. The outsiders initially found it beneficial in their national interest to continue the struggle in Cambodia but later they felt it would be more useful to end it. Gradually with each the balance of interest shifted towards terminating the conflict and it has now came to be in the interest of all that peace be established.

The author is a Lecturer in Political Science, S.N.D.T. College of Arts and S.C.B. College of Commerce, Bombay. He has recently published a book, Superpower and Non-Alignment in Third World Conflicts: A Study of Kampuchea.

The demise of the Cold War, and the Sino-Soviet reapproachment had an impact on the attitudes of the three actors—China, Vietnam, the USSR—as well as the various Khmer factions towards one another. In March 1985 Mikhail Kapitsa, the Soviet Deputy Minister of Foreign Affairs, toured Asia and repeated in Beijing in particular that Moscow sought to be a peace broker in South-East Asia.

On August 16, 1985 the Indo-Chinese Foreign Ministers agreed in their conference to withdraw the Vietnamese troops from Kampuchea in 1990, and the Phnom Penh Government was ready to talk with various groups and individuals for national reconciliation on the basis of the elimination of the Pol Pot clique. On September 2, 1985 it was announced on Khmer Rouge Radio that Son San was to replace Pol Pot as the supreme commander of the national army of Democratic Kampuchea and this enabled the various factions to engage in further talks.

◆

THE historic meeting between Gorbachev and Deng Xiaoping in May 1989 resulted in normalisation of relations between the two countries. That meeting underlined the importance of the Cambodian conflict. Both sides agreed on the formula of a peaceful, neutral and non-aligned Kampuchea, withdrawal of Vietnamese troops under international supervision. They condemned the civil war, and they committed themselves to abide by the result of the ensuing general elections. What is more, they agreed to reduce their military assistance to all the Cambodian factions. The Soviet Union drastically cut aid to Vietnam. Under enormous economic and international pressure Vietnam withdraw its military forces from Cambodia in 1989.

The US-Soviet and Sino-Soviet rapproachment and normalisation were accompanied by intense diplomatic initiative on Cambodia. In the winter of 1986-1987, a retired French diplomat, Jean-Jacques Galbru, met Prime Minister Hun Sen in Phnom Penh and convinced him to negotiate with Prince Sihanouk and in 1987 they met in France. The ASEAN effort, by Indonesia and Thailand in particular, led to the Jakarta Informal Meeting (JIM) in July 1988. For the first time four factions including the Khmer Rouge and the Vietnamese met and all of them except the Khmer Rougue submitted peace proposals. The JIM II in 1989 and JIM III in 1990 underscored the difficulties of bringing the parties in the conflict to the negotiation table.

In 1988 the United Nations passed a resolution to hold an International Conference on Cambodia in Paris. In August 1989 the various factions met in Paris for a monthlong conference. All sides agreed to the role of the UN to monitor (1) the withdrawal of all Vietnamese forces; (2) a ceasefire; (3) stopping of all external military support; (4) the creation of an interim administration; (5) the supervision of free elections. But the conference failed because the warring factions wanted to exclude each other from the interim government during the UN operation. The Chinese and the Khmer Rouge wanted to see the compelte dismantling of the Phnom Penh Government with the United Nations running the country during the interim period. In contrast, Vietnam, the Soviet Union and the Phnom Penh Government wanted the Hun Sen administration to remain intact during the transition period with a UN team supervising the transition. At the same time the Sihanouk faction called for a UN role with a quadripartite interim government. Authority would be divided equally between the three resistance factions and the Hun sen Government, it was suggested. Both Phnom Penh and the Khmer Rougue rejected sharing of power with each other.

On June 4, 1990 Japan invited the four factions to hold talks in Tokyo. Except the Khmer Rouge the others participated and agreed that a Supreme National Council representing all the factions should take Cambodia's seat at the UN.

◆

IN November 1989, after the failure of the Paris Conference, Australian Foreign Minister Evans proposed the establishment of a UN-supervised interim administration as a way of removing the key obstacles to a political settlement. His proposals emphasised the following elements:

— a UN peace keeping force that would be reponsible for implementing a ceasefire in cantonments, disarming forces, destroying military stockpiles and monitoring the ceasefire;
— internationally supervised elections to elect a constituent assembly;
— an internationally supervised end to external sanctuaries and external assistance for military purposes to all parties;
— massive international programme of relief, rehabilitation and reconstruction in Cambodia;
— permitting civilians in all camps associated with the resistance factions to have freedom of movement to return to their place of origin or to accompany their faction back into Cambodia.

This proposal was aimed at breaking the logjam on the interim political arrangement, and the UN's significant role in governing Cambodia between the time an agreement is reached and the emergence of a new Cambodian Government.

In June 1990 the Chinese Vice-Foreign Minister, Xu Dunxin, met the Vietnamese Foreign Minister, Nguyen Co Thach, in Hanoi for four day talks on the issue of peace in Cambodia. It was the seniormost formal contact between China and Hanoi since 1979. This scenario offered hope since finding a solution to the Chinese-Vietnamese hostilities was central to the problem of finding a solution to the civil war in Cambodia.

James Baker, the US Secretary of State, announced in July 1990 that the US would no longer support the seating of the rebel National Government of Cambodia at the UN. He also announced an American plan to begin dialogue with Vietnam on the issue of Cambodia. The US also started giving humanitarian aid to the area held by the Hun Sen Government.

On August 28, 1990, exactly one year after the Paris conference, the five permanent members of the UN Security Council announced an agreement on a framework of political settlement for Cambodia. That included a UN Transitional Authority for Cambodia (UNTAC) to oversee the elections and a Supreme National Council (SNC) to run the country in the transitional period. This decision was followed by an agreement on September 10, 1990 by the warring factions to form a Supreme National Council (SNC) to maintain and represent Cambodian sovereignty during an unspecified period of transition.

◆

IN December 1990 the Paris International Conference on Cambodia reached on agreement on settlement of the Cambodian problem. But the Phnom Penh Government rejected the central component the plan which involved the UN supervision of Phnom Penh ministries, including defence and foreign affairs, and the disarming of all factions.

In an attempt to review the deadlocked UN peace plan, the Indonesian Foreign Minister and the French Foreign Minister's delegate visited Vietnam in early February 1991 to pursuade the Vietnamese to exert pressure on Phnom Penh to accept the UN peace plan but failed.

The United States on January 1991 suspended its aid to the two non-communist factions which was US $ 20,000,000 as humanitarian and non-lethal military aid. The USA also outlined a plan for normalisation of US-Vietnam relations under which any relation was fully conditional on Vietnamese acceptance of the stalled UN peace plan for Cambodia.

On March 7, 1991 the Chinese Foreign Minister's spokesman indicated that China had resumed supply of arms to the Khmer Rouge which it had stopped in November 1990. Richard Solomon, the US Assistant Secretary of State for East Asia and the Pacific, and his Soviet counterpart, the Deputy Foreign Minister, Igor Rogachev, visited China and expressed their concern about China's apparent volte-face over military assistance to the Khmer Rouge.

The call for a voluntary temporary ceasefire was issued on April 22, 1991 by Indonesia and France, the co-chairmen of the Paris International Conference on Cambodia, and the UN Secretary-General, Perez de Cueller. The State of Cambodia accepted the appeal on April 24 and two days later the rebel National Government of Cambodia announced that it was happy to accept the appeal. At the same time the four factions also backed the idea of fresh talks.

The warring factions of Prince Sihanouk, Khieu Samphan, Son San and Hun Sen, and also the UN Secretary for Asia, Rafeeudin Ahmed, and officials of France and Indonesia who co-chair the Paris Conference on Cambodia met in July 1991 in Beijing. This meeting consolidated the atmosphere of mutual trust among the factions. The SNC, which was set up, unanimously appealed to the UN to send its mission to Cambodia to supervise the voluntary ceasefire and the halt of military aid.

This shows that the major obstacles in the way of peace in Cambodia were at times the superpowers and at times the regional powers. Now by signing the peace agreement in Paris the centre of gravity in the peace process has shifted out of the international arena to Cambodia itself. For the first time whether there is to be peace or more war largely depends on what happens inside the country. The central problem now is governance and within this the threat posed by incipient anarchy. ■

N.C.'s Commentary

(Continued from page 2)

you disapprove a government-sponsored history, would you leave the job to the private sector, to the market? In other words, the choice is between an establishment-backed history or a commercially-produced history. Such a proposition is untenable. What is necessary and possible is that distinguished scholars with reputation for integrity can be collected together by an educational or cultural institution of eminence, and assigned to produce history books which the students can read with profit—voluntarily and not as an official command. This is how the world renowned series of Oxford and Cambridge history volumes have been produced. Textbooks made to government order may be learned, projecting valuable insights. But these will be handicapped because in the public eye these will hardly command respect for objectivity.

The realities of current-day politics cannot but have their imprint on such a subject as the interpretation of the past. The prevailing polarisation makes it abundantly clear that a number of diverse viewpoints are bound to impinge on historical scholarship. Not only between the BJP school and the Marxist, there is also the regional approach whether it is in Tamil Nadu or in Maharashtra or in the North-East. To expect that everybody will accept a common denominator for writing history would be naive or may be shot down as an authoritarian approach. No doubt in a situation like this, the problem of writing a history textbook is formidable. But this can hardly be overcome by a Ministerial mandate issued to a chosen few among historians, however high in scholarly reputation. If anything, such a move will make things worse. ■

"I know LIC's Group Gratuity Scheme benefits my employees...

"But what's in it for me?"

- 100% income tax deduction on contributions made (up to 8.33% of salary).
- Contributions for past liability can be made in five installments —and be eligible for 100% income tax deduction in the year of payment.
- The task of management of funds and actuarial valuation is entirely borne by LIC.
- Saves employers the botheration of providing for large sums, for unforeseen circumstances.
- A yield of 11.4% to 12% p.a., depending on the size of the Gratuity Fund under the Cash Accumulation Scheme.
- A scheme can be tailormade to suit statutory requirements or specific needs of clients.

For more information and advice about the scheme, send this coupon to the
P & GS Department
at your local LIC Divisional Office.

POLITICAL NOTEBOOK

Learning from Larry

There seems to be some sort of a mini-euphoria over Senator Larry Pressler's visit to New Delhi and Islamabad. His testimonial that he could not think of India falling within the mischief of surreptitiously developing a nuclear weapons programme is being advertised here as an indication of a refreshing change in the US stance His statement that he found no valid reasons to extend the Pressler Amendment (linking aid to nuclear weapons development programme) to India no doubt signifies a new approach to the question taken by prominent persons in the US Congress. However, it would be a costly error if we adopt a naive attitude on the subject and begin to think that henceforth Washington would desist from exerting pressure on New Delhi to sign the nuclear non-profileration treaty (NPT).

For one thing, Larry Pressler is not a member of the US Administration which has been actively pressing all countries, including China and India, to accept the NPT. Secondly, since India is not a US ally like Israel (that is much closer to Washington than Islamabad) the White House will not stop at anything to ensure that this country loses its option to use nuclear weapons in an extraordinary situation. The way in which Beijing's arms have been twisted to sign the NPT should be an eye-opener to all (Now China is reportedly prepared to make major concessions to the US to avert a trade war that the latter is intending to launch.) In fact there is little doubt that the five permanent members of the UN Security Council are jointly moving to force the "recalcitrant" states to fall in line on the issue (even though Israel is not being subjected to the kind of pressure that has been brought to bear upon Pakistan).

It is in this backdrop that one must seriously question the justification of influential segments in India falling prey to the anti-Pak campaign of personalities like Senator Pressler. Why should we permit a superpower to use its clout to browbeat a developing country on the subject, no matter whatever the latter's attitude towards India? It is necessary for us to overcome our petty predilections which foreigners, especially the Westerners, frequently exploit with effortless ease. What is essential is to initiate a comprehensive dialogue with neighbours like Pakistan with the objective of constructing from the scratch an edifice of trust whereby conflicts and use of nuclear weaponry by either side would become redundant in the long run. A recent visit to Pakistan by a group of leading Indian intellectuals and journalists has helped them to appreciate that the realisation of such an eventuality is very much within the realm of possibility. The dialogue must extend to China as well on the nuclear question in particular. A narrow view, hardened by longstanding prejudices, needs to be eschewed at the earliest.

If such a regional arrangement for

arresting the growth of nuclear weapons in this part of the globe takes shape through the infusion of trust, that would reinforce our capacity—that is, of each one of the states in this zone—to stand upto Western bullying. There is no need to wait for the emergence of a Camp David type meeting between India and Pakistan under US auspices, as proposed by Pressler (and rejected by our Prime Minister) We ourselves can take a tangible step in that direction without depending on a generous Western mediator. For that, of course, we shall have to discard our myopic vision that also hampers growth and enrichment of each of the countries in South Asia.

In a rapidly changing world such a step will be in full conformity with the global trend of civilised integration cutting across all artificial barriers But do we have the mature statesmanship of a Jawaharlal Nehru to evolve such a long-term view?

The Western powers, which are time and again lecturing to us of the virtues of the Western world and the threat inherent in nuclear weapons falling into the hands of Asians, conveniently forget that it was the White man who had first dropped the atom bomb on an Asian nation killing countless innocent men and women in the ghastly tragedy of Hiroshima and Nagasaki over fortysix years ago

Senator Larry Pressler's visit must spur us to think anew on all such vital issues

January 15 *S.C.*

Punjab Poll and National Integration

NIKHIL CHAKRAVARTTY

On the last day of the last year, the Prime Minister of India reiterated that the long-postponed elections in Punjab would have to be held, as promised, by February 15, otherwise the credibility of his government would be thoroughly eroded

This emphasis laid by Narasimha Rao before the National Integration Council meeting is no doubt welcome and bears the implication of the unwisdom of the cancellation of the Punjab poll at the eleventh hour in June last. It is often not realised outside Punjab the importance of holding elections there as a tangible antidote to the rule of the gun—both of the armed militants and of the security forces. On the one hand, the holding of elections neutralises to a large measure one of the points of the militants' campaign that New Delhi trusts no Punjabi and wants to hold Punjab down by the sheer might of the armed forces. On the other hand, an elected government in Punjab, however non-conformist and critical of the Centre, could act as a cushion or a baffle wall which will be responsible for the handling of armed militancy or extremist politics in the State In this sense, this brings out that decentralisation offers greater chances for reinforcing national integration than the direct armed rule of the Centre.

As the Prime Minister himself anticipated, the spate of the militants' violence has been stepped up with the government's decision to go ahead with the elections to the Punjab State Assembly. This is because the Khalistanis who operate at the behest of the Pakistan authorities would not like a democratic order to function in this country, and as such would do everything possible to scuttle the Punjab poll, even to the point of terrorising the public to engineer the sabotaging of the proposed poll.

Not only the Pakistani agencies, but quite a few others, who have been engaged in violence poll, particularly the large number of anti-social elements who have been indulging in banditry under cover of the respectable alibi of political militancy. According to some estimates, there are about 150 groups today in Punjab who have taken to the gun, of whom not more than 15-20 are motivated by a cause, while the rest can be branded as criminal gangs taking advantage of the abnormal conditions to carry on their operations which range from smuggling and drug peddling to sheer looting. Obviously, these groups would try their utmost to spread terror to spoil the elections.

In simple terms, one may say that the only solution to this problem lies in going for determined police action In this context, the deployment of the Army in Punjab has become necessary to ensure free polling. Together with this, it is necessary for the government as also for the ruling party to come to some understanding with the more responsible sections of militants so that they could be brought round to contest the poll or at least to abstain from breaking it up.

Far too long, the Punjab crisis has been handled within the stereotype framework of the narrow interests of the party in power at the Centre and hands considered as a direct challenge to the fabric of the nation's integrity. It is true there are individuals and groups that have been concerned with the dangerous turn of events in Punjab as an assault on the nation's unity; but unfortunately, such an approach had little impact on the decision-making process at the Centre particularly in the last ten years. This point needs to be underlined over and over again because it is likely to impinge upon decisions at the political and governmental level in the crucial months ahead.

If we view the issue with a degree of objectivity, the onset of the crisis in Punjab could be discerned early in the eighties when Indira Gandhi returned to power. Her position and prestige at that time was such that she could have met some of the more reasonable demands of the Akali party and defused the crisis provided she and her colleagues had taken a long-range view of the crisis. However, the problem at the time was that within the Congress the feud between Darbara Singh who was then the Chief Minister of Punjab, and Giani Zail Singh then elevated to be the Union Home Minister, blocked any possibility of a settlement. While Darbara Singh was for outright political battle with the Akali party, Zail Singh moved to paralyse and disrupt the Akali party by promoting Sant Bhindranwale. And it has to be conceded that the Giani won in this internal feud, and Darbara Singh had to step down from Chief Ministership on Indira Gandhi's directive. Such a strategy of using an extremist faction to divide a political opponent has become the bane of our present-day politics; and it could be seen not only in Punjab but in other parts of the country as well.

This strategy of abetting Bhindrawale ended in disaster. His avowedly aggressive extremism turned out to be a Frankenstein for the Congress leadership so much so that a stage had come when the Army had to be called in to flush him out of the Golden Temple. The Operation Bluestar succeeded in liquidating Bhindranwale, but the desecration of this sanctum sanctorum injected a measure of alienation of the Sikh community from New Delhi to a degree which was unprecedented. It will be no exaggeration to say that this turned out to be the prime cause of Indira Gandhi's gruesome assassination five months later. The Sikh alienation was further accentuated by the ghastly pogrom in which thousands of innocent Sikhs were killed in Delhi and some other urban centres in north India.

The promise of a positive turn came when Rajiv Gandhi signed the accord with Sant Longowal, whose terms were expected to be the basis of an amicable settlement. This could have been reinforced by large-scale joint campaign all over Punjab by the two parties to the accord, thereby isolating the intransigent militants. However, such a follow-up was not undertaken, and instead, immediate elections to the State Assembly were announced. The elections saw the two parties to the accord ranged against each other, campaigning on their separate platforms with the result that the spirit of the accord itself evaporated, leaving no opportunity for generating mutual trust between the two major parties in Punjab—which alone at that time could perhaps have isolated the Sikh extremists, and activated the Sikh centrists.

Inevitably, the Akali Ministry under Barnala that followed, was bereft of the full support of the Akali party, while on the other hand, the Rajiv Government failed to implement the accord with Longowal. Even the promised transfer of Chandigarh was not honoured, apart from the other clauses of the accord. Consequently, the Barnala Ministry could not overcome the opposition of other sections of the Akali party. The denouement came with the dismissal of the Barnala Ministry by the Centre on the fatuous plea that it could not put down militant violence. The real reason for the oustr of the Barnala Ministry was the mistaken calculation that this would help the Congress-I in the impending Assembly elections in Haryana. The miscalculation was evident when the poll results showed the Congress debacle in Haryana, where Devi Lal emerged with a larger-than-life image.

A phase of blindfold drift ensued, during which the militants stepped up their attacks with overt support from across the frontier, from Pakistan, while the reinforced police action, both together, harassed the public. This was the period when violence became rampant—extortions, cold-blooded killings, fake encounters all these hitting at the normal life of large sections of the public.

After Rajiv, when V.P. Singh came to power, he began with an excellent gesture of goodwill as he

Need for a Secular, Centrist Alternative

SEEMA MUSTAFA

It does not need an astrologer to predict that 1992 promises to be as momentous, politically, as the preceding year. The semblance of stability is a mirage and any sudden move can rock the boat setting into motion a chain reaction which will affect all Centrist parties, groups and factions. Acutely aware of the uncertain political situation, the average politician is waiting in the wings, trying desperately to keep a finger in every political pie even as he keeps a close watch on individual leaders and events.

A new understanding between the Congress-I and the BJP will have its own repercussions on the political structure. There is no doubt that Prime minister P.V. Narasimha Rao has finally decided to use the BJP to keep his minority government afloat. The two parties, over the years, have been coming closer in terms of ideology, political approach and attitudes. Since the assassination of Indira Gandhi and the subsequent general election, it has become clear to even the sceptics that the RSS is not averse to bailing the Congress-I out of trouble as and when the need arises, for in its assessment the post-1980 Congress-I is ideologically closer to it than any other party. Recent statements by the RSS leaders on this are an indication that this Right-wing organisation does not see many ideological barriers coming in the way of a closer cooperation with the Congress-I.

The Prime Minister, it may then be argued, is only carrying the relationship to its logical end. Aware that the economic policies being pursued by his government will never have the approval of the Left and the socialists in the National Front, he is accommodating the BJP in the political arena to ensure support for himself and his government. There is barely any criticism from the Congress-I against the BJP. The party in power at the Centre turned a blind eye to the illegal notification issued by the UP Government acquiring land at and around the disputed shrine at Ayodhya. The Centre again refused to react to the BJP's *ekta yatra* and in fact Narasimha Rao called an all-party meeting on the eve of the *yatra* to discuss the issue. As he himself had no suggestions to offer, members came out saying that the Prime Minister had convened the meeting merely to give publicity to the *yatra*. Many in and out of government believe that Narasimha Rao has entered into a tacit agreement with the BJP on this issue. So long as the *yatra* does not pose a law and order problem for his government he will allow Murli Manohar Joshi his way and then oblige the BJP by arresting its members after Jammu.

There is no doubt that the Congress-I has decided against wielding even a soft stick on the issue of communalism. At a recent meeting of the National Integration Council, called to discuss the Punjab and Kashmir issues, not a single Congress-I leader spoke. The usual galaxy of Ministers and senior leaders were present but when an Opposition member wondered why none of them had thought it fit to speak on the issues concerning the nation the reply was: "We are Ministers." The Prime Minister spoke at length from a prepared text which, he admitted at the meeting, to be reading for the first time. And the major part of his speech was against Pakistan, the convenient scapegoat for a political leadership unwilling, for more reasons than one, to come to grips with the situation at home. In the process the BJP, insofar as the Congress-I Government was concerned, escaped unscathed. And perhaps that was the intention for not much can be said about the present communal situation in the country without reference to the BJP and its cadres.

Interestingly, when Narasimha Rao took over, the Left and even the National Front appeared kindly disposed towards him. They were going more by his age, and the end of dynastic rule than by any track record. The initial statements were subdued and even wary of criticising the government as senior leaders met the Prime Minister on several occasions to explore his bent of mind. But soon it became clear to all in the Left and the National Front that Narasimha Rao could not be influenced. That he was determined to pursue the course of reckless liberalisation, that he was more in tune with the BJP and would not temper his economic or political policies to keep the Leftists happy.

Smile of the Buddhist Sages

OCTAVIO PAZ

We are living at a particularly difficult time, a time when there is an intellectual vacuum in the world of political philosophy. The collapse of the great systems constructed in the last century is coinciding with the appearance throughout the world of political and economic institutions which constitute a new social group, a class which, for want of a more accurate term, we call "bureaucracy".

In some countries, this bureaucracy is identified with an ideology or a state. Elsewhere, if the political and technocratic bureaucracy plays a decisive role, as it does in Mexico for example, its power is far from being absolute. This new class is universal: it has invested and invaded the great capitalist enterprises of the West and Japan, and the political regimes of Eastern Europe, not to mention powerful institutions such as the CIA, and the governments of some developing countries.

The vacuum in political and social ideas is a result of twentiethcentury history. It is an aspect of the great crisis of modern post-industrial civilisation. Until the 1930s many people, including myself, thought that only the socialist revolution could resolve the contradictions in our societies. But since then we have seen the failure of the experiment which began with the Bolshevik Revolution of 1917. It has been a social failure, because it has been unable to provide freedom and equality; it has been an economic failure because the wealth that was supposed to be created did not materialise. The only triumph was political or, rather, military.

The idea of revolution, however, has received a serious blow and has lost almost all its appeal, notably in the developed countries. Even in Mexico, where the intellectuals—the heirs of the clerics and courtiers—are singularly impervious to criticism, the Left has begun a process of ideological detoxification. But the disappearance of utopian ideology which is noticeable even in the USSR, through the constructive reforms of Mikhail Gorbachev, does not mean the birth of a new political philosophy. As far as social ideals and collective morality are concerned, there is a gaping void. Peoples and states are drifting.

The moral criticism of capitalism by Marx and the anarchists is still largely valid. Similarly, the liberal critique of despotism and state socialism, what Engels called "cartel socialism", is as relevant as ever. The same could be said of the critique of the iniquities of the modern world made by Christianity and other religions. But the foundations of the political ideologies which have motivated twentieth-century man—socialism, liberalism and others—have been relegated to the sidelines since the Second World War.

The author, a renowned Mexican poet and writer, won the Nobel Prize for Literature in 1990. A former Ambassador of Mexico to India, he is also a recipient of the Jawaharlal Nehru Award for International Understanding.

Today we are confronted with the perils of nuclear holocaust and environmental degradation, which threaten world peace and the very survival of the human race. Neither of these two scourges can be imputed to the injustices of capitalism or the evils of socialism: they both result from the very nature of modern societies. The bomb and the pollution of the planet are the result of technological progress and not of a particular ideology. Reality has reduced ideology to rubble.

◆

WITHOUT wishing to make prophecies, we can say that in this great historical vacuum democracy is the only regime which is still showing signs of life. But democracy is not a panacea. It is a form of conviviality, a system for preventing people from killing each other, for ensuring that the reins of government change hands peacefully, and for enabling heads of state to come to power via the ballot-box. Democracy teaches us to live together and nothing else. I hope that one day, a day that I shall perhaps never see since I am seventyfive years old, a new form of political thought will emerge and reconcile the liberal and the socialist traditions.

In the Mexican intellectual microcosm, all that can be done at present is blow away the dust and the cobwebs, open the windows and let in some light, maintain a critical approach and a healthy scepticism of easy solutions. Irony is one ingredient in criticism, but it is also born of disenchantment. We belong to a disenchanted generation. And we also lack something of imagination and compassion.

I have used the word irony in the sense in which it was used by the French artist Marcel Duchamp—an irony which goes beyond irony and cancels itself out by mocking itself. Irony is subjective, the reaction of the self to the stupid or criminal seriousness of the objective world. The ironical man laughs at others but also at himself: "meta-irony" consists in going further than the dialogue with the self, in mocking the self which mocks the world. If irony is cruel, meta-irony dissolves the cruelty.

Transposing these aesthetic ideas to morality and politics, I believe that the political writer should show

Extradition and Terrorism

SHAKUNTALA MAHAWAL

There have been indications lately that the Indian Government means business in combating the menace of terrorism. Though terrorism is a global concern, having lost two Prime Ministers at the hands of terrorists, India is most acutely aware of the gravity of the situation.

A good deal of terrorist activities are fanned, financed and directed from the foreign soil. New Delhi is rather keen to sign an extradition treaty with the United Kingdom so that some hardcore terrorists taking refuge there can be brought to India for a speedy trial. The British Government has assured its cooperation in fighting the menace which is affecting both the countries. The recently concluded visit of the British Secretary of State for Home, Kenneth Baker, therefore, assumes great significance in getting down to brasstacks. It may pave the way for the signing of the long awaited extradition treaty.

It was the late Rajiv Gandhi, who, during his official visit to Britain in October 1985, persuaded the government there to evolve an "effective mechanism" which would make it possible to extradite terrorists. Because of the differences between the two countries on crucial clauses, it has taken more than five years in giving a concrete shape to the mechanism of a bilateral treaty on extradition.

Extradition is the return of a fugitive criminal from the country where he is found to another where he is accused or has been convicted of an offence. It is an arrangement designed to prevent criminals from escaping justice by crossing national frontiers.

It is felt that international response to terrorism has so far been weak and ineffective. In this context, the maxim *aut punire aut dedere*, that is "extradite or punish", suggests that the offender must either be punished by the state of refuge or surrendered to the state which can or will punish him. It is easier to bring the criminal back to the home country than to carry the evidence to a foreign country.

Legal thinkers have, therefore, emphasised the need to extradite. Besides, no state can desire that its territory should become a safe haven for the malefactors of other countries, and as such it is obviously in its national interest to get rid of them without let or hindrance. Of course, with changing international equations many states resort to the contrary because of compulsions of realpolitik. Still, there has been a widespread tendency towards creating legally enforceable obligations through extradition treaties.

In keeping with the international trend, India should also enter into new treaties on the basis of reciprocity with as many countries as possible. Equally important is the need to review at the earliest our existing treaties.

Difficulties faced in cases from Tarasov to Teja to Sobhraj show that India is yet to enter into treaty relations with important countries in respect of extradition traffic. At the same time, international practice in this field is witnessing quick changes and it is, therefore, desirable that these changes should be incorporated into our extradition practice also.

After the enactment of the Extradition Act of 1962, it was expected that adequate attention would be paid to this task. But, strangely enough, the proposed treaty with Britain will be just the third bilateral extradition treaty which India will be signing since independence. The other two treaties were signed with Bhutan and Nepal.

The 40-odd pre-independence bilateral extradition treaties were all signed by the then British Indian Government. Most of them are about a century old. An analysis of these treaties which are still binding on India, reveals that their provisions have become obsolete.

◆

WITH the exception of the post-independence treaty with Nepal practically in all the extradition treaties to which India has been a party, there is a mandatory provision declaring that any person charged with the commission of political offences "shall not be surrendered". The Extradition Act of 1962 also makes this provision mandatory. This gives a

Dr Mahawal, a member of the Indian Information Service, is the Director, Press Information Bureau, Government of India. Her research topic for Ph.D. was "Extradition Treaties of India".

convenient handle to some countries to give desired interpretations to political offence, and refuse to surrender even hardened terrorists. The provision related to political offence, therefore, needs maximum attention in the proposed treaty with the United Kingdom. Baker's remarks that "extradition could not be sought on political grounds" are being interpreted as a hint at the mandatory provisions against the surrender of political offenders. It is hoped, New Delhi will insist on discretionary provisions.

There is no other aspect of the extradition law which has undergone such a metamorphosis as the principle and practice regarding political offenders. The French Revolution was the starting point for the revolt in the nineteenth century against despotism throughout Western Europe, it was then that the term "political crime" arose and countries began to grant asylum to foreigners exiled from their home country for the cause of liberty.

With democratic governments having taken over in most parts of the world and with the upsurge of terrorism in the last decade, it is pertinent to note that a number of countries are making certain exceptions to the safeguard for political offences. Modern international terrorism is very different in scale and character from anything known in the last century when political safeguard was first introduced in the international law. It more frequently involves threat to the safety of innocent people by hijacking aircrafts or kidnapping arbitrarily selected victims to extort political concessions such as release of prisoners in exchange for the lives of the hostages.

The general increase in international travel especially by air, and the relative ease with which national boundaries can now be crossed are other elements in the growth of international terrorism and the escape of the terrorists. Besides, the availability of modern weapons which enhance the striking power of small groups and the worldwide media coverage which highlights major terrorist incidents, give terrorists the "oxygen of publicity".

It is a measure of international recognition of these problems and of a readiness to cooperate in combating them that 107 countries, including India, signed the Tokyo Convention of 1963 on offences and certain other acts committed on board an aircraft. As a member of the Commonwealth, India has separate, simple provisions for extradition to other Commonwealth countries. There is a need to put further pressure through organisations like the NAM and the SAARC to evolve a uniform practice of extradition. These multilateral conventions could operate side by side with bilateral treaties.

The task of negotiating new and amended extradition treaties, bilateral as well as multilateral, is no doubt colossal, but it cannot be delayed any further.■

Subsidy Reduction in IMF Oriented Strategies

V.N. VISWANATHAN

The IMF (International Monetary Fund) oriented policies of the Indian Government and politically charged issues like devaluation of the currency or deregulation of the industrial sector or even the pruning of the public sector and subsidies reduction became subjects of endless debate in the columns of *Mainstream* for the last six months. Meanwhile, the letter of intent to the IMF from the government was placed before Parliament. It was expected that the letter of intent of the government would reflect the specific commitments of the government to the IMF. Surprisingly, no specific commitment was imposed by the IMF as it happened for other Third World countries. It was left to the Government of India to decide the kind of budgetary discipline that is necessary to raise on a permanent basis India's capacity to export.

Thus, excess spending by the government and waste and monopoly pricing by the private sector will both have to end. The decisions that the Government takes in the next two months as it designs the budget (1992-93) will decide the fate of India. This calls for a fresh analysis of the impact of the IMF-oriented strategies that is going to affect the future of the Indian economy. Particularly those financial strategies that are going to affect the poorest sections of the Indian population.

The prevailing mood of flagging consensus behind economic reforms and the 'no challenge' posture by the Opposition parties in Parliament may fail to unearth the dangerous consequences of the IMF-oriented strategies. No doubt in the present situation, India had no alternative but to take a large loan from the IMF to stave off imminent default on its foreign debt servicing payments. Domestically also the government has to cut its expenditure.

In the next financial year it seems that the government may adopt two IMF-oriented financial strategies. The first one is to cut its excess spending which is in the form of mounting subsidies. Secondly, the government is poised to cut its insalubrious investment in loss-making public sector units (PSUs). These structural changes will entail some hardships. But such hardships must be equally shouldered by all the economic sectors in the country. In the absence of constructive criticism of the government's financial strategy only the poorer in India is going to be affected by these drastic measures.

Among the major national Opposition parties probably only the Left continues to oppose the IMF-oriented policies since the IMF first made its entry into the Indian consciousness in the recent past. Even for the Left there is a very practical limitation in opposing the IMF-related policies. That is because the core ideology of the Left—socialism—is being regarded with scepticism in the main body of political and economic debate worldwide. Incidentally, the IMF/World Bank designed economy in Britain (1980s), South Korea (1985), Malaysia, Thailand and Indonesia made spectacular recoveries of their economies. But their success cannot be repeated in India by blindly following the IMF-oriented financial strategies.

◆

IN this critical juncture it is necessary to introspect the three drastic financial measures that are going to be attempted in accordance with the IMF/World Bank directives or the specific commitments made by the Government of India through the letter of intent to the IMF. Briefly, the specific commitments of the Government of India to the IMF are as follows:

a) to limit the fiscal deficit to 6.5 per cent of the gross domestic product (GDP) in the current financial year;
b) to reduce living on borrowed money, that is, from Rs 43,331 crores to Rs 37,727 crores;
c) to prune non-productive expenditures, that is, to reduce subsidies, defence spending and interest payment on foreign debt liabilities.

India's commitment to limit the fiscal deficit cannot be realised unless the climate is created for promoting savings and investment and bringing the inflationary forces under control. However, the savings rate can be improved only with an abatement of inflationary pressures, the continued creditable performance of the agricultural sector and a buoyant foreign trade. If production fails to maintain the present tempo even collection of taxes can fall short of the government's expectations. Sources in the North Block say that the shortfall in the customs revenue could be restricted at Rs 3500 crores in this financial year. There may be a 50 per cent shortfall in the Rs 2000 crore additional excise duty collection and the Income Tax Commissioners have already made it clear that they

The author is a Senior Lecturer in Political Science, Presidency College, Madras.

will not be able to step up collections beyond the target fixed in the budget. There may also be a tangible advantage out of the proceeds of sales of dollar bonds from the NRIs and OCBs and receipts under the amnesty schemes. There is every sign of credit squeeze which is likely to increase the inflationary rate to 30-40 per cent in the next financial year.

What we urgently need today is to make a serious effort to equate domestic saving with domestic investment. For that we need a two-pronged thrust:

a) to check the 'dissaving' by the government administration;
b) to streamline the administration for effective collection of revenue and for close estimation of revenue. For instance, the revenue from corporate taxes seems to have been understated in the present budget. [The revenue budget indicates the receipt from corporate taxes to be Rs 5400 crores in 1991-92 against Rs 6350 crores in 1990-91 (RE).]

◆

THE current year's non-plan budget expenditure and the revised non-plan budgetary expenditure of 1990-91 deserve careful attention. The government's non-plan expenditure demonstrates that the 'dissaving' attitude of the government in such items as police, defence, elections and interest payment are going to continue in the next budget (1992-93). As a result, the government may move towards reducing subsidies. Such tendencies may end up only in imposing increased hardship on the common man, instead of restoring balance in the economy.

Economic equity (distributive justice) stipulates that in any cutback in expenditure, it should not fall on non-productive expenditure alone which cares for the poorest and their basic needs.

The savings effected in the current budget year (1991-92) by the Finance Minister are: (a) Rs 435 crores by way of non-plan loans to public enterprises; (b) Rs 400 crores of fertiliser subsidy; and (c) Rs 451 crores in various non-plan other interest payments. (Table-I) In all, these measures will reduce the majore subsidy payments from 1.9 per cent of the GDP in 1990-91 to 1.2 per cent of the GDP in 1991-92.

If the government is really bothered about revenue expenditure why has the budget for the police been increased? This will result in the Indian budget culture of 'incrementalism' which will be carried over to the next budget. Secondly, the existing subsidy to public sector units cannot be suddenly eliminated without carefully restructuring the PSUs. Thirdly, Central assistance to plans for the States and Union Territories which stood at Rs 2348 crores is going to be considerably reduced. Introducing the Eighth Plan (1992-97) at the meeting of the National Development Council (NDC) the Prime Minister sent signals to the States to execute expeditiously the aided projects and strengthen the financial position with the elimination of subsidies and avoidance of waste. All these and others are going to subject the poorest sections in India to serious economic strain next year (1992-93).

Table I: **Central Government Expenditure**

Rupees in crores

	1990-91 (Revised)	*1991-92 (Budget)*	*Difference*
Non-Plan			
1. Interest Payments	21,850	27,450	(+)5600
2. Police	1581	1758	(+)177
3. Defence	15,750	16,350	(+)600
4. Postal Deficit	150	243	(+)93
5. Elections	60	200	(+)140
6. Charges payable to IMF	205	409	(+)204
7. Export Promotion	2700	1224	(-)1476

Grand Total	1,06,717	1,13,422	(+)6695

Source: Budget papers, July 1991-92.

Further reducing subsidies in items other than non-plan expenditure faces a lot of inherited constraints. Firstly, there is no single opinion on the volume of subsidies in India. In fact there are open and hidden subsidies well entrenched within the Indian economy. The official calculation that the net subsidies alone account for Rs 10,000 to 12,000 crores is an open lie and distortion of facts. Secondly, in almost all sectors of the Indian economy one can find the intrusion of subsidies both by direct and indirect ways. The mechanism of reservations and differential tax structure itself represents the various forms of subsidies. The result is that in the last four decades of planned economy we have built up, on the one side, a gigantic system of taxation; and, on the other side, we have simultaneously developed a whole network of subsidies.

◆

A rough estimate of the total Central and State taxes amounted to Rs 68,000 crores (1988-89). In that same financial year the quantifiable subsidies within the economy were Rs 88,000 crores. By this reality, anything between 70 to 100 per cent of tax revenues raised are in fact served to cover subsidies. It appears that the IMF-oriented financial strategies will attack the overt subsidies, some of them meant for the poor, as for example, the food subsidy. In fact, overt subsidies on food, fertilisers and export promotion were but a small fraction. It is also inferred that covert subsidies are in essence accelerating the tempo of production. As such there should not be any cut in those subsidies which are meant to generate further wealth and employment. With regard to other kinds of subsidies those cannot be reduced from the macro-economic level. Thus it has become necessary to identify and select subsidies to productive and non-productive sectors.

Subsidies which are intended to cover a large number of geniunely poor in India (43 per cent below the poverty line) should not be reduced at any cost. In fact restructuring of the public distribution system (PDS) is the order of the day to serve the poor better. Anti-poverty programmes which run on Central Government subsidies need to be revitalised and thus made a potential source of increasing the real incomes of those who are covered under it. In future efforts have to be made to minimise the political interest while framing and implementing anti-poverty programmes.

For instance, the much ambitious Integrated Rural Development Programme (IRDP) which was started in the year 1980 has suffered since then because the programme resources were deliberately sprinkled throughout the country to reap maximum political dividends. There has been no substantial economical benefit from such politically motivated anti-poverty and developmental programmes. Thus the depoliticisation of developmental programmes and anti-poverty programmes will enhance the real income of the poor people and provide near full employment. This falls within the ambit of the current economic policies and the implementation of the Eighth Plan which directly and indirectly depends much on government subsidies.

Even at this critical stage, it may be possible to save the poor as well as to reduce subsidies, provided the men who matter do some introspection and concentrate on basic economic issues affecting millions of poor. Thoughtless reduction of subsidies will cause further hardships for the poor and may result in social tension. Till we arrive at the stabilisation of the economy, it is necessary to ensure that in respect of rural-oriented programmes (which enjoy substantial subsidies in various forms) every caution has to be taken to arrest the generation of considerable money incomes. Because any rise in the real incomes of the newly employed should not result in the fall of the real incomes of those who are already employed.

◆

OUR enthusiasm for the competitive market system has its own limitation. As such it cannot be a quickfix solution for the problems of the Indian economy. For instance, out of 244 PSUs under the Central Government 98 are loss-making PSUs. Of these the loss-making PSUs operating in the competitive market were the ones which accounted for 79.3 per cent of the accumulated loss. Thus even in the competitive market mechanism, the Centre has to continue with indefinite budgetary and subsidy support. Budgetary support to the Central PSUs is budgeted to decline from 1.5 per cent of the GDP in 1990-91 to 1.2 per cent of the GDP in 1991-92. Things can be set right by replacing outmoded technology and over-employment without resorting to cut in the subsidies alone.

In the agricultural sector substantial subsidies involved in providing free electricity have to be reviewed and restructuring the tarrif of the State Electricity Boards (SEBs) could be the other strategy to reduce subsidies. For the small and marginal farmers the present rate of 14.6 paise per unit can be continued.

In the oil sector, as per the report of the Narasimhan Committee (December 1991), it is necessary to link petroleum products to the international level and reduce the subsidies for cooking gas. In the revenue side there is a need to increase the excise duty on luxury consumption goods which is very marginal now. Our revenue effort through direct taxation has to be increased. The sale of PSUs' equity (20-30 per cent) will reduce the fiscal deficit. There is, therefore, a clear case for an effort at raising larger resources.

Thus the fiscal deficit can be reduced through the reduction of subsidies but should not be restricted at the board economic-macro level. Our concern for any reduction of subsidies should permeate and penetrate into almost every major and minor sector of the Indian economy. It is the step-by step, sector-by-sector search for the reduction of subsidies that is not only unproductive but is also not intended for 43 per cent of the poorest in India. It is fortunate that this time the IMF never insisted on specific commitments from us, but it will not be the same in the next three years, where it may insist on reforms, not merely at the macro-level but at the very important strategic segment of the Indian economy.

To conclude, reducing subsidies is one plank of the deficit management strategy. Obviously success cannot be achieved through this process alone. It is right and proper that every patriotic appeal must be made to increase exports. All of us must resolve to take up productivity as a challenge. Reduction of subsidies must be governed by both growth and equity. Economic ethics in a democratic set-up demands that the poorest in India should not be in anyway affected by reducing subsidies. ■

Non-proliferation of Soviet Nuclear Weapons

M. ZUBERI

The emergence of a Commonwealth of Independent States from the ruins of the former Soviet Union has raised the troubling issue of the non-proliferation of the vast Soviet nuclear stockpile.

An estimated 27,000 nuclear warheads are deployed within the republics of Russia, Ukraine, Byelorussia and Kazakhstan. Thousands of tactical nuclear weapons are scattered over the various republics. The Soviet ICBMs are deployed in hardened underground silos roughly following the route of the Trans-Siberian Railway across the country. Bruce Blair, a former American Air Force missile-launch control officer and an expert on the Soviet nuclear command and control systems, says that Soviet safeguards against unauthorised use of nuclear weapons have been "more stringent than those of any other nuclear power, including the United States".

Until recently there were several layers of control and the Soviet President as well as the Ministry of Defence had to provide a special code to start the launching process. Warheads were guarded separately from the missiles; the missile silos generally contained two regular servicemen and two KGB men. To arm a missile, a 12-digit number had to be punched into an electronic cypherlock; punching the wrong code could permanently disable the warhead. Moreover, each code was good for only one warhead or a small group of warheads. Special electronic keys and blocking devices strengthened the security arrangements. During the abortive August coup, the commander-in-charge of mobile SS-25 ICBMs reportedly sheltered them in garrisons where they could be safely kept away from turmoil. According to all recent reports, there has been no loosening of the electronic grip and centralised control over the stockpile.

Far more complex than the custody of nuclear weapons is the question of the unity of the command, control, communications and intelligence network and the impact of the emergence of independent states on this network. Command and control is more than custody of the so-called "Nuclear Button" containing the codes for the release of nuclear weapons. The vast array of early warning systems, underground, mobile and airborne command centres, monitoring stations and command and control bunkers for the top civilian and military leaderships are components of this complex and vastly-dispersed system.

The Soviet Air Defence Forces headquarters near Moscow made the early warning and attack assessment which had to be passed on to some 30 military National Command Authority bunkers. Multiple hardened facilities and mobile command vehicles and aircraft provided support. Nine intermediate strategic force headquarters and about 300 launch centres controlled the land-based ICBM forces. There were also a number of airborne command centres. At any time 15 to 20 Soviet ballistic missile submarines were away from their home bases.

According to American sources, 12 of the 16 Soviet bases for the ICBMs were in Russia as were 10 of 12 mobile ICBM bases, all six ballistic missile submarine bases and 11 and 26 strategic bomber bases. Some early warning satellites were launched from Kazakhstan and many radar systems were outside the Russian territory with some in the Ukraine and Byelorussia. The entire command, control, communication and intelligence network was linked to Moscow. Fragmentation of this network, builtup over several decades at enormous cost was a major concern of Gorbachev during the last days of his presidency of the former Soviet Union.

The deliberations at Alma Ata were inconclusive on this issue. It was agreed that Russia will have the custody of the codes for the release of nuclear weapons subject to a collective decision-making process involving the Ukraine, Byelorussia and Kazakhstan. This would mean that Moscow, Kiev, Minsk and Alma Ata will be linked together on the deadly issue of nuclear war. But as the *Financial Times* of London has reminded us, Alma Ata is nearer to Beijing than it is to Minsk and Minsk is half the distance from London than from Alma Ata. Air Marshal Yevgeny Shaposhnikov is the interim head of all the armed forces. A clear

The author, a noted expert on disarmament issues, belongs to the Centre for International Politics and Organisation Disarmament, Jawaharlal Nehru University, New Delhi.

delineation of nuclear responsibilities has not been made so far. Eduard Shevardnadze stated on December 30, 1991 that he was worried about the possibility of nuclear weapons, scattered all over the Soviet Union falling into the hands of para-military forces.

◆

DESPITE these agreements, there were important nuances distinguishing the postures of the republics on the nuclear issue. The Ukraine has at present such a large number of strategic and tactical nuclear weapons on its territory that it can qualify as the second most powerful nuclear weapon power in Europe, Russia being the foremost such entity. Its stockpile is larger than the combined total of the British and French holdings. During the recent elections in the Ukraine, all nationalist candidates including President Leonid Kravchuk spoke against the transfer of nuclear weapons to Russia on the ground that they did not want to strengthen "Russian imperialism". There is, however, a strong anti-nuclear movement in the country and Chernobyl is a grim reminder of the nuclear danger. The Ukraine would like to have the status of a nuclear weapon-free country and is willing to subscribe to the NPT and other arms control agreements. It would prefer nuclear weapons on its territory destroyed as soon as possible and has even made a request seeking assistance from American experts for this purpose. Byelorussia would also like to get rid of nuclear weapons on its territory and join the NPT.

President Nurusultan Nazarbayev of Kazakhstan assured James Baker that his republic was for joint control over all Soviet nuclear weapons. This posture is coupled with his insistence that his republic will keep nuclear weapons for as long as Russia does. There is an unwillingness to allow Russia to have a monopoly of these weapons. Semiplantinsk, the Soviet nuclear test site, is located in Kazakhstan. It has been shut down as a result of a mass movement led by a famous poet.

The United States and the other Western powers would like to have only Russia as a nuclear weapon power joining the NPT; the Ukraine, Byelorussia and Kazakhstan are expected to be non-nuclear weapon states signatories to the treaty. This can happen only if strategic and tactical nuclear weapons located in the three independent republics are either transferred to Russia or destroyed on their territories. Digging the land-based ICBMs from their silos in the republics, transporting them to Russia and building silos and other necessary structures for them is going to cost tens of billions of dollars and will take a considerable amount of time. Removal of all tactical nuclear weapons, including artillery shells, bombs and mines, is a much easier task but raises the vexed question of making sure that some of these portable weapons have not been kept in secret places.

Dismantling of the nuclear warheads would be a longdrawn process. Sergei Rogov, a Soviet arms control expert, estimates that it could take at least twenty-five to thirty years and it is difficult to predict the course of events over such a long period. Andrei Kortunov, another arms control expert, can picture a situation "in which the nuclear forces just melt—morale is down, people defect, computers malfunction, there is no checking, there are accidents, blunders and so on" and "this scenario could happen even next spring." A report prepared by experts at Harvard University has suggested that it would be faster to disable the warheads at site. Ashton Carter, one of the authors of this report, has outlined a programme of "quick and dirty" disarmament. Fissile material should be removed from warheads, then "wrap the pieces in plastic or metal wraps and squash them". This way the "geometry" of the material would be deformed thereby removing the possibilities of an explosion. Carter then suggests wrapping the fissile material in very thick plastic and putting it back into bunkers. This "quick and dirty" disarmament is not the final solution of the problem. The US Congress has sanctioned 400 million for the specific purpose of storing, dismantling and destroying these weapons.

◆

THE economic and political chaos in the former Soviet Union has raised another issue related to the non-proliferation of nuclear weapons; this is the possibility of Soviet experts in the nuclear military field leaving the country and their services becoming available to other states. In a recent interview with a Moscow newspaper, V.N. Mikhalyov, an important member of the nuclear weapons programme, lamented the poor living conditions of nuclear scientists. Insisting that his colleagues were "patriots and none of them wants to go abroad and work on creating weapons for anyone", he asked, "how is it possible to live now on 400 roubles a month?" And he added: "What is a person to do if he only knows how to make atom bombs and nothing more when he feels unwanted in his own country?" Vladlen Sirotikin, a Soviet historian and political columnist, recently declared, "give me a million bucks and I'll have a nuclear-tipped missile stolen for you and delivered any place you want".

William C. Potter, an American expert who conducted a nuclear non-proliferation workshop in Moscow in October 1991, has mentioned a Russian organisation called the International Chetek Corporation of Moscow, founded in December 1990, which provides peaceful nuclear explosive services as a desirable means of disposing of toxic waste, decommissioned reactors and retired nuclear weapons.

Assurances regarding the safe, reliable and centralised control of the nuclear stockpile of the former Soviet Union have been given by Gorbachev, Yeltsin and other responsible civilian and military leaders of the republics. Richard Cheney, however, declared on American television that central control over the former Soviet Union's 25,000 to 30,000 nuclear weapons was incomplete. According to him it was 99 percent successful but "you still have 250 (nuclear warheads) that they are unable to control".

The former Soviet Union's research reactors and nuclear power plants, scattered in different parts of the country, were not subjected to IAEA safeguards inspections because it was a nuclear weapon power The IAEA's safeguards are applied generally from the beginning of a reactor's operational life; this enables the Agency to have a complete inventory from the start-up of the reactor. The long duration of research reactor's and nuclear power plants' operation in the former Soviet Union raises the issue of verification procedures in arms control. If the Ukraine, Byelorussia and Kazakhstan join the NPT as non-nuclear weapon powers, the IAEA will face the unprecedented task of preparing an authentic and complete inventory of fissionable material in their nuclear installations.

Nuclear weapons appear to have become bargaining chips in the negotiations between Russia, the Ukraine, Byelorussia and Kazakhstan and between these republics and potential aid donors overseas. Recognition of independent status and economic and technological assistance would depend on a satisfactory arrangement about the custody and non-proliferation of these weapons. But as Senator Sam Nunn, Chairman of the US Armed Services Committee, put it:

> We are on the verge of either the greatest destruction of nuclear weapons in the history of the world or the greatest proliferation of nuclear weapons, nuclear materials and the scientific know-how to make these weapons. ■

Information on Six Media Efforts in English and Hindi

by Bharat Dogra

Media efforts that stand for the rights of weaker sections, for ecological consciousness, for equality of women and social reform. All these media efforts depend only on subscriptions and sales. Grants are neither sought nor accepted to protect our independence.
For any information on all these media efforts write to Bharat Dogara, D-7 Raksha Kunj, Paschim Vihar, New Delhi-110 063 (India).

I NEWS FROM FIELDS AND SLUMS IN INDIA (N F.S.-INDIA)
II PRESS-CLIPPINGS SERVICE ON DEVELOPMENT ISSUES IN INDIA DESIGNED TO MEET YOUR HIGHLY SPECIFIC NEEDS
III *SHURUAAT*—JOURNAL IN HINDI FOR WORKING CLASS READERSHIP
IV BOOKS AND PAMPHLETS IN ENGLISH AND HINDI
V POEM POSTERS IN HINDI
VI HANDMADE BOOKS

NEW BOOKS BY BHARAT DOGRA

India—Hope and Despair. Price Rs 300, $ 20 outside India, pages 340. This book starts with essays which stress the need for revising development concepts. Then India's economic, ecological, social and political problems are examined in this context. There are special sections on 'struggles' and 'aid and trade'. Despite dealing with many distressing issues, this is a book of hope, as it also outlines the steps which can be taken to significantly reduce this distress.

The Work and Life of Dr R.H. Richharia. Price Rs 100, $ 10 outside India, pages 106. This is the inspiring story of an eminent scientist who defied imperialist interests to protect the interest of rice farmers of India. The book includes the text of an action-plan for increasing rice productivity in India prepared by Dr Richharia at the request of the Prime Minister's office. This book also raises some wider problems of farm research in India.

In the Interests of Interest-aid, Trade, and Debt in an Unequal World. Price Rs 125, $ 10 outside India, pages 115.

Chipko: Social Background of an Environmental Movement

HARSH DOBHAL

The Himalayas are the life-support system providing basic subsistence to its inhabitants in particular, and all others in general. The source of major, perennial, life-giving rivers, the Himalayas have loomed large in the spiritual and religious life of the Indian civilisation. Today, the world's greatest and the youngest mountain range is being butchered in the hands of the modern capitalistic society. As the flora and fauna die, most people merely stand by and watch, horror-strick but silent. And yet there are some whose voices rise to protect the very finite part of this planet. The Chipko movement, today one of the most celebrated environmental movements of the world, was a people's initiative in this direction, up in the Garhwal Hills of UP, that spread out to the whole of India.

In true Gandhian spirit the satyagraha could only be observed by the people themselves relying on their own strength and organisation which gave a new direction to a non-violent struggle. After Gandhi most satyagrahas have failed to honour the commitments implied in the term and debased this noble idea and its credibility. Fortunately even in these times, Chipko demonstrated and reinforced the potential and promise of satyagraha before us.

'Chipko' literally means hugging, in this case encircling the trees with human embrace. Some writers have seen 'Chipko' as having its origin in an incident believed to have occured in Rajasthan in 1753, when members of the Bishnoi sect laid down their lives to protect the trees being felled under the orders from the Maharaja of Jodhpur. Amrita Devi and her three daughters alongwith 363 villagers are believed to have laid down their lives when they attempted to protect trees by hugging and axes fell on them.

Before the middle of the last century the only major intrusion by the state in the life of the people of Uttarakhand, before taking over of its forests, was the system of forced labour known as the '*begar* system'. This authoritarian system was protested against from time to time. In the middle of the ninteenth century the commercial exploitation of forests was started by the British and the Princely States. Prior to this exploitation nearly 75 per cent land was covered by forests. The lives of the people were inextricably interwoven with mountain culture and forests. The forests provided the basic subsistence. There was an absence of class differences within the village society, which to a large extent owes its origin to ecological characteristics of the mountain society, the close integration of agriculture with forests and pastures, the distinct ecologically determined hallmark of mountain society. There have always stood major ecological obstacles to the generation and emergence of social classes in the hill society. As Uttarakhand was virtually unaffected by external political forces, the system of properly regulated resource use had become an integral and permanent part of the social fabric. Later they were suppressed by the system of forest management, propelled by powerful economic and political forces, whose motives revolved around a radically different set of priorities.

The building of the railway network is a major landmark in the history of Indian forestry. In 1864, a Forests Department was set up hastily with the help of German experts as a result of tremendous destruction of accessible forests which aimed at supplying durable timbers. Himalayan pines provided the best answer and thus started the commercial exploitation of forests. For a period of 14 years (1850-1864) the forests of the Bhagirathi Valley were leased to the British by the then ruler of Tehri. Felling continued for another 20 years

The author is a student of M.A. (Sociology), School of Social Sciences, Jawaharlal Nehru University, New Delhi.

and the steep slopes could never resurrect, once felled.

Prior to this, forests were owned, managed, regulated and used by the local communities who always exercised their moral right over forests that formed a part of their culture. There was a close interaction between the local people and forests around, the very entity of which they subsisted. But now the forests were owned by the state depriving the local people of their rights which they held over centuries. Voice was raised against this act by women especially, as women are the worst suffers if we locate them into the social structure of the hill society. Later they were offered land for cultivation but deprived of the right to forests.

The logic of management departed drastically from the logic of villagers. Now all commercially insignificant weeds were eliminated permanently. These broad-leaved species provided fodder, fuel, food and fertility to the soil. Their place was taken by pine and this change in species had a disastrous effect on ecology which was the permanent economy of local people. With the disappearance of these forests water resources started drying up, soil erosion was accelerated. The prevalence of *chir* led to soil acidity. The villagers resisted this and their plea was: "We need broad-leaved food, fodder and fuel species to feed ourselves and our cows." But their protest was brutally suppressed.

Tapping resin was another form of exploiting forests commercially. During 1920 the number of resin channels tapped was 21,35,000 while in 1921 it was 2,60,000 only. This increase led to exporting turpentine to the UK and the Far East. Consequently, during World War II felling and sawings were pushed into the remotest areas which had so far not witnessed even the shadow of the modern form of development

This faced simmering discontent among local people, occasionally breaking into open revolts that, at times, accompanied attempts to take over forests. In 1930 a major agitation was launched against the Raja of Tehri for he had forged a nexus with the British to deprive the people of their rights over forests.

This exploitation and destruction of forests continued and so did the periodical protests. The state went on earning revenue and the so-called development in other areas of the country gathered momentum at the expense of the poor people of Uttarakhand. Besides, the various Forest Acts since 1864 have sought to keep away the locals not only from exercising their rights over forest wealth but have also deprived them of the basic necessities which they used to produce from jungles.

◆

THE consequent prolonged and simmering discontent found full expression in the form of famous 'Chipko' in 1973, that has focused worldwide attention on the grave environmental crisis in the Himalayan region. 'Chipko' can only be analysed as a response to the fragmentation of the village community and growing social and ecological disintegration of a traditional hill society. One can say that the increasingly changing, complex but antagonistic, relationship between the state and the people found expression in the form of popular consciousness generated by the Chipko movement. Within Uttarakhand there is a diversity in social structure at micro-level, and hence the movement took different forms correspondingly. As mentioned earlier, women again came to the forefront and that is why Chipko is often depicted as a women's movement.

Social protests, occasionally breaking out into militancy has been the history of the Paharis (hill people) of Uttarakhand. While most movements went unseen and unnoticed, 'Chipko' caught worldwide attention since it was a sustained and organised movement coupled with the charismatic leadership of Sunderlal Bahuguna, Chandi Prasad Bhatt and others who generated popular mobilisation and a new consciousnes. For the first time women realised that their active participation could change government policies. 'Uttarakhand Sangharsh Vahini' was a product of this movement which is even today actively involved in social work in this region. After Chipko's grand success, a new political, social and scientific consciousness has spread amongst the people here.

Sunderlal Bahuguna, the much respected environmentalist today, was a prominent Sarvodaya leader. Several times he agitated against liqour sale in Uttarakhand. He went on fasts with many others and several times the agitators were jailed too. In the early fifties the demand for a separate Hill State also gathered momentum. At the same time several students went on strike demanding the establishment of universities in the hills. The

Tehri project was opposed and *bandhs* and *dharnas* successfully organised in several towns. All these protests cannot be studied in isolation. 'Chipko' was the fullest expression of these protests and the people's attitude towards the state.

In 1970 the region witnessed the most collossal and devastating flood which marked the turning point in the ecological history of this region. Water inundated 100 square kilometres of land, washed away six metal bridges, 10 kilometres of road, 24 buses, several dozen other vehicles, 366 houses collapsed and 500 acres of standing paddy crop was washed away. The loss of human and bovine life was mind-boggling. As a direct consequence the Ganga Canal was blocked and around 95 lakh acres of land in eastern UP went unirrigated causing food scarcity. People realised the fact that due to denuded hill slopes, deforestation, and butchering of trees, the soil had become too fragile to retain water and to bear the onslaught of heavy rain. People realised that the survival of trees was the survival of people.

The cumulative effect of all these realisations was the people's fight to protect the forests. In 1973 the local organisations were denied allotment of ash trees in order to make some agricultural implements. Instead the Symonds company was alotted ash trees. The people organised against this injustice.

First, they stopped timber trucks, burnt resin depots and argued with the government officials and contractors. Sarvodaya workers were the most active people. Several methods were applied but found unsatisfactory. Finally, they thought of 'hugging trees' by human embrace to stop felling. They said: "If the axes have to fall, they will fall on us first." This was a spontaneous reaction of helpless people. The government tried its best by wheeling and dealing but they would not give up. Once in the absence of the menfolk, Gaura Devi, the head of the Mahila Mandal, organised an all-women agitation against the contractors who had reached there in the absence of the menfolk, as a part of their devil strategy. The women very valiantly forced them to retreat from the brutal act of felling trees.

Despite all those agitations the government went ahead with its work and so did the periodical protests, dharnas and picketings by the people. Their leaders would observe fasts in the jungles even on chilly winter nights. For almost ten years the movement sustained itself.

In 1981 Sunderlal Bahuguna urged a total ban on green felling in the Himalayan region above an altitude of 1000 metres. When unheeded and unnoticed, he undertook an indefinite fast and met Mrs Indira Gandhi, the then Prime Minister of India. As a consequence a committee was set up and a Model Forest Conservation Act was formulated by the State Government which became quite controversial in later years.

The Chipko leaders have been spreading their message thereafter which included a 4780 kilometre footmarch by Bahuguna from Kashmir to Kohima. Chipko adheres itself to alternative development schemes also.

Thus, Chipko represents one of the most positive and innovative responses to the ecological crisis of the modern industrial society. It can be analysed as a romantic reunion of man and nature, science and culture, tradition and modernity. It was a spontaneous reaction to rescue a hill society from the ravages of the modern capitalist onslaught. The Himalayan ecological crisis cannot be studied in isolation, rather it can be rooted in modern materialistic civilisation which has disastrous future implications.

Chipko also had its underlying ethical notions of morality, equity and social justice. It has consolidated and catalysed social consciousness of the hill people against exploitation, neglect and deprivation that they suffered for decades together. Chipko quite successfully has been trying to arrest this Himalayan tragedy. Not only the Himalayas but the very survival of the whole eco-system is in crisis today, and that is why the slogans of Chipko find an echo far and wide, cutting across all boundaries. Today its relevance extends way beyond the parameters of conservation, afforestation and ecological harmony into the very realm of humanity, peace and brotherhood. ■

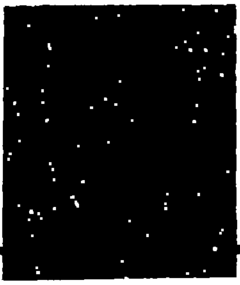
"Higher Productivity alongwith continuous improvement in the quality of tea"

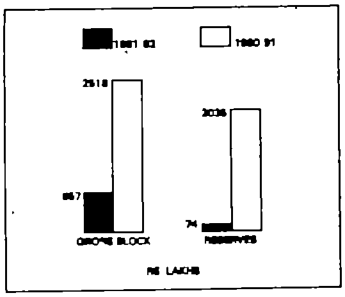


Excerpts from the speech of Mrs Shirin Paul, Chairperson, Assam Frontier Tea Limited, at the 14th Annual General Meeting held on September 27th, 1991 at Talap, Assam

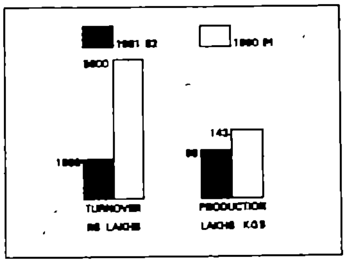
The Management pays its homage to the Late Rajiv Gandhi whose life was cut short by assassins He dreamt of a strong modern India He was committed to the upliftment of backward and underprivileged classes The policy measures that the new government headed by Mr P V Narasimha Rao has taken so far promise to unleash the latent productive forces in the economy In the highly competitive environment that is sought to be created, there has to be greater awareness of productivity and cost effectiveness

Assam Frontier Tea Limited has once again produced excellent working results for the year ended March 31, 1991 The company's sales are up from Rs 52 75 crore to Rs 56 crore while the profit before depreciation and taxation has risen from Rs 18 92 crore to Rs 19 84 crore In view of this encouraging performance, the company has paid a total dividend of Rs 10 50 per equity share, including the interim of Rs 3 50

Due to unfavourable climatic conditions, the 1990 crop at 143 62 lakh kg was marginally lower than the previous year's crop of 145 30 lakh kg Higher unit value realisation, however, enabled the company to record an increase in turnover



Sustained efforts at improving the quality of teas produced and effective cost control measures have stood Assam Frontier in good stead The company's working vindicate the management's investment decisions of earlier years The cornerstone of the strategy formulated by the company's erstwhile chairman Late Mr Surrendra Paul is that higher productivity must be achieved alongwith continuous improvement in quality

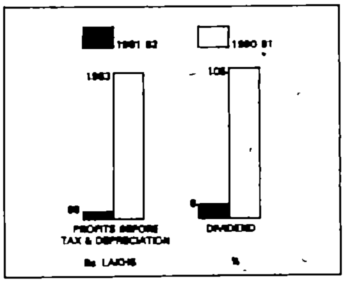


How well the company has been run since the present management took it over in 1981-82 will be evident from the increase in gross block from Rs 6 57 crore to Rs 25 18 crore and of reserves from Rs 74 lakh to Rs 20 35 crore Earning per share is Rs 21 It is gratifying for the management that Assam Frontier is a much sought after share on the stock exchange

The prospects for the current year look encouraging An improvement in productivity and quality is expected, thanks to the favourable growing conditions

Export has always been given pride of place We must not spare any efforts in stepping up export sales in view of the unprecedented balance of payments crisis faced by the country We have been successful in exporting our tea to Iran for the second consecutive year Teas were also exported to the traditional London Auction Centres where the price realisation was, however, disappointing Your company's teas received good support from the Russian Agents at the domestic auction centres and German buyers showed an interest in our teas We continue to explore new avenues for bulk and value added packet tea exports

Your management remains deeply committed to the welfare of the staff, workers and their families The recent industrywise agreement with the Assam Cha karamchari Sangha will benefit the members of the staff The company's various socio economic projects not only benefit its own workers but also the people living around the tea estates Construction work of the Bogdung School adjoining our Khanjan Estate is progressing satisfactorily The completed portion of the school is being utilised by the students of the locality Other schools set up during the year at Budlabeta, Hokonguri and Hapjan have gone a long way in meeting the educational needs of the localities The Apeejay Medical Centre at Longsoal is now well supplemented by a modern well equipped mobile clinic, which is providing antinatal care and immunisation to children in the remote rural areas



Note This does not purport to be a report of the proceedings of the "Annual General Meeting "

Perestroika and the History of Russia

VLADIMIR G. KHOROS

This article was written before the formal dismantling of the USSR last month.

—Editor

Some of you may have seen *Andrei Rublyov* made by our outstanding film director Tarkovsky. The film is about the great Russian painter of the fifteenth century. At the same time it is a certain symbol of Russian history. Tarkovsky focuses his attention on the triangle "power-intelligentsia-the people". Each of the elements of the triad is doing its own work: power rules, the people automatically obey the former and the intelligentsia (which is personified by Andrei Rublyov) is somehow trying to humanise the relationship between power and the people. These efforts fail. Power tramples not only common people but also artists. Rublyov's icons are destroyed, churches are plundered. At first Rublyov gives way to despair but then comes to a stoic decision: to continue doing his work despite everything, wandering about the villages, painting churches, rejoicing the people. The sides of the triangle do not intersect.

Such is Tarkovsky's sad interpretation of Russian history which to a certain extent reflects the reality. If we take Tarkovsky's triangle as the starting-point for looking back into our past we shall see that very seldom did the three sides unite into the whole. This usually happened only under the impact of external danger, wars and invasions. During the rest of the time only two forces interacted at best: sometimes intelligentsia supported power without too much considering the needs of the common people; at other times, just the other way round, intelligentsia tried to win the people over to their side in the confrontation with power. Sometimes power and the people united to persecute intelligentsia.

On the whole, the existence and evolution of each side was mainly determined by its own inner motivation.

Perestroika which is underway in our country has stirred public opinion. Heated discussions about the guidelines of economic and political reform and the optimal solution of urgent social problems are taking place in the USSR. In my opinion, such a solution can be found only within a historical context. There is no perspective without retrospection. This particularly refers to the historical evolution of Russia with immense inertia inherent in it. This inertia, so to say strength of materials, as well as such elements of cultural tradition that could facilitate progress, should be taken into account by any earnest social engineer. Being a historian, I will try to outline the retrospection within the above mentioned triangle "power-the people-intelligentsia".

Professor Khoros, a Doctor of Historical Sciences, is the Head of the Department of Politology at the Institute of World Economy and International Relations under the Academy of Sciences, Moscow.

◆

POWER: Restructuring in Russia has always been initiated from above. The present *perestroika* is the third in succession. Comparing these transformations one can observe certain common trends.

The first *perestroika* took place when Peter the Great carried out his reforms in the first quarter of the eighteeenth century. Historians have often presented Peter as a man who wanted to Europeanise Russia, raising it to the level of Western civilisation. However, actually Peter had no especially elaborate programme for his policy; he was dragged into it under the impact of the circumstances, in the course of the Northern war. Certainly, he sought "to open the window into Europe", to make Russia a maritime power. But this was what Ivan the Terrible had also sought. What distinguished Peter was the fact that having got familiar with foreigners since his childhood and having estimated their knowledge and technical skills he managed to find the key to the task of foreign policy—borrowing European experience for the modernisation of the army. But while pursuing his policy Peter created something more significant, that is, certain social structures that demonstrated considerable historical stability.

The centre of these structures became the military-industrial complex, if we apply a present-day term here. It comprised, besides the army and the navy, small arms factories, manufacturers supplying personnel with all necessary commodities, construction works, road service, etc. Besides, Peter needed well-trained soldiers and officers and for this purpose the system of training and education was expanded and improved. Finally, the implementation of the given programme required the reform of government and Peter spared no effort to make old Russian bureaucracy more dynamic and rational making use of the experience of German, Swedish and Dutch institutions.

Hertzen once said of Peter's reforms that Peter had fixed European arms to an Asian body. But the body did remain Asian. Moreover, the pressure on the toiling population greatly intensified. Peter transferred serfdom from rural to urban areas, to the sphere of industry. Violence and coercion became the major means of implementing the planned projects. Construction of Petersburg can serve as a vivid example of it. Duties were increased threefold, and the population decreased by one-fifth during Peter's reign—such was the price of Peter's modernisation campaign.

As a result, a structure was created which can be defined as a model of pre-bourgeois empire which, nevertheless, coexisted and competed with other more developed Western countries. The model was characterised by the following features: (1) selective borrowing of technological (mainly military and industrial) achievements of Europe in exchange for the export of raw materials; (2) intensification of exploitation of the people based on pre-bourgeois, despotic methods; (3) growing centralisation and bureaucratisation of government.

One can see that the model created during the period of Peter's reforms was characterised by inner contradictions, but at the same time by peculiar rationality permitting periodical renovation, albeit at an expensive price. To complete the picture mention should also be made of rich domestic resources and the patience of the Russian population. No wonder that in international politics beginning from Peter's reign Russia became one of the first fiddles in the European orchestra.

◆

HOWEVER, after a century and a half this fiddle began to play out of tune. Russia suffered a defeat in the Crimean war and it was obvious that the military triumph of Europe resulted from a vast (and increased) difference in the levels of social development and that Russia would no longer be able to borrow Western technological achievements unless the level of economic and cultural development, as well as management, rose. In the 1860s a series of reforms, primarily the abolition of serfdom, began to be implemented. That was the second *perestroika* in Russia.

This time transformations were much more extensive and profound as far as borrowing the experience of European institutions is concerned. Not only was the peasantry liberated from the bondage of serfdom, but local *(zemstvo)* self-government was also obtained. Trial by jury was introduced and press censorship became less strict. All this paved the way for a more extensive development of bourgeois relations.

Nevertheless, the already familiar empire model manifested itself at this stage as well. On the one hand, the government encouraged bourgeois relations; on the other hand, it held back their development. Numerous remnants of serfdom managed to survive. The implementation of land reforms was dragged out for many decades (the final redemption of peasant land was planned to be completed only by 1930). Changes in political structures were minimal with rigid bureaucratic centralism limiting social initiative, possible positive results of juridical and *zemstvo* reforms, as well as that of the press. Imperial policy, as before, had its own priorities: after the conquest of the Caucasus, the annexation of Central Asia was carried out and the expansion in the Far East was started.

At the beginning of the twentieth century, contradictions inherent in the empire model led to its collapse. Power structures were weakening, social tension was growing having engendered a strong revolutionary movement from below. The unsuccessful wars of 1904 and of 1914-17 also contributed to its collapse.

I will not specially dwell on the October Revolution as we are speaking about restructuring, that is, reforms initiated from above. I would only like to point out that the socialist revolution in Russia could develop in different ways: It could develop into democratic, cooperative-market socialism (which was outlined by NEP) or into a centralised, administrative-commanding system (which emerged during the period of 'War Communism'). The second alternative prevailed over the first. Bearing in mind the subject of this article it should be emphasised here that once the Stalinist regime became firmly established, a peculiar restoration of the Russian empire model took place, albeit its ideological contents were different. All the features of the old model were present: industrialisation oriented primarily towards the establishment and development of a military-industrial complex; non-economic methods of production organisation; rigid political centralisation; forced or semi-forced labour.

Limitation of space prevents me from a detailed analysis of the causes of the above mentioned restoration. I will try to explain the phenomenon with the help of the following comparison. In the

Hindu-Buddhist culture there is a concept of *karma*—the burden of previous existences of man which can be rationally looked upon as genetic heritage. In a sense we can assume that whole nations have their *karma* and that some or other cultural stereotypes are inherited by successive generations forming a sort of invariant. The empire invariant was also acting during the period of 1930-70. Once again was the society drawn into a grave social strain which caused a considerable lagging behind developed countries. By the mid-eighties the critical situation had become obvious and this necessitated the third *perestroika* in Russian history. This time the tasks facing *perestroika* are much more complicated and challenging because the main problem consists in the fact that it is necessary to renounce the very model which the country had stuck to for about three centuries with the exception of short intervals.

◆

THE PEOPLE: It consisted mainly of the peasantry which was patriarchal as far as economic relations, way of life or cultural and psychological characteristics are concerned. It was characterised on the one hand, by an obvious anti-landowners mood; and on the other hand, by strong Czarist illusions, based on the belief that the monarchy should settle its conflict with landowners giving the land to the peasants. Hence the social passivity of the Russian peasantry, its patience towards the exploiters.

During the sevententh and eighteenth centuries not once did the peasant protest take the form of large-scale uprisings (as those headed by Razin, Bolotnikov, Pugachev). All those were actions mainly of a particular social stratum—the Cossacks, who were more mobile and militant as compared to the peasants.

Besides, peasant riots, as a matter of fact, did not exceed the limits of feudal order as far as their slogans are concerned (against the landowners but for 'the kind Czar'). As a strong third estate was not available, the peasant masses yielded to the processes of bourgeois transformation only very slowly. Feudal structures of Russia could not engender any stable elements of bourgeois law; Russian peasants had never been private owners of their land.

From the second half of the nineteenth century the working class began to take shape and develop in Russia, its most progressive contingents (metal workers and railwaymen) quickly acquired political consciousness imbibing revolutionary socialist ideology. But they were not numerous, surrounded by a mass of proletarians of the first generation, their psychology being close to that of the peasantry.

Being socially inert and a politically passive class, the Russian peasantry at the same time created a peculiar folk culture, albeit pre-bourgeois and not much developed but to a certain extent integral and attractive. Not without reason did great Russian writers from Pushkin to Leo Tolstoy and Bunin describe it with such enthusiasm and it was also admired by the *narodniks* (Russian populists). But from the second half of the nineteenth century folk culture was subjected to a deep-set erosion which caused grave and far-reaching consequences.

In Russia, which was a country of belated capitalism, the emergence and development of the bourgeois system was stimulated from outside rather than being an organic process. In contrast to the long centuries of European development, this process was pressed in time and met with strong opposition of traditional institutions, stereotypes of consciousness hampering it as well. Hence initially, especially in the reflection of public opinion, the influence of capitalism on the society was seen as destructive rather than positive causing social decay. Thus after the reform of 1861 there emerged in the countryside landless or land-starved peasant households (their share accounted up to one-fifth) which for a number of reasons (strict administrative barriers to their secession from the commune, insufficient demand for labour in the industrial sector) found themselves, so to speak, between the city and the countryside.

Keen observers did not fail to note the growth of this stratum. Gleb Uspensky, a well-known publicist and an expert on peasant life, wrote in the 1880s that the Russian peasant had endured everything: the Tartars, the Germans, but he could not endure 'the rouble shock'. Uspensky expressively described this product of decay in the countryside as 'angry paupers'.[1] And at the end of the century, Russian literature and the press expressed their anxiety over the problem of *bosyachestvo*[*] as a widespread phenomenon.

What did this process signify? It was not only a matter of the emergence of paupers, outcasts (Uspensky had every reason to speak of 'angry paupers', not simply pauperism). In Russia a category of people was growing that can be described as socio-cultural lumpens. In sociology the notion of lumpens is traditionally associated with poverty, material privations caused by declassing. In my opinion, it should be also (if not primarily) associated with socio-cultural uprootedness, alienation from previous social class or social estate structures which provided a person with not only fixed social status but also certain cultural orientation. Uprootedness which was not accompanied by the process of taking roots in new social strata (of bourgeois society), in a new system of values.

Thus, uprooted elements emerged in all marginal social groups. At the end of the nineteenth century, besides declassed peasants, there were declassed gentry, merchants, intellectuals, etc. in Russia. In a famous play by Gorky, *Night Asylum*, almost all the strata of Russian society of that time are represented.

Uprooted consciousness is usually rid of previous values and stereotypes. A cultural cover falls down, revealing instincts. Primarily the instinct of survival, but simultaneously the instinct of destruction, aggression, revenge on the society for having pushed the marginals out of it. Lumpen consciousness is, certainly meagre and easily succumbs to hypnotism and manipulation but it is only a semblance of that *tabula rasa* on which Mao Zedong was going to inscribe any character. In fact only those characters can be inscribed that are in keeping with "cleared", "decultured" instinctive motives. Therefore, lumpen consciousness presents an odd mixture of levelling ('to be like everybody') and self seeking, asceticism and thirst for possession, plebian democratism and respect for hierarchy, striving for learning and hatred of educated people and culture at large. Their political behaviour is also ambivalent: inclination to anarchist riots is easily transformed into willingness to submit to power, strength (particularly when one is associated with them).

◆

THE lumpen strata increased considerably in the twentieth century during the period of the three revolutions (in which they took an active part), imperialist and civil wars, in short all the great upheavals that have befallen Russia in the first quarter of this century, when destruction of the society caused by belated, 'peripheral' capitalism was greatly aggravated during states of emergency, that is, wars, famine, privations. By mid-1920s groups of such 'lost' people, culturally disoriented and declassed elements, had formed such a critical mass that that became the social mainstay of Stalinism.

Simultaneously with the mass declassing of society, the corresponding ideology of 'barracks socialism' was also taking shape. Its roots can be traced back to the sixties of the nineteenth century. It was then that Nechayev, a lumpen intellectual, came on the scene with his ideal of a society where 'as much as possible should be produced and as little as possible should be consumed' and with his Jesuit methods of revolutionary struggle. It was then that Tkachev came on the scene. He openly called for forcing the working masses 'to readjust their life... according to the ideal of the best and justest society'[3] after the revolution. Certainly the majority of the revolutionaries were by no means as blunt and consistent as Nechayev and Tkachev. But the trend of barracks socialism in one or another, form can be traced down in the Russian liberation movement up to the 1920s. If it were not for this we would not be able to comprehend the phenomenon of War Communism, for instance, or to understand why in the 1920s some Marxist historians considered Nechayev and Tkachev as forerunners of Bolshevism.

With the appearance of Stalin the ideological trend of barracks socialism and its mass exponent (socio-cultural lumpens) finally met. Stalin, who to a certain extent was an outclass figure himself, understood the psychology of this stratum better than anybody. He deliberately flooded the party with a motley element—from the Kaganoviches and Malenkovs at the top to the smallest pawns of the party mechanism. He was the first to realise as to who could carry out collectivisation in the countryside: the 'depeasantised' and resentful lower strata. In building an administrative-command system he took advantage of the political traditions of Russia. He did not have to invent anything, the only thing he had to do was just to let loose the accumulated trends already available in society.

But having come to power in a wave of socio-cultural lumpens, Stalinism intensified it considerably and spread it to the whole society. This was achieved primarily through deindividualisation of man, through binding him to the chariot of the state economically, politically and culturally. A system was created where a concrete individual could mean anything only being an integral part of one or another state unit. In the 'barracks' society with its rigid economic and political structures, with levelling made state policy, with a corresponding system of propaganda, education and moulding of the young generation lumpen, culturally uprooted consciousness was reproduced on its own basis. Isolation of society served the same purposes. Isolation not only from the milieu, but also from the country's own national and cultural past. Primitivsation of Marxism, negation of pre-revolutionary Russian culture and of 'alien' scientific achievements, persecution of religion—all those were components of one and the same process.

Unfortunately, we still remain at the stage of administrative-command, barracks socialism. We have not been able to overcome it yet despite all attempts at de-Stalinisation, *glasnost*, developing tendencies of democratisation and economic reform. Levelling-socialist ideals still serve, either in a latent or patent form, as the main values for an overwhelming majority of people. And quite a number of characteristic features of 'uprooted' consciousness—low standards of labour, ignorance, irresponsibility, voluntarism, etc.—have survived. In my opinion, it is this circumstance that serves as the main obstacle to *perestroika*.

◆

INTELLIGENTSIA: In the eighteenth and at the beginning of the nineteenth centuries, the educated strata was allied to power. Such a standpoint can be explained by their acceptance of the empire model; besides, it reflected the privileged interests of the nobility. But after the war of 1812 the situation changed. Having got familiar with the order in more developed countries during the European campaign, progressive-minded officers were staggered and embittered on realising the formidable backwardness of their own mother country. They returned home full of democratic ideas and large-scale plans of modernising Russia. Thus national self-consciousness as well as national intelligentsia were awakening.

Sir Isaiah Berlin described the phenomenon of Russian intelligentsia as 'the largest single Russian contribution to social change in the world'.[4] As a matter of fact even the term "intelligentsia" came into existence in Russia. If in the last century in Europe the notion "intelligence" meant intellectual, mental ability, in Russia it became associated with a certain social stratum or social force, not with just educated people, but with a group which stood opposed to power and in defence of the people, the interests of the nation at large and considered itself responsible for the future of its mother country and its development.

From the very start the Russian intelligentsia found itself in extremely difficult conditions. It constituted an insignificant minority of the population which was between the hammer and the anvil. It was confronted by a colossal repressive machinery of a police state. But it was also isolated from the common people by a very wide social and cultural gap which it failed to overcome during the nineteenth century. The Russian bourgeoisie which was weak economically and passive politically was not its ally either. To complete the picture, mention should be made of the fact that the Russian intelligentsia existed as though within two rather incompatible cultures—national and European. No wonder that its history is an incessant drama of ideas and events.

Hence the tremendous concentration of thought which gave birth sometimes to bold reformatory projects and sometimes to social Utopias. Hence revolutionary heroism of individuals and small groups which for a long time had to carry on their shoulders the liberation movement in the country. Hence an urge to create a specific revolutionary party which would be able to stand up to the struggle with a police state without broad support from below. Such an organisation finally founded by the Bolsheviks proved to be an effective instrument of struggle but at the same time it implied a potential danger of dictatorship.

The main problem facing the Russian intelligentsia consisted in overcoming national backwardness and helping Russia to join the European civilisation. The Decembrists tried to solve this problem in a direct way—"by shifting France to Russia", as Alexander Rosen, one of the members of the clandestine society of the Decembrists, remarked. On December 14, 1825 the Decembrist officers were very close to staging a military coup, abolishing serfdom and setting up a constitutional monarchy and,—who knows?—probably, assisting Russia to catch the departing European train. In any case they could have taken this opportunity, which was unique in the struggle of the intelligentsia against power right through the nineteenth century.

Undoubtedly, it would have been extremely difficult to exploit the opportunity—the Decembrists were much too isolated both from the people (who treated them as the nobles, the masters) and the bulk of the landowners, as well as the power structures that did not accept liberal ideas. Therefore, the defeat of the Decembrists was natural. It was perceived by the public opinion as a proof of the fact that it was impossible to implement purely enlightened, imitative projects of modernisation in Russia and that it was necessary "to interbreed" elements of European civilisation and national traditions on Russian soil.

For the first time the problem of such synthesis was formulated distinctly by the philosopher Pyotr Yakovlevich Chaadayev, an ex-Decembrist by the way. In his famous *Philosophical Letters*, Chaadayev very convincingly exposed the historical backwardness of Russia where despotism and serfdom had been ruining the creative energy of the nation. Europe, on the contrary, had advanced very far ahead due to its centuries-old cultural work and more humane political institutions. How could this lagging behind be done away with? Chaadayev gave the following answer: backwardness is not only a defect but also *an advantage*. Starting later than other countries a backward country can, first, profit by the already available achievements of the more developed countries (technology, economy, institutions, scientific thought, etc.). Second, the Russian civilisation is young in terms of history, its people are not burdened with longstanding traditions, they are simple-minded, ready to accept any idea. Finally, even slavery and the fact that the people have been accustomed to obedience can become a powerful factor of development if enlightened power makes use of it for the benefit of progress. Moreover, if Russia embarks upon this path it may well surpass the West.

Chaadayev's *Letters* are imbued with a striking combination of pessimism and optimism, national self-humiliation and nationalistic-Messianism. But this is why different social schools and political trends within the intelligentsia originated from his ideas. The Westernisers-liberals advocated the priority of European methods in the process of modernisation. Slavophiles, on the contrary, fell into the negation of cultural backwardness of Russia, though admitting technological backwardness. Contrasting "communal" Russia with "individualistic" Europe, A.S. Khomyakov, one of the founders of Slavophilism, said: "It would be a shame not to surpass Euorpe."[5]

As a matter of fact, staunch Slavophilism and occidentophilism, as any extreme trend, were not politically influential. But certain elements of them were synthesised peculiarly in the ideology of the revolutionary intelligentsia. For Hertzen the European experience was no longer embodied in bourgeois civilisation but in socialism as a natural outcome of the contradictions of European capitalism. The advantage of Russia's backwardness, according to Hertzen, consisted in the fact that Russia could bypass the bourgeois phase and build a socialist society on the basis of a peasant community (or a small producers' cartel). This theory was supported by Chernyshevsky, a well-known Russian thinker and publicist, and formed the basis of the *narodnik* movement.

◆

THUS, socialism had become for the revolutionary intelligentsia the sought-for formula of overcoming national backwardness in a shortest, straightened way. What was the role of the socialist idea in Russia? On the one hand, it orientated, in a more resolute way then other theories, towards implementation of urgent social transformations: abolition of landlord property rights, introduction of democratic freedoms (*narodnik* slogan "land and freedom"). Inspired by the socialist future, the intelligentsia directed its energy to seeking contacts with the masses involving them in social struggle). At the same time, socialism introduced the spirit of Utopia into the intelligentsia's environment which later had a number of consequences.

First, contempt for capitalism, the "mercenary" bourgeois civilisation; desire to bypass and skip over it as fast as possible. Naive faith in a just society that can be built according to collectivist traditions of the common people.

Second, revolutionary extremism, proclamation of violence as the principal method of struggle. From the point of view of Utopian consiousness it is quite logical: any price can be paid for the achievement of a perfect, ideal society. Moreover, a Utopian can easily pass from violence for the sake of the people to violence upon the people if they, in his opinion, are politically passive or oppose something that would be beneficial to them. Emergence of barracks socialism, the Utopias of Nechayev and Tkachev, etc., which I have mentioned above, revealed quite distinctly this logic of a Utopian rovolution.

Finally, socialism in Russia integrated in some way elements of great-power chauvinism and Messianism. Bearing in mind the feasibility of the socialist idea Hertzen supposed that "our untilled soil... is more suitable for sowing grain reaped from Western fields".[6] But a fairly ordinary *narodnik* believed that the Russian people "would be the first to witness the establishment of socialism on earth".[7] A little later, during the Marxist period these Messianic trends manifested themselves in the aspirations for the leading position of Russia in the world revolution.

◆

MARXISM represented a significant shift in the world outlook of the intelligentsia—both from the point of view of the efficiency of revolutionary movement and as regards the problem of overcoming national backwardness. It acknowledged the progressive nature of capitalism, the necessity of developing productive forces. It appealed to the working class which is more susceptible to revolutionary propaganda than the peasantry.

At the same time there developed very rapidly two trends in Russian Social Democracy. One of them, the Mensheviks were akin to the Westernisers and liberals. They considered that at that time Russia needed only a bourgeois-democratic revolution and further development of capitalism was required, while a socialist revolution might be a matter of the future. And their political influence proved insignificant just like that of the Russian liberals.

The Bolsheviks headed by Lenin were closer to reality, to the national political scene. They were aware of the fact that the Russian revolution, as well as further development of Russia, could not follow the European pattern primarily because of the acuteness of the agrarian crisis, general cultural backwardness of the country and because the Russian bourgeoisie was still in embryo. Relying upon the workers they, at the same time, were striving to involve the peasantry into the revolutionary movement. The Bolsheviks assumed that in a country of belated capitalism where social tension was similar to the steam accumulated in a boiler, revolution could well outgrow the limits of a bourgeois revolution. They were ready to make use of this circumstance. And history presented them with such an opportunity in 1917.

But at this stage differentiation, which was not very noticeable at first, was beginning to take place inside the Bolshevik wing. Having gained power a number of leaders and party functionaries began to move more and more to the Left towards the Utopia of barracks socialism. It occurred not only under the influence, often not realised, of a corresponding ideological tradition (Nechayev, Tkachev and others) but also in a unique historical situation when basic social structures had been destroyed paving the way for any, even the most fantastic, experiments.

The other group comprised the minority of "old Bolsheviks" headed by Lenin. Even though Lenin was "the Kremlin dreamer" as Herbert Wells called him and he had also been tempted by the ideas of 'War Communism' and aspirations for the world revolution. At the same time Lenin was a sober-minded man and possessed sound pragmatism of a politician. Considering socialism as the way to overcome national backwardness, Lenin was aware of the enormous complexity of this task. His strategic design was to gain power and on the basis of this power to set off catching up with other nations in the spheres of economy, politics and culture. With this aim it was planned not only to make good use of the technological achievements of the developed countries but also to develop mixed economy, to encourage free enterprise, to induce foreign capital and to carry out cooperation of the peasantry.

Were these prospects practicable? I think so. In any case, several years of NEP demonstrated the economic efficiency of the adopted course. Unfortunately, soon after NEP was proclaimed Lenin died. He did not have time to lay the foundation of the corresponding power structures which would contain elements of political pluralism necessary for expressing the interests of various population strata and for providing the implementation of the adopted economic programme. He did not have time to realise the imminent danger from the side of the declassed strata as the basis of barracks socialism either.

The advent of Stalinism then became a terrible tragedy for the whole country, especially for the intelligentsia. Not only because the regime of barracks socialism took away the lives of millions of people and destroyed primarily the intellectual nucleus of the nation. The tragedy consisted in the fact that to a certain extent Stalinism had been prepared by the activity of intelligentsia. The roots of Stalinism can be traced back to the times when the intelligentsia began to *worship* "the people"—peasants, workers or simply "the common people". When writers, even so prominent as Maxim Gorky, expressed their admiration of tramps and declassed people. When poets like Block and Bryusev greeted "the coming Hans". When thinkers and politicians dreamt of the socialist paradise to come where all old cultural traditions would be done away with. Of course, it would be unwise and irrational from the point of view of history to reproach the Russian intelligentsia with this—at least because it paid for its faults in full.

◆

AND now, almost three centuries after Peter's reform, we are approximately at the same point on the axis of world history. The window into Europe was opened long ago. Leo Tolstoy, Dostoyevsky and others who brought worldwide fame to Russian culture created their masterpieces. Sputniks and spaceships made on Russian soil are ploughing the space. But the country is still facing the problem of how to join the ranks of developed societies and the world civilisation.

Our situation is difficult. The inertia of past decades and even centuries is extremely strong. The empire model still appeals to a significant part of the leaders and the population. The society is tired of constant social strain, everyday inconveniences, propagandistic hypocrisy. Labour discipline is not improving, if anything it is deteriorating.

I have no panacea to offer. As a historian I can only draw a number of conclusions from the previous national experience. If we don't want the third *perestroika* to be like the two previous ones the sides of the triangle "power-intelligentsia-the people" should intersect. First of all, it is necessary to reject the empire model. As far as foreign policy is concerned, some important steps have been taken by the Soviet leadership in this direction. Now we have to apply the principles of new political thinking to our domestic affairs. Otherwise it would be impossible to solve those grave problems that have already arisen in a number of Soviet republics and that can become a great obstacle to *perestroika*.

Now an influential, though not a very numerous, contingent of the intelligentsia has formed in the USSR. It made a considerable contribution into the processes of democratisation, *glasnost* and renovation of thought. But re-estimation of values is only beginning. Many illusions have to be given up. Illusions that for a long time have tempted social thought in Russia: from age-long Russian Messianism, awareness of its "unique", "exceptional" nature, its exclusive influence on the rest of the world to the advantages of backwardness. Let us call things by their proper names: backwardness is backwardness and utilisation of the achievements of more developed states requires certain skills. And it is high time to admit that socialism which we have been cultivating since Stalin's time is an impasse and its only historical significance consists in the fact that it is a great lesson for the future both to us and to other nations. These conclusions may sound not very optimistic, but the sobering truth is better than new Utopian narcotics.

As regards "the people", the broad masses' cultural disorientation of mass consciousness, deterioration of moral standards, hard drinking, drug addiction and so on arouse the greatest concern. Where is the way out? Only in the awakening of the personality. And this process has already started. The writer Yury Chernichenko recently told the readers of *Literaturnaya Gazieta* the story of Ivan Rassokha, a peasant from Poltava. In the time of Brezhnev this man sank into degeneration, drank hard, idled. *Perestroika* gave him a chance and he decided, together with his son, to take a lease of a livestock farm. And he did this because of his awakened desire to prove that he means something as a personality, that he can really do something and not just rot, rather than earn a lot of money. That means that independent, spontaneous breaking away from the vicious circle of "uprooted" consiousness, its breakthrough into genuine human life. I imagine this case as a sort of a cell, a model of the people's rebirth. But this process should by all means be supported by the 'power', the system of propaganda and education.

Now Soviet society is faced with the necessity of largescale economic and political reforms aimed at elimination of the state monopoly of economic activities and the party monopoly of power. Non-standard solutions are required here. Today, just as in the times of the Decembrists and Chaadayev, Russia cannot carry out its modernisation following the pattern of Great Britain, France or the USA but only relying upon its own cultural traditions. Russian history does not teach only despotism and brutality. Among our traditions there is, for example, a tradition of penitence inherent in the Russian national character. We need it badly today, for without clearing ourselves of the negative legacy of the past, we shall not be able to advance. A Russian man has always been notable for his patience—we need it badly today, for we have, as Lenin said, "to learn to trade", to learn to raise labour standards, to acquire skills of political democracy and to learn many other things.

And here the aid of developed countries will be required. Undoubtedly, Russia begins the third *perestroika* in its history not in blank space. During the post-revolution years a powerful industry has been built up in our country, an overwhelming majority of the population is educated, large natural and human resources are at our disposal. But the West's awareness of our problems and difficulties, its readiness to take part in a productive political dialogue and economic assistance—all this will be very inportant for the Soviet Union.

To conclude, I would like to return to what I started with—the film *Andrei Rublyov*. There is an episode in the film: It is necessary to cast a bell for a new church, but nowhere can any master be found; all the adult villagers are either killed or captured by the Tartars. Quite accidentally a boy, the son of a master, is found. He had seen his father casting church bells. And the boy spares no pains to remember how his father worked. Guided by intuition he does everything right and his bell rings all through the neighbourhood as the creation of a genuine master. Something like this we must have with our *perestroika*. Under present-day conditions a man in Russia has to regenerate all his best traits and to enter our time boldly. Then the results will not be long in coming.

Indian Foreign Policy: Reorientation is Inevitable

AJAY K. MEHRA

This is another contribution to the discussion on our foreign policy initiated in Mainstream *(July 6, 1991) based on Partha Ghosh's "Post-Gulf War Foreign Policy: Need for Rethinking" (March 30, 1991) and R.C. Dutt's rejoinder "A Principled Foreign Policy" (June 1, 1991), the arguments of which were sought to be rebutted by Partha Ghosh in his "Foreign Policy: Status Quo or Change?" (July 6, 1991). Subsequently Anil Rajimwale joined the debate with his contribution "Foreign Policy: Reorientation is Need of the Hour" (September 21, 1991).*

The author is a Visiting Fellow, Centre for Policy Research, New Delhi.

—Editor

The Ghosh-Dutt debate on Indian foreign policy—Ghosh's "Post-Gulf War Foreign Policy: Need for Rethinking" (March 30, 1991), Dutt's plea for "A Principled Foreign Policy" (June 1, 1991) in his rejoinder to it and Ghosh's reply (July 6, 1991) "Foreign Policy: Status Quo or Change?"—is relevant and timely. But certainly we can indulge in this debate without calling each other "opportunist" or "status quoist". This, everyone would agree, hampers the spirit of free debate.

The debate raises some relevant and pertinent questions considering India's fumbled responses to the fast paced and momentous changes sweeping the globe. What should be the basis and objectives of the Indian foreign policy under the circumstances? Should it be based on considerations of realpolitik, or should it follow certain professed principles? Should the objectives of the Indian foreign policy under the quickly shifting international scenario be a cold-blooded pursuit of national interest, or a high profile moralistic posture against the imperialist and hegemonist West? And, in case we attempt to achieve some kind of a balance between the two, and succeed in this difficult endeavour, how do we reconcile them in a clash situation?

It must be admitted at the very outset that the choice between a principled position on world affairs and a national interest based foreign policy is not zero-sum. For national interest is normally one of the underlying principles of any foreign policy; and howsoever "principled" a foreign policy is it cannot afford to compromise on national interest. Moreover, the conduct of diplomacy and the practice of foreign policy can rarely be divorced from realpolitik. It is surprising that the role of realpolitik in international politics is under dispute in the land of Chanakya!

II

INDIA's foreign policy and her role on the world stage during the recent events has been confounding, to say the least. It betrays the logic of "principles" as well as that of "realpolitik". The result, however, has been that we have been reduced to less than passive onlookers on the world stage. Worse, we had had to face the embarrassment of a condescending "don't bother" from the superpower we consider such a villain in world affairs.

The present author happened to be in the United States during the momentous days of "Operation Desert Shield" and "Operation Desert Storm"; during the days when the Soviet Union was trying hard, to the discomfiture of President Bush, to avert the war; during the days when George Bush was confounding the world with his New World Order (NWO); during the days when the intellectual community in the USA was debating the shape of the post-post-Cold War world; during the days when the Gorbachev-Yeltsin battle of nerves was heating up in Moscow and the Americans were gleefully commenting on the collapse of the evil communism. As a member of an international group being exposed to the US foreign policy process, the author also had the privilege of interacting with some of the leading persons from the policy-making community as well as some of the front-ranking opinion-makers in the US capital between January and June 1991.

Painfully for us, India found no mention in this whole debate either for her role or participation, in the peacemaking effort, or for her unequivocal position on this crisis. We were perfunctorily mentioned for abstaining in the UNO and when we invited a condescending "don't bother, we understand your domestic compulsion" from George Bush on the refuelling controversy. We were not good enough even for a criticism!

Since many in this country have a negative, sometimes hostile, view of the USA as a symbol of the imperialist West, it might not bother us that:

> When the White House published a paper recently, outlining the "National Security Strategy of the United States", it barely mentioned India. When the coup in the Soviet Union happened, George Bush called a number of world capitals to discuss the crisis but did not call New Delhi.[1]

But how do we react to the following?

> When a beseiged Boris Yeltsin asked for international support, he probably did not expect any from India which is why he did not care to dial the 91 country cold. When Mikhail Gorbachev could lay hands on a telephone after his captivity, he called a few world leaders but apparently could not find the time to speak with the Indian leaders, despite our long friendship with the Soviet Union...[2]

Don't these facts reflect our complete marginalisation in world politics?

South Asia in general and India in particular have remained a low priority area for the USA, the invisible "foreign hand" and "destabilisation" psychosis gripping us since Mrs Gandhi's days notwithstanding.[3] Our geo-strategic position has not changed. If anything, the end of the Cold War and turmoil in the Soviet Union has reduced our geo-strategic importance even further.

The US concerns in the region are rather negative—Indo-Pakistan tension, nuclear proliferation, human rights, intellectual property rights and so on. These priorities are not likely to change in the near future and determine the course of Indo-US relationship.[4] If we still have any misconception regarding our importance for the US, we should look at the New York based Council on Foreign Relations' assessment of "America and the World 1990-91". The 1991 issue of this important US think tank's prestigious publication, *Foreign Affairs,* devoted to the above subject neither contains an article devoted to India (or South Asia) nor (even perfunctorily) mentions either of the two.[5]

III

THERE are two dimensions of our marginalisation in world politics—geopolitical and the conduct of foreign policy. It is obvious that we can do little regarding how we are located on the world map and how our region figures in the geo-strategic considerations of the world powers. But it would be stating the obvious that how we assert our importance through the substance and conduct of our foreign policy is entirely in our own hands.

And, we have generally done it, with a few lapses, pretty well during the Nehru era, and not too badly during the Indira Gandhi years. Even though the facade of principle was always a component of our foreign policy, the motive force most of the time was national interest; hence realpolitik was adroitly mixed with, if not took precedence over, principles. Therefore, while the principles involved in the non-aligned movement (NAM) should not be undermined, it would be equally wrong to ignore or underplay its realpolitik dimension. Dulles' branding of the NAM as immoral reflected frustration over its realpolitik dimension and disapproval of the shroud of morality wrapped around it. And, we cannot say, on either count, that it did not pay us dividends in world affairs. Not only a nation as young as India emerged as an important voice in world affairs, her foreign policy became synonymous with the voice of the Third World.

It would be wrong as much to fault our leaders for being governed by realpolitik in shaping Indian foreign policy, as for using the cloak of principles to make it more presentable and acceptable. But, as stated earlier, while no one would grudge a nation to pursue national interest through foreign policy as long as certain broad principles of coexistence are not undermined, blowing either principles or national interest out of proportions is generally resented.

In our case, for example, overemphasis on principles has created a self-righteous streak in our national personality that has not been appreciated by the international community. It has not done much good to us either. In the case of the Kashmir question, for example, was it not a self-righteous confidence of moral superiority that made Nehru accept the advice to take the question to the UNO? And, to what consequence?

Dulles' characterisation of non-alignment as immoral too, as stated earlier, was a reflection of indignation over moralistic posture over a realpolitik move. Zhou Enlai, it has been recorded, did not quite relish when Nehru with a big-brotherly magnanimity tried to take him "under his wings" during the Bandung Conference of 1955. He resented this "arrogance" even at the height of the *Hindi-Chinee bhai bhai* days.[6]

Years later, when India's non-aligned stance seemed considerably watered down due to a treaty of friendship with the Soviet Union, India's moralistic stance was absolutely unpalatable to the West. Nixon, for example, had a distaste for Mrs Gandhi's moral posture in dealing with him. As Henry Kissinger has recalled:

> ...Nixon and Mrs Indira Gandhi...were not intended by fate to be personally congenial. Her assumption of almost hereditary moral superiority and her moody silences brought out all of Nixon's latent insecurities. Her bearing toward Nixon combined a disdain for a symbol of capitalism quite fashionable in developing countries...[7]

Not only leaders of the stature of Nehru and Mrs Gandhi, Kissinger's memoirs reflect resentment also of "the hectoring tone of moral superiority with which Indian diplomats sometimes exhaust if not the goodwill, at least the patience of their interlocutors".[8]

Today an honest evaluation clearly shows a smugness in our self-perception, an exaggerated notion of our importance in world politics. Remember the comical mission of Rajiv Gandhi to solve the Gulf crisis! Others, however, feel that "India is nowhere into new power equations".[9] A pathetic situation for a nation inhabiting one seventh of the humanity!

IV

THE Indian response to both the Gulf crisis and the coup in Moscow last August further undermined the country's position in world politics. As we analyse our forgettable diplomatic *faux pas,* it seems that on both the occasions aside from other factors, the self-imposed dichotomy between "principles" and "realpolitik" also played a significant role.

It is true that the response to the Gulf crisis was a very delicate diplomatic choice, given our relationship with Iraq, millions of Indians working in Kuwait, our stand against the big power involvement and, of course, unstable political situation in the country. It was a critical test that our leaders failed.

Iraq's invasion of Kuwait was against our stated principles of foreign policy as well as self-interest. Haven't we frequently raised our voice for the protection of small states against the encroachment of the big ones? Moreover, considering millions of Indians employed in Kuwait, whom we very efficiently evacuated, would it not have been prudent on our part to disapprove of, if not condemn in strong words, Saddam's misadventure? Did we, in keeping silent, in our wildest dream imagine Iraq to permanently annex Kuwait and expect the US and other big powers to keep quiet? Or, were we expecting big benefit to accrue from the annexation of Kuwait?

Our judgement also faltered in determining whether the US role was a big power involvement or the intervention approved by the world body. Some may think that George Bush hijacked the UNO, but it is equally true that by seeking UN approval for his actions he also gave it the importance that it has rarely enjoyed in recent times. Moreover, it would not have been difficult for the US to liberate Kuwait singlehanded. By constituting a multinational force for the purpose, President Bush successfully transformed it into a global issue. Agreed, the USA was guided by her actions leave many questions unanswered from the democratic point of view.[10] Still the US stance was far more principled than Iraq's.

We also seem to miss the point that by creating a situation for the US involvement in regional affairs, it is Saddam Hussein who has done a great disservice to the Third World. Even if he wanted to prove a point against Kuwait, he had several occasions for a diplomatic withdrawal, but he decided not to relent. Further, if we accept the argument that the decline of the USSR has shut down a forum of appeal for the Third World, Saddam has made a contribution in the dismantling of that forum. His rebuff to Gorbachev's peace initiative was a blow to the Soviet prestige and it legitimised the role of the US and her Western allies in the Gulf theatre.

R.C. Dutt is right when he says that the personality of Saddam Hussein is not under debate here. But it is not completely out of context for our debate that he is a dictator. Nor is the fact that in spite of his secular and democratic pretense, he has silenced all the dissent in his country and his Baath Party is known to have spread a reign of terror in Iraq with few parallels; and his secularism was too fragile to withstand the pressure of the war he himself started. His persecution of minority Kurds is too well-known to merit a detailed discussion here. In sum, any way we look at the support to Saddam Hussein, the argument would seem to rest on thin ice.

The ambiguity and confusion enveloping Indian foreign policy was evident also during the abortive overthrow of Gorbachev. Whether Indian reaction was based on principles of realpolitik, it did not do any good to national interest.

From the Iraqi annexation of Kuwait through the Operation Desert Storm to the coup in the Soviet Union, three different governments, three different Prime Ministers, three different Foreign Ministers and three different political parties were at the helms. But the response to each of the events was confusing. This indicates a similarity of approach or consensus in dealing with foreign policy among the political parties. In fact, the hullabaloo raised on the refuelling facilities to the American planes and Rajiv Gandhi's diplomatic sojourn on the Gulf crisis also demonstrated our capacity to confound this confusion further. Sure, this consensus and political energies can be channelised constructively for a coherent foreign policy.

The NAM was India's brainchild. It is facing irrelevance and extinction today. Instead of shouting from the rooftop about its relevance and inviting sneers, India should think about its reorientation in the current world order. True, we do not have a Nehru on our political firmament today. But we do have a pool of foreign policy analysts, ideologues and a diplomatic corps that could be envied by any country. Should we not use their combined talent to draw a new agenda for the NAM with a prominent role for India? R.C. Dutt is right that pro- or anti-Americanism is not the issue. Then, while we judge the issues on merit, we should not hesitate to collaborate with the USA where needed and criticise her where she deserves. We should also not ignore the fact that the USA has emerged as a symbol of democracy and liberty, irrespective of her global involvements as a superpower. That is why every voice of democracy is sought to be raised in the US Congress. Why should we hesitate to make our voice echo there, especially when we have sympathetic ears and vocal support available?

It is also true, as Ghosh has asserted, that as long as we are economically weak, we are politically vulnerable. Howsoever we may resent others' "pressures", "humiliating conditions" and "interference" on our policy matters, we cannot avoid them with a begging bowl in our hand. Hence, without getting into the chicken and egg controversy, we should move towards independence and self-sufficiency.■

NOTES

1. Gautam Adhikari, "Rethinking Foreign Policy: Change Needed for India's Sake", *The Times of India*, September 2, 1991.
2. *Ibid.*
3. Paul Kreisberg, a former US career diplomat who has served in India for a long time, and a South Asia expert, told the author in an interview:

   > South Asia...is so far away from the scene and has no strategic importance...you look at the map of South Asia...It is a land mass pointing to nowhere, to Antarctica maybe. It cannot serve any strategic purpose for the US.

4. The author's conversations in the State Department in April 1991. Richard Haase, the Senior Director, in the National Security Council, indirectly admitted the neglect of South Asia by the USA in a speech before the Asia Society in New York in January, 1990. There was a tinge of big brotherliness when he said that "South Asia demands our attention because of potential for conflict" c.f. A US Government handout.
5. *Foreign Affairs*, 70(1), New York, Council on Foreign Relations, 1991.
6. A decade after the Bandung conference of 1955 Zhou Enlai recalled to some Pakistani journalists how Nehru quite openly tried to take him under his wings. "Indians have often recalled this as one more incident meriting Chinese gratitude, but to the Chinese it must have appeared as the height of presumption, the recollection of the incident could still irritate Zhou ten years later." Neville Maxwell, *India's China War*, Bombay, Jaico, 1971, p. 261.
7. Henry Kissinger has also observed somewhat appreciatively about Mrs Gandhi: "Once one cut through the strident, self-righteous rhetoric, Mrs. Gandhi had few peers in the cold-blooded calculations of the elements of power." *The White House Years*, New Delhi, Vikas, 1979, p. 848.

OCTAVIO PAZ: Smile of Buddhist Sages

(Continued from page 5)

a little irony in his dealings with himself and others—he should be less sure of himself, know that he does not possess infallible recipes, and recognise that there are no absolute truths. And through the practice of meta-irony, keep a hold on compassion and pity.

The vile dictatorships which we have endured in the twentieth century have been rooted in merciless ideologies. I can accept that many of them, as in the case of Stalin, were perversions of altruistic doctrines, but it must also be admitted that these doctrines contained the seeds of despotism and intolerance.

In their profound wisdom, the theologians of old considered pride to be the sin of Satan. Among mankind, this sin is born of the claim to possess absolute truth. It is an evil which has poisoned the twentieth century in the guise of science and philosophy.

Criticism is the only antidote to this moral poison. When people understand that they do not possess the absolute truth and that all truths, especially political truths, are relative, then there is room for irony and pity—towards others and towards themselves. This is what our century lacks—a resurrection of pity. One of the most beautiful features of Buddhism is that Buddhist sages are always smiling. And their smile expresses irony and pity...The smile of the Buddhist sages should be introduced into politics. ■

Remembering Our Beloved Batukda

AJIT KUMAR DUTTA

Had he been living, he would have completed eighty this winter. An illuminating personality, marked by an affable nature and comprehensive mind, he easily won friends wherever he went. More than suave manners and witty comments, he was a talented person, noted for versatility. If his admirers in Calcutta recently gathered together to pay tribute to his hallowed memory, Delhi too has reason to remember him gratefully for his contribution to the Capital's cultural scene during his long stay here spanning almost two decades.

Jyotirindra Moitra (1911-1977), just Batukda to a vast number, young and old, was a man of many interests. A science graduate, due to his literary inclination he ultimately took his master's degree in literature. If his early years in the vicinity of the vast and vigorous Padma and the greenness around moulded his mind in one way, the liberal family tradition helped him to develop a rare rational outlook and finer sensibilities. No wonder a stage came when instead of taking chartered accountancy articleship seriously, he could be found observing birds and studying their whistles with more attention. An uncaring type and an artist at heart, his life's course was destined to be far from the ordinary.

He came to be noted as a poet initially. He emerged on the scene at a time of turmoil—the Second World War, famine. and fast-changing values, in which context his *Madhu Bansi's Gali* (A Blind Alley Tale), did not merely attain significance, but earned for him a distinct place in the realm of Bengali poetry, with his pieces finding regular inclusion in the anthologies of modern poems. Incidentally, his *gali* ultimately came out in a disc with voice by renowned Sombhu Mitra.

But the poet was soon overtaken by the musician in him. Not that he ceased writing, he began devoting more time to music, as was borne out by his regular training under the eminent musicians like Bhishmadev Chattopadhyaya for the *shastriya* kind and Indiradevi Chaudhurani and Anadi Dastidar for *Rabindrasangeet*. His wide grasp was soon acknowledged, specially for his contribution in the area of choral music reaching culmination in the now famous *Nava Jibaner Gaan* or Life's New Music, subsequently made popular through the IPTA or people's theatre movement. In this, he set tune to his own words, in the tradition of Tagore, Nazrul and Atul Prasad.

In a sense Batukda proved himself akin to the little bird—a poetic creation of his own—that kept on building nests hardly settling down at one place for long. Maybe due to inner restlessness, he too moved on from Calcutta to Bombay and from there to some quiet spot in Bihar and later to Delhi, thanks to well-wishers and friends like Nirmala Joshi, Govind Vidyarthi and others prevailing upon him. But here too circumstances in the end compelled him to wind up.

Batukda's Delhi years saw him primarily confined to the Bharatiya Kala Kendra productions as its Music Director. His musical scores for its famous Ram Lila, which still form the core, according to experts, could be considered as his most significant contribution—noted for melody and richness in vocal aspects. In the opinion of Narendra Sharma, an eminent choreographer and who corroborated with Batukda on several occasions, Batukda himself being a man of literature could easily attend to and produce dramatic music. That ensured his success as the creator of music in ballets.

Batukda left yet another distinctive mark when he composed music for *Lambakarna Pala*, a Parasuram story, dramatised by Abanindranath Tagore. Besides Delhi, it was staged in Calcutta, earning accolades, for its music in particular, from discerning audiences. For his unusual sense and grip over music, Batukda was much sought after and with his friendly attitude he readily extended his help. Out of deep respect and close relationship with poet Bishnu Dey, a friend and compatriot, Batukda got involved and was somewhat innovative in providing music to a mime-based stage production in Delhi, on the occasion of Bishnu Babu's receiving the Jnanpith Award. It may be mentioned here that similarly at different times he cooperated with film-makers like Satyajit Ray, Ritwik Ghatak and James Ivory.

Easy and intimate as were his ways, it surely was a tribute to his winning manners that a kid of about ten considered his company worth seeking. To the youngster, he was an amazing personality. He appeared to be a storehouse of information relating to bird-watching, cricket and diverse kinds of anecdotes. The young admirer therefore could describe this *Jethu* of his as the Most Impressive Character for his class essay. Luckily the teacher too appreciated the off-beat approach and read out the essay in the class for the benefit of other students.

The bugbear of poetry really never left him. Though not immensely productive, the Delhi phase witnessed him taking up pen at intervals depending on needs (while waiting, on a bank pay-in slip emerged a piece, a friend testified once). With a flair for *adda*, he took the initiative for literary exchanges, by launching a wall-magazine, *Ajanta*. He suggested the name and the opening line of his first poem there read: "Here the fawn of life plays gleefully in the green of the forest". Thanks to his inspiration and an initiated group behind him, the venture soon took a printed form. The magazine is still in existence and sometime back to celebrate its silver jubilee, a seminar on Little Magazine was organised in which writers in Hindi, Oriya, Assamese, Tamil and Malayalam, based in Delhi, participated. It can also be mentioned here that before Batukda's departure from Delhi, the Karol Bagh organisation he was associated with—the Bangiya Samsad—and publishers of the *Ajanta*, presented him an anthology of his own select poems written here, in the form of a regular publication titled *Ye Pathei Yao* (Whichever way you go). That made him immensely happy as it did many others.

.Far from an ivory tower dweller, guided by a sense of duty and social awareness, he often took pragmatic approach to things. For many passersby, it was a sight, to see him leading groups of musicians along the busy Ajmal Khan Road and adjoining areas to help raising relief funds for occasional floods and droughts in one or other part of the country.

In parallel with his growing stature in the field of music, his young friends like Nemi Chand Jain and others, primarily through translations, helped him to come closer to the mainstream. Although he hardly bothered whether he became known or was accepted in certain circles, his admirers hardly thought so. Hence they all felt elated when Batukda was honoured and publicly felicitated by Delhi's Sahitya Kala Parishad, for his valuable contribution in enriching the Capital's cultural scene.

One may say that the same carefree attitude, rather a poetic fancy, prevailed when he made his final exit from this world. He breathed his last in sleep during a train journey. By the time the train reached Howrah, Batukda had already left for another destination! ■

NIKHIL CHAKRAVARTTY **Punjab Poll**

(Continued from page 3)

drove through the streets of Amritsar, unarmed and unescorted by a wall of security guards. V.P. Singh's promise of early elections touched the heart of millions of Sikhs, and preparations were seriously afoot for an early poll. Even a new Governor, with the image of a man of peace, was sent—further strengthening the V.P. Singh Government's credentials in the eyes of the alienated Sikhs.

However, the elections were put off because of the opposition of the two parties backing V.P. Singh's National Front Government, namely, the BJP and the Left, both of whom vetoed any early elections in Punjab, and V.P. Singh yielded before their pressure—a folly which he has since regretted and has said so in public.

Not only was the abandonment of elections in early 1990 a mistake, it was compounded by a total policy drift without any clear-cut perspective on the part of the National Front Government. The fund of goodwill that it commanded in Punjab was dissipated. Here too, the concern to keep the Haryana politics on the right side—with Devi Lal in high visibility—led to the abdication of any serious efforts at handling the Punjab crisis.

After the fall of the V.P. Government, there was the promise of a breakthrough under Chandra Shekhar. In spite of the precarious tenure of his Prime Ministership, Chandra Shekhar made a positive contribution by exploring the possibility of opening a dialogue with the militants, apart from maintaining a friendly rapport with the Akali leaders. There is little doubt that had he been able to run his government, he would have achieved a breakthrough in Punjab. His decision to hold elections in Punjab which the then Governor, General Malhotra, assiduously prepared for, was however opposed by Rajiv Gandhi, who rather thoughtlessly announced that the Congress would not participate in it—a decision which was known to have been taken without serious discussion with the leaders of the Congress in Punjab.

This was the main reason why the Narasimha Rao Government got the entire poll cancelled in June. Because, if the poll had taken place at that time, it would have meant the total absence of the Congress-I from the new Assembly after the poll—which would have meant largely a political holiday for the Congress in Punjab for the next five years. The abrupt announcement of poll postponement at the very last moment gave fresh impetus to the militants' propaganda that New Delhi was not prepared to hold any poll at all, as it could not trust the prospect of an elected government in Punjab.

It needs to be realised that the Punjab crisis has gone far beyond the framework of a normal political problem. It calls for unorthodox approaches and rather determined will. For instance, speculation was common in Congress circles last summer when Rajiv Gandhi declared his party's non-participation in the poll—which, incidentally, compelled Narasimha Rao to seek the countermanding of elections last June—that the elections would return the militants as the majority group in the Assembly where they would pass a resolution declaring independence and announcing the establishment of Khalistan; this would mean real secession from our Republic. This hair-raising scenario is not difficult to dismiss. Even in the poor voter-turnout in the 1989 Lok Sabha election, which was dominated by the militants' intervention, the poll results showed that the majority of the voters did not favour the militants; rather those who were opposed to the militants line got the major share of votes polled. If that was the situation in 1989, there is little doubt that the hard-core pro-Khalistani elements will not be able to dominate the scene, and the Assembly that will be returned would be largely dominated by the more sensible among the militants, who would like Punjab to be within the Indian Union, but with more powers in the hands of the State authorities. The bogey of secession through poll need not therefore be taken too seriously.

It is in this background that one has to understand the full import of Narasimha Rao's cryptic observation before the National Integration Council that any further postponement beyond February 15 would cost the very credibility of his government —before the people of Punjab. It is reported that a section of the higher echelons of the Punjab police wants to delay the poll on the execuse that they would require more time to muzzle the militants. One only hopes that the Home Minister and the Prime Minister would firmly stick to their commitment of the election deadline on February 15.

The common concern of all parties is that the elections this time must be really representative, that the voter turnout must be at least near-normal and not just nominal.

To ensure a sizeable voter turnout and also to make it possible for the Akali leaders to overcome their present stand of boycotting the poll, the Narasimha Rao Government will have to take some immediate steps. For one thing, an overture to the militants, at least to the more amenable among them, has to be made, open or covert, to neutralise any outright attack on the poll. Secondly, it is imperative for the Prime Minister to make a solemn promise that Chandigarh would be handed over to Punjab without delay—preferably as a prelude to the poll, which is bound to have a tremendous psychological impact. The transfer of Chandigarh to Punjab must not be linked with any transfer of areas to Haryana on linguistic grounds, which is a totally separate issue. For Haryana to have Chandigarh, it can be granted an adequate sum for building a capital of its own. As for the question of sharing river water as also the transfer of areas on linguistic principle, the Centre can announce immediate reference to Supreme Court for making the necessary awards after examining the respective claims of the two neighbouring States.

From a wider angle, the Punjab crisis demands a clear enunciation by the Narasimha Rao Government of approach to the question of the Centre-State relations. Not only in Punjab, it is unquestionably the most pressing demand from almost all parts of the country—from Assam to Maharashtra, from Kerala to West Bengal.

This really requires a promise to have a thorough second look at the Constitution itself to ensure a more authentic federal set-up. Such a move should be able to enlist all-party support since the major parties in Parliament are running State Governments, and they regard this as a crying need. In fact, a more federal structure would be more than half-way towards bringing peace in Punjab and possibly to Kashmir as well.

It is to be recognised that if the Narasimha Rao Government can successfully hold the elections on the promised date, it will help to bring confidence to a large section of the people in the Kashmir Valley that New Delhi is serious about restoring genuine democratic process instead of continued dependence on the power of the gun, which has already turned out to be counter-productive.

The holding of elections in Punjab on the promised date is thus of far-reaching significance for Indian democracy. ■

(This is an enlarged version of the article written by the author in The Hindustan Times, *January 9, 1992.)*

On Women and Supremacy of English Press

SARALA JAG MOHAN

Women have been facing insurmountable problems all through the centuries. They do so even now, when the world is not very far from entering the twentyfirst century. However, there is greater awareness about women's problems today, thanks not only to the enlightened activities by various women's organisations all over the country, but also to equally englightened writing on the subject by several writers. One among these writers is Mrinal Pande, a former lecturer in English, but now a "militant Hindi editor" (currently of the *Saptahik Hindustan*) and an active feminist. She is a very articulate journalist, who has contributed articles to many Hindi and English journals and periodicals. She has voiced her firm and uncompromising views both about women's problems and various aspects concerning print and electronic media, expressing her ire not only against the wrong projection of women in the mass media but also against the domination of the English language press.

The Subject is Woman by Mrinal Pande; Sanchar Publishing House, New Delhi; 1991; pp. 160; Rs 160.

The Subject is Woman, a collection of articles on these topics, is an expression in capsule form of Mrinal Pande's firm convictions as a woman and as a journalist, As Khushwant Singh writes in his foreword to the book, it is a "focus on Indian women and the world around in which they live." But it is not just that. Mrinal Pande dwells on the "decomposing dictatorship of English which has a demoralising effect on what she calls "vernacular" journalism, and also pushes down non-English programmes on television.

The book begins with a very touching portrayal of her maternal grandmother, Amma, a "strong-willed matriarch who also staunchly upheld patriarchal values". In this depiction of her Amma, Mrinal Pande describes the "transformation of a tomboyish seven-year-old girl into a prematurely grey matriarch", and thereby narrates the story of Indian women in general. It also sets the readers' mood, who are eager to see what she has to say in the pages that follow—and indeed she says a lot. However, in her introduction, she has made a statement that cannot go undisputed. "History of women's experiences," she says, "reveals that it is not power that corrupts, but powerlessness". Now it is true that powerlessness corrupts, but it is also true that power corrupts equally and here, Mrinal Pande does stand to be corrected.

However, the author's approach to the problems of women in rural and urban areas at various social levels is absolutely realistic and her advocacy of a common civil code, particularly in the light of the infamous Shah Bano case is unexceptionable. So is her defence of the feminist movement in India which, according to some sceptical people, is a concept imported from the West and irrelevant in the hisotrical and present-day context of the life of the Indian woman. Whether one calls it feminism or something else, there is such a thing as disability of Indian women, who despite the constitutional guarantee of equality and protection against discrimination, do suffer from grave injustices in their various fields of activity. The media, on the whole, tend to perpetuate the feminine mystique and glorify the meek and submissive woman. Advertisements in newspapers and on television use women as ploys to promote their respective products.

Everything that Mrinal Pande has written about such problems needs to be taken seriously not only by men but by women themselves. She has dealt with those problems with great concern and even anguish and it should stir the conscience of all right-minded people and provoke them to do something about it. Only, her discussion about woman's image in films and theatre, despite her correct approach, do not have the same depth as in her other articles. They appear rather specimens of scattered writing.

Her vehement argument against the supremacy of the English press because of its enormous advertisement revenue and its self-appointed mission of forming the national opinion, are likely to cause discomfort to those engaged in English journalism. But she has a point that needs to be considered by those who see intellectual and cultural superiority—only in what is written in English. For one thing, the language press is highly disadvantaged and because of the paucity of financial resources, cannot match the English press in terms of quality of production. But contentwise, the language press does not lack in quality to the extent it is generally presumed. Just as good literature is produced not only in Hindi but in most Indian languages, language journalism is not exactly lagging far behind English journalism. Mrinal Pande's advocacy of Hindi journalism is understandable. Nobobdy can or should take exception to that. What is not very clearly coming through in her book is the link she tries to establish between the primacy of the English language and the disadvantaged position of the Indian woman. And when she talks about "feminisation of poverty" people are bound to respond to it with scepticism for, poverty is poverty for the vast majority of Indian masses and it knows no sex. What is really true is that while men are crushed by conditions of poverty, women suffer more because they are bogged down by tradition and social conventions and do not have the same scope and freedom to find escape for themselves like men.

But these are the points on which there can be more views than one. And if Mrinal Pande has taken a particular view, that is her privilege as a writer, journalist, social worker and an individual. The important thing is that she has given a new thrust to the debate going on about women's condition in the country and a shock-treatment to the barons of English journalism, which they need very badly. ■

SEEMA: A Secular, Centrist Alternative

(Continued from page 4)

Ayodhya emerged as the breaking points and the Left leaders joined the NF in launching a scathing attack on the Narasimha Rao Government on these issues. The chasm has widened since and now the CPI-M has gone many steps further in making it clear that it will have no truck with the Congress-I Government And that it can work to bring the government down even if it means an election that the people do not really want. The CPI is at one with this with its members admitting that the BJP and the Congress-I are now functioning openly as two sides of the same coin. The brief honeymoon with Rao is over and the Left parties have decided to strike out on their own while continuing support to the National Front and the beleaguered Janata Dal under V P. Singh

There is no rethinking on this. That is, there is no rethinking on the fact that a second secular, Centrist alternative is the need of the hour And there is also a growing realisation that the National Front which had started as an experiment to bring together secular and progressive forces on one platform has not grown sufficiently to answer this need. The challenge posed by communal forces, aided and abetted by the Centrist elements, can only be countered by an aggressive secular party committed to the tenets that form the basis of our Constitution Secularism to be revived has to enter the streets through an aggressive campaign by a political party with an essentially Centrist image. There can be no truck with Hindu or Muslim fundamentalists, no appeasement or pampering of any such group or individual if the politics of secularism is to succeed. Leaders will also have to sink their petty egos to work at an organisaton which can answer the political and economic needs of the country.

Correction

In "Fiji: Institutionalised Racial Discrimination" by Shanti Sadiq Ali published in *Mainstream* (December 28 1991) a slight error has crept in The fourth sentence on para two, column two, page 19 should read as follows:

"However, they were brought into Fiji precisely for this purpose, but given short leases of 10 years which have kept them insecure, and many of them turned to food crops."

The error is regretted

— Editor

It is clear that the Congress-I as it has evolved through the years is not the party to answer these aspirations. It is also becoming amply clear that big business in this country (and abroad) would like a two party system—the choices being limited to the BJP and the Congress-I. There is growing resistance to the emergence of a third alternative, and a combined effort by industrialists, a section of the media and other vested interests to crush the third force in its infancy The petty egos of leaders in the Janata Dal and National Front have of course helped this attempt by the vested interests, and today the secular experiment which had sufficiently enthused the people of this country at one stage, is in danger of breaking up. It can be saved, if the constituents respond to concerns larger than their egos, and understand that their own political survival is linked to the survival of the country A Herculean effort is needed, not only to save the National Front from disintegration, but to reconstitute, re-activise it into facing the challenges along the lines outlined in its manifesto.

The writing on the wall is bleak but very clear: only a second, secular, progressive political force can save the country from chaos and ultimate ruin. Those drawing lessons from the events in the Soviet Union should realise that it was the inability of the Soviet leadership to handle the genesis of the problem that led to the break-up of that country. *Hindutva* and rank communalism will only split the country, not unite it. Irresponsible liberalisation will further squeeze our weaker sections. Myopic politicians are steering the country towards self-destruction. Wanted is the will and vision, reminiscent of the freedom struggle, to revive the fundamental aspects of the Constitution. It is possible still, but it needs a lot of good men to get together, to sink individual ambitions and for once, to put the country before themselves. ■

LIC's Group Insurance Scheme
in lieu of EDLI Scheme (1976)

LIC's GROUP INSURANCE SCHEME FOR YOU!

A better alternative with benefits both for you and your employees.

Employee's Benefits: Higher insurance cover ranging from Rs. 11,000/- to Rs. 27,000/- depending on current salary and number of years of service ● Even low-salaried employees,get high insurance benefit ● Prompt settlement of claims on death ● Double accident cover available at nominal premium ● Premiums paid by the employer

Employers' Benefits: Lowest possible premium rates. ● Tax savings since premiums are treated as business expenses. ● Option of increased uniform cover of Rs 27,000/- ● LIC will guide you in securing exemption under section 17 (2A) of E.P.F Act 1952

For detailed information about this scheme, mail this coupon to the P & GS Dept. of your local LIC Divisional Office.

SAS-7A/91 (R)

LIC's GROUP INSURANCE SCHEME.
EVERY CONSCIENTIOUS EMPLOYER'S WELFARE SCHEME.

Life Insurance Corporation of India

Yes, I am interested in LIC's (EDLI) Group Insurance Scheme Please send details

Republic Day Special

Mainstream

VOL XXX NO 14 SATURDAY JANUARY 25, 1992 Rs 8

The problems which India faces are to some extent common to other countries, but we have new problems for which there are no parallels or historical precedents elsewhere. What has happened in the past in the industrially advanced countries has little bearing on us today. As a matter of fact, the countries that are advanced today were economically better off than India today, in terms of per capita income, before their industrialisation began. Western economics, therefore, though helpful, have little bearing on our present-day problems. So also have Marxist economics which are in many ways out of date even though they throw a considerable light on economic processes. We have thus to do our own thinking, profiting by the example of others, but essentially trying to find a path for ourselves suited to our own conditions.

In considering these economic aspects of our problems we have always to remember the basic approach of peaceful means; and perhaps we might also keep in view the old Vedantic ideal of the life force which is the inner base of everything that exists.

Jawaharlal Nehru

B.K. NEHRU ❖ UPENDRA BAXI ❖ YOGINDER K. ALAGH ❖ MRINALINI SARABHAI ❖ SEEMA MUSTAFA ❖ RANDHIR SINGH

A PROFILE IN COMMITMENT

'A house of one's own'. This is a wish, a hope, a dream that's cherished by millions of Indians across the length and breadth of our country.

Indians who represent an immense diversity. With their different needs, capabilities and limitations. To help each one of them own a house — that's the commitment that led to the establishment of the National Housing Bank in July 1988 under the National Housing Bank Act. As a wholly owned subsidiary of the Reserve Bank of India.

As an apex institution, NHB is responsible for the promotion of a sound, healthy and self-sustaining housing finance system in the country. Since inception, NHB has adopted a multi-pronged strategy to fulfill its commitment. The initiatives taken include increasing the flow of resources into the housing sector, augmenting the supply of buildable land, and helping develop cost-effective building materials and technology.

The **Home Loan Account Scheme** launched on July 1, 1989 is central to NHB's multi-pronged strategy. The HLA Scheme is designed to stimulate savings specifically for housing among all segments of the community It is a loan-linked savings plan that makes owning a house a possibility for every Indian make the scheme accessible to one and all, it is operated through the branches of several scheduled banks and designated housing finance companies all over the country.

NHB launched the **Capital Gains Bonds Scheme** in July 1990, having a maturity period of 3 years and carrying an interest of 9% per annum, payable half-yearly or on a discounted basis at the very beginning. This is one of the essential schemes to generate resources for financing housing loans at the lower end with subsidised interest rates.

NHB has formulated schemes to refinance scheduled banks, housing finance companies and co-operative institutions. This helps them extend housing loans to individuals and project loans for land development to public agencies, professional developers and co-operatives. Financial assistance is also available to public and private sector employers in respect of rental housing projects undertaken by them for their employees. Also commercial exploitation of cost-effective technologies based on local resources for the supply of building materials qualify for NHB's assistance.

The task ahead is stupendous. But NHB is confident. A beginning has been made.

Housing for millions.
We're making it happen.

When all schemes look alike, look at the promoter:

UTI makes the difference !

UTI's

MASTER EQUITY PLAN - 92

Your investment in MEP - 92, up to Rs 10,000, is completely exempt from tax (80 CCB).

Plus, it multiplies faster in high-growth equities. Last year, MEP - 91 showed capital appreciation of over 62% in just 9 months !

FEATURES

- Dividends exempt from income tax up to Rs 13,000 (Sec 80L)
- Capital gains exemption up to Rs 15,000 [Sec 48(2)]
- Wealth tax exemption up to Rs 5 lakhs (Sec 5)
- Assured allotment on March 31, 1992
- Minimum investment Rs 500 and in multiples thereof
- 20% deduction at source, of the principal, on encashment
- 10-year plan with 3-year lock-in

Early Bird Incentive
3.5% for Jan. '92
2.5% for Feb. '92

LEADING LIGHTS. IN PUBLIC SAFETY.

Some of India's major roadways and public highways, today, are lit by Philips. Because, Philips are experts the world over, in providing the vital community service of public lighting... and in providing reassurance that people can live, walk and drive in safety.

Philips make public lighting highly energy-efficient as well. Their modern luminaires with computer-designed optical systems, plus lamps with advanced technology, work together to produce optimum levels of illumination along with energy savings.

In fact, the perfect combination of a tubular sodium lamp and a luminaire with POT optics helps reduce the number of points over a given stretch of road... by as much as 30%. Translate that into actual savings, in thousands of KW per hour!

Record Rs 260 crores foreign exchange turnover by ITC

1990-91 Highlights

Gross Income	Rs 2316.38 crores
Net Income	Rs 1014.46 crores
Net Profit	Rs 77.52 crores
Foreign Exchange Turnover	**Rs 260.00 crores**

In the unaudited financial results for 1990-91, ITC has registered significant growth on all fronts—with a record 58% increase in foreign exchange turnover being the high point. For ITC, the Rs 260 crores turnover in foreign exchange is the outcome of an increased thrust in the international business arena.

Working closely with domestic producers to attain world standards, ITC is carrying the 'Made in India' mark with pride across the globe. Among its diverse trade ambassadors are quality tobaccos, oilseeds, tea, coffee, spices, marine foods, home furnishings, leather goods and garments. Additional foreign exchange is earned by its Welcomgroup hotels in India and through the Bukhara chain of restaurants abroad.

Turning potential markets into advantages with strategically-located foreign offices, ITC is well set to further consolidate its position as the 'Indian International'.

EDITOR'S NOTEBOOK

The Hour of Challenge

Under dark, lowering clouds the Republic Day is being celebrated this year marking the fortysecond year since the proclamation of our secular, democratic order. There are physical assaults on the integrity of the Republic, there are insidious forces undermining with impunity its very fabric from inside.

With all its shortcomings and drawbacks our democratic set-up is still maintained. But it is being grievously corroded by mega-size corruption in public life. The electoral process itself is being openly subverted by large-scale violence by anti-social gangs acting as hirelings of political parties.

Regional, ethnic loyalties have been raising their heads challenging the supremacy of the central authority, while the persons in office at the Centre feel insecure by the claims and clamour of the States. In other words, the concept of federalism has come under public scrutiny. Meanwhile, through neglect and short-sighted opportunist politics, the loyalty of certain local areas has been sapped, and out of despair and in some cases by design, the call of secession from the Indian Union is being raised leading to bloody and fearsome violence, marked by the retaliatory violence of the armed forces—creating certainly an extremely precarious situation.

The record of the four decades of our Republic is badly tainted by the persistence of caste divisions. In many cases, these appear to have been intensified since independence. Witness the epidemic of brutal caste violence from our villages.

The communal tension and outbreak of pogroms against the minority communities have posed a direct challenge to our national integrity. Now in the name of uniting the country, the assertion of the hegemony of the majority community is being propagated. The plan to unfurl the national tricolour in Srinagar's Lal Chowk does not help to unify the nation. Rather, it may endanger that unity itself. Discontent in Kashmir has to be calmly settled—not by the mere demonstration of flag hoisting. A flag does not make a nation, it is the nation that begets its flag.

Worst of all, the disparity between the affluent and the underprivileged has widened sharply and the latest bout of economic reforms promises to intensify, and not narrow, this immoral gap of disparity. This way the nation's morale is getting petrified while its integrity fragmented.

This is the hour of challenge for all concerned citizens of our Republic. It is their solemn task to come forward and save the Republic—its integrity, its honour and its morale. There is no moment to lose.

Appeal for Preservation of Our Economic Sovereignty

Every sensitive Indian concerned about the country's economic sovereignty feels unhappy that the nation's crisis almost on every front is deepening. Foremost is the economic crisis and we, the signatories to this statement, make a united appeal to the President, as the Head of the Republic, and to the Prime Minister and his colleagues, as the plenary representatives of the Union Government, to uphold the independence of India, the socio-economic values of the Constitution, the imperatives of self-reliance, industrial progress and prosperous agriculture. Towards this end, we plead with the government not to bend before external pressure.

We are aware that our balance of payments position, whatever the pathological causes, is precarious. But true to the Gandhian tradition and the Nehruvian vision, we must as a nation mobilise the people to resist inroads into our sovereignty even if it involves austerity, jettisoning modern luxuries, foreign goods and sophisticated technology catering to affluent amenities and exotic pleasures. Maybe, we may have to ban certain types of imports altogether for a period. Maybe, we may have to manage with cruder plants and machinery, equipments and manufactures, made in India so as to become self-reliant. Maybe, we may have to import less of oil and maximise the use of gas and coal. Maybe, energy alternatives may have to be developed all over the country to be independent of foreign imports.

Our law of patents, carefully drawn and modelled on the best principles of national interest and international standards, is an expression of parliamentary wisdom. Tampering with the laws of patents to appease American interests may be fatal to our agriculture and industry. Therefore, we stand for the 'untouchability' of our law of patents, since it protects our economy and our development and is consistent with fair norms internationally recognised. Hands off our law of patents should be our stance at the GATT negotiations (Uruguay Round).

Our friendship with the people and the Government of the United States is and has always been warm and well-meaning but the multinational corporations operate to our detriment and seek to involve the threat of Special 301 and Super 301. It is somewhat humiliating to our self-respect as a nation that we are put on the 'Priority Watch List' or rather on the 'hit-list', and what is more galling is that we are given three months' extension for compliance with what the American big business interests require of us. This is a kind of parole or probation of good conduct which a country with India's standing should object to. Indeed, the intimidatory references of the American spokesperson suggest expectations of command performance of client-conformity which, certainly, is not compatible with our sovereignty. We, therefore, emphatically request the Government of India to make our national position clear beyond mistake that everything will be done for mutual benefit in trade, commerce, industry and agriculture or trade-in-services.

It is true that our Finance Ministry has chosen to borrow from the IMF and has resorted to certain measures like devaluation whose adverse impact on the people's conditions of life is beginning to tell. Distributive justice in regard to basic needs is being subverted and any further subordination of Indian interests to Western or Japanese interests may spell harrowing conditions for the millions and eventually lead to an avalanche of unrest.

Having regard to these potential consequences, we feel that no conditionalities of the IMF or other international financing agencies should be accepted, tacitly or openly, which may in the least mortgage our economic sovereignty. The present policies of liberalisation may seem to be very attractive but in its deeper implications run counter to our legacy from Gandhiji and Panditji and to the whole history of independence, of sustainable development with justice. In these circumstances, we plead for a national debate on the issues involved, for a detailed parliamentary debate on the questions of policies and liberation from liberalisation. We are all for supporting the policies of the government so long as they are in national interest but wish to caution the government against adventurist moves and manoeuvres which serve interests other than ours at a time when the people of India are hardest hit by privations and disablements in many dimensions.

A Fresh Look at the Constitution

B.K. NEHRU

So large a proportion of the intellectuals who guide our thought live in Delhi and are so absorbed with the doings of the Government of India that they fail adequately to appreciate what is happening in the rest of the country. The people of India, on the other hand, are concerned not with the stratospheric matters which are the responsibility of the Central Government but with the much more earthy subjects which are the responsibility of the governments of the States. The State Governments are forever wanting more powers and more autonomy but the fact is that in every single subject which concerns the life of the people of India, responsibility rests with them and not with the Centre. The levels to which the State Governments have fallen is simply not understood by those whose eyes are riveted on Raisina Hill.

Objectives

The very first objective of any proposal for Constitutional reform must be to ensure that the system provides a stable government both at the Centre and in the States. I rate stability high in the factors required for good government; instability leads to weakness and weak government leads to chaos. We have been fortunate that since independence we have had only two periods of instability at the Centre—1977 to 1979 and 1989 to 1991. This relative stability is not a product of our constitutional system; it is the product of history on the one hand and accident on the other. The long continued struggle for independence with the Congress as its leader gave it a loyalty throughout the country which took some time to wear off. The accident was that we had two powerful personalities almost succeeding each other in the office of the Prime Minister so that it was the personality rather than the institution which caused the stability.

The author, a distinguished civil servant, served with distinction as India's Ambassador to the USA and the Governor of Jammu and Kashmir. This article is based on the S. Ranganathan Memorial Lecture that he delivered at a function, organised by the S. Ranganathan Charitable Foundation, in New Delhi on January 12, 1992.

The States have not been so forutnate. The historical role of the Congress was forgotten earlier there than at the Centre. As the towering personalities of the pre-independence period who ruled the States disappeared one by one and were replaced by ordinary politicians, the instability inherent in the system became apparent. Ever since the elections of 1967, there has been more or less instability in the governments of most of the States of India. Even when a party has come to power with a substantial majority, there is no assurance of stability. For not only is it the constant effort of the Opposition to topple the government but an opposition to the Chief Minister develops within the party by those who feel they have not had their fair share of the loaves and fishes of office. The day after a Chief Minister is sworn in there develops a group of dissidents who, if the party in power is an all-India party, are running constantly to Delhi to complain to the High Command about his misdeeds and asking for his removal. The result is that most of the time of the Chief Minister, which should be devoted to the good governance of his State, is taken away in fighting off the intrigues of his opponents. There is a story that Jawaharlal Nehru once upbraided a Chief Minister for not doing enough for the benefit of his people. The Chief Minister's reply was revealing. He said: "Panditji, both my hands are fully occupied in holding on to my chair; with which hand can I work?"

It is hardly necessary to point out the dangers of instability particularly at the Centre. No concerted policy can be followed nor can any policy be implemented, for the entire effort of the government is devoted to keeping itself in the seats of power. The situation that we are faced with in Kashmir, Punjab and Assam is in no small measure due to a lack of policy and a lack of persistence in pursuing any policy to deal with the discontents that were manifesting themselves. The economic mess in which we now are, which has made us dependent on outside authority and unable to resist its demands, is once again due to the total absence of the will to take hard and unpopular decisions. A strong government taking action two years ago to correct a situation that anybody could see was fast developing, would have prevented our country from having the kind of economic setback we are now facing and the political setback that our total dependence on the foreigner has caused.

My second objective is to improve the quality of the men and women who govern us. It is sometimes said that there is nothing wrong with the Constitution; what is wrong is only with the people who exercise power. The trouble is that the Constitution is such that it must almost inevitably and increasingly catapult into the seats of power the more undesirable elements in our society. The proportion of criminals and history-sheeters in the legislative assemblies of the country has been increasing from election to election. There have been instances in which criminal charges have actually been pending against the Chief or other Ministers in office. There is no shortage of decent, honourable, honest, public-spirited and highly competent people in the country; but the constitutional system is such that it makes it almost impossible for them to enter political life. I should like at this point to pay my tribute to that group of people who have all these qualities and have, nevertheless, had the courage to overcome the hurdles in their way. Without them our political life would have deteriorated even faster than it has. And from the many criticial remarks I shall make about politicans as a class, this category must be rigidly excluded.

The third objective is to ensure that the executive government is strong enough and willing and capable enough to address itself to solving the major problems of this country even though the measures required for their solution may, for the time being, be unpopular. The basic problem in India, of which almost all the troubles that manifest themselves from day-to-day are the facets, is the growth of our population. Even when we became independent, the population-resource ratio was less favourable in India than in many countries of the world. The population since then has more than doubled; by the end of the century it will have tripled. The population-resource ratio is, therefore, very much worse and is worsening every day.

True it is that as a result of better technology, we have been able to increase production from our limited resources slightly faster than the rate at which the population has grown. Prosperity has, therefore, increased and poverty decreased. But the rate of economic growth has been much lower than the rate of the growth of expectations. If the former has to be increased to approach the latter, the measures required, both in regard to population and in the economic field, will, in their immediate consequences, be highly unpopular. The present system makes it impossible to take any unpopular decision, for the vote has become our God. In fact, political decisions are taken which are quite clearly contrary to the national interest because the ruling party of the moment thinks that by taking them it will be returned to power at the next election or even help in getting it more votes at the next by-election.

The fourth objective is to re-establish the Rule of Law. There is no shortage of laws in this country. Every session of Parliament adds a dozen or more to them. The British Government in India passed no more than a little over 400 laws in the 90 years of their rule between 1857 and 1947. The independent Government of India has passed in the 44 years since independence almost 5000 acts at the Centre alone; it is only a minority of them that is actually implemented. Every single one of the British laws was implemented; one of the major considerations in enacting a piece of legislation was whether it was possible, given the limitations of the administrative apparatus, to enforce it. If a proposal for legislation was such that it would be impossible to enforce it, it was considered preferable not to have it, no matter how desirable, than to bring the whole system of law into disrepute by laws being violated with impunity.

Laws today are passed without adequate thought and almost without any discussion. The Prime Minister or the Chief Minister of the day gets a brainwave one day that a certain law is desirable. It is drafted the next day, is passed by the State Assembly or by both Houses of Parliament on the third day, and sent up to the head of state for assent. Furthermore, when legislative business is before the House, there is hardly ever any quorum; legislators who are supposed to have been elected to legislate have no interest in legislation.

The reason why they have no such interest is that they know very well that the law does not matter. Increasingly, the will of the Chief Minister, of the individual Minister and of the local MLA is being substituted for the laws of the land. The Civil Services, whose duty it is to implement the law and not the will or the whim of Ministers or legislators, have been subjected to such enormous pressures that they have no alternative but to forget the law and carry out these wishes.

The fifth objective is to ensure that the elected representatives of the people who make the laws actually represent the people. The MLA or MP should represent every section and every interest of the electorate; under our present system of first-past-the-post elections, the legislature does not reflect the real wishes of the people. The Congress party, which has been governing us for most of our independent existence, has not, except on two occasions, had the support of more than half the electors. The number of votes in the country opposed to the policies of the Congress has, for most of these 44 years, been larger than the number of people who support those policies. But under our system, the views of these people are not represented in Parliament as adequately as they should be. The consequence is that instead of disputes and differences being settled through debate and compromise in Parliament, which is the democratic method, they are taken into the streets with increasingly more violence.

The sixth objective is to ensure that local problems are settled and local development takes place, not in accordance with the wishes of the State legislature or even Parliament itself, but according to the wishes of the people of the locality, insofar naturally as their wishes, desires and actions do not come into conflict with the interests of the people of other localities. The system today is—of power concentrated in the hands of the State Assembly or in Parliament. The local bodies, the municipalities, the zila parishads, the village panchayats, etc. exist almost at the will of the State Government. They do not have enough resources to meet their obligations and, what is very much worse, if they take actions which the party in power at the State level does not like, the local body is suspended or superseded. This is true not only of territorial bodies such as those I have mentioned, but the craze for power is such, and the safeguards against that power being misused so few, that nominally autonomous bodies such as universities, cooperative societies and the like are infiltrated and dominated, much to their detriment, by appointees of political parties.

Finally, the objective is to reduce the ever-rising tide of corruption which threatens not only to overwhelm the administration, which is serious enough, but what is even more serious, to destroy the moral fibre of the country. Eleven years ago I made a speech in Madras which attracted considerable attention. In that I traced the roots of corruption to the enormous sums of money required for an election under our present constitutional system. The amounts have grown since then; they were then, and are now, so large that there is no possible honest method by which that kind of money can be raised. Political parties and individual legislators are compelled to raise that money; the only way they can reimburse themselves or their financiers is to extract that money, with usurious interests, from the administrative system. Corruption is, therefore, not only encouraged but the honest officer is virtually compelled both by peer pressure and by the pressure of the bosses to become as corrupt as they are.

My proposals for constitutional reform are based on the essentiality of the separation of powers. It has now for several hundred years been a well-recognised principle of democracy that the three powers of the state, the Executive, the Legislative and the Judicial, should be kept entirely separate from each other. This separation is necessary because each of the three branches of government serves as a check on the others leading to a balance in the final direction in which the government moves. In the parliamentary system there is a confusion between the Legislative and Executive powers. The Chief Minister or the Prime Minister must be a legislator, and so must all the Ministers in his Council of Ministers. In all parliamentary systems, the extent of the confusion is limited to the Ministers being members of the legislature and so is it theoretically in our Constitution. Article 102 of the Constitution in regard to the Centre and Article 191 in regard to the States says that "a person shall be disqualified for being chosen as, and for being, a member of" either the Central or the State legislatures, "if he holds any office of profit under the Government of India or the Government of any State". Unfortunately, the same sentence goes on to say "other than an office declared by" the legislature concerned "by law not to disqualify its holders". Both the Central legislature as well as every single State legislature has an enormous list of offices, every single one of which is "under the Government" and is not only of legal profit but often of great illegal profit, to the holder, as being an office which does not disqualify him from the membership of the legislature. In the case of the Mother of Parliaments, whose rules and conventions we think we follow, it took the representatives of the people almost 200 yeas to get rid of what were known as the "King's Men", whose loyalty had been bought by the Crown by giving them all kinds of offices.

MESSAGE OF THE MARCH PAST

Men, women and children.
Senior citizens and
Sentinels of Freedom.
As they march in proud
unison on the Republic Day
they have but
one thought— INDIA,
OUR INDIA.

And in the hearts of the millions who watch the parade there is only one swelling spirit — the spirit of togetherness.
A spirit that gets strengthened by challenges— economic or otherwise.

And makes us more determined in our efforts to fight poverty and forge ahead in new directions.

A Resolve to Win Challenges
That's the Parade Spirit

D A V P 91/600

Executive

We have at one stroke destroyed that essential safeguard of democracy. Once a Chief Minister is appointed, all that he has to do to keep himself in office is to give an office of profit to every single member of his party. Whence it is, that the number of Ministers goes on forever shamelessly increasing. The result is that subjects which should be, and were, dealt with by Under Secretaries, now have a full Minister to take the same decisions as the Under Secretary used to take. When this subdivision of subjects goes so far as to pass the point of absurdity in that further sub-division is impossible, those left out of the ministerial list are made Chairmen of Public Sector Corporations or Commissions. If there are not enough corporations in existence to satisfy officeless legislators, more corporations are created overnight. In fact it is becoming increasingly clear that our great devotion to socialism is based not on any understanding of, or commitment to, socialism, which we never had, but on the fact that under our system it produces enormous profits for legislators no matter what losses it produces for the tax-payer. If unfortunately even this shameless creation of offices is not enough, the legislators still left out are kept happy with being given government contracts. The life of the Chief Minister is thus ensured for the statutory term of the legislature.

The price of stability in our system seems to be the transformation of a democracy into a kleptocracy. The only danger that remains is that important legislators may be dissatisfied because they have not been rewarded with a 'lucrative' enough portfolio. The term 'lucrative portfolio' now current in our political parlance is our contribution to the theory of democracy! Here fortunately the Anti-Defection Law stands in the way but careful Chief Ministers take out an even better insurance policy. They grant to every single member of the legislature, irrespective of party, the right to transfer a given number of officials from place to place within his constituency. What happens to law and order, to education, to development, and to the numerous other services that government is supposed to provide to the people is nobody's concern. Furthermore, ruling party legislators are permitted, encouraged and indeed expected, to issue orders to the district administration. If they are disobeyed, the official is subject to the dire wrath of the Minister. The confusion between the legislative and executive powers is complete; the causalities are the Rule of Law and good administration.

My first proposal is, therefore, to separate entirely the legislative from the executive function by making it impossible for any member of the legislature to hold any office of profit under the government, including a Ministership. The Chief Executive of the country or the state that is, the President or the Governor as I would prefer to call them, will be elected separately and will appoint such Ministers as he may wish from outside the legislature. There will be no authority under the Constitution to give anybody the right to waive this prohibition.

The effect of this will be immediately and automatically to reduce drastically the attraction of becoming a legislator. The scores of thousands of people who seek tickets from the party they believe most likely to win, do so not because they are interested in legislating but because they are interested in governing. If a member of the legislature cannot exercise any executive power, the only people who will stand for election to a legislature whose only function it is to legislate, will be those who are interested in making good laws. This will automatically raise the quality of the persons wanting to be Members of Parliament or of the local Assemblies and improve the quality of legislation by having greater attention paid to it by men and women interested in legislation and having the competence to legislate. It will secondly, and very importantly, improve the quality of the Ministers because the Chief Executive will be able to recruit the best men for the job irrespective of whether or not he has the capacity to wheedle votes out of an ill-informed electorate.

My second proposal is that the President or the Governor will hold office for a fixed term of years without any possibility of his removal during that term—except by impeachment for acts of moral delinquency. Not being dependent from day-to-day for his own existence on a whole horde of rapacious legislators he will be able to propose unpopular policies and take unpopular actions in the interest of the country. He should have a tenure long enough to be able to give effect to the policies which he considers desirable, say seven years in the case of the President and five years in the case of the Governor, but, very importantly, he should be limited to a single term of office. This limitation is essential because otherwise he will fall a prey to the same temptation as our present politicians, of seeking popularity in order to remain perennially in office and in following more and more populist policies which give immediate pleasure to the voter but harm the long-term interests of the country.

The fixed term of the Chief Executive ensures stability in the executive government. The President or the Governor does not have to waste any time at all in placating the desires for power and pelf of the members of the legislature. They can be discontented with him, they can abuse him, they can run to the High Command complaining against him, but all this will have no effect. He will continue to remain in power till the earth has completed the prescribed number of orbits round the sun. The futility of these efforts will soon become apparent and the enormous amount of time and energy wasted in the effort will hopefully be put to better use.

Theoretically, the best way to elect the President or the Governor would be to have him directly elected by all the adult population of the country or the State. But our country is so vast and the population so great that the expenditure involved for any candidate would become colossal. Once again this would lead exactly to that corruption which it is one of our objectives to eliminate.

The next best alternative is for the President or the Governor to be elected by a college of electors who themselves represent the people. It is the general belief that the President of the United States is elected by the direct vote of the people. But this belief is legally and constitutionally wrong. The people vote to elect members of the College of Electors; it is this College which elects the President. The Founding Fathers of the American Constitution prescribed this indirect method because they felt, rightly, that so important a decision should not be taken by the vast number of people who could be swayed by emotion or a populist appeal or election gimmickry; it should be taken by a very small group of people who, while being representative of their communities, were relatively immune to these unworthy influences and could act in the best interest of the nation. Theoretically, members of the College of Electors were not bound by the wishes of the people who elect them to that college. They could theoretically totally disregard those wishes and vote for the person who they thought would be best for the country irrespective of who their electors wanted. The conventions that have, however, developed and have probably by now assumed a legal form debar such a practice.

There is nothing new about the proposal that the Chief Executive should be elected by a College of Electors for the President today is also so elected, the College of Electors being the Members of Parliament and the State legislatures. And indeed the Prime Minister and the Chief Ministers are once again elected by a narrow and small College of Electors, that is to say, the members of the majority party in the Lok Sabha or the lower house of the State legislatures. The College of Electors I propose is much wider consisting of not only the Members of Parliament and the Members of the State legislatures but also of the members of all local bodies down perhaps to the panchayat level. The electorate will be wide enough to ensure that it reflects the wishes of the people; it will be small enough not to require much expenditure of money to enable it to get to know the qualities and the merits and the policies of the various candidates for the office. This was the method that was adopted in the Constitution of the Fifth Republic of France originally. It is only later that France changed to a two-stage direct election. But France is smaller than our larger States and France is infintely richer than India. It is, therefore, easier for them to expand the constituency of the President than it would be for us.

There is one specific provision regarding the election of the President which should find a place in the Indian Constitution. India has a peculiar problem, shared by Pakistan and Nigeria as also, in another way, by Canada. It is that there is one region of the country with a distinct linguistic and cultural identity which is so large as to dominate the rest of the country. In Canada, the English-speaking part dominates Quebec; in Pakistan, the Punjab has more population and more wealth than the rest of the country put together. In Nigeria, the area which used to be the Northern Province is larger than all the other provinces combined. In India, it is the Hindi-speaking belt, undoubtedly more backward than the rest of the country but more populous, which has since independence tended to dominate the governance of the country particularly in the matter of the choice of the Prime Minister. In 44 years, we have had only two Prime Ministers who have not belonged to Uttar Pradesh. Given the fact that some of these seven occupants of the Prime Ministerial office would have occupied it in any case because of their outstanding merit no matter which part of the country they came from, it is nevertheless true that this large mass of northern India enjoys an unfair advantage over the rest of the country.

The dissatification that arises from this kind of imbalance without adequate safeguards in the Constitution to protect the rights of the other States are clearly visible in Canada and Pakistan. The only country which has recognised the problem in its Constitution is Nigeria and I would suggest that we take a cue from what that country has done. In our conditions, I would notionally divide the country into four zones—east, west, south and north—and would require a successful candidate for the Presidency not only to get an overall majority of the votes cast throughout the country but also a specified, relatively small, percentage of votes in all the zones, before he can be declared elected. This is to ensure that we do not get a President whose knowledge of the rest of the India is so confined as to think of everyone coming from the south of the Vindhyas as a Madrasi!

Legislature

The proposals I wish to make about the powers of the legislatures and the methods of their election are so interlinked with the question of the devolution of power that it would be preferable if I discuss that first before proposing the mechanism of election.

The States in general are forever wanting more autonomy. The discontents in Punjab, Assam and to some extent even in Kashmir are traceable to a certain extent to the lack of autonomy. This question has been gone into very thoroughly by Justice Sarkaria and his Commission. I would agree with his findings that, bearing in mind the interests of the country as a whole, the powers and responsibilities that have been allocated to the Centre and the States under our Constitution do not require any radical change. There may be some adjustments here and there which may be of benefit but these are marginal.'

What has harmed and indeed, to a certain extent, destroyed the autonomy of the States are three factors. The moment the country, with general consent, adopted central planning for economic development, it followed that certain powers which the Constitution gave to the States would have to be vested in the Centre. To take but one example, industry under the Constitution is a State subject. But economic planning for India as a whole cannot be done without central control of industrial policy; control over industry was, therefore, transferred to the Centre by the willing consent of the States.

But the most important factor in the destruction of the autonomy of the States has been the extra-constitutional authority that is exercised by the all-India political parties. Under the Constitution, it is for the people of the State freely to choose and elect their own candidates to the legislature and for the members of the legislature to choose the person they like best as their Chief Minister. The Chief Minister then chooses his Ministers and the head of the State, who is above all political conflict, swears them in. There is no room in the Constitution for any outside interference. However, the existence of all-India parties has resulted in the destruction of this freedom of advice. The Congress gets the principal blame for this for the simple reason that it has been in power for the longest period of time. But the guilt is as much that of all other all-India political parties; the Janata Dal or the BJP act exactly in the same manner. The interference goes to such an extent that even the list of party candidates to the local legislature has to be approved by the central organisation, the Chief Minister to be elected has to be its nominee, the Ministers he chooses and even the portfolios that he gives them are dictated to him by the same authority. One of the great appeals of regional parties is that there is no such interference with them from outside; regional parties in power consequently enjoy much greater freedom than governments belonging to all-India parties. No constitutional provision can be devised to prevent this kind of unconstitutional interference based as it is on the free will of the people; the remedy for restoring the autonomy that the Constitution guarantees to the States lies in their own hands.

The third factor that has operated to weaken the autonomy of the States is the misuse of the institution of the Governor. It was the clear intention of the Founding Fathers that that office should be totally above the political fray and that its occupants would in no way be interested in furthering any political party. In order to ensure that the Governor would not be subjected to the pressure of the Central Government he was given a fixed term of office of five years. The oath of office of the Governor is clear. It says that he will, to the best of his ability, preserve, protect and defend the Constitution and the law and that he will devote himself to the service and well-being of the people of the State.

This would involve, as the Sarkaria Commission has pointed out, the appointment of individuals as Governors who have achieved eminence in fields of activity other than politics or who, though they may have started as politicians, have no further political ambitions or role. However, over the years this concept of an independent and impartial Governor has increasingly become unacceptable to the Central Government. The day after the Sarkaria Commission report was made public, seven appointments of Governors were made of whom six were active politicans belonging to the party in power at the Centre. The concept seems increasingly to be that the Governor is no more than a representative of the Government of India subject to its orders whose function is to serve the interests of the party ruling at the Centre. This concept has been accepted to such a point that the Cabinet of India advised the President to dismiss all the Governors who were in office when they themselves came to power and the President accepted this advice. There could have been no clearer demonstration of the changed character of the Governorship; the Governor had become a political hack not to hold office for the five years which the Constitution required but only till the government at the Centre changed its colour.

My proposal has the inestimable advantage of abolishing the institution of the Governor as it at present exists thereby removing all threats presented by that office to the autonomy of the State. The new Governor freely elected by the people of the State can cock a snook at the Central Government and tell them to mind their own business. Whether or not he obeys the orders of an all-India political party will depend on him and the wishes of his electors. If, in addition, central planning is abandoned as it is likely gradually to be, the autonomy of the States will be restored to its original position.

But the devolution of power that I seek is not from the Centre to the States but from the States to its local bodies, that is, the municipalities, the town area committees, the district boards, the village panchayats and the like, which are much closer to the people than the MLAs sitting in the State capitals. All these bodies now exist but none of them has constitutional protection. What I would want is that their rights, their obligations, their powers, their resources, their method of election and organisation should all be given constitutional protection without the right of any authority, whether the State Government or the Centre, to supersede or suspend them. If the State Government or any other authority had any objection to any of their actions, it would be for the courts to decided whether the action was intra or ultra vires.

I would hold direct elections only to the primary legislative body, that is, the village panchayats in the rural areas or the town area committees or municipal committees in the urban areas. These elections should be held with proportional representation on the basis of a single transferable vote in multi-member constituencies so that every caste, creed, trade or calling or other interest would have a fair and equal chance of representation. A village is a small body of people who inevitably know each other intimately. They know who is good and who is bad; they know who is competent and who is incompetent; they know who works for the public good and who is a self-seeker. They can be trusted to elect to ther panchayats the best people in the village.

It is often said that giving additional powers to a village panchayat would only mean giving powers to the local strongarm *Chaudhri*. This may be true in present conditions. But if the panchayat is given constitutional recognition and its elections conducted under the same safeguards as those to Parliament, I do not see why the panchayat cannot be as true a reflection of the will of the people as it is humanly possible for any elected body to be.

The primary body, that is, the village panchayat or the town area of the municipal committee would be in my scheme of things the base on which further representative bodies would be built. The next tier of local self-government would be the district board—unless local conditions require yet another intermediate body. This would be elected not directly but by a college of electors. This college could consist of the members of all the primary local bodies in the district. For the next stage of government, namely, the State legislature, there again should be no direct elections, the college of electors being members of the district boards of the States. The final stage would be the election to the Central Parliament for which the college of electors should be the members of the State legislatures.

All these elections should be through proportional representation on the basis of the single transferable vote. The system of the single transferable vote has been in practice in our country since the beginning of our Constitution for elections to the members of the Rajya Sabha. It is by no means unknown to us and should easily be practicable even at the lower levels of elections. It is by far the fairest way of electing a body or an individual which or who reflects in themselves or himself the totality of the interests of the electors. The first-past-the-post system as I have earlier pointed out completely distorts the will of the people and is, to that extent, undemocratic. This system is prevalent only in the United Kingdom and in the countries which at one time were part of the British Empire. In all other democracies, some form of proportional representation is practised. For some reason, the only other form of proportional representation known in India is the German system of list voting. In that system for half the seats in the legislature the people vote not for individuals but for political parties. The number of seats of a political party depends on the proportion of votes it gets. Which individual actually gets elected depends on the position his name occupies in the party list. This is a method that takes away the power of election from the individual voter and transfers it to the party bosses. In Indian conditions where the party bosses in general have no elective authority, this system would be absolutely disastrous.

The merits of the proposals I make are first that the electorate at every stage is limited to electing the people who are to decide on the issues which are of the most direct consequence to them. The normal villager in an Indian village has neither any concern with nor any knowledge of abstruse subjects such as foreign policy on which, under the present system, he is supposed to vote. He is concerned as a villager with the supply of drinking water or proper working of the school or the establishment of a hostpital or a dispensary, the timely supply of seeds and fertilisers and irrigation water. He could not care less about whether India followed a policy of alignment or non-alignment.

Further, he knows personally the people who want his vote; whether they stand on the symbol of one party or another is irrelevant to him. He will choose the man who in his opinion is the best man and in whom he has the greatest faith.

Similarly at the next tier of government, the likelihood is that the voter would have sophistication enough, knowledge enough and interest enough to be concerned with the affairs which are the responsibility of the next tier which are wider than the village or the town area. He would in addition be more personally knowledgeable about the individuals who are wanting his vote than would be the general elector. As this process proceeds, the expectation is reasonable that the level of sophistication, knowledge, and interest will increase. What happens at the moment is quite the reverse. A blitzkrieg overtakes a village or a town at enormous expense asking the voter to vote for the Hand or the Lotus or whatever. All that he may know is the name of the leader of the party and the vote that he gives represents his confidence in that leader rather than in the individual for whom he is voting.

The Services

Lastly, but very definitely not the least importantly, I deal with the services whose position I feel should be specifically and clearly defined in the Constitution. Whereas in the classical theory of the separation of powers, the Executive is regarded as one undifferentiated whole, modern political theory tends increasingly to divide the executive power also into two separate branches. There is the political exeuctive whose function it is to direct policy and in the classical words of Harold Laski, "to inject a current of tendency into the stream of affairs". These policies, in order to be effective, have to be given shape into laws which have to be approved by the second branch of government, namely, the Legislative. The application of the law in particular cases is not, however, the function of the political executive; it is the function of the permanent civil service. This group of people are entrusted with the implementation of the law. The Income Tax Act, the contents of which are a matter of policy, does not vest in the Minister of Finance any powers at all; the persons in whom various powers are vested are the Income Tax Officer, the Commissioner of Income Tax, etc. etc. Similarly, no Minister has any function at all under the Criminal Procedure Code; the people who are entrusted with functions under that Code are the District Magistrates, the Superintendents of Police and the like. There is no law, whether in India or in any other democracy which empowers a Minister to decide an individual case; Ministers are merely advisers to the President or the Governor; those whose duty it is to carry out the orders which the Ministers have advised the President to give are the servants of the President which the Ministers are not.

The reason why India is increasingly becoming a lawless country is that those to whom the law entrusts its enforcement are not allowed to exercise their powers. The law is replaced by the will of the Ministers and, indeed, often by the will of individual MLAs. The law says that the police must take cognisance of a murder, investigate it, and proceed to prosecute the party or parties whcih it considers guilty. The Minister, on the other hand, says that if the murder has been committed by his henchmen, the case has either not to be registered at all or not investigated or investigated improperly or the post mortem report has to be cooked or other steps taken to ensure that the guilty party gets away scot-free. Not only that but there have been well-known instances where the Chief Minister has used the police force as his own private army virtually converting it into a gang of outlaws committing murder and rapine. To collect money for his own private purse through the agency of the police force is something that unfortunately is by no means now unknown in our country.

We have gotten to a point at which many parts of the country—and I do not refer to Assam, Punjab or Kashmir which are special cases—have no law and order. The only persons whose life and property can be regarded as safe are those who are the political bosses connected with the party in power at the moment or those who are fortunate enought to enjoy their favours.

How is it then that the permanent civil services have abdicated the functions entrusted to them by law? The Constitution has provisions which show clearly that the permanent services were supposed to be independent of the political executive and not to be swayed by the political bias of whoever happened to occupy the seats of power for the time being. The Public Service Commissions which were supposed to be completely impartial and independent were to recruit the personnel of the services; under Article 311 of the Constitution the public servants once recruited were given special protection; they could not be dismissed or demoted or other disciplinary action taken against them without an elaborate inquiry.

But the provisions of the Constitution did not specifically prevent the Minister from transferrring, denying promotion or suspending an officer who was not pliable and performed his duties without fear or favour as he was expected to do. It is these three powers of transfer, denial of promotion and suspension that have been ruthlessly used completely to demoralise the services. In a country where jobs are not easily available, it is not surprising, though it is tragic, that a larger number of civil servants, including the corps d'elite of the all-India services, namely, the IAS and the IPS, should not have been able to live up to the great traditions of independence and impartiality which they inherited.

In virtually all well-run democracies, the civil services have, mostly by convention, a special position which excludes the kind of pressure that is applied against them in India. In the United Kingdom—and this is true *mutatis mutandis* of all European democracries—recruitment is made by the Public Service Commissions which are truly independent and immune from political influences. Appointments, postings, transfers, promotions or denials thereof, are all decided not by Ministers but by a group of senior civil servants themselves. As the civil servant's future does not depend on whether or not he has been able to please his political master but whether or not he has been successful in implementing the law, it is the law and not the ministerial whim which get obeyed.

The idea that the civil services should have autonomy is, of course, anathema to politicians of all kinds and of all parties. The Indian tradition of governance is not through the Rule of Law; the law in our tradition is what the ruler wishes. It is not understood that in a proper democracy there is no ruler in the sense we have understood the term but that every functionary of government from the highest to the lowest has a strictly limited task to perform. That task is defined by the Constitution and the laws; the will of any indiviudal, no matter how highly placed, cannot prevail against the law. Even if it is the President who breaks the law, he is liable to impeachment. We are all aware that Richard Nixon who had authorised a kind of house-breaking and larceny had to abdicate what is perhaps the most powerful office in the world, the Presidency of the United States, as he found himself defenceless against the threat of impeachement. In India even a minor Minister can authorise and does authorise that kind of action without the slightest fear that any authority would take any action against him. Indeed, extortion, bribery, unlawful detention, assault and even murder seem in our political consciousness to be the legitimate rights of the person who regards himself and is often regard as the ruler.

I suggest that if we do not want to descend into chaos, a major change in our Constitution will have to be to define the respective and distinct functions of the permanent and political parts of the Executive branch of government. The conventions on which we were relying for good government under the Constitution have all been broken; they have, therefore, to be replaced by law.

Conclusion

I have attempted to sketch the outlines of a Constitution which, in my view, should replace the present one if we are again to become a peaceful, honest, just and progressive nation. Each one of the specific proposals I have made requires to be greatly elaborated after mature thought and wide discussion. I do not for a moment claim a monopoly of wisdom; what I would like to suggest is that these ideas of mine should be discussed for what they are worth more objectively than has hitherto been the case.

The objection that is often raised even to the discussion of this kind of basic constitutional reform is that it is so radical that it is never likely to be accepted by the only people who can change the Constitution, namely, the politicians themselves, whose present access to power and pelf it will totally eliminate. That is true in normal circumstances. But the body politic is deteriorating at so rapid a pace that it is just possible that within a foreseeable future an abnormal set of circumstances will arise where the present-day politician will not have the last word in determining the future of our country. Who would have thought only a couple of years ago that the Soviet Union would collapse and be replaced by something so entirely different? The conventional wisdom was that the power of the rulers of the Union was so formidably entrenched that nobody could ever challenge it. But circumstances are not bodies; it was the force of circumstance, the economic collapse of the system which forced the change.

All that I urge is that at least the intelligentsia should discuss these matters and come to some kind of consensus on the shape that we would like the constitutional reforms to take so that when the irresistible force of circumstance compels the change, we should not face the kind of chaos that has replaced the breakdown of the old system in the Soviet Union. ■

University in a Democracy

UPENDRA BAXI

We all know that our campuses are beset with a kind of malignancy arising from a multitude of big and small factors. It seems that all of us—students, teachers, karamcharis—more often than not tread on the toes of each other. Verbal aggression, name-calling and even shouting downright abuse is the order of the day. Even worst forms of physical aggression abound. Stabbing incidents are common in many of our campuses. And ragging which seems to be some people's idea of fun creates situations which often result in student fatality; in any case, severe psychic distress, especially in terms of self-image and self-esteem, haunts the victim for a long time. Sexual harrassment of women on campuses is also increasing alarmingly.

Campus cultures also reflect pronounced tendencies towards denigration of others, often quite malicious. Perhaps, this syndrome may be described as *nishkam ninda* (desireless denigration), the opposite of *nishkam karma* (action unaccompanied by desire of gain) the *Gita* proselytised.

It is not that we are not aware of the crisis of civility in our campus cultures. Indeed, we talk about it from time to time. And we insist on the norms of civility, even if in politically partisan ways, from time to time. But, by and large, apathy overtakes honest agony at the growing crisis of civility. Private distress is not matched by public outrage.

Our campuses are marked by moral majorities which, however, prefer to remain silent. But a silent moral majority is not a change agent. Indeed, its inarticulateness endangers the very idea of a University, an idea which is civilisationally precious. And a society which progressively loses the idea of University is indeed a society without a future, if future is to be conceived as the shape of a struggle for just transformation by men and women of compassion, dignity and learning.

I have said that moral majorities on Indian campuses were inarticulate. This must be qualified by two caveats. They are not, quite naturally, inarticulate in pursuit of individual or class/collective interest. The rationality of self-interest is powerful enough for all of us to break our *mauna* (vow of silence) when the occasion demands this. But, more important, even the moral majority is a participant in *nishkam ninda*. The leaders of moral majority—be they teachers, students, karamcharis—are extremely articulate on one theme: lamentation on 'politicisation' of our campuses, on 'lumpenisation' and 'criminalisation' of politics and on the decline of values, summed up as a loss of national character.

The author is the Vice-Chancellor of Delhi University. This contribution is taken from the convocation address he delivered at the University of Manipur (January 4, 1992).

All of us are very generous with denigration of politics and politicians, as individuals and as a class. And I know, as we all do, that there is a lot that is wrong in the practices of Indian politics. But the continuous condemnation of practices of politics is, I believe, unjustified as well as harmful to the future of democracy in India. We must strive to correct and chasten arrogance of power. But to denounce politics and politicians as a class is, simply, anti-democratic.

For, liberal democracy requires dedication to politics; doing of politics requires men and women to shun other career paths; without some people opting for politics as a career, consuming them in the process, the pursuit of other careers—including academic careers—would simply be impossible. In its most ideal sense, democratic politics is sacrificial, although existentially, pursuit of politics may not be seen as sacrificial anymore.

But whatever be our judgment on the nature or career in politics this much ought to be clear: liberal democracy requires men and women who would pursue power for its own sake and seek to justify this pursuit in cogent languages of national interest. Without a will to power and a rhetoric of legitimation no successful practice of politics or career in politics is ever possible. Only in India an observation that politicians are 'power-hungry', 'power-brokers' would be regarded as gems of wisdom. It is as profound as an observation which condemns a capitalist for making profit!

I would want to think of democratic politics more seriously. If you think that politics is bad, what's the answer to bad politics? One answer enamouring many a practitioner of politics is that no politics is better than 'bad' politics; that is the royal road to authoritarianism. But there is another answer to the question of 'bad' politics. And that is: 'more politics'. By 'more politics' I mean great civic participation in the affairs of the state. Name-calling, maligning, gossiping, condemning politicans as a class is, in my opinion, not civic participation, but its precise opposite: a mean-minded evasion of responsibility of knowing and doing things for the nation.

◆

UNIVERSITIES are sites for expansion of consciousness, accesses to millennial traditions of thought, development of scientific outlook, and creatively compassionate engagement with national renewal. We should bring the great human heritage that we name as university to bear on our understanding of practices of politics and seek to transform its nature and direction where necessary. This cannot be done by lung power, muscle power, or trigger-happy verbal aggression. We need to bear our civilised understanding to this great task and a dignity of discourse marked by humility.

And this virtue of humility should arise from introspection within our own campuses. Have we been able to exercise freedom of choice, relatively free from the arm of politics, rigorously within our domain? Have we demonstrated the necessary qualities of moral imagination and academic exemplarship in ways which not merely sustain our heritage but enrich it for future? Are practices of academic power within the Indian campuses informed by values and virtues whose lack we constantly bemoan in others? Have we too readily succumbed to temptations whcih we would like others in public domain to valiantly resist? What is the transformative potential of practices of knowledge for practices of power? Or is there manifesting, over time, an impermissible degree of unity between the practices of knowledge and practices of power? If the latter is the case, should we not begin to understand the criticism of politics as our agony at our own selves?

These uncomfortable questions must be on our agenda. And we should all discuss them with patience, courage and candour. I believe that even a modest growth of determination to place such live questions on our collective consciousness will give hope for overcoming the crisis of civility on our campuses. Recovery of civility and of dignity of discourse on our campuses is important for the Indian future. It is important if we are to cease to be 'modern educated saints' whom Karl Marx witheringly criticised more than a century ago when he wrote: the classical saint of Christianity mortified his body for the sake of salvation of the soul of masses; in contrast, the modern educated saint mortifies the bodies of the masses for the sake of his own salvation.

If we have to choose between models of saintliness, Marx should be our unfailing guide. Indian campuses, in their search for renewal, need to move in the direction of ever greater social engagement and commitment. We should be moved, in thought and action, by everyday misery of the Indian impoverished; we should find ways, in everything we do in our campuses, to express solidarity in struggle against vicious forms of deprivation, dispossession, disadvantages to which hundreds of thousands of our fellow beings are subjected—by society and state. In addition to being progenitors of well-bred, well-manicured critiques of power, Indian campuses should themselves be producers of alternate social consciousness and of visions of justice.

It is true that "it is not given to any generation of men to complete the task of human improvement and redemption". But it is also equally true that "no generation is free, either, to desist from them". This generational commitment carries the reminder that the attainment of social justice involves a series of tasks, none of which is accomplished by recoiling at the arrogance of power. We should also recall that tasks of justice are often performed best through quiet looking acts of struggle in one's own academic niche. That niche is secured by practices of power oriented to the Indian Constitution.

Towards the end of his luminous career Albert Einstein said: "Politics is harder than physics." And education conceived as constitutional politics directed to escalate transformative potential of future generations of Indian citizens is even harder than the politics of will to power for domination and subjugation of men and women. This is the reason why academic freedom is the most difficult freedom of all. And a university constitutes a permanent invitation for us all to exercise and enjoy this freedom. ■

Mera Ukaradi Mahan

YOGINDER K. ALAGH

The word *ukaradi* literally means dungheap in Gujarati. It is also the name of a village of around 1430 souls about 28 kilometres north-west of Viramgam, the headquarters town of a taluka of the same name in Ahmedabad district. The village is a part of the area called the Chuwal Pradesh (*chuwal*) originates from the Hindi-Gujarati equivalent of 44 referring to the land of 44 villages). Viramgam, it may be recalled, had gained momentary world fame, since to go to the Kala Ghoda Salt Works of the then Imperial Government you could do so only via Viramgam. In fact the famous despatch to the United States, describing the brutal lathi charges on Maulana Azad and the Congress satyagrahis during the freedom struggle probably went from the present Viramgam Post Office, since not much has changed in this town with its ancient walled fortification, *talao* and handsome Bapus, Darbars and Thakores.

The soil of the Chuwal area is the gold our country in many parts is endowed with—the rich deltaic alluviam—not that common in many other parts of Gujarat—with their black, or red laterite soils, but the problem is water. My friend Sanat Mehta tells us of the incredulous look on his face when he went to some villages in north-western India in the 1987 drought as the AICC Drought Committee Secretary, and was told of the misery of the *sukha*, arising from the groundwater being as low as 40 feet. In Gujarat, of course outside the coastal plain, temple bells start ringing if groundwater levels reach 40 metres high. In the Chuwal folklore women sing of the blessings of the years in which it rains, for only in those years do their men come back from far away places in the Chaumasa.

I would like to remember Republic Day this year by my "Ukaradi" experience on August 15 last year. Independence Day enthusiasm this year was subdued by even the Doordarshan commentators at Red Fort talking of the sombre mood generated by the nation's woes. For some of us, however, Ukaradi was to be the silver-lining.

A few days earlier my friend Vimal Shah, the author of the Resurveys of Matar Taluka (the original Matar Survey by Sitaramayya on behalf of the AICC was a part of the freedom struggle) had met me with his friends the Gandhians, Ambubhai Shah and Maganbhai Patel. They were accompanied by a 60 year old gentleman who had the hard lean look of a Gujarati trader and yet seemed to have a benign eye on Sarvodaya workers, not to mention economists like Vimal Shah and me. Ambubhai got straight to the point. The other gentlemen was Mulchandbhai Virchandbhai Shah of Sarangpur village of Dholka taluka in the Bhal Pradesh of Ahmedabad district. He had donated a lakh of rupees to the Sarvodaya Sangh for the "balanced social and economic development of any one village" and the Bhal Nalkantha Prayogik Sangh at the Sarvodaya Ashram at Gundi, Lothal (yes, the Indus Valley Lothal) had picked up Ukaradi village, over 150 kilometres away for this purpose.

Ukaradi was sufficiently far away for Mulchandbhai not to feel as if he was helping his own *watan* and anyway wasn't it appropriate to start with *ukaradi* on independence day this year, said this *chela* of Gandhi with a slightly mischievous smile. It is quite obvious that this business of cleaning toilets in Phoenix and of Bhangi Colony will remain with us. The villagers had collected twentyfive thousand rupees and would eventually match Mulchandbhai's one lakh. Maganbhai of the Sangh had done a survey of Ukaradi and I was to start the work with a speech on Independence Day. "I will come anyway since I like development mongering, but let us get a Minister," I said; for that way we will get some more money, I explained. "Ministers only make promises these days, Alagh saheb"—this from Mulchand Kaka.

The caption should have been: "*Mera Mulchand Mahan*". They were picking up guns to settle scores all over, Nafis Sadiq was telling us that the Sahel was being ravished. My friends, Maurice Strong and Nitin Desai, were worried about CFCs,

The author, a distinguished economist and former Member of the Planning Commission, is currently Professor of Economics, Sardar Patel Institute of Economic and Social Research, Ahmedabad.

the ozone layer and the Earth Charter. Our own Anil Agarwal was telling all of them that it's all wrong, and Gorby was probably preparing for his famous holiday—but the man comes out from the Bhal, takes out a lakh of rupees and insists on "the balanced development of any one village". No wonder the Planning Commission is in trouble.

There are over a hundred Darbar households in Ukaradi and about fifteen each of Rawals, Thakores and Rabari Bharwads (cowherds). There are about fifty Kumbhars and around thirty Harijan households. With a majority population of darbar, rawal and thakore households, it is a socially conservative village. For example a number of women drew *ghunghats* (*laj kadvani* in Gujarati).

Out of its 857 hectares of land, only 32 were irrigated. There is a big *talao* and a small *talavadi*. Paddy, jeera and cotton are grown if the rains are good. There seemed little poverty in the village and less inequality than in most rural areas.

◆

THE entire village in all its finery was present on August 15. After a mass tree plantation ceremony in the village commons, Mulchandbhai presented his cheque and the sarpanch, Bhathisangh Solanky, a bag full of the villagers' contributions to Kashiben Mehta, President of the Sarvodaya Ashram. Kashiben who has quite a reputation for her pugnacity, everytime she got up would ask the women to get rid of the *ghunghat* ("*laj rakhwani, laj kadvani nathi*"; difficult to translate the play on words but something like we must preserve our honour, not cover it). The village schoolgirls danced on a welcome song and some grains and oil were distributed to destitute households.

The appeal by Ambubhai for volunteers to give up drinking, tobacco and gambling, was met by a stony silence. The proud Darbars would not renounce their macho pursuits and that too in front of their elders, the visiting dignitaries and most important, I suspect, their womenfolk. Also the acceptance of these indulgences as "sinful" was perhaps not OK. The ice was broken by Pratap Singh—a graduate farmer, the local development monger, honorary postman and M.C. of the show—who announced that he was giving up smoking. Sensing this as the opportune time, I also joined in a pep talk on the fun of fighting the tobacco urge and how I had given up smoking sixty cigarettes a day. The action began with a renunciation from one of the older Darbars who come up twisting his imposing moustache and spoke out his vow and as the day wore on we had around twenty more volunteers.

Pratap Singh took me to the *talao*. In the areas which are desilted, the water tables rise. The farmers then use an *oiliya* (a diesel pumpset for irrigation). HYV seeds are used and the yield is around 55 quintals per hectare of paddy. A young schoolboy who accompanied us quickly transformed the bighas and kutcha maunds to quintals and hectares. He had quite a glow when I told him that he was a great Hindustani *sipahi* when he translated fertiliser from bags of nitrogen/bigha to nutrient kilograms per hectare. Pratap Singh wanted the entire *talao* to be disilted and the embankment on the northern end repaired. The village was getting Rs 60,000 as JRY funds and I suggested they use them. They were told they could not do so for some hassle between the Minor Irrigation, Rural Development and Panchayat Departments which in spite of my Delhi training even I could not understand from the *talati*.

So much for land and water development through labour-intensive means. In the *panchayat ghar* we worked out with the rainfall pattern for the last ten years that the *talao*'s capacity should be for a little less than the average rainfall, for in that case there would be carry over storage into three of the four bad years. It was agreed that it should be possible to grow about Rs 3000 of output per bigha with around 18 inches of water and about Rs 1800 in bad years with some carry over storage. Plastic lining, mulching and other water-saving possibilities were talked about.

More *oiliyas* and first stage processing of paddy, jeera and cotton was difficult and so the price realisation was low. New technologies for processing were coming, I said. But the PACS was not eligible for refinance on account of default. Would they agree for rescheduling of debts? Yes—but the local functionaries had not heard of the Khusro Committee's revival plans or NABARD's restructuring proposals. We were going to meet again with the concerned people to resolve these problems.

The Darbars were happy when I talked of the intoxication of *vikas* as a substitute for their renunication and the ladies liked to be told that the young girls who welcomed us and others were the foundation of our future—in fact our civilisation. I remember Sudhir Krishna who was then Collector in Sidurga in Karnataka telling me how excited the Youth Club in an interior village was, when we shared similar thoughts with them and later at

Mussoorie insisted that all planners must visit villages to concretise their ideas.

But as I drove back my Gandhian friends in my van, in spite of their exuberance I was not at all sure that we should be able to integrate all the programmes for which I had written "guidelines" while at Delhi—and for which I was now supposed to be planning at Gandhinagar. This "small" job had to be done in the village of Ukaradi.

Thank you Mulchandbhai for insisting with your own money on the balanced development of a village. Also thank you Ukaradi. Prof N.R. Rao keeps on accounting our big successes. We can at least try to make a success of this one small job. Come to think of it even the IMF team may not object. For we have a lakh and a quarter of our own post-devaluation rupees tucked away in our own restructured deregulated lead bank's local branch. Delhi, somewhere between Narita and JFK, remember not to lose touch with Ukaradi. ■

Help us Mother Earth . . .

MRINALINI SARABHAI

Once upon a time the world began, from God or perhaps only with a big bang. It does not really matter which—for here we are for better or for worse, connected close together—like pearls upon a string. Reflected each in another whether we will or not, what are we doing here trying perhaps to save our planet with words of wisdom—perhaps later to act upon these visions or perhaps not?

Are there problems? Ah yes, the overpopulation. Do not let that bother you, my friends. Thousands of girl children are being slaughtered every day, in pure scientific methodology. Man will survive!

Did you say culture was being lost ? Do not despair! Farsight and Bollywood will bring their precious gifts of sex and violence right to your door.

Mythology is so foolish—just stories of these primitive peoples of the Third World, of course.

This is the text of the author's intervention at the symposium on "The Challenge of the Twentyfirst Century", organised by the Indira Gandhi Memorial Trust in New Delhi (November 19-21, 1991).

The God Shiva whose locks were forests of Himalayan peaks has had his tresses shorn, by us, of course. Such childish thoughts this worship of the Ganga, its mighty flow-we stopped with garbage. For we are human and we know best. Water is passé, let's drink you know what!

Words, words, words. I am so tired of words. You speak of conservation. Alas, I have nothing to conserve. You speak of food—to me who has nothing to eat!

You speak of a man called Gandhi. We shot him—yes, you and I, so long ago—we shot the truth, again, again, again!

Dear friends, let us *stop speaking,* and for a long while to come, *act out* those dreams we dream. Yes, we are human. But surely we can save just one tree, one child, one bird.

It's strange, but I do still have faith. So help us Mother Earth who gave us life, to share your bounty—please without greed, please without strife. ■

Taking Secularism to the Masses

SEEMA MUSTAFA

It is difficult and at the same time simplistic to look for a watershed in the politics of communalism. But if one were to do that to understand the developments in recent years, the turning point will be the controversial Shah Bano judgement by the Supreme Court and, more specifically, the Muslim Women's Divorce Bill brought in and passed by the Rajiv Government.

For, in doing so the Congress-I Government unnecessarily got involved in a controversy not of its making, and to appease the Muslim fundamentalists who deliberately construed the Supreme Court verdict allowing maintenance rights to the divorced Muslim woman as a direct attack on the Shariat, brought in the legislation negating the court verdict. The proponents were the Imams, the mullahs and the self-styled Muslim leaders who have resisted change and progress so as to retain their hold, or whatever they perceive of it, on the Muslim community at large. Regardless of the fact that most Islamic countries have brought in reforms in the personal law, the custodians of Islam here whipped up a hysterical campaign against the verdict, demanding that the government intervene and set matters 'right'.

◆

THE tradgedy of Indian secularism has been that many who claim to profess this ideology misconceive it to mean a 'soft' attitude towards Muslim fundamentalists. There has been a tendency by political leaders even of the secular hue to pamper Muslim fundamentalists. Note the difference between Muslim fundamentalists and the Muslim community. For while successive governments at the Centre, and in the Hindi belt in particular, have paid scant heed to the genuine grievances of the minorities, allowing them economically and socially to sink further into their ghettos, they have tried to retain this crucial vote-bank through the Imams and the mullahs. By succumbing shamelessly to regressive suggestions designed to further suppress the minorities and at the same time, rather deliberately it does seem, doing nothing or perhaps everything (deployment of PAC, discriminatory recruitment policies, etc.) to preserve the minorities as second class citizens.

Rajiv Gandhi was no different. Only more ignorant. And in his ignorance he resorted to half-baked measures that have set the country aflame. Instead of leaving the self-styled Muslims to challenge the Supreme Court verdict through the court itself, he decided to intervene. Ignoring the secular voice that had asserted itself, he participated with the Muslim fundamentalists to drown it. And brought in this legislation which proved to be the turning point in India's recent politics. For, while it satisfied the Muslim clergy, it armed the Hindu fanatics with new ammunition against the government and the minorities. And provided them with a 'base' which they had lacked earlier.

It was then the turn of the Hindu fundamentalists to orchestrate a strident demand for 'justice'. Attacking the government for pampering Muslims, the BJP and all its front organisations began a campaign to promote their communal cause. Namely, that even though in the majority, Hindus in this country were actually second class citizens. This argument struck a chord in the Congressmen's hearts and there was considerable pressure on Rajiv Gandhi and his advisors at the time, from within. So the search began for the 'counter'. And the Babri Masjid/Ram Janmabhoomi tucked away in far-off Ayodhya provided the answer. The locks of this long-disputed shrine were opened, much to the glee of the Hindu fundamentalists and the consternation of the Muslims. The government exulted over the clever ploy of killing two birds with one stone, lacking the vision to realise that it had opened a pandora's box with the potential of destroying the social fabric of our country.

The author, a journalist-turned-politician, belongs to the Congress-S on which party's ticket she contested the Lok Sabha poll from UP last year.

The BJP fanatics realised the potential and immediately began centring their campaign around the disputed shrine. One thing led to another and the Rajiv Government showed neither the ability nor the will to check the communal environment from deteriorating. *Shilanyas* began, spreading the vitriol to villages that had never before heard of the Ayodhya controversy. So successful was the BJP's exploitation of the issue that when the elections were held it not only formed the government in some States but emerged as a major Opposition power at the Centre. And got a further boost by the National Front's decision to form a government with its support. For any compromise with fundamentalist forces, as the Front leaders discovered at their expense, works to the advantage of the fanatics by giving credibility to their arguments. And at the same time it detracts from the secular platform by exposing it to the charge of rank opportunism.

It should have been expected but the National Front Government was caught unawares by L.K. Advani's decision to take out a countrywide *rath yatra* on the Ayodhya issue. Finally, reason asserted itself and V.P. Singh acted. Advani was arrested in Bihar and the Central Government fell. The country, after some more permutations and combinations of the worst kind, went in for another general election. And the BJP fought a grim, communal, ugly battle with no holds barred. It lost some ground in the States where it had ruled, but came back with more members in the Lok Sabha and a government in the sensitive State of Uttar Pradesh. One has not mentioned the numbers that have died all over the country in communal riots that broke out over the Ayodhya dispute. It is a matter of record that most of the victims were Muslims. And that riots took place in areas which had never before witnessed such carnage, leaving not just a trail of death and destruction but permanent scars in the Hindu-Muslim hearts. It was this sentiment that communal forces like the RSS and the BJP exploited, and added to in their election campaign.

Significantly, the Muslim fundamentalists who had been fairly aggressive at the beginning, slowly beat a retreat. In face of Hindu militancy the Muslim leaders went indoors and ugly concepts like the Adam Sena, floated to counter the Bajrang Dal, died a natural death. In fact persons like Syed Shahabuddin who had been fuelling Muslim communalism ran for shelter to the Communist Party offices, asking the CPI leadership to protect the minorities. Over the past months the Muslim 'leadership' has made the some muted noises, just loud enough to be heard by the minorities but not enough to provoke the Hindu reactionaries. That their hold over their own community is limited is proved by the fact that the Muslims all over the country still prefer to vote for the national parties than for individuals professing Islam as their creed. After all some great leaders of the Muslims of India have been non-Muslims—Gandhi, Nehru and, at one stage, Indira Gandhi.

◆

THE fear today is that the scars in the hearts of the common man have gone too deep. And the fear is compounded by the reality that the political and secular forces are too divided and weak to even begin the healing process. The Congress-I is the party in power at the Centre. And with an organisation that could be bolstered to counter the BJP and spread secularism, as an active ideology, throughout the country. But it is the Congress-I that has succumbed to the pulls and pressures of fundamentalism, to the extent of actively conniving with these forces to keep itself in power. Sanjay Gandhi openly sided with these forces. Indira Gandhi began flirting with the reactionaries but never openly so, taking a step back for every two steps forward. But her death fuelled the communal fire and on the Hindu-Sikh issue the RSS cadres came out openly and helped the Congress-I to power with a record number of seats in Parliament. Rajiv Gandhi tried to repeat the performance by pandering to the RSS and the BJP, obviously hoping that his call for *Ram Rajya* from Faizabad as the opening note for the 1989 general elections would entice the RSS and BJP cadres again. But they had tasted blood and had the leadership to realise that victory could be theirs without the Congress-I.

And today P.V. Narasimha Rao is playing the same game. Like the proverbial ostrich this Prime Minister buries his head in the sand every time the BJP passes by. He has clearly decided that his friend in the Opposition is the BJP, closer to him and his party as it has evolved over recent years in ideology (or rather the lack of it) and is willing to pay the price of overlooking their antics in return for power. Unfortunately, it is unlikely that Narasimha Rao will pay any price, at worst he will lose the Prime Ministership, but the country most definitely will. Under his leadership the Congress-I has still to emerge as a cohesive force, but the BJP certainly has consolidated itself. And it is acting with brash confidence, secure in the knowledge that the Congress-I has wilfully adopted the line of least resistance.

On the communal front there are several pointers indicating a tacit understanding between Narasimha Rao and the BJP. Madhavrao Scindia who tried to strike a new note by attacking the BJP at a press conference in Lucknow was silenced rather effectively within just a few days. His comments invited a hostile reaction from the BJP, and the Congress-I party refused to bail its Minster out by supporting his views. A few days later the Congress-I gave full support to the BJP candidate for the Deputy Speaker in the Lok Sabha while Scindia tried vainly to explain his compliance with the usual 'I am a disciplined member of the party', etc. etc.

The BJP Government in Uttar Pradesh passed an illegal notification acquiring land at and around the disputed shrine at Ayodhya. The requisite public enquiry was dispensed with and within weeks it was made clear that the BJP had acquired the land to facilitate the construction of the temple. All through there was no reaction from the Congress-I party or the government. The UP Congress-I refused to react and there was not a single statement from the veteran leaders against the BJP's action. The Prime Minister was urged by the National Front and Left leaders to intervene but he responded with a blank silence. A dharna by all senior Front and Left leaders did not elicit a reaction, with the Narasimha Rao Government's silence making it clear that it had decided against joining issue with the BJP on the Mandir-Masjid controversy.

Emboldened by the passive support the BJP stepped up its programme. The party President, Murli Manohar Joshi, is currently on an *ekta yatra* on the sensitive issue of Kashmir. Again the National Front and Left parties urged the Narasimha Rao Government to intervene. Again there was no reaction. On the eve of the *yatra* Narasimha Rao did convene a meeting of all the party leaders but did not come out with even a single suggestion to indicate that he was concerned over the problem. Opposition leaders came out of the meeting alleging that it had been convened only to give further publicity to the BJP programme. The *yatra* which began from Kerala is moving through north India now with no reaction from the Congress-I. Narasimha Rao made it clear that he would deal with this only as a law and order problem. It has become apparent that the BJP is not interested in violence this time around but is using the *yatra* to spread its own distorted, communal view of history to consolidate and expand its base throughout the country. Kashmir, even as Murli Manohar Joshi insists that his party does not really have anything against the minorities, is being projected as a Muslim issue and Gandhi as a 'nationalist' of the BJP hue. Surely, the country does not have to be littered with dead bodies to make the slumbering government realise the damage being caused to our body politic by the BJP and its *yatra*!

To appease the non-BJP Opposition, Narasimha Rao called a National Integration Council meeting recently to discuss the issues of Punjab and Kashmir. The meeting eventually blamed Pakistan for all that is happening here, and despite lengthy speeches by the members, failed entirely to understand the problem. The Prime Minister, for one, made it clear that it was a low priority meeting for him, as he had not even found the time to read his prepared text. Secondly, he did not refer to the spread of communalism throughtout the country, the role of the BJP in destabilising the heartland and remained content—like some others—to use Pakistan as the convenient scapegoat. It is almost clear that Narasimha Rao and the BJP are one on many issues, and in the face of this total silence on the issue of secularism it does seem that most Congressmen too are in agreement.

◆

TO give due credit, the National Front and the Left have been taking up the cudgels on behalf of secularism. The problem is that the Left seems to be content to function in its own pockets. And the Front is too divided by petty rivalries, oversized egos to launch an aggressive secular struggle which is the need of the hour. There is a definite need today for a Centrist secular alternative to the Congress-I—which has neither the will nor the ability to occupy this position—to combat the BJP and check the growth of communalism. The alternative has to be organised at the grassroots, articulate, cohesive so as to be perceived by the people as stable and strong. A squabbling Front, despite its best intentions, will never be seen by the electorate as an organisation capable of countering the BJP and despite the goodwill it has managed to generate in the rural areas it will find it impossible, as the last elections have proved, to convert this into votes.

The Front was formed as a secular experiment. But while it is premature to say that it has failed, it can definitely be said that it has failed to grow. At the same time it can be revived, activised and organised to form the secular alternative that the country so desperately needs. Secularism now can no longer remain a concept, for discussions by intellectuals at seminars and conferences. It has to be taken to the streets, to the mohallas and the galis as a living creed, as essential to the well-being of this country as food and water are for the human being.

It is a fallacy to think that secualrism is a preserve of the intellectuals. One has met more genuinely secular persons in the dusty villages of rural India, more tuned into the realities than their counterparts pontificating in urban drawing rooms. Recently at a public meeting in a village at Siddhartha Nagar one was astounded to hear a seemingly illiterate local man give the crowd a lecture on secularism. And he had the courage to tell them that they were not born into any religion, and were what they were by sheer coincidence. Birth, he said, only determined one's sex. The rest was wished onto the people by others born before them. One looked with some apprehension at the large crowd in an interior village, wondering how they would react to this truth. And the taciturn villagers who usually listen to speeches straightfaced burst into applause.

It is time that politicians drew a lesson from the rest of India. And regardless of prejudices cherished by the middle classes, took courage into their hands to seriously begin the fight against communalism. The arrest of Advani, or the dharnas against the BJP will be perceived as isolated incidents. Until and unless these are converted into a relentless movement. And that—at the risk of repeating oneself—can be done only by a strong, organised, ideological force that can not only counter the BJP but expose it as the anti-national party that it is. ■

Terrorism, State Terrorism and Democratic Rights

RANDHIR SINGH

It is a privilege for me to be addressing this inaugural session of the Seventh State Conference of the Andhra Pradesh Civil Liberties Committee (APCLC) at Karimnagar, home of the great Telengana Struggle which, regardless of what happened to it afterwards, yet has a message, and the promise of other possibilities, for the people still struggling for a better life in this country, in Andhra Pradesh and elsewhere. I have my memories of those youthful years as a full-time Communist activist. It is a privilege also because the APCLC is no longer just another civil liberties organisation; today it is a movement, a movement of exceptional significance, representing as it does an outstanding example of effective people's intervention in the life and politics of our country—all the more exceptional and significant for the paucity of its material resources and the heavy odds against which it has to work.

Not formally associated with any democratic rights organisation, I have admired your work from a distance, as have many others. And everywhere in this country your courage, commitment and struggle have been a source of inspiration to those actively engaged in defending people's democratic rights or civil liberties. Among them are friends in the People's Union for Democratic Rights at Delhi, who have specifically asked me to convey their fraternal greetings to this Conference.

You have been admired and sought to be emulated but, together with other democratic rights organisations, you have also been criticised and condemned. Even as the Indian state and ruling class politics have been rapidly degenerating into a lawful as well as lawless authoritarianism in recent years, especially repressive when people protest or seek to organise and struggle, thereby making the presence and work of democratic rights organisations all the more necessary and urgent, though more risky also, these organisations have come to be regularly reviled and run down not only by the ruling elite or those manning its state apparatuses but also by others in all sorts of other places, especially the media.

The critics claim to be independent and impartial, above party, politics or classes; even more than 'law and order' they speak in the name of 'the nation', 'the unity and integrity of India'. It has become customary for them to refer to democratic rights organisations, with ill-concealed hostility and unease as 'a nuisance', 'do-gooder groups', 'the self-styled do-gooders', 'so-called defenders of civil liberties', 'these worthy organisations' and so on. At other times they are portrayed, attacked or dismissed, as 'front-organisations'—for 'anti-national' forces, 'terrorists' or 'secessionists', or, as in case of the APCLC, 'the Naxalites', etc.

I am not going to speak of the increasing importance, despite all the odds and all these critics, of your struggle in defence of democratic rights in our essentially undemocratically constituted society which, with its multiple crises, is daily becoming more undemocratic and oppressive for the people. There is more to learn from you here than to teach you. Nor is it for me to make a critical assessment of your work and offer suggestions—you are in every way better placed and equipped to undertake this exercise, and this is indeed what you shall be doing at this Conference. As a concerned citizen who believes that the issues of Terrorism, State Terrorism and Democratic Rights involve us all, today more than ever before, even if in apparently different ways, I shall be content to make a few observations on *how to think* about these issues, in the hope that a little more clarity here may lend a little more effectiveness to our struggle in defence of people's democratic rights. If there is something of the teacher or the academic about my argument, I can only ask you to overlook it as an occupational hazard, for this is how I have mainly functioned

The author is a former Professor of Political Theory, University of Delhi. His book, Of Marxism and Indian Politics, *published in 1990, generated considerable interest in intellectual circles and among activist groups. This article is the transcript of the inaugural address that he delivered at the Seventh State Conference of the Andhra Pradesh Civil Liberties Committee (held at Karimnagar on April 27-28, 1991).*

over the last forty years and more. Though, I would like to reassure you, it is not going to be an academic or 'scholarly' exercise. I shall try not to be boring and I shall also avoid the jargon, the 'ifs' and 'buts', and the Aesopian or 'now black, now white' manners of expression that sophistication in academic scholarship seems to entail these days. I will try to speak as simply and clearly as possible for I do want to be understood.

Mine will be in fact a straightforward political and partisan exercise in the sense that in a class-divided, exploitative society like ours all worthwhile thinking *is*, inevitably as it were, political and partisan. In such a society, on all important issues, in philosophy as in real life, neutrality is an illusion. Here everything said or done, or left unsaid or undone, helps one side or the other. And so it is with the issues of terrorism and democratic rights. I will readily concede that what I am going to say is nothing new or original. If, nevertheless, I have considered this exercise worthwhile, and chosen to so speak today, I could perhaps, in justification, appeal to Goethe who had asserted:

> **One must from time to time repeat what one believes in, proclaim what one agrees with and what one condemns.**

II

HOW does one think? The question is important, whatever the issue or the area of one's concern, because on this thinking, on the nature and adequacy of the understanding it provides, depends the nature and adequacy, the ultimate effectiveness, of how one acts in the matter. It is our diagnosis of a disease which determines its treatment. In the same way, it is our explanation or understanding of social reality, any aspect of it, which indicates the prescription, the necessary purposeful action on our part. An explanation thus always has a 'value slope', it determines the prescription as well.

Bourgeois social science, seeking to become 'truly scientific', has often so debated this issue as to ignore or effectively deny this dependence or determination. It has in fact sought to drive a wedge between explanation and prescription, between 'facts' and 'values', and made much of the dogmas of 'value freedom' or 'ethical neutrality' in social scientific enterprise. Much of this debate has been a wasteful exercise, illustrative only of a certain philosophical illiteracy among the social scientists concerned. This is not the place or occasion to explore the philosophical or methodological issues involved in this debate, issues which are necessarily political also. I have written and spoken of these elsewhere. Here I will make only two points which are immediately relevant to my argument.

In the first place it needs to be recognised that the issue of democratic rights directly impinges upon human interests in our society, one way or the other. Therefore disputation and conflict over them should not be a matter of any surprise. Centuries ago, the English philosopher Thomas Hobbes had, with characteristic insight, pointed out that if geométrical axioms were to be 'a thing contrary to the interest of men that have dominion', even these would be 'if not disputed, yet by the burning of all books of geometry, suppressed, as far as he whom it concerned was able'. Hobbes' insight in fact goes deeper to touch on a problem at the very heart of social sciences: truth here is always partisan. Unlike the physical or natural sciences which are fairly neutral politically, the social sciences, concerned as they are with class-divided societies, are full of political dynamite.

Truth here is not only partisan but also dangerous for the dominant classes, for it tends to affect their interests adversely. Truth becomes a matter for disputation and, if need be, suppression—and therefore also difficult to acquire. This is perhaps the most important reason—another, closely related to it, is its philosophical or methodological orientation—why so much of social science, far from being concerned with truth, is so much *apologetics* only which, given its esoteric sophistication, weird and unintelligible jargon—'Socspeak', Malcolm Cowley called it—and often obscurantist ideological role in society has compelled Stanislav Andreski to even speak of 'social sciences as sorcery'.

Be that as it may, our concern here is with democratic rights of the people. And the point is that they involve human interests, they do adversely affect the interests of those who have dominion in our society. Hence the disputation around them and their attempted suppression by the powers that be, suppression of the truth historically embodied in democratic rights. So it has been in the past, and so it is today, in our own troubled times.

My second point is theoretically the more important one. If our explanation always has a 'value-slope', if it is decisive in suggesting the prescription, the purposeful human intervention on our part, then, obviously, it matters *how* we generally go about explaining or understanding things. In other words, we need to be self-consciously aware of our philosophical or methodological orientation, or, if I may put it that way, aware of the 'philosophy' we have for coming to terms with the reality around us.

This indeed matters. It is this vital issue that the rebel students of Paris raised in the late sixties, when they asked of everyone who would speak to them: 'Where do you speak from?' They had well grasped the fact that everyone has a position to speak from, a philosophy so to speak, whether one knows or acknowledges it or not. Because everyone needs to have it to be able to live minimally as a human being.

To live postulates coping with the reality of the world around us. To cope or come to terms with this reality, to relate to it in an intelligent, purposive manner, we need to make sense of this reality. And this we do by explaining or understanding it as best as we may. Thus arise our most general ways of seeing and comprehending things, 'our more or less open, more or less clearly or consciously formulated assumptions, opinions, beliefs, principles, attitudes towards life, on which we habitually act, by which we indeed, live'—this is our philosophy. Philosophy thus understood is a precondition for any kind of sane existence in the world. It is in this sense that we indeed live by thinking, by ideas even more than we live by bread. That is why there is none so poor as not to have a philosophy of his own just as there is none so rich either as to be able to do without one. As A.E. Taylor pointed out long ago, the choice here is not whether one has a philosophy or not but only what kind of philosophy one does or shall have.

'What kind of philosophy'—this immediately draws our attention to an important dimension of the philosophic situation around us. It is a fact that people have generally found the social reality around them rather difficult to cope with for, throughout recorded history and in our own times, it has been an ugly and painful reality, the reality of a class-divided, exploitative and diversely oppressive society. A genuinely *human* coping would be to seek to change it into a more human society. But such an effort to change requires, at the very least, a true explanation of things as well as guts to act in a revolutionary manner—a combination rather rare to come by in real life. Unable to change it, the people learn to accept this ugly and painful reality—but they can do so only by interpreting it differently, often in a necessarily false manner. Necessarily, because the strain of a true explanation coupled with the inability to carry out the change it demands is simply too much to bear.

In a sense, unable to change the *objective* reality around them, people so change themselves *subjectively* as to be able to accept this reality, with the least strain. Unable to think of themselves as exploited or victimised by an unjust society and yet incapable of doing anything much about it, the people, especially the poor and oppressed, have generally found it more comforting, certainly less punishing, to think of themselves as correctly placed by a just society and here the will of God, law of *karma*, vagaries of fate, teachings of various religions and 'the enshrined wisdom' of assorted moral philosophies, they all help. If the risks involved in the discovery of truth about a class-divided society have persistently pushed social sciences in the direction of *apologetics* and even 'sorcery', the difficulties involved in changing such a society have left their massive mark on social thinking in the form of flourishing social myths, and any number of limited, mistaken or false philosophies. Limited, mistaken or false—such philosophies or ideas have helped the common people everywhere to survive, to live on without going insane. The majority of our own people, the other half of 'the Indian nation', are even today living more by such ideas than by bread—the bread is simply not available most of the time, unlike the ideas which are always there to help interpret and its non-availability. It is thus that they come to accept the ugly and painful reality of their poverty and oppression as part of a natural or divinely-ordained arrangement of things.

It is one of the many ironies of their life that while the heads of the poor and oppressed are indeed their own, physically, the ideas in their heads belong to others, they correspond not to their own interests, but to the interests of the rich and powerful in society who oppress and exploit them. In this sense, the poor and oppressed are really the philosophers of the rich and powerful, all the time reinforcing the latter's domination over themselves.

But this is not the case with only our supposedly ignorant or illiterate common people. So many of us, in our half of society, may be thinking more consciously but we generally do so with 'a false consciousness' in the sense that we are not aware of the real origins of our ideas, the practical-political interests they correspond to or whom they really serve. All too often, even as we too find it comforting to go along with God, *karma*, *fate*, religious or moral techings and the rest of it, we live our daily life by the prevalent 'philosophy of common sense'—'what can one man do', 'men are selfish by nature', 'the poor have always been with us', 'Indians are all corrupt', 'politics is dirty business', 'there is much to be said on both sides', etc. etc.—which helps us evade real issues, difficult choices, all social responsibility, and accept or endorse the established order of things.

I might add, the situation in the academy and such other places is hardly any better, only the evasion and the acceptance or endorsement is more subtle and sophisticated. The philosophic underpinning of most of what goes on in our schools and universities only ensures that 'the educated' are duly socialised into the existing social order, that is, come to feel 'at home with exploitaton and domination'...Indeed all of us, 'the illiterate' and 'the educated', the academic and the scholar, the intellectual and the journalist, the democratic rights activist and his critic, need to answer the question: 'Where do you speak from?', 'Whose philosopher you really are?'

'Where do you speak from?' is an important question for the democratic rights activists for it points to the need of having a philosophy or methodological orientation which is as rational and scientific as they can possibly make it, in order to ensure greater clarity and effectiveness for their struggle. But the question is important for their critics also, perhaps more so because they are generally far less aware of the issue involved, sharing as they do, despite pretensions, in the currently dominant mode of thinking in our society. And this mode as a rule, Marx had pointed out, is the mode of the dominant classes. These classes, no doubt, always have their 'hired prize fighters'. But the critic may well discover that even when he is subjectively most honest and upright, the position from which he speaks is limited, mistaken, or even false in a manner as to yield prescriptions and politicswhich correspond to the interests of those who have dominance in our society and that these interests demand a defence and justification of the state's current assault on the democratic rights of the Indian people.

III

HOW does the dominant mode of thinking deal with the issues of terrorism, state terrorism and democratic rights? And how do we need to think about them? I shall take a quick critical look at the basic limitation of the dominant mode in its treatment of terrorism and democratic rights; state terrorism is simply an 'unproblem' for it stands understood and justified as a corollary of its treatment of the problem of terrorism. State terrorism is something which only needs to be defended. My critical comment shall also be suggestive of a different, more adequate way of thinking about these issues.

The dominant mode is really a commonsense way of thinking, which furnished with academic frills has even come to be raised to the status of 'Method' in social sciences. Its is a loudly proclaimed 'clear-headed' concern with 'here and now', with 'hard facts' and 'things as they are', that refuses to look deeper into them or go beyond them—any such effort would be dismissed as impermissible 'metaphysics'.

In one sense such concern is justifiable, indeed necessary, for this is where the search for all scientific understanding begins. It begins but does not end here. 'Sound common-sense' of the dominant mode, however, stays put with the immediate and the obvious, the apparent or the visible, with facts apart from other facts. The complexity of things, phenomena and processes is itself sought to be reduced, abstracted and isolated into 'facts' and treated as given once for all, outside of their history and their more or less important interconnections. 'The immediately observable, measurable *fact*' becomes 'that Moloch', as Paul Baran once put it, 'which is always seeking to devour analytic thought in contemporary social science'. It has certainly served to obscure social reality, 'the nature of things', as Marx called it, for things or facts exist, above all, in their history and their interconnections. In fact, the more of this history and interconnections one is able to group, the more of truth one has.

Let me illustrate with a couple of very simple examples. It is customary with economists and politicians of different hues to regularly refer to the fact of our surplus foodstocks as a sign of success, indeed the growing health of our economy and society—gone are the PL-480 days of foodgrain imports. This appears quite obvious and convincing. But seen in relation to only one other fact (I am leaving out the rest) that nearly half our population regularly goes without food, that we are unable to bring our surplus food and our own hungry people together, these stocks would be indicative of something entirely different, they are far more the sign of a failure, indeed a certain shameful sickness of our economy and society. Incidentally, however you define this failure or sickness, it has something to do with the much celebrated 'market-friendliness' of our economy and society.

Again, it is customary in our country, with its 'spiritual traditions', to see and speak of 'charity' as a virtue, the mark indeed of a good man and a good society. This too appears obvious enough. But next time you are in the mood to secure salvation for your soul, try giving charity to your best friend—and the truth will be out. Even a cursory search for its history and interconnections will reveal that charity implies a society which has degenerated into one of gross inequality, of givers and takers of charity. Recognised thus, 'charity' is a kind of sickness in human relations, it is far more the mark of a bad society. In a society of equals there will be no such virtue as charity. Those still retaining their souls for souls too are a matter of history and interconnections—will have to look for other devices 'to arrange for their well-being in the hereafter'.

Engels had something to say about the way of thinking or apprehending the world which I have been discussing. He chose to describe it as 'the metaphysical mode of thought'. In that masterpiece of popular exposition of Marxism, *Anti-Duhring*, which, despite its critics, all sorts of 'Marxist', 'ex-Marxist' or 'post-Marxist' experts, remains unrivalled in its elucidation of the Marxist way of thinking, Engels noticed that 'at first sight (the metaphysical) mode of thought seems to us extremely plausible because it is the mode of thought of commonsense'. But he found it to be 'onesided, limited, abstract' because it studies things 'in their isolation, detached from the whole vast interconnection of things; and therefore not in their motion, but in their repose; not in their life, but in their death'. He added:

> in considering individual things it loses sight of their connections; in contemplating their existence it forgets their coming into being and passing away; in looking at them at rest it leaves their motion out of account;...it cannot see the woods for the trees....

IV

AND so it is with the metaphysical mode's treatment of the issues of terrorism and democratic rights.

Armed actions—protests, resistance or struggles—in different parts of the country, in Punjab, Kashmir and Assam, Andhra Pradesh and Bihar, the North-East, and elsewhere, which have mostly come to be described as 'terrorism', have an extraordinary variety about them. As Indian phenomena, they do share a certain social-material basis and historical context and they have all arisen within an ongoing structure of politics and power-relations, often in response to an utterly unscrupulous and myopic ruling class politics. But they have in each case a specificity of causation and characteristics; each expresses its own kind of grievances against and alienation from the system and the powers that be, each poses a challenge to the Indian state but a different kind of challenge; each seeks a different kind of future for itself, and so on. The armed aspect which they share notwithstanding, they represent social and political developments of great significance, each distinct from the other.

All this and more is of decisive importance for any proper understanding of the ongoing 'terrorist violence' in India. But in the metaphysical mode of thought all this and more is precisely what comes to be ignored, all distinctions are blurred or obliterated, and everything, all such protests, resistance or struggles are simply lumped together into one omnibus thing called 'terrorism'. The obvious and visible similarities are focussed upon and a certain autonomy which their violent dimension necessarily comes to acquire is inflated into an independent factor, indeed their defining characteristic, as if this violence has no social basis, has nothing at all to do with the economy of the country or its politics, including the politics of its ruling classes. Violence is simply abstracted from its varied histories and still more varied interconnections, isolated and reduced to produce an essentially depoliticised composite phenomenon and its equally depoliticised composite image, 'terrorism', complete with bombs, landmines and rocket-launchers, the AK-47s and Kalashnikovs, and 'the dreaded terrorist', an image suggestive of only ruthlessness and inhumanity, delinquency, irrationality and fanaticism, and, of course, foreign linkages.

'Terrorism' now is simply a resort to senseless, utterly uncivilised forms of violence, a foreign inspired social or political deviance. It becomes a label of defamation, a means of ostracising those branded as 'terrorist', excluding them from any human standing. They are the 'outsiders', 'foreign agents', a menace to an otherwise peaceful and orderly society. The image is indeed powerful, evoking fear and hostility, which are then sought to be reinforced with the help of equally abstract, mechanically posed counter-images of 'non-violence' and 'democratic politics', 'the rule of law' and a fetishised 'Constitution, 'judicial processes' and 'law-abiding ordinary people' and so on, including the almost mythical 'national mainstream', which nobody knows what is and where it is flowing. Academic scholarship, indigenous or foreign-aided, lends its prestige and sophistication to this construct of 'terrorism' as it comes to be nicely aligned with the demand of the establishment for an exclusive focus on violence or the threat of violence.

It is this essentially depoliticised image or construct of 'terrorism' and 'the terrorist' which is then promoted by the state through the massive regime of modern propaganda servicing it today its own electronic devices, with television bringing the image visibly alive right into our homes, and the rest of public and private media, including 'the national press'. A nationwide 'selling of terrorism' takes place. The selling certainly has its variety and flexibility, but underlying it is the media's ready adoption of the official identification of terrorism and the terrorists. As issues of history and socio-political basis are pushed out of consideration, the discourse comes to be confined almost entirely to ways of meeting a self-evident terrorist threat to society.

Simultaneously, state terrorism is not seen as another form of 'terrorism', it is rationalised and defended, public sanction secured for it, as a means of countering this threat. Compelled to admit the obviously lawless and terrorist acts of the state, they are justified simply as necessary counter-terrorism. We are even informed that terrorism is a worldwide phenomenon now, just like corruption. But, given the priorities of the ruling classes, while nothing much can or need be done about corruption, terrorism has to be ruthlessly put down. There is no escaping from this responsibility, even if you insist on calling it 'state terrorism'. If the deeper, more specific factors underlying 'terrorism' still come up for considertion, they are either dismissed as no longer relevant or sought to be taken care of by that characteristically evasive response: 'of course, but...' The argumentation turns into a feat of system-supportive word-management, almost an intellectual legerdemain. It is thus that the depoliticised abstraction 'terrorism', well-manipulated by the powers that be, comes to serve the most brutal form of ruling class politics—state terrorism.

The manipulation is facilitated by the fact that all the 'mainstream' political parties, including those of the established Left, come to subscribe to this depoliticised image. Their continuous contention for power in the state notwithstanding, they have a consensus here—shared by the assorted image and opinion-makers—based upon everybody's commitment to nationalism of one kind or the other. Nationalism as an ideology covers up the essential character of Indian social reality whence 'terrorism' ultimately springs, and helps unite the large social audience behind the ruling class politics in a war against terrorism.

Occasionally there is the appeal to the deviant to give up the bad and violent new ways and rejoin 'the national mainstream' whatever it is and whereever it flows as if some morality play is on. But the appeal is neither meant nor taken seriously. In the 'national consensus', the 'terrorist' remains and has to be treated as an 'outsider', an enemy, a threat to the nation, its unity and integrity. There is intermittent talk of 'political solution', 'restoration of the political process', 'political and economic initiatives' and 'packages' of all sorts—the less the ruling classes have to offer the more their emphasis on 'packaging' these days. But this remains so much rhetoric, mere plays in a deadly political game. Overwhelmed by their own image of 'terrorism', and their ineptitude and opportunism as well, the powers that be are simply incapable of any such initiatives.

Perhaps a policy of drift has its own advantages. In any case, a political solution is impossible for them until they recognise 'terrorism' as a *genuine political problem*—rather a set of political problems, problems with history and interconnections, becoming daily more difficult *politically*. Despite noises to the contrary, it continues to be seen primarily as a 'law and order' problem. 'Firm action', 'the hard option' persists as the only viable solution, 'a more meaningful alternative' indeed. Counter-terrorism reappears, again and again, as the easier option for the ruling classes. The vested interests that have grown around this option, involving the police and paramilitary forces, bureaucracy, politicians and sundry other dubious elements, only facilitate the persistence of this option—and state terrorism continues. Ever new justifications are found for it, including its currently fashionable rationalisation as a means of creating those ever elusive 'conditons', 'congenial atmosphere' they also call it, for a political solution.

But there is no solution here, nor any real success. On the contrary, as I wrote four years back, apropos the emerging state terrorism in Punjab:

> its success, such as it may be, will turn out to be even worse in its consequences than its failure.

The politics of state terrorism has only ensured the total alienation of the Sikh people not with the Khalistani militants, they are today even less with the Indian state. And, except for some odd pitifully small ultra-Left groups, no other politics is in sight. Therein lies the tragedy of Punjab—today a tragedy for the Sikhs, the Punjabis, including Hindus, and the Indian people as a whole.

State terrorism as a political option has fared no better elsewhere in the country; it has produced only tragedies for the people. Yet the powers that be, in government or in Opposition, may criticise or condemn, even 'flay' each other *factionally*, they don't know and can't do anything different or better. Even the best they can offer, but in their ineptitude and factious lack of will do not, is only a cooption or accommodation within their own brand of 'democratic politics', which is incapable of confronting the really important issues underlying the explosive presence of 'terrorism' in different parts of the country today. They can only seek to hide the utter bankruptcy of their option by still more vigorous nationalist posturing. Not only does the rhetoric around 'the nation' or 'the unity and integrity of India' grow louder, there are new warnings against 'underminig the morale of the police force' or 'tarnishing the image of the army', etc. etc.

V

BANKRUPTCY of this option apart, it does have its own advantages for the ruling classes. It is not merely a question of its various political formations or groups within them, 'patriots' all, playing their petty political games with 'terrorism' or terrorism-related 'nationalism' in their quest for power in the state. Far more important is the fact that a situation of terror and counter-terror, despite the risks involved, yet serves their more basic class needs. For one thing, it facilitates the ongoing ideological manipulation of the people. The bogey of 'secessionism', 'destabilisation', 'threat to unity and integrity of India', etc. is invoked to divert people away from their own concerns and mobilise them behind ruling class politics in the name of defending the 'nation' or maintaining 'national unity'. Their own politics, their struggles for a better life are delegitimised as inopportune in the prevailing, supposedly temporary, situation; even the suspension of democratic rights, for the duration, is demanded. For another, this situation provides the ruling classes with the additional pretext and public sanction to further expand and strengthen the repressive state apparatuses and use them to defend their general class interests in the name of fighting terrorism.

Thus, for example, we have new laws like Terrorist and Distruptive Activities (Prevention) Act (TADA), which in its attack on democratic rights undermines almost every safeguard, provided by the Indian Constitution and violates all principles of liberal jurisprudence and natural justice—its definition of terrorist and distruptive activities is wide enough to cover anything and everything that those in authority may choose to find embarrassing, inconvenient or undesirable. And we have more of modernised and better-equipped police and security forces, the army's increasingly active role in 'civilian conflict', and the state's everyday resort to extra-legal means—all this over and above the normal repressive machinery of the state. This state apparatus, ideologically refurbished and materially augmented, and rationalised as 'a bulwark against terrorism' is now available for use against not just the 'terrorists', but others also, above all, the people struggling in defence of their interests and for a more just and equitable social existence.

And it has been so used against every form of democratic movements, popular struggle or social activism, against trade unions and striking workers, and those seeking to defend the environment; against women and dalits protesting the atrocities committed on them; against the landless and the adivasis engaged in a battle of survival; against journalists and academics, poets and cultural workers; in fact anyone deemed inconvenient or undesirable by the state, including of course the civil rights activists. Such has been the experience not only in Punjab, Kashmir and Assam, Andhra Pradesh and Bihar, or the North-East, but everywhere else in the country. Not surprisingly, even those who opposed the new legislation and repressive practices when in Opposition have found selective recourse to them useful when in power themselves—among the victims have been the Opposition members in Congress-I ruled States and Congress-I members in the States ruled by the Opposition, but, needless to repeat, the common people and those struggling with or for them in all the States. It is thus that state terrorism, spreading within democratic forms and without them, is contributing to the rise of an authoritarian, ever more repressive and anti-people state in India.

Needless to add, when the civil or democratic rights organisations protest and seek to intervene on behalf of the people against the growing terrorism or lawlessness of the state, they are seen as 'a nuisance', dismissed as 'do-gooders', denounced as 'front organisations', and finally, identified with 'terrorism' itself, condemned as 'anti-national'.

VI

IF 'things', abstracted from their concrete socio-historical existence, come to be easily depoliticised, 'their mental images', that is, 'ideas', too may come to be subjected to a similar treatment. It is thus that alongside the depoliticisation that 'terrorism' represents, we are witnessing an increasing depoliticisation of the idea of democratic rights into a rapidly spreading version of 'human rights'.

Lewis Namier, whose work gave rise to a whole new school of history-writing, argued for and practised a historiography which pushed ideas out of history. He sought a history voided of ideas and, as a conservative, a politics voided of 'political philosophy', or 'programme and ideals'—he hailed such politics as a token of 'greater national maturity'. In a parallel development in philosophy, scholars have sought to push history, as well as politics, out of ideas. Philosophy properly understood and practised is analysis, which easily becomes a timeless elucidation of ideas or concepts. Ideas are divorced from things they represent, concepts from the reality they are the concepts of ideas and concepts

All that
GAIL'S
achieved
is really
a lot of Gas !

30,00,000,000 cubic meters of it. And still counting

Its over 1800 Kms of HBJ pipeline laid over 5100 hectares of land, 56 Kms of forests, 22 major and 69 minor rivers, 281 canals, unending stretches of slush, roads and railway lines. It is in fact one of the longest in the world

Never before has 4,50,000 tonnes of equipment and pipes been moved to distant locations so fast. And a project of this magnitude completed within 19 months of its inception. Complete with satellite communications links between every major pumping station

By optimal utilization of natural gas, GAIL is adding a lot more to our lives. It is replacing conventional fuels. It is also supplementing the country's LPG availability by about 4,00,000 tonnes per annum to keep the home/kitchen fires burning. As well as planning systematically the nation's future gas utilization — now

THERE'S A LOT MORE TO GAIL THAN JUST GAS.

Gas Authority of India Limited

extrapolated from their concrete existence, their historical context or socio-economic inter-connections, are transformed into weightless counters which are then manipulated at will, by themselves or in arbitrary conflation with other such idea-counters, generally in the service of conservative, often admittedly anti-radical, politics.

In political philosophy proper this is well exemplified in the work of Isaiah Berlin, Karl Popper or Michael Oakeshott in their treatment of the ideas or concepts of 'liberty'—'negative' and 'positive', 'historicism' and 'open' or 'closed' society, or 'rationalism' and 'tradition', respectively. Such treatment, especially as analysis, has indeed served as an antidote to sloppiness in our thought and expression, it has helped light up many dark corners, resolved ambiguities of language and argument, and generally made for greater precision and clarity in our thinking. But if 'one-sided, limited abstract' concern with *facts,* as they *appear* to be, has been a Moloch 'seeking to devour analytic thought in contemporary social science, such philosophical exercises in their flight from the real world, the world of facts as they *really* are, have tended to denude social thinking of its substantive empirical content and ethical concerns.

In any case, an atemporal, dehistoricised treatment of an idea or a concept easily makes for its 'depoliticisation'. And it is in this manner that the concept of democratic rights or civil liberties is undergoing a certain depoliticisation these days. As history and politics are pushed out of it, what is emerging is a particular, abstracted and almost bloodless, use of the term 'human rights'. This has been a much used term for a long time, essentially expressive of some or similar concerns as democratic rights or civil liberties and for certain purposes its use is indeed most appropriate. But it always had a certain history and context-lessness about it, referring as it does to that rather abstract category 'human being'. Ever amenable to easy dehistoricisation, it is a dehistoricised and therefore depoliticised use of 'human rights' which has come into circulation with remarkable speed and strength in recent years, its trajectory rather closely related to that of the other abstraction, 'terrorism', produced by the metaphysical mode of thinking.

As with 'terrorism' in one way, now with 'human rights in another, economic-structural basis of democratic rights, the concrete historical, political and cultural context of their existence as well as the state's attack on them is obscured. Conflicts in society and the processes generating them which are always historically specific and the equally specific contradictions between the people and the state which make democratic rights an important issue in real life, come to be pushed out of consideration. The rough and troublesome specificities of situation and struggle, conflict and confrontation smoothed out, an universalised abstraction, 'human rights' takes over, leaving everyone free to make moral demands, pass ethical judgements, or play politics in its name. These 'human rights' won't hurt anyone, least of all those who deny or violate the democratic rights of the people. The violation of democratic rights can in fact go hand in hand with a defence of 'human rights'.

The worst violations of the one the world over can parade themselves as the best defenders of the other. A Reagan or a Bush is the man for our times. Sanitised from the grim reality of life, from the economy and politics of our essentially undemocratic times, 'human rights' becomes an eminently fit subject for discourse, and a little later, almost inevitably, for discourse over changing the terms of discourse!

It is thus that 'human rights' as a subject for study is arriving on the academic scene the world over, characteristically devoid of much concern for the people or involvement with democratic rights movement; department and courses at universities, long or short-range research projects at centres, old and new, foreign sponsorship and funding, especially by the American agencies well-known for their role in such matters in Latin America and elsewhere in the Third World, 'human rights' seminars and conferences, national and international, all the time somewhere or the other, which governments violating democratic rights, yet in search of legitimacy, are not afraid to sponsor, fund or join in.... A new breed of human rights academics is on the way, just like the far too many we already have in areas become fashionable from time to time opening up new, exciting possibilities for a career and for peer-group scholarship. The mundane interests of these academics apart, 'the empiricist method', 'specialisation' and 'functional rationality' rampant in the academy will easily accommodate and sustain this 'new discipline' as they would describe it.

The comments by *Economic and Political Weekly,* made a few months back, remain relevant:

> Like tribal art and ethnic handcrafts, human rights appear to have become chic among among members of the establishment. Delhi is hosting a World Human Rights Congress in December. The External Affairs Ministry is partly financing it and has put a senior Joint Secretary to officially represent it on the preparatory committee of the Congress which is going to be held in the five-star Maurya Sheraton hotel in the capital.
>
> The Capital's elite university, Jawaharlal Nehru University, has even started a Human Rights Teaching

> and Research Programme. The Director of this programme is in charge of organising the World Human Rights Congress. Curiously enough, this gentleman has never been known to have taken up any human rights issue, or sign his name to any petition or appeal protesting violation of civil liberties within India. Academic discourse on human rights at international fora is apparently not only a safer option, but also probably a convenient stepping stone to recognition in right circles.
>
> Nothing can be more hypocritical than the government's patronage of the World Congress. New Delhi is yet to ratify the Optional Protocol to the International Convention on Civil and Political Rights, and the Convention against Torture. By refusing to ratify the Optional Protocol the government is denying private civil liberties groups in India the right to approach the UN Human Rights Committee with cases of violation of human rights of Indian citizens, and disallowing the UN Committee to investigate into such cases. The government is violating almost every day the major provisions of the International Convention which prohibits detention without trial, trial in camera, killing of citizens, torture in police custody, etc. One wonders how the official representatives of the government at the World Human Rights Congress will defend themselves if asked about the detention of thousands of people under NSA and TADA in Kashmir, Punjab and other parts of the country, or about custodial deaths, or about indiscriminate police firings upon peasants and workers fighting for their democratic rights. But will there be anyone in the Congress to ask such questions? Will the guests dare to offend the hosts?
>
> Under the existing laws, victims of police torture or next of kin of those killed in police custody, have no statutory right to compensation. Yet, the government is spending several lakhs on preparations for this jamboree on 'human rights'...

Incidentally, the Government of India still refuses to allow Amnesty International and similar other civil liberties organisations to visit several parts of the country where the state's violation of democratic rights has become a routine affair.

VII

IT is the dominance of 'the metaphysical mode of thought' even with those on the Left who otherwise profess the Marxist, that is, the dialectical mode, which has over the years helped the ruling classes to define and pre-empt the terrain of Indian politics for their own purposes. They have posed the issues in this mode, asked the questions accordingly, and secured the answers they wanted to have. For example, this is how it has been in the recent crisis-ridden years: 'Are you for the Sikh/Kashmiri/ULFA militants or the nation? For secessionism or the unity and integrity of India? For violence or democratic politics? For the Congress-I Government or that of the National Front? For communalism or secularism? For reservations or against them?' and so on.

It is not difficult to see that in each case the choices are really foreclosed in the sense that whatever the answer, it lines you up behind one or the other kind of ruling class politics. The way the issues are posed consistently ignores the larger context and the deeper determinant interconnections dissociates the issues from any consideration of socio-economic structures, class domination, or ruling class politics, and thus ensures that radical or revolutionary choices simply don't come up as answers, as real historical possibilities.

It is the same with the metaphysical mode's posing of the issues of terrorism, state terrorism and democratic rights. A certain sectarianism apart, it is the philosophical surrender here and the consequent surrender to bourgeois politics which has prevented the established Left as a whole from coming out actively in defence of democratic rights today, as their forbears, the united communist movement once did. During the British rule, defence of democratic rights was a major concern with the CPI, it was seen as a part of the Indian people's struggle for freedom and better life.

VIII

DEMOCRATIC rights have to be defended above all against their violation by the Indian state today. But for an effective defence these violations must not be seen, as the liberals generally do, as the result of some mistaken policies, unfortunate 'aberrations' or 'distortions', on the part of the Indian state. A Nehruvian vision of the post-colonial state has contributed much to cloud matters here. Nor is it enough to recognise this state, as activists, even 'theoreticians' of the civil liberties movement often do, only as a system of power, overgrown and much too-centralised and standing over and above the civil society, and therefore insensitive to the interests of citizens and intolerant of diversity, even prone to abuse its power, to dominate and repress, to homogenise.

Such a view of the state has gained new endorsement these days because it is central to the argument of that most significant development in our social and political life, which has gone on to become an important, though somewhat problematic feature of contemporary social scientific concerns as well as social acitivism, namely, 'identitarianism', as I would like to describe it. I am not concerned with this development here except to point out that drawing our attention to the multiform oppressions prevalent in our society, as against the conventional focus on the economic oppression, it sees an overcentralised and powerful state, 'the at once homogenising and colonising juggernaut', as the enemy against which the rights and interests of our long oppressed and more disadvantaged social groups, 'identities' as they have come to be called—minor nationalities or ethnic groups, religious minorities, dalits, tribals, women, and so on—have to be fought for, won and defended.

In this perspective, even when they have crossed the traditional liberal threshold, studies have focussed on the state's obviously visible, politically repressive features but rarely gone deep enough to see its economic basis or class character. That remains a forbidden threshold to be nodded at or flirted with occasionally, but never to be crossed. The state is studied as such but not as the organiser of society in the interests of the class (exploitative) structure as a whole, a function which decisively conditions its own structure and organisation. The state is seen in dissociation from this class structure, whose defence, of course with necessary modifications, is its defining characteristic. It is not seen that the Indian state does not merely *happen* to be violent or repressive, it is *inherently* so, by virtue of the society it presides over; it guards and keep going, violently if necessary, an inherently violent society because it is a society of myriad economic, social and cultural oppressions.

As a result, when it occurs, state violence is analysed in terms of violations of democratic rights but not as class violence, as an expression of class domination or policies, as a part of the ongoing open or hidden class struggle in society. A certain flirtation with the notion of class may be there, but there is no recognition that state power in India is also a form of class power and that this has its relevance for any effective struggle in defence of democratic rights of the Indian people against the Indian state.

It is this classlessness of their 'theorising' which primarily accounts for the fact that even with scholars who otherwise seek radical, even revolutionary changes in society, their discourse is strong only in its idealism or liberal rhetoric, that there is such a gap between the enormity of the oppressions they describe so well and the painful pettiness, the fragmentary and feeble nature, of the political options that emerge from this description, that even as they speak of 'state against democracy' or 'a terrorist state', and warn other intellectuals against cooption, they themselves are quite comfortable with this state whenever the occasion arises, missing no opportunity to serve it as 'inside political advisers', pleading for the long lost 'Nehruvian consensus' or new 'social contracts' for 'nation-building', that the rhetoric of 'grassroots politics' and 'movements from below' is accompanied by yet other developmental solutions from above, offered in Planning Commissions and elsewhere. The critical intellectual, in spare time at least, gets reduced to an 'intellect worker' as Paul Baran once defined him. This is, in its own way, indeed tragic. For these scholars know better and mean well by the people. But then theory is a cruel mistress, like history. And like history, it has its tragedies too.

IX

THE need then is to move away from the metaphysical mode of thought, its 'specific narrow-mindedness', as Engels called it, and try to understand the issues of terrorism, state terrorism and democratic rights in a dialectical manner so that we don't miss the wood for the trees. It is not my purpose to explore these essentially interrelated issues as they have emerged in different parts of the country. Here I can only again insist that we need to understand them in their 'whole vast interconnections' within the larger social reality of contemporary India. This will include, depending upon the particular issue, the more or less important interconnections in the areas of history, of caste, gender and ecology, religion, ideology and culture, ethnicity and nationality, and so on. But central to this understanding are the interconnections in the realm of economy and the ruling class politics spawned by it.

Even a cursory look at it from below will reveal that ours is a historically specific form of capitalist economy in which all the evils of a somewhat lumpen or comparadore capitalist development, semi-feudalism, bureaucratisation and bloated bourgeois politics daily enter into and reinforce each other. There is unequal and uneven development with its 'two-nations' and the ever-widening gulf between the two and an 'internal colonialism' at work in the more backward parts of the country, which together are turning all the divides and fissures of our society, such as class, caste, religion, language, region, ethnicity or nationality, etc. explosive and giving rise to strong disintegrative tendencies everywhere. An overcentralised and homogenising state, which is yet a weak state, only makes for more disintegration. Old organised struc-

We do not believe in a rigid autarchy, but we do want to make India self-sufficient in regard to her needs as far as this is possible. We want to develop international trade, importing articles which we cannot easily produce and exporting such articles as the rest of the world wants from us. We do not propose to submit to the economic imperialism of any other country or to impose our own on others. We believe that the nations of the world can co-operate together in building a world economy which is advantageous for all and in this work we shall gladly co-operate. But this economy cannot be based on the individual profit motive, nor can it subsist within the framework of imperialist system. It means a new world order, both politically and economically, and free nations co-operating together for their own as well as the larger good.

Jawaharlal Nehru

99, NETAJI SUBHASH ROAD
BOMBAY 400 002

tures of exploitation and oppression persist and myriad new oppressions, insecurities and alienations have emerged—'We suffer not only from the living but from the dead' also, as Marx once put it.

The corrupt and criminalising mark of this socio-economic development is there on everything in our society—there are no jobs or ideals for the youth, nor any vision and values for the people. Ours is a society in deep social and moral crisis. We are indeed paying the 'terrible costs of not changing the existing order'—Nehru's words, spoken in an obviously more lucid Marxist moment. Unable to move forward in a revolutionary manner this society provides a continuing social-material basis for all sorts of ideologically muddled protests around genuine grievances and any number of divisive or disruptive anti-people developments.

These protests and developments, ranging from 'terrorism' to communalism, have indeed materialised, above all, as the consequences of a politics dominated by the ruling classes. As practised by their different political formations in recent years, in its utterly unscruplous internecine competition for power and ineptitude of leadership, this politics has been producing one after another interactable problems for the ruling classes and tragedies for the people.

Even a cursory search for interconnections will show that within the larger socio-economic context of Indian society, it is the ruling class politics at the Centre and in the States which has, in each case, created and later sustained the political problems which have become or come to be perceived as 'the terrorist problem' in different parts of the country—an entirely indigenous creation which others, imperialism and its allies, are taking full advantage of. At the other end, bankrupt and increasingly bereft of legitimacy in forcing the problems of its own generation, this politics, its powerlessness making it only more repressive all the time, has created and come to sustain 'a terrorist state', making the defence of democratic rights all the more necessary and urgent, though more risky also.

To advance these *general* propositions is not to deny the part of the *particular* in the emergence of 'terrorism', state terrorism and democratic rights as crucial issues at a given time or place in one part of the country or another. A recognition of their specific context and nature is in fact of decisive importance in each case, for this is how and where the state's violation of democratic rights occurs and where therefore the defence of democratic rights has to be undertaken. 'A concrete analysis of a concrete situation' is necessary, as always. But a dialectical as against a 'metaphysical' orientation in such analysis will give us a more adequate understanding of the specificities involved and make for a more effective struggle, here and now, in defence of democratic rights.

X

I don't need to pursue this subject any further. A slightly extended comment may be found in my *Of Marxism and Indian Politics*. I shall conclude with a somewhat different last point.

It is quite common for the critics or opponents of democratic rights organisations to question their protest against state terrorism and charge them with 'keeping silent' over terrorism of 'the terrorists'. They are constantly called upon to condemn all violence, to act in a 'responsible' manner and be at least equally condemnatory of 'terrorist violence'. The alleged silence is even interpreted and condemned as support for terrorism. This is nothing new. Civil liberties organisations the world over have regularly faced such charges, similar criticism and condemnation. This criticism or condemnation, however, is entirely misconceived. I am not here concerned to discuss the overall nature and scope of the work of democratic rights or civil liberties organisations, but it is certainly legitimate for these organisations to make the distinction between terrorism of the state and terrorism resorted to by private individuals or groups. Whereas in a law-based state like India, there exists an elaborate code, an entire ensemble of laws, procedures, institutions and enforcing agencies to deal with private violence or lawlessness, there is nothing comparable, no genuine checks or controls, to take care of peaceful or violent lawlessness of the state, which is potentially, and often in actual practice, the most powerful violator of democratic rights in society.

It is this absence in our system of credible institutional safeguards against the illegal acts and terrorism committed or backed by the state and its functionaries that, more than anything else, makes the presence of democratic rights organisations necessary. These organisations locate their primary concern, *the* task as it were, precisely here—in the paramount need to protect the people's rights against their violation by the state or with its backing in one from or another. Such being the very *raison d'etre* of these organisations, to ask them to do anything else, least of all take care of private lawlessness and violence, or still worse, provide justifications for the state's own violence or lawlessness is indeed misconceiving their role in our society. These organisations are not there to strike a balance between two kinds of terrorism. By their very self-definition, their work lies elsewhere.

This is not to ignore or in any way underestimate the problem that private violence has come to be in our society today—its ever-growing level, scale and diversity are indeed frightening. More and more of the conflicts and tensions generated in this society, above all, by its economy and politics, are seeking to express themselves outside the constitutionally ordained institutional frameworks, including the electoral process which has witnessed a steady decline in popular participation in recent years. If there is widespread socio-political turbulence in society, there is also the widespread, not unjustified, impression that peaceful ways seldom work and issues arrest political attention only through recourse to violence. But any adequate response to the problem of this spreading violence in our society demands, at the very least, the recognition that while any form of violence in due course acquires a certain autonomous dimension, it always arises on and is sustained by a given socio-material basis, and that its various forms, various because of differences of causation, context and conjuncture, need to be carefully distinguished from each other before we decide and act in the matter.

There is, for example, the ordinary personal-motivated violence of different kinds in our society, a most common occurrence, for so long as we have a money-and-profit dominated economy and society all forms of crime and violence which promise to pay will continue to be committed. Any effective response to this violence obviously, must begin by questioning this domination or, again, given the fact that this society is full of glaring injustices and iniquities, oppression and exploitation, it will always have its victims, frustrated and desperate men and women, ready to avenge themselves or their fellow victims, violently or otherwise. The need here is not to pass moral judgements or condemn their motives and actions, but to do whatever we possibly can to change the conditions which make such frustration and desperation, and the accompanying violence, inevitable.

Yet again, alongwith the normal violence, we have a great deal of specific anti-people violence in our society. There is the recurring violence among the people, on one issue or another, often generated, even actively promoted, by unscrupulous politics at the top. Communal violence is an obvious example. But we need to take particular notice of a more pervasive kind of private anti-people violence, which has finally arrived. The crisis of our poor possessive-market society, its manifold conflicts, its lumpen rapacity and crumbling structures of authority, with the people desperately struggling to survive, has given rise to a great deal of private violence of the rich and powerful against the people below—landlord armies, armed gangs or vigilante groups of the dominant classes, a rich variety of mafias, all sorts of 'goon squads', often linked with the police, politicians and businessmen and always available for hire, and so on.

This violence which given its overall class character is generally backed, condoned or connived at by the state, deserves to be condemned without reservation. But this private violence, or for that matter lawless violence of the state itself, may provoke counter-violence on the part of the people. The people may be compelled to resist and even retaliate. They may find it necessary to turn to violence in sheer self-defence, or in defence of their democratic right to organise and struggle peacefully. They may need to resort to violence to defend the gains of their past struggles or exercise of the rights they still have including the right to vote, and so on. Such private violence by or on behalf of the people is well-justified; it certainly cannot be treated or condemned in the usual manner.

Our society has also given rise to certain specific forms of private violence, armed protests or struggles by individuals and groups, which are, despite their differences of causation, character and possible futures, generally lumped together as 'terrorism' in the country, its foremost political problem today. It is not my concern to analyse this problem beyond the general observations I have already made. But one aspect of it does interest us here. We don't have to lump together the various historically specific expressions of this private violence to recognise that even as this 'terrorism' fights the Indian state, it is known to turn, to a greater to lesser degree, against the people also.

And this calls for a brief comment. In any armed protest, resistance or struggle, the quality of its politics, politics commanding the gun, is of decisive importance. If the quality of this politics is poor, the gun becomes increasingly more important, it tends to itself become the politics, just as state terrorism tends to do at the other end. In other words, if an armed resistance or struggle lacks a coherent liberationist ideology and programme, the requisite revolutionary theory and practice, which may help it gain the willing support of the people and mobilise them in a popular movement, it will, sooner rather than later, seek to use force to gain this support—really the people's acquiescence or compliance through fear and terror-hardened sensibilities. The policies and actions of the 'terrorists' become increasingly self-defeating, harming the very people whose cause they otherwise claim to espouse, in taking up arms against the state. Just as at the other end, seeking to gain their acquiescence or compliance the same way, state terrorism too harms the people, alienating them from 'India', it claims to be defending for them against the terrorists.

In this situation, dependence on foriegn aid, aids only the process of moral and political degeneration of the original armed protest or struggle. The consequences are the dead-end game of killing and getting killed, a vicious circle of competitive atrocities and reprisals, intermittent internecine warfare among the various groups and a brutalisation of everyday life of the common people, all of which provides an excellent cover to all sorts of anti-social elements, any and every kind of criminal activity. Maybe Punjab is very much on my mind, but the argument certainly has its general relevance.

Needless to add, terrorist violence against the people has no moral or political justification at all. It can only be condemned. Though, for obvious reasons, detailed knowledge and careful analysis is necessary before we pass judgement in each case. We need to know the truth and not its official version only.

In a society like ours which is *structurally* saturated with violence, with exploitation, oppression and inequality, there is always room for revolutionary violence. To reject such violence and uphold non-violence on principle has no justification, rational or moral, in the light of the historical experience of the struggles of the oppressed the world over. As the French philosopher, Maurice Merleau-Ponty, once put it,

> to teach non-violence is to strengthen established violence, that is to say, a system of production which makes misery and war inevitable.

Revolutionary violence aims at destroying this established violence and to create a new system of production and society in which 'misery and war' are no longer inevitable. It is a violence, as he put it, 'which transcends itself on the way to the human future'. Thus, for example, the problem that the 'Naxalites', as they are called, present our society is not one of private violence to be condemned, but of an exploitative and oppressive social order crying out for revolutionary change.

Revolutionary violence may indeed be criticised, even rejected, but not on abstract moral grounds. The grounds have to be specific such as a negative assessment about its 'appropriateness' in a given situation, a lack of 'proportionality' between means and ends, and so on. On the basis of historical experience, it is also possible to argue against the general efficacy and appropriateness of individual or group acts of revolutionary violence. Even when deemed necessary, one needs to beware of the dangerous possibility of getting sidetracked or lost in a vicious circle of violence and counter-violence.

It is thus absolutely imperative for those so involved to be constantly self-critical of their theory and practice in this regard, as elsewhere, in the interests of the revolutionary movement as a whole. It seems to me, however, that the real issue with revolutionary violence is not so much its rights or wrongs as the taking of sides in the ongoing class war between the people and their oppressors and exploiters.

Looming large over all these forms of private violence in our society is the violence that Indian state has come to represent today. The issue here is not its inherently violent nature *as a state*, or the violence implicit in the socio-economic structures this state normally defends, violently or otherwise. What needs to be noticed is its emergence as the single largest perpetrator of violence on the people today. Such is the explicit material expression of this violence in recent years that scholars and laymen alike have been compelled to speak of 'state terrorism' or 'the terrorist state' in contemporary India. There is the ever-growing draconian legislation and the ever-expanding apparatuses of repression and the ruthless use of both everywhere in this vast land of ours. The old, extended or new laws are there—ESMA, MISA, NSA, different Armed Forces Special Powers Acts, many kinds of Disturbances, Disturbed or Terrorist Affected Areas Acts, amendments to the Constitution and the Criminal Procedure Code, and, above all, the TADA, and so on—which provide for new structures of authority, new hierarchy of courts, new legal procedures, new ranges of offences, new and stiffer penalties, new detentions without trial and new and harsher powers for the police, para-military forces and the army. New restrictions have come to be imposed on the life and liberties of the people in violation of old and established constitutional safeguards and new authorisation provided for the lawlessness of the state, including extra-judicial, kidnappings and killings known as 'encounters'; and alongwith 'custodial deaths' even the pheno-

menon of 'missing', long associated with the dictatorial regimes of Latin America, has arrived.

To execute these laws and this lawlessness alongwith the old we now have any number of new police and paramilitary formations, new security set-ups, armed wings, guards and protection groups and the rest, well-supported by the army on the one hand and the well-rewarded state or politician-sponsored terrorist groups on the other. The much touted 'financial crunch' notwithstanding, financing all this has been no problem at all. In large 'terrorist affected' parts of the country, it is a situation of massive power, without any checks or accountability, but with an irresistible temptation to confuse every expression of popular protest, dissent or even recalcitrance with terrorism and therefore meant to be handled with ruthless brutality. Unchecked power has its own logic; corruption rampant in the system has taken care of the rest. Whatever its problems, or problematic success in fighting 'terrorism', the state's terrorism has been remarkably successful in alienating the people and pushing them out of its own 'mainstream', leaving the 'national press' free to deceive itself and mislead the rest of the 'Indian nation'.

Only the nationalistically blind will fail to see that it is this mindless violence of the state, growing ever more mindless in its failure or impotence and the accompanying loss of legitimacy which spawns anew and fuels the terrorist violence in the country. The two in fact regularly feed, justify and legitimise each other—all the while adding to the misery and suffering of the common people everywhere.

XI

THIS digression on the subject of violence in our society, which is far from being exhaustive, should be sufficient to indicate the complexity of the issues involved which critics must show awareness of when they seek condemnation of violence qua violence or make their more specific but simplistic demands on democratic rights organisations. It is simply not true that these organisations condone, approve or support private violence or terrorism against the people. Only they don't see its condemnation as *their* task. Nor is it that they don't take note of its excesses or violations of people's rights, or have not found it necessary at times to even publicly criticise or condemn these. They have indeed done so, not on abstract moral grounds or to oblige the critics, but for good reasons of their own which include securing greater effectiveness for the democratic rights movement. But by self-definition, they have not seen this as their responsibility. They are committed to use their limited resources, first and above all, to defend the democratic rights of the people against their violation by the state.

Besides, if they are rather wary and seemingly non-cooperative with their critics in this matter, there is a consideration which they simply cannot afford to ignore. They are well aware that concerning the state's current assault on democratic rights, we are in a situation where those who know will not speak and the vast majority of our people are simply kept ignorant about the violations, even crimes being committed by the state, often in their name and their supposed interests. Given the power and reach of the communication media, public and private, at the disposal of the state, given its extraordinary ability to project its own point of view and to manipulate public opinion by selective use of information, and given the fact that you cannot accuse the state or the 'mainstream' private media of fair or balanced reporting where the democratic rights movement or for that matter any popular democratic movement is concerned, every concession made by the democratic rights organisations to their critics here is bound to be used in the time-tested onesided manner to further condone, justify and legitimise state terrorism. This would mean, in effect, a denial of the very purpose for which these organisations have come to be constituted. Their work will lose its meaning, and so will the courage, dedication and sacrifice of their activists.

The democratic rights organisations and their activists have indeed reason to be wary. They have a right to their own democratic decision in this matter. You cannot blame them if they do not see the 'condemnation' demanded of them as one of *their* concerns an invariable responsibility they must not evade. 'Law and Order' is not their business and they are not in the game to perform balancing acts, give evidence of their 'impartiality' or 'fairmindedness', or dish out even-handed judgements on violence in our society. Nor are they in search of certificates of good conduct or 'patriotism' from their critics or the powers that be. They may in fact regard it ridiculous, even shameful to jump on their bandwagon and join their chorus of righteous indignation against 'terrorism'.

They refuse to join this chorus not because they love violence or have a twisted moral sense which can no longer distinguish between right and wrong, nor because they would condone actions which every decent person ought to condemn. Their work over the years in Andhra Pradesh and elsewhere should make it abundantly clear that they don't need to make any apologies for their moral sense. And they know what decent behaviour is as well as most, and certainly a lot better than their critics or the other leaders of the anti-terrorist chorus—they owe no explanation to anyone here. They don't join this chorus simply because they are in the game, if not only, certainly primarily, to defend the democratic rights of the people against their violation by the state.

The way the critics still continue with their criticism and condemnation and even betray a strong compulsion to misrepresent the motives and intentions of the democratic rights organisations even when they are known to have condemned militant groups for their 'violation of human rights' or 'senseless killings', persuades me that there is more to the critics' umbrage, and one needs to look at *their* motives and intentions, at their game. Maybe what is involved here, implicitly or otherwise, are the more basic issues of ideology and politics on either side.

For example, apropos 'terrorism' in Kashmir, one of India's top-ranking journalists, in a centre-page article in *The Times of India*, has written of the 'utterly one-sided pronouncements of do-gooder groups' and charged them with the view that 'mass killings and kidnappings of the innocent by terrorist and secessionist gangs are perfectly allright'. This, we all know, is simply not true. No democratic rights organisation has ever subscribed to anything even remotely resembling this view. On the contrary, to give an example, with V.M. Tarkunde of the Coordination Committee on Kashmir and many others, they have, context permitting, more than once criticised and condemned such actions and urged the militants to stop them. Yet the critics persist with their charges—they are simply not satisfied. Obviously what really troubles them is not the lack of such criticism or condemnation. Obviously they are after something else or more.

It seems to me that what they are really asking for, of course in 'the interests of the nation', is an acceptance and endorsement of the state's terrorism in the Valley, the politics of this terrorism, in effect, the ruling class politics in Kashmir. I see no reason at all why the democratic rights organisations or their activists should be expected to so oblige these critics.

This is not to suggest that the democratic rights organisations are the vehicles of some other politics, as this term is commonly understood. If 'law and order' is not their business, 'politics' in this sense is not their business either. Racketeers abound in our country, they are everywhere. But there is no doubt that those genuinely attracted to the risky business of defence of democratic rights today are men and women of a high moral sense and idealism, full of deep concern for the people. Many, if not most, of them may naturally tend to sympathise with the Left of one shade or the other, they may have their interest in radical or revolutionary politics. To this they are fully entitled. But the democratic rights organisations or those of their activists who have this other interest or activity well know that even though the abuse of state power, including the state's terrorism, ultimately grows out of the essential, structural compulsions of the prevalent economy and politics, *other* organisations, *other* struggles of the people, are needed for a change in this situation, and that it is going to be a long haul. They know that the democratic rights organisations are not the vehicles of this other struggle.

But then this other struggle *is* on in our society, between the people and those who oppress and exploit them—however weak or fragmented it may be or beset with a thousand problems of theory and practice, politics and organisation. And no matter how the democratic rights organisations define or circumscribe their role, how scrupulously they stick to the self-imposed limits of their popular concerns or how responsibly they behave in pursuit of these concerns, their work yet remains a defence of the people's rights and places them firmly on the people's side of the barricades, if I may put it that way. It is and cannot but be also an entry, one among many, into this other struggle, and in this sense, more than only a defence of democratic rights.

Even if the democratic rights activist somehow fails to see this, his critics, generally more perceptive and class conscious in these matters, see and understand this very clearly. So do the state and its functionaries. Hence the hostility and harassment, the persistent persecution. For the ruling classes, their representatives or spokespersons, democratic rights activity is, in the final analysis, a dangerously subversive activity. It has to be questioned, criticised and condemned and as far as possible, suppressed.

The democratic rights organisations and their activists are, in their own way, standing by the struggling Indian people in these our troubled times, when so many others, from the intelligentsia and elsewhere, have deserted them—many of them deserting their people for 'the nation'! Such an understanding should make them rightfully more proud of their struggle in defence of democratic rights and, I am sure, it will make this struggle more effective also. ■

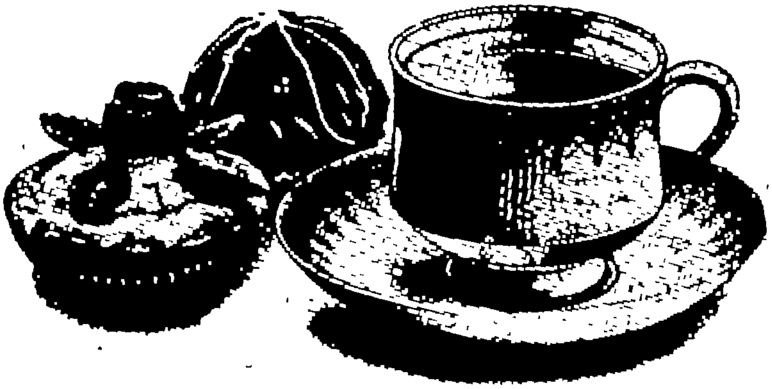
GARDEN FRESH ASSAM
TEA



India is the world's largest producer, exporter and consumer of tea. The country produces from the ordinary to the best teas, yet the Indian consumer does not get to drink the best. That is why APEEJAY, which is the 4th largest tea producer in the country, has decided to introduce its selectively picked high quality pure Assam tea direct to the consumers.

This is pure Assam tea from our own tea gardens. Make it the way you normally make your tea and it will give you a superb flavour and liquor. Drink this tea for 3 months and you will never want your old brand again.

EXCELLENCE IN ENGINEERING

Today, Dasturco is a name synonymous with steel plant expertise. World wide. From concept to completion - over 200 projects successfully engineered to date

Prestigious projects handled by Dasturco include Misurata Iron and Steel Complex in Libya. Visakhapatnam Steel Plant - India's first coast-based integrated plant. Alloy Steel Plant, Durgapur. Special Steels Plant, Salem. Tata Steel and Rourkela Steel Plant modernisation. Sunflag Iron and Steel Plant - India's first composite DR-EAF Plant.

WORLD BOOK FAIR

A Treasure-House of Books

9TH NEW DELHI
WORLD BOOK FAIR

India produces more than 20000 titles every year on every conceivable subject. Reasonably priced books of quality. In English and the Indian languages.

The 10th New Delhi World Book Fair offers you a wide range of books to choose from. Books which should adorn your library. New books. Rare books. Books published overseas. Books exhibited by over 800 leading publishers, booksellers and book distributors from various parts of the country and from abroad. Books in English, Hindi and other Indian languages, apart from books in the foreign languages. Such a large collection is brought together only once every two years.

The World Book Fair has many other attractions. Presentations on editing, designing, production, marketing; and seminars, workshops, discussions, etc.

The World Book Fair is for everyone. Plan your visit to the 10th New Delhi World Book Fair now. If you miss this opportunity, you will have to wait another two years!

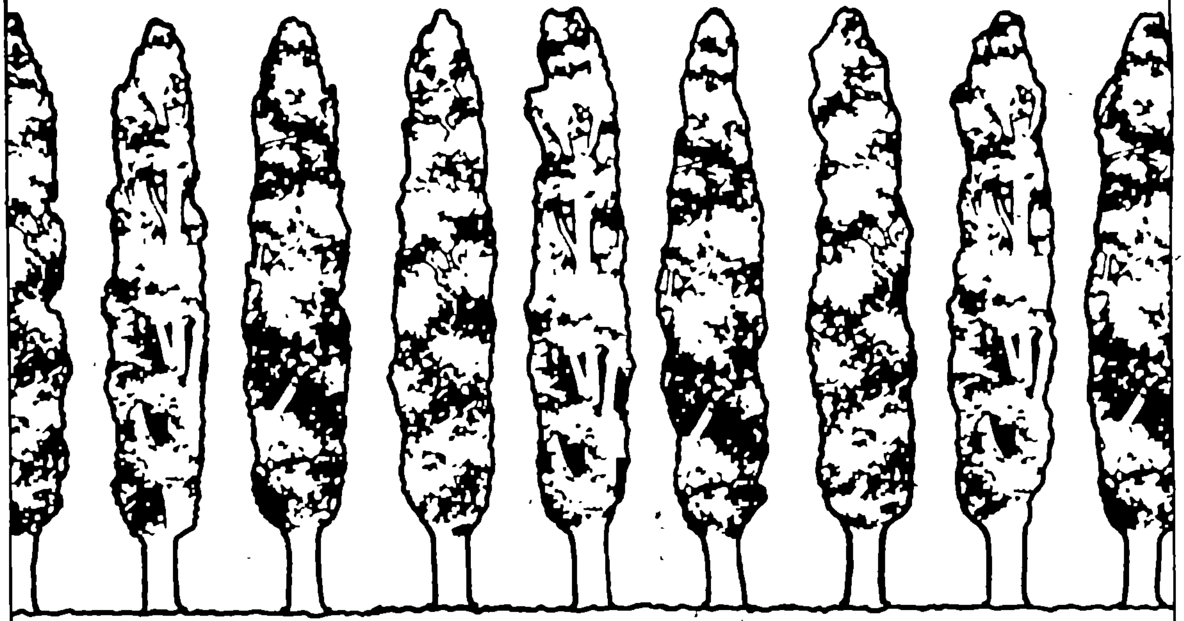
SAIL HAS MORE THAN A MILLION PLANTS



ONLY NINE OF THEM PRODUCE STEEL !

Even that may not be enough!

SAIL continues to play an even more crucial role in the restoration and preservation of the environment.

By employing the latest technology.

By developing specialised expertise in environmental management.

By conducting a $ 3.3 million environmental study to identify and locate critical areas requiring corrective action.

By 2000 AD, SAIL is scheduled to implement 850 environmental preservation measures in and around its plants and mines.

Today SAIL renews its pledge to give back to Nature what it takes to build a better tomorrow.

STEEL AUTHORITY OF INDIA LIMITED
Steelmakers to the nation.

POLITICAL NOTEBOOK

Centre on Trial

The *Punjab* elections have become highly crucial. On trial are the democratic credentials of the Central Government.

What has been the policy of the Centre with regard to Punjab? The Rajiv-Longowal Accord, announced with much fanfare in 1985, was not sought to be implemented due to political reasons. The last Chief Minister of Punjab, Surjit Singh Barnala, was unceremoniously dismissed only to enable the Congress-I to reap the dividend. Elections to the State Assembly, slated for May 1991, were cancelled to help the Congress-I: an unprecedented move on the part of the Central authorities.

Hence it is for the Congress-I Government at the Centre to prove its credibility before the people of Punjab.

However, far from doing so, the Central authorities are adopting measures that can only become counter-productive.

First, the leaders of those parties that are opposed to the elections were lathi-charged and beaten up while they were peacefully campaigning for poll boycott. Theirs was neither an unconstitutional move nor an illegal offence.

Secondly, the Union Home Minister has stated that steps would have to be taken to prevent those advocating poll boycott from holding rallies and thus coercing the electorate not to vote. Certainly any form of coercion is condemnable and would attract punitive measures. But a peaceful stir against the poll is something guaranteed in any democratic set-up.

In fact it is the Centre's actions which have exposed it to the charge of coercion. Instead of such coercive acts let the people themselves decide whether or not to exercise their franchise.

No doubt Punjab is plagued by secessionist terrorism which needs to be effectively countered. And in that context those who have stood for the Punjab elections deserve the highest praise of the entire nation as genuine crusaders for democracy. But the Centre's short-sighted steps neither promote democracy nor help the fight against the terrorist secessionists. Those are only adding grist to the militants' mill while further eroding the Centre's credibility among the Punjab populace.

It is necessary to urgently make amends. While adopting all possible measures to implement the Rajiv-Longowal Accord and transfer Chandigarh to Punjab as its natural capital, the Centre must reassure the people of Punjab that the elected government due to assume office after February 19 would not be summarily dismissed as was done in the case of Barnala.

The Centre is facing a severe test in the Punjab poll. If it is serious of winning the hearts and minds of the people of the State it must strike a new course departing from past practice.

A Fruitful Odyssey

SUMIT CHAKRAVARTTY

In his first major exposure abroad this year Prime Minister P.V. Narasimha Rao has been able to effectively convey India's distinct positions on the various vital issues thrown up in the midst of the breathtaking historic changes the world is undergoing in this last decade of the twentieth century.

Both at the extraordinary summit of the 15-member UN Security Council at New York on January 31 and the annual international gathering of the captains of global business and industry at Davos in Switzerland on February 3, the Prime Minister provided adequate testimony of India's forthright positions in the altered politico-economic landscape following the final burial of the Cold War. At the same time he took the opportunity to voice the developing countries' serious misgivings and concerns amidst the growing hopes and aspirations accompanying the triumph of the democratic spirit over totalitarian tyranny in the Second World.

At New York Narasimha Rao unequivocally welcomed the recent "upsurge of democratic sentiment all over the world" and declared:

> We have been touched by the desire in diverse countries that the values of liberty, economic justice and the dignity of man should govern the conduct of world affairs These are trends of which our discussions must take cognisance.

In this context he did not fail to note that the Security Council and the UN body itself could play the role expected of them because the Council's permanent members "adopted a harmonious, cohesive and firm stance in dealing with the threats to the cherished values of man". He was not hesitant to greet the efficacy that the Council had acquired of late.

And yet, the Indian Premier did not shy away from projecting the grim realities of the present-day scene from the Third World perspective

> Lasting peace and security, necessarily require comparable levels of human happiness across the globe It is impossible to think of a United Nations functioning usefully or harmoniously while humankind continues to be riddled with ever-increasing disparities This is the single simple truth which this body has to take note of All else falls in place, although the overall task remains extremely complicated, even with the best will in the world

He emphasised the fact that the UN Charter needed to be safeguarded by the "collective will of the international community" and added:

> At every step the interpretation of the Charter as well as the actions by the Security Council must flow from that collective will and not the views or predilections of a few. A general consensus must always prevail. What is right and just must become transparent. It is as simple as that. Members of the Security Council, whether permanent or elected, should insist on this consensus, scrupulously avoiding the temptation to dictate for quick results. Besides, while prescribing norms and standards for national and international conduct, the Security Council must scrupulously accept those norms for itself.

The author covered the Prime Minister of India's visit to New York and Davos (January 30-February 4, 1992) on behalf of Mainstream.

Narasimha Rao spoke in the afternoon of January 31 following the speeches of the heads of state/government of several countries, including France, Russia, the US, China. He did not specifically mention President Bush's pronouncements at the international meet and yet to any lay observer it was evident that what he said ran counter to Bush's hectoring postures that became more than transparent in his use of such crude, undiplomatic phraseology, as "we must make clear to the world, and most important, to the people of Iraq, that no normalisation is possible so long as Saddam Hussain remains there, remains in power"; "we must resolutely deal with these renegade regimes, if necessary, by sanctions or stronger measures, to compel them to observe international standards of behaviour"; "I would just like to use this meeting today to call on Libya to heed the call of the Security Council of the United Nations" on the Lockerbie disaster.

In fact on the question of imposing sanctions on developing countries like Iraq, Narasimha Rao brought into focus the need to "act decisively and in time to alleviate human suffering in the country in question, once the primary purpose of imposing economic sanctions has been fulfilled".

◆

IT was on the question of human rights that Narasimha Rao adopted the most forthright stand. Reiterating his "profound respect for those who are crusading for the protection and preservation of human rights" and reasserting India's steadfast pursuance of cherished human values throughout history from Buddha to Ashoka, he did not mince words to underscore:

> We cannot countenance a situation where all human rights are reserved only for the practitioners of terrorism, while governments dealing with this menace are arraigned day and night on grounds of violation of human rights—real or imaginary, mostly the latter.

Calling for a clear-cut delineation of the "parameters that harmonise the defence of national integrity with respect for human rights", Narasimha Rao said:

> While the endeavour of the UN... is to gradually move towards creating uniform international norms for human rights, such norms should not be unilaterally defined and

> set up as absolute preconditions for interaction between states and societies in the political and economic spheres.

This was in complete variance with the common stand of the US, Britain and Russia at the meet. While Bush spoke of the universality of human rights transcending the borders of state, John Major, the British Premier who hosted the summit (in his capacity as the head of government of the country which presided over the Security Council for the month of Januray), pointed out that "human rights verification and free and fair elections" were now becoming essential components of UN peace-keeping operations as vital elements of peaceful settlement of conflicts. Echoing the same sentiment, Boris Yeltsin, the Russian head of state and star attraction at the gathering—who declared that his country regarded the US and the West "not as mere partners but rather as allies", and described this as "a basic prerequisite for a revolution in peaceful cooperation among progressive nations"—said questions of "human rights and freedoms in their entirety including political and civil rights and decent socio-economic and environmental living standards" were "not an internal matter of states". Thereafter he added:

> The Security Council is called upon to underscore the civilised world's collective responsibility for the protection of human freedom, honour and dignity.

India's stand on the issue with stress on the development aspect found support from such states as China and Zimbabwe. While agreeing that human rights should be universally accepted, Li Peng, the Chinese Premier, pointed out that "human rights cover many aspects,... not only civil and political rights, but also economic, social and cultural rights" and "as far as the large numbers of developing countries are concerned, the rights to independence, subsistence and development are of permanent importance". He said:

> In essence, the issue of human rights falls within the sovereignty of each country. A country's human rights situation should not be judged in total disregard of its history and national conditions. It is neither appropriate nor workable to demand that all countries measure upto the human rights criteria or models of one or a small number of countries.

China was ready to discuss the matter with other countries on an equal footing, he said, but asserted that "it is opposed to interference in the internal affairs of other countries using the human rights issue as an excuse" (At the same time Li Peng—while repeating the Beijing approach of "socialism with Chinese characteristics"—averred that the world was "moving in a direction of multipolarisation" from its original bipolar structure, thereby rejecting the unipolar global concept of many of the Indian Sinophiles steeped in dogmatic perceptions that China with its "one country two systems" has long discarded.)

In the absence of the Zimbabwe Premier, Dr Robert Mugabe due to a personal bereavement, Dr Nathan Shamuyarira, in a comprehensive and exhaustive speech that outlined the developing states' charter before the world body, welcomed the steps being currently taken to "dismantle the ugly face of apartheid" and said:

> Massive and deliberate violations of human rights or the existence of situations of oppression or repression can no longer be tolerated.

He was also aware that in the present era, the Security Council could be "called upon to deal more and more with conflicts and humanitarian solutions of a democratic nature that could pose threats to international peace and stability". Nevertheless, he counselled "great care" to see that "these domestic conflicts are not used as a pretext for the intervention of big powers in the legitimate domestic affairs of small states; or that human rights issues are not used for totally different purposes of destabilising other governments". He then expressed "apprehension about who will decide when to get the Security Council involved in an internal matter and in what manner", that is, "who will judge when a threshold is passed that calls for international action; who will decide what should be done, how it will be done and by whom".

Narasimha Rao in his speech urged the UN to "work towards a just and fair world economic order" and "encourage countries to move towards universal norms of human rights". Significantly, this view was shared by none other than Kichi Miyazawa, the Japanese Prime Minister, who spoke immediately after him. The favourable trend towards world peace, in Miyazawa's opinion, "will not endure unless the dividends of peace are shared by all, but especially by the peoples of the South who are beset with famine, poverty, disease and other hardships". Thus, he felt, the UN should engage "in serious efforts in addressing the North-South problems" and "extend appropriate assistance" to the "self-help efforts of developing countries". Such efforts, in turn, "will foster respect for human rights and the spread of democracy, values shared by people in all parts of the world", he added.

Interestingly, the divergences on this issue became so sharp at the meet that eventually the consensus statement read out by John Major did not carry any reference to human rights as Britain and the US with Yeltsin's Russia would have desired. There was just a reference to human rights verification becoming an integral part of the Council's peackeeping efforts in some conflict areas. In the statement the issue was covered in two paragraphs bereft of the postures of George Bush:

> The non-military sources of instability in the economic, social, humanitarian and ecological fields have become threats to peace and security. The UN membership as a whole, working through the appropriate bodies, needs to give the highest priority to the solution of these matters.

◆

INDEED try as they would, the US and its allies could not prevent the North-South issues from being raised at the Summit. India did not harp much on the theme perhaps in view of the time constraint. But in a brilliant wide-ranging speech that demonstrated France's distinct entity in Europe, quite independent of the US, Francois

Mitterand, the French President, called for the setting up of "regional funds for conversion to promote the transfer of research and military development to non-military production" for the benefit of the CIS constituents and the developing states as in the Middle East. Thereafter he spoke of the "new solidarity" with the really developing states through private and public investments, cheap credit and growth of international trade and with the least developed countries through active steps like the necessary control of primary commodities to get them involved in the world economy—all with the purpose of preventing the substitution of East-West confrontation by North-South conflict. It is in this context that his proposal for a world summit on social development—"to review our thinking on development itself and develop the human dimension of this matter"—merits special attention.

Also worthy of mention is the last sentence of John Major's consensus statement:

> They (the Council members) recognise that peace and prosperity are indivisible and that lasting peace and stability require effective international cooperation... for the eradication of poverty and promotion of a better life for all in larger freedom.

Narasimha Rao's distinct approach to nuclear non-proliferation came out in bold relief at the summit. Referring to the "possible loss of control over nuclear arsenals" in the CIS, he felt that the proliferation issue, having assumed a "qualitatively and frighteningly new dimension", had now become a global problem and not of a few potential nuclear weapon states.

> In this imponderable yet terrible scenario, technical fixes or regional arrangements can no longer suffice. The difficulties of monitoring and policing activities in a large number of states, several of them not even accurately identified at any given time, preclude effective results. (Here the Prime Minister departed from the prepared text to point to the futility of expecting the UN Secretary General to survey basements in search of bombs.)

Hence the "only logical route available to us", in his opinion, is to "pursue a global approach, based on a new international consensus on non-proliferation" which to be effective "must be universal, comprehensive and non-discriminatory and linked to the goal of complete nuclear disarmament". It is against this backdrop that he dwelt at length on the Indian Action Plan for Disarmament, placed by the late Rajiv Gandhi at the Third Special Session of the UN on Disarmament, as it contained all the key elements of a new global consensus on nuclear non-proliferation.

> The idea India put forward in its Action Plan, such as a universal pledge to abjure the use of nuclear weapons, conclude a comprehensive Test Ban Treaty and to evolve a new, universal and non-discriminatory approach to non-proliferation, acquire compelling relevance. It is only within the framework of such a consensus, and through no other means, that the Security Council can deal effectively with the threats to peace emanating from the proliferation of nuclear weapons in its current global dimension.... I would venture to suggest that even going beyond India's Action Plan, the target date for a nuclear weapon-free world should now be advanced (from 2010) to the end of the present century. It would be a hopeful note on which to enter the twentyfirst century.

This was a constructive reply to the US President's *insistence*, at his 25 minute meeting with Narasimha Rao the same morning, that India should join the proposed five power *discussions* (involving the US, Russia, China, Pakistan and India), as suggested by Islamabad and backed by Washington, for creating a nuclear free zone in South Asia. This firm reply was in full conformity with India's oft-repeated policy-perspective on the issue although it did not find reference in the final statement of John Major. The statement was significant and India accepted its overall spirit, Narasimha Rao said in his speech. "However, I find that the statement does not reflect one or two of India's crucial concerns," he ventured to add.

◆

COLLECTIVE security and preventive diplomacy found repeated references in the speeches of the participants as well as the final document. Arms control measures, notably the US and Russia's spectacular cuts in nuclear arsenals, were duly reflected at the summit in varied ways. Yeltsin's call for the creation of a "Global System for Protection of the World Community based on a reorientation of the US Strategic Defence Initiative (SDI) to make use of high technologies developed in Russia's defence complex" was noteworthy but drew a lukewarm US response thereby demonstrating how the roles have been reversed since the Reykjavik Summit that had foundered on Gorbachev's rejection of a similar proposal from the side of Reagan. Mitterand's observation that "nothing is possible without the determination of states, and especially the major powers, to reject the law of the jungle, the might is right principle" was a clear indication of France's sharp demarcation from the US policies. His proposal that France was "ready to make available to the UN Secretary-General a contingent of 1000 men for peacekeeping operations, at any time and at 48 hours notice" did not find acceptance on account of the US-British opposition although Yeltsin openly welcomed the suggestion.

India's call for a "wider representation" in the Security Council in view of the trebling of the UN membership since its inception, and "if it is to ensure its moral sanction and political effectiveness" found positive response from Zimbabwe which felt an expanded and more representative Council would carry more weight". Interestingly, Japan too extended indirect endorsement of the move.

> Since the Security Council is at the centre of the UN efforts to maintain international peace and security, it is important to consider thoroughly ways to adjust its functions, composition and other aspects so as to make it more reflective of the realities of the new era. This is a process in which Japan is prepared to take an active part.

The summit meeting was convened not only to promote John Major's domestic political credibility so necessary

(Continued on page 32)

What Remains Unsaid About UNCED

VIBODH PARTHASARATHI

In the complex geo-politics of today, any analysis of socio-ecological issues cannot be carried out in isolation from the dynamics of the international economic system. However, in the hitherto process towards the United Nations Conference on Environment and Development (UNCED), scheduled to be in Brazil next summer, a multi-dimensional politico-economic approach as well as a synthesis of micro-level reality with the global perspective has been conspicuous by its absence. After the third Preparatory Committee (Prepcom) meeting of the UNCED held in Geneva in August, it is of utmost pertinence to spell out and re-articulate the UNCED process in close relationship with the economic challenges facing the South in the light of the multi-pronged efforts at recolonisation by the North.

As has been the case in most international forums, the agenda for the UNCED too has been undoubtedly set to protect interests of the North. While the agenda of the GATT had been blatantly moulded to further economic penetration by the North, this persistence of domination has been carried out at the UNCED in a much more subtle manner. To begin with, the UNCED documents seem to reflect an understanding of "the environmental crisis" which has been commonly associated with the notion of "deep ecology"—prevailing both in the North as well as among the respective elites in the South. This notion espouses the global threat pertaining to ozone layer depletion and global climatic changes, as the primary manifestation of this "crisis"—the biggest threats to "our common future", and thus the immediate need to "conserve" the living planet. The UNCED documents completely ignore regional and micro- level socio-ecological realities within the South such as the absence of drinking water, health hazards resultant of industrial pollution and degradation of forests and productive land.

This "crisis", in itself inarguably crucial to the collective survival of humankind and thereby the only one truly operating in global space, has been precipitated, as often reiterated, largely by factors whose roots lie deep in the very philosophy of free-market enterprise in the industrialised North. What is lacking, therefore, is not merely a multi-dimensional critique of these development models. At a more fundamental level, the UNCED documents lack, or rather have chosen to ignore, the fact that these very development models of the North have been, and continue to be, the primary inspiration for those encouraged and proliferated in majority of the South.

It is important to mention in this context that throughout the various Prepcoms the US has repeatedly asserted that solutions to the "environmental crisis" must be evolved from within the existing system of free-market enterprise. This not only implies a narrow economic solution to a complex, essentially political issue, but further the promotion of the path of development which the US has accepted—the gist of which is the myth of the dynamics of a market providing ecological sustainability as well as social equity. It is in the perpetuation of these socially inequitable and ecologically unsustainable economic models by the North to as to facilitate its hold over the global economy that the significance as well as the relationship between the GATT and the UNCED as multi-lateral forums must be understood.

The author, an environmental activist and freelance journalist, was recently in Europe and attended the third UNCED Prepcom at Geneva.

Throughout the three Prepcoms hitherto, the North has carefully chosen to dodge any discussion on, firstly, the "how" of the environment of the environmental crisis—both at the macro level on the planet, and the micro level within the Third World. Secondly, while discussing development, rather underdevelopment, in the South, it has also avoided the "why" pertaining to poverty in the South. That these two issues were conspicuous by their absence clearly indicates efforts by the North to "hijack" the UNCED process. The pronouncement of the "conspiratheory" in this particular context is simply due to the abundance of evidence pertaining to the precipitation of this dual crisis and the resultant increase of poverty, which unquestionably points towards overconsumption and waste in the North, as well as the unfair global trading system in the post-colonial period with the South respectively, as the villain of the piece.

Media rhetorics of its leaders notwithstanding, right from the agenda setting stage, the North seems to be following the age-old dictum vis-a-vis the South—"do as I say, don't do as I do". The case of the so-called Biodiversity Convention is a prime example of double standards by the North at the Prepcoms hitherto. The draft Biodiversity Convention, as conceived of by the North, proposes natural resources to be looked upon as global commons conserved and used for the benefit of humankind. At one level, this Convention can be viewed as a sincere effort on paper by the North to achieve a Gandhian harmony with Nature. However, at the same time, the US-led North at Geneva was neither willing to accept the (then unsigned) Law of the Oceans (which stands for an equitable and sustainable use of marine resources by all countries) nor extending the agreement banning the commercial exploitation of Antartica (then shortly to be declared as a global reserve).

However, it is the GATTian perspective of the proposed Convention which has important implications as far as the economic perspective of the South is concerned. Needless to mention, the GATT is one of the most crucial multilateral forums for the South as it is an important instrument of neo-colonialism by the North today. While the collective North at the Uruguay Rounds has repeatedly asked the South to agree on Biodiversity (especially in tropical eco-systems) being a common heritage, yet it has itself been adamant on "privatising biodiversity" wherever it suits their interests.

Privatising biodiversity essentially has two components: the techno-scientific process of isolating genes from a plant to preserve them or produce new plant species through genetical engineering; and the politico-legal process of privatising the bio-technology involved in the primary process by patenting it. Therefore, if biodiversity is privatised then all access to the so-called global commons is restricted by regional, national or local sovereignty. In such a situation, enterprises wishing to develop bio-technology will have to commercially purchase biodiversity available within the geographical domain of these political sovereignties.

On the other hand, if biodiversity is truly looked upon as a common resource, then it is only logical that bio-technology be equally a common resource—the financial benefits accruing from it belonging to the community. Although this has been the stand of the South at the Prepcoms, this is exactly what the North, primarily the US, wants to avoid at all costs. Consequently, the North has a peculiar stand—while biodiversity is a common resource, biotechnology is privatised, a private property. This peculiarity is rather simple to explain if the economic perspective is spelt out. The North needs access to raw materials all over the planet, namely, floural resources, especially those located in the tropical belts. Not ecological but purely economic motive in declaring biodiversity as global commons as only after access are they in a position to benefit from millions invested in R&D on biotechnology through returns from patents. Thus, hypothetically if the Biodiversity Convention comes into practice at the UNCED and the existing Intellectual Property Rights rules at the GATT are at best retained, the resultant common access as well as privatisation of biodiversity will not only result in gigantic financial gains for corporate and multinational enterprises, but also political control in the hands of these institutions pertaining to the proliferation of the synthesised products.

Attention must be drawn to how the North has been able to rather cleverly keep away from the UNCED the equally important, if not more so, process of North-South commerce—the primary regulator of the latter in our times being the GATT. At the UNCED, the North is quick to point out that trade and finance have nothing to do with "ecological" issues these being discussed at the Earth Summit. However, at the bilateral level and in forums such as the GATT, the North has consistently played a different tune. One may recall that countries from the North while disbursing the so-called development aid at the bilateral level have been trying to ensure that South governments bring about "structural" changes in their domestic economic system as a quid pro quo. Similarly, the track record of international organisations such as the World Bank and the IMF, effective puppets of the North, also brings to light a definite practice of "structural changes" as a pre-condition for aid, as is being witnessed in this country today. The deliberations of the GATT so far only reinforce the belief that the North is gearing towards extending such practices throughout the global space.

Therefore, it is evident that sooner rather than later the North will impose the same conditionalities in relation to the Earth Summit. Although their delegations have hitherto made no such statement publicly, there are indications that the North together with international financial institutions are working towards something along these lines to be presented at Rio, while discussing "funding potential" as a follow-up of the UNCED. As a corollary, individual countries from the North are bound to link the recipient countries signing on the dotted line of the principle conventions at the UNCED, to the flow of aid at the bilateral level.

That armtwisting by the North at the bilateral as well as multilateral level, in order to force the South to concede to its agenda at the GATT, is by now too well documented to be called an illusion. What is also being gradually discovered is that much is the same with the modus operandi of the North in the case of the UNCED. What seems to be ignored is that gigantic amounts of money as spin-offs of the entire UNCED process, the Earth Summit and after, will itself be used as a lever to force countries of the South to give in on issues it has been holding firm at the GATT—in the case of India it is the TRIPS and TRIMS that will bolster economic interests of the North. Those who doubt this argument or consider it to be an overstatement of one's case, need to analyse the structure of the Global Environment Facility (GEF) born during the countdown to Rio.

Created at the initiative of some industrialised countries, the Global Environment Facility (GEF) is a three-year pilot programme to facilitate the disbursement of loans or grants to the South to encourage projects relating to protection of global ecology. It is pertinent to note that though aid is on paper for the South, yet in practice it will benefit the North more as it is to be channelled for the Protection of the global ecology. Though the GEF fund is to be administered jointly by the UNEP, the UNDP and the World Bank, there is no doubt as to who would be running the show. Given the track record of the World Bank in funding environmental disasters and extending the tentacles of international debt in the South, there is substantial reason behind the anxiety of the South that environmentally disastrous aid packages will emanate from the GEF. Thus, such neo-colonial international organisations dominated by the North which are very much a part of the problem being discussed at the Prepcoms, can neither be catalysts for an alternative approach nor universally accepted forums to facilitate whatever, if at all, comes out of the UNCED.

As the final phase towards the Earth Summit at Rio unfolds, it is becoming increasingly clear that the core of issues at the Prepcoms, if reflecting a true concern at the UNCED, have possible solutions outside the sphere of the conventional approach towards environmentalism. What needs to be re-emphasised is that any attempt towards "saving the planet" will be a mere illusion if not addressed in relation to the mechanisms of global commerce being renegotiated in forums such as the GATT. Unless a democratic international economic and commercial order is established, all efforts at achieving social equity and ecological sustainability through the UNCED are doomed to fail. ■

(January 31)

Third World Approach to Modernisation

M.M. THOMAS

Modernisation is a global process which has transformed the pattern of living of people throughout the world.

The forces making for modernisation may be covered under three revolutions. *First,* the revolution in science and science-based technology. Material technology produced the industrial revolution and increased agricultural and industrial productivity and has moved poverty from the realm of inevitable fate to the realm of moral responsibility. Military technology has changed the character of war and made it highly destructive. Social technology has developed the human capacity for engineering with social forces, planning for social change and bureaucratic administration and management. This has enhanced the functions and powers of state in society and produced the welfare state. Mass communication technology has eliminated distances so that the world is fast becoming a global village. Life-sciences and technology control disease and death making control of birth necessary and possible; and genetic engineering has opened possibilities of deciding what kind of humans should populate the earth. And psychological techniques are able to control the minds and spirits of people in propaganda and advertisement as well as education for character.

Secondly, accompanying the technological revolution is the concept of human rights. The individual awakened to the rights of individuality emerges from group domination to assert the right to follow one's own reason and conscience. And communities hitherto submerged and suppressed become awake to their self-identity and its right to self-determination as well as to participation in decision-making processes which affect their lives. So one may read modern history as a series of social revolts for justice—the French Revolution with its slogans of liberty, equality and fraternity leading to democratisation of state; the revolt of industrial workers for trade union rights, better working conditions and welfare states; the social democratic and Soviet Communist Revolutions, the Asia-African nationalist revolts leading to decolonisation followed by the struggle of the poorer societies for greater share in technological power, and of the non-White peoples for racial justice.

Dr Thomas, Governor of Nagaland, is a social thinker, author and theologian of distinction.

Thirdly, accompanying the technological revolution and social revolts for justice, there takes place a conscious process of secularisation through which religious authorities and institutions are forced to give up their traditional control of state and society and to accept the plurality of religions and ideologies within the framework of a secular state and a growing secular society dependent on rational discourse to understand and pursue what constitutes the common good.

These three forces—technology, human rights and secularisation—have been operating largely within the framework of the world-view of what has been called Secular Humanism, that is, of the idea of a self-redemptive history, which provided the philosophy of modernisation. It was expressed in the optimistic doctrine of inevitable evolutionary progress or of inevitable dialectical progress; and when that optimism broke down, it was replaced by secular pragmatism—or nihilism.

I have surveyed the forces and philosophy of the modernisation process covering a few centuries to show that we still operate within the process and that it has both creative and destructive potentialities inherent in them. And from here, one may examine the manner in which the process found expression in three separate worlds.

The First World of Democratic Capitalism centred in the West, but actually no more a geographical area but truly transnational including Japan, and elite groups in all nations—which has already acquired dominance over the process worldwide. The Second World with its centre in Eastern Europe, was following an alternative path of command economy and one-party state to relate technology, justice and secularism. This world of communism was making its impact within the global process for several decades and which of course now lie in ruins, because the system became a fetter on production and suppressed the freedom of the individual in the name of social justice.

The Third World consists of the former victims of Western colonialism—Asia, Africa and Latin American—who even after political independence have not found their path of effective participation in the global process or their path within the nation of relating technological development, human rights and religious pluralism, to attack the massive poverty in their midst or to respond to do justice to the awakening of the weaker sections of their societies to their rights to equal social-cultural status with others and to determine their own self-identity. Here again, the Third World does not denote geographical regions but as in the Association of Third World Theologians a transnational area of peoples who see themselves placed in the exploited periphery of the power centres of the global process of modernisation.

My concern in this paper is to indicate briefly some of the current issues in the approach of the Third World peoples to Modernisation.

The first problem is to find space and support in the global process of modernisation for the Third World's own independent experiments of relating technical development, human rights and religious pluralism.

The Third World societies, of course, cannot isolate themselves from the global process but must relate themselves to the global forces as they exist. But the question is, can the Third World countries do so with freedom to develop without losing their priorities of liquidation of mass poverty and of other welfare objectives and preserving the democratic framework. As it is, there is no international order which will give the Third World countries the space and support to their own independent paths.

Of course, there was a time when the Third World could remain non-aligned between the Big Powers and dominant ideological systems and get some independent space. But with the breakdown of Eastern European socialism and the disappearance of the Soviet Union as a Big Power, that space has vanished. And with Eastern Europe moving fast towards capitalism and with Reaganism and Thatcherism dismantling the state welfare measures which have existed for decades, the idea of state intervention in economic and social processes of modernisation on behalf of the poor and the marginalised has globally suffered a serious setback. The world has become unipolar in terms of both ideology and power. This is to be regretted because, as the former Archbishop of Canterbury, Runcie, told the European Parliament in November 1989 that while communism has failed, capitalism has not shown its capacity to liquidate mass poverty in the world, to eliminate the threats of war or to deal tenderly with our only earth. As Leonard Hoff the Latin American liberation theologian has said: "The truth of capitalist exploitation is proved by the breakdown of the social fabric in the rich nations and the shattered lives of workers and those left behind in our societies on the periphery. The collapse of authoritarian socialism does not pardon the sins and inherent perversity of capitalism which must be constantly condemned and especially now when it is feeling euphoric and triumphant." ("Liberation Theology and Collapse of Socialism" in *Youth of India*, National YMCA, Summer 1991.)

In fact, many scholars like Nicholas Walterstoff and C.T. Kurien who have taken what is called a systemic approach to interpret mass poverty in the Third World are saying that poverty and affluence belong to one system, and that under capitalism, the process of creating wealth also creates poverty and unemployment. Global underdevelopment has to be explained by taking note of the adverse impact of the highly developed areas on the undeveloped. And within the nation, affluence for the ten per cent and life under poverty-line for the fifty per cent are the products of the same process. If this is so, we have to find an alternative path towards modernisation which while producing wealth and economic growth does not inevitably create increased poverty. The formulation of an alternative path for the Third World is indeed the second current issue in the Third World modernisation.

I have no regrets that Stalinist communism with its one-party political totalitarianism and a command economy which destroyed all economic initiative from the bottom disintegrated by its own inner contradictions. No doubt, it had its roots in the idea of one-party proletarian dictatorship of Leninism and the vagueness of Marx's own idea of the dictatorship of the proletariat. Elsewhere I have made the point that the roots of the inhumanity of Stalinism can be traced to the Enlightenment Humanism which Marx shared with most of the nineteenth century secular democratic intellectuals, in which the transcendent spiritual dimension of the human person was denied paving the way to dissolving the transcendent ground of human dignity in an ensemble of social functions and relations.

Even so, we need not deny the validity of Marx's humanism with its interpretation of the social sources of self-alienation of human beings in a class society. And in any case Marx had predicted that no social system which became a fetter on production could survive in history; and Stalinism fell as it had become such a fetter.

The point I am making is that the disintegration of Stalinist communism cannot be the end of socialism. If an alternative to world capitalism is needed to promote social justice, a new form of socialism has to emerge in the Third World which now of course may be defined to include Eastern Europe as well. In fact, much of the socialism canvassed in the Third World in the past has been anti-Stalinist from the very beginning as in Jayaprakash and Lohia in India; and their development in the light of lessons, about incentives for production and role of market, learned from the breakdown of the communist experiment in the Soviet Union and Eastern Europe, should help the emergence of a new form of socialism which takes the Third World priorities of social justice seriously. Again, to quote Leonard Hoff, socialist ideals "will find their place where they naturally belong, in the poor and oppressed nations of the Third and Fourth Worlds. The lesson of History must be learned: the society which it aims to build must be a society appropriate to the multi-faceted nature of human beings, and their social and transcendant dimensions."

In developing the New Socialism, the Third World has to go beyong the classical Capitalist-Socialist concept of what has been called the Economic Man, and take seriously the awakening of Dalits, Tribals, Women, Cultural Minorities and other communities to their separate self-identity and corresponding rights in the body politic—not as superstructural reflections of class-reality as Marxism tends to interpret, but as independent social realities themselves. It must also give adequate attention to the question of preserving the bio-eco environment for life on earth.

The Welsh Marxist, Raymond Williams, remembering the socially well-knit community in which he grew up, strongly argues that the weakness of much of the socialist movement arose from its ignoring "the various forms of social bonding—family, neighbourhood, ethnic group, etc. in its attempt to base everything on class consciousness which underlies the individualism of capitalist society." Bastion Wielenga in his comment on it ("the Changing Face of Socialism and its Relevance to the Churches" in *Christian-Marxist Dialogue* Spring 1991), adds, that human beings "live and experience themselves as social beings, as persons-in-community, in various forms of daily social life; such forms are vital and crucial for the satisfaction of basic social needs of the human person, but can no more be perceived by the atomised individual in capitalist society or uniformed member of a bureaucratic society. Instead, they get hooked up on substitute desires.. This applies not only to social needs but also to ecological needs. We need viable eco-systems in order to survive. We need patterns of production and consumption which can be sustained for the generations to come. Adivasis, women and peasants, living in direct interaction with Nature feel and perceive these needs existentially and act on it.

Fourthly, all current issues of the Third World approach to modernisation I have mentioned, speak for the relevance of the Gandhian critique of large-scale technology as an inherent source of alienation, dehumanisation and violence. Any new pattern of modernisation needs to develop not only as an ideological alternative to capitalism and communism but also an alternative technology appropriate to a human mode of modernisation. The Boston MIT Conference of Technicians on the Future of Humanity in a Technological Age held in 1979 under the auspices of the World Council of Churches said that the New Technology both in its scale and character must be "appropriate":

- to tackle the twin problems of poverty and unemployment simultaneously by the production of goods for mass consumption by the masses themselves—which means it should be labour-intensive;
- to sustain human life within proper natural environment which means it should not be too exploitative of non-renewable natural resources and not pollute the environment;
- to enable people's participation in decision-making processes of economic life affecting their welfare—which means, it should be small-scale, making direct democracy possible to the utmost;
- to enable industrialisation of poorer societies without too much capital—which means it should be made largely out of indigenous resources with indigenous creativity.

It seems to me that all these call for a philosophy of modernisation which goes beyond the materialistic world-view and respects the organic and spiritual dimensions of human community life. Actually all religions and cultural traditions of the Third World are quite sensitive to these dimensions through their reverence for Nature and concern for the primary communities like the family; and therefore any emerging new socialism needs to assimilate some of the traditional spirit and values in their renewed form. This will also help to give modernisation indigenous cultural roots, without which it often brings demoralisation. ■

Dunkel Draft Subverts Sovereignty

CALL FOR NATIONAL DEBATE

Three distinguished specialists in international economic relations, Muchkund Dubey, former Foreign Secretary; Surendra J. Patel, former Director of the United Nations Conference on Trade and Development (UNCTAD); and Deepak Nayyar, former Economic Advisor to the Ministry of Finance and now Professor in Jawaharlal Nehru University, have come out sharply warning against the Dunkel proposals before GATT. The following is the text of their statement. —Editor

Mr Arthur Dunkel, the Director General of GATT, in presenting a Draft Final Act on the Uruguay Round of Negotiations in GATT has given India the option of either acceding to the whole document or moving out of the international trading system altogether.

The Dunkel Document militates against India's interests in several ways. Its acceptance will result in curbing our economic sovereignty. It will blatantly interfere with our macro and microeconomic decision-making and frustrate the pursuit of our development priorities.

The proposed Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) goes against all major elements of the Indian Patent Act (1970) which has been regarded all over the world as a model. The 1970 Patent Act continues to reflect a broad national consensus. The acceptance of the TRIPS agreement will require major changes in the Act. These changes should not be acceptable to Parliament.

The text on Trade-Related Aspects of Investment Measures (TRIMS) will oblige us to treat foreign investors on a par with domestic companies. India's compliance with the Dunkel Text will seriously impede our self-reliant development and accentuate our balance-of-payments problem.

The Dunkel Draft of a General Agreement on Trade in Services (GATS) will oblige us to provide expanding and unrestricted space in our economy for the services, products and capital of foreign multinational companies. Once we include any service sector in the Schedule to the Agreement we will no longer be able to limit the inflow of equity capital and other imports for the foreign service industry.

The Dunkel proposals will undermine our programmes for agricultural development. Price support schemes, subsidies on inputs like water, power, fertilisers, pesticides and credits, organisation of buffer-stock build-up and public distribution system will have to be scrapped. The patenting of seeds, plants and biogenetic substances will harm our agricultural growth.

By far the most pernicious provision in the Dunkel Document is the establishment of a Multinational Trade Organisation (MTO) which will, in collaboration with the IMF and the World Bank review our trade policies, it will function on the basis of cross-retaliation and cross-sanctions. The GATT will be converted into yet another instrument for enforcing the IMF and World Bank conditionalities. The Dunkel Draft also provides for collaboration with the IMF and World Bank to promote, monitor and enforce a market-oriented growth strategy. The trinity will undermine our sovereignty. It will externalise the decision-making process for our national development. This will thus pave the way for our accepting the hegemony of the developed countries.

And what shall we get in return for the draconian restrictions that the Dunkel Draft imposes on our economic sovereignty? The answer is: absolutely nothing. In GATS, there is hardly a mention of the services in which we are competitive, that is, consultancy and labour services. In textiles, there will be only marginal liberalisation during most of the transitional period. The postponement of liberalisation till the end renders the entire package on Textiles and Clothing wholly unacceptable.

The way the Government of India will react to the Dunkel Document may well determine our very capacity for independent decision-making and action in economic matters and the very character of our international economic relations.

We, therefore, urge the government to refuse to accept the Document on a take-it-or-leave-it basis. The government should identify the points in the document which we cannot accept as they are. It should insist upon our right as a sovereign state and as a member of the international community to renegotiate these points. In the meantime, we call for a national debate on the entire issue, both in Parliament and outside. ■

Reform of GATT: Dunkel Proposals

ARUN GHOSH

The Director General of GATT, Arthur Dunkel, has prepared a revised draft treaty concerning the General Agreement on Tariffs and Trade, the main features of which are very briefly summarised below:

(1) For the first time, the subject of Intellectual Property Rights (relating in the main to Patent Rights)—which had in the past been the concern of the world Intellectual Property Organisation (WIPO)—is now to be incorporated as a separate agreement among members of the GATT, in respect of which complaints regarding violation and consequent damage) are to be considered within the Multilateral Trade Organisation (MTO) purposed to be set up to oversee the operations of GATT. The inclusion of property rights within the forum of the MTO is to be achieved by a separate treaty on Trade Related Intellectual Property Rights (TRIPs).

(2) Also included in GATT are Trade Related Investment Matters (TRIMs), the provisions of which give to foreign investors the same rights in the matter of investment as nationals in every member country. This implies complete exclusion of provisions like "phased manufacturing programme" seeking to increase the indigenous content in manufacture; no restrictions in regard to the import of raw materials and components; no ceiling on the extent of foreign investment; and no provision in regard to mandatory export of part of the output.

(3) There is to be a new agreement in regard to trade in services (GATS)—purporting to bring within the ambit of the MTO all services such as banking, insurance, shipping, etc.

(4) Certain new provisions in GATT, in regard to trade in agricultural products as well as domestic policies regarding agriculture, have been introduced.

(5) The Dunkel proposals incorporate significant dilution of exemptions and safeguards so far allowed to developing countries on balance of payment grounds, under the present Article XVIII of the existing GATT.

(6) An all-embracing facility of "cross retaliation", in case of damage, has been incorporated, thus allowing a country claiming violation of, say, patent rights by another country to discriminate against the latter in the matter of commodity trade.

(7) Deletion of the provision for "compulsory licensing" where a patent-holder does not want to manufacture an item in a country (this provision being under TRIPs), and treatment of import at par with domestic manufacture, for purposes of definition of the working of a patent (again, under TRIPs). These are significant new features of TRIPs as compared to existing facilities.

(8) Finally, the burden of proof in the case of any complaint would hereafter fall on the 'defendant' not on the 'complainant'.

The author is a former Member of the Planning Commission. This is the note he placed before the Cabinet Sub-Committee collecting different viewpoints on the Dunkel Proposals (January 1992).

This very brief summary indicates the most vital provisions of the Dunkel proposals which are likely to affect all developing countries generally and India in particular. Though a certain "transition period" is allowed, it is noteworthy that the transition period is shorter in most cases than even the phasing out of the Multi-Fibre Arrangement (MFA) under which the USA imposes strict quotas for the import of garments. For example, only some 50 per cent liberalisation is to be achieved in respect of MFA by the year 2002, in a phased manner, and eliminated only after 2003. Also, GATT recognises economic unions (like EEC) which can formulate their own rules in regard to trade within the "group" and trade with other countries.

◆

THE first point of the note about the Dunkel proposals is that the GATT now goes well beyond the area of international trade. The Dunkel proposals seek to extend the coverage of GATT to areas which are essentially part of domestic policy. For example, subsidy on agricultural supplies to any part of the population can now be given only on grounds of providing "nutrition" to certain target groups of the population. Subsidies on agricultural inputs are barred. Government purchases of agricultural products are to be made only at market prices; and subsidies on their sale are not to exceed 10 per cent.

Under TRIPs, even microbiological organisms and processes are patentable, which means that even hybrid seeds would become patentable, and cannot hereafter be replicated without adequate compensation to the patent-holder. Further, the existing provision regarding "compulsory licensing" of a patent in respect of which there is no production in the country which under the Indian Patent Act has to be compulsorily sub-licensed—subject to a maximum payment of 4 per cent of the value of output as compensation—is to be given up, implying enforced recourse to imports.

In like manner, the entire area of TRIMs involves an intrusion into domestic policy, insofar as this provision has implications for the pattern of investment that a country may wish to pursue, as also the types of technology that a country may wish to promote. There can hereafter be no regulation of technology import or import restriction of any kind in the interest of development.

The most problematic provisions of the Dunkel Proposals are (i) that the "burden of proof" in respect of complaint of damage will be on the defendant, and not the complainant; (ii) there is serious dilution of Article XVIII of GATT, in particular. The proposal now is that before any quantitative restrictions are imposed, import tariffs would first be tried and only if such tariffs prove to be inadequate, can the concerned country even think of imposing quantitative restrictions, in regard to which it would inform all other member countries and seek approval of MTO before imposing any such quantitative restriction; (iii) the provision in regard to "cross retaliation", which in a way arms all countries with the powers currently exercised by the USA under Super 301/Special 301; (iv) the serious inroads into the area of domestic policy through TRIMs and GATS; and (v) the extension of patentability even to microbiological organisms and processes without safeguards like "compulsory licensing" available to the Indian producers under Indian laws today.

◆

THE Dunkel proposals thus clearly set aside part 4 of the Existing GATT document which deals with issues concerning trade and development, the latter being a matter of over-riding concern. The GATT was initially created to pursue the objective of free trade in the interest of development. Hereafter, the GATT—and its operating mechanism, MTO—would really be concerned only with the problem of "market access" for developed countries. The objective is no longer free trade as an instrument for promoting growth. Dunkel has himself stated as much; he has clearly indicated that the objective of the reform of GATT is to increase market access. Obviously this is a recognition of the objective reality of "regional groups"; GATT which has always been a "rich man's club" will now become an active instrument for ensuring unequal trade between the developed and developing countries. The various regional groups can shut the door to outsiders and discuss the issue of "market access" on a reciprocal basis. The developing countries are, however, to be forced to provide for greater market access to all the developed countries.

The issue of the "burden of proof" (in the event of a complaint) falling on the defendant is a matter of serious concern. The Indian Legal System is based on the accused being presumed to be not guilty until so proven by the prosecution. Under the new GATT procedure, a complaint regarding "damage" has to be refuted by the defendant. It will no longer be necessary for the complainant to prove that damage has been inflicted; and even while discussions are on, "cross-retaliation" can take place. In fact, this provision regarding "burden of proof" goes against the very basis of the Indian legal framework.

Brief reference has been made to serious dilution of Article XVIII of GATT. More importantly, the Dunkel proposals make TRIPs and GATS separate agreements, without any reference to safeguards or exemptions under Article XVIII of GATT specifically written into these documents. And yet, "cross retaliation" even in respect of these areas is possible through MTO. That is, a complaint regarding GATS will allow a country (with the complaint) to restrict imports from the country against which the complaint is made. This is in effect a replication of the US Super and Special 301 in regard to all developed countries. The composition of MTO is obviously heavily weighted in favour of the developed countries. This appears to be a clever ploy to deny the developing countries even the limited (and now diluted) safeguards under Article XVIII of GATT, provided in the Dunkel Draft.

The provision in respect of "cross retaliation" is thus the most ominous feature of the Dunkel proposals.

The effect of the provisions on agriculture—on which the general impression created is that they will favour Indian Exports—will be to: (a) restrict Indian agricultural growth through restraint on even indigenous research on plant genetics—where, say, patents are filed in regard to microbiological processes—and inhibiting even the production of new seed varieties through these processes; total surrender of sovereignty in regard to the public distribution system; and elimination of all subsidies on agricultural inputs; and, most importantly, compulsory import of three per cent of our consumption of foodgrains, if international prices are lower—as part of the "market access" formula—which would imply an import of some five million tonnes of wheat and rice annually.

The effect of GATS and TRIMs would be to deny to the Indian Government sovereignty in regard to any development policy, for now there can be no independent investment policy other than that dictated by the global market system. And yet, while we lose control over investment through TRIMs and control over monetary and financial policy through GATS, the developed countries can continue to have a protective umbrella through, for example, the MFA, and over-all protection exercised by economic groups like the EEC.

The above is merely a very brief summary of the implications of the Dunkel proposals, which are currently under the consideration of the Government of India. ■

Critique of Dunkel Proposals

The National Working Group on Patent Laws submitted a memorandum to the Cabinet Sub-Committee on Dunkel's Report on Uruguay Round of Multilateral Trade Negotiations in New Delhi which was dated January 26, 1992. Here is the text of the Memorandum. The Chairman of the Group is Dr Nitya Nand; its Co-Chairman is Dr Surendra J. Patel, and its Convenor is B.K. Keayla.

—Editor

1. RESUMÉ ON ACTIVITIES OF NATIONAL WORKING GROUP

1.1. Our Group was constituted in August 1988, in response to the aggressive moves by foreign interests demanding substantial changes in the Indian Patents Act (1970). A high-powered official delegation of the US Administration visited India in July 1988. At the end of its meetings with senior officials and Ministers, this delegation held a Press Conference where they indicated that the government was favourably inclined to amend the Indian Patents Act to meet the demands of the USA. Further, it became evident from the Press Statement issued by the government on October 5, 1988 on the "Gandhi-Reagan Science and Technology Initiative Extension" that India and the United States had agreed "to consider the question of providing for protection and allocation on mutually agreeable basis of any intellectual property rights arising out of the STI programme". A joint Seminar of FICCI, WIPO & ICC which was held in November 1988, with the patronage of the government also alerted concerned persons in India on similar issues.

1.2. These developments had caused considerable concern among major sections of our people. There were many informal discussions among a cross-section of non-governmental organisations (NGOs) representing scientists, academics, legal professionals, journalists, health organisations, organisations of consumers, trade unions, industry associations and others. Following these discussions the National Working Group was established. Its main objective was to examine the issues surrounding our Patent Laws and to create public awareness of their relevance to national development.

1.3. The group prepared several scholarly studies on various aspects of the patent system in India and other countries. It also examined various issues being negotiated in the Uruguay Round. The group has organised a number of national seminars, conventions, conferences, brain-storming workshops, symposia, etc., during the three-and-a-half years of its existence. These sessions adopted resolutions and issued statements of national concern. These were circulated to the government, the media and the public. The response was much greater than we could have expected.

1.4. We are submitting a set of our important publications as an accompaniment to this memorandum. These publications have also been forwarded to the relevant Ministries for their consideration.

1.5. These three-and-a-half years have proved to be the most fruitful experience for our Group. We have learnt a lot. In the process, the support for our objectives of defending national sovereignty to adopt laws and policies best suited to our national development has become very wide indeed. Our Group has grown from a small debating society to a significant centre in our country. Scientists, economists, lawyers, journalists, Members of Parliament, leaders of all political parties, NGOs and industrial bodies have come to us to join in our activities. We have joined the mainstream of our people. We are, therefore, very pleased to accept your invitation on the Uruguay Round. We are convinced that this first phase will have to be followed by a more intensive, real participatory discussions involving the four pillars of our society—the Parliament, the political parties, the media and the people.

1.6. The GATT, the Uruguay Round and TRIPs, TRIMs and Services are no longer obscure words. We are happy to have contributed on these issues of vital concern to our people.

1.7. In December 1990, we obtained a copy of the Draft Final Text embodying the results of the Uruguay Round of Multilateral Trade Negotiations tabled during the Brussels Ministerial Meeting. The contents of this document, dealing with several areas, were extremely disturbing to us. We examined them in a Brain-Storming Workshop. Since then, in all the seminars and conferences held by us, we have been stressing five major points. They are:

1.7.1. The Government of India should issue a White Paper and Policy Statement on its stand on all GATT issues;

1.7.2. These issues should be discussed in Parliament with a view to evolving a national consensus on GATT issues;

1.7.3. No International Treaty commitments should be entered into by the government without securing prior consent from the parliament for their ratification and for whatever changes they may be called for in our laws and policies;

1.7.4. Determined efforts be made to press for suspension of negotiations on new issues viz. TRIPs, TRIMs and services under the GATT framework;

1.7.5. The government should take concrete initiatives to mobilise the developing countries so that a common stand can be evolved amongst them at the Uruguay Round of GATT negotiations.

1.8. In spite of repeated approaches we regret to state that the government has not taken any serious initiative on the above points. Instead India diluted its position in April 1989 when it agreed to the inclusion of TRIPs in the Uruguay Round negotiations and let down the Third World countries.

1.9. More than 250 MPs cutting across party lines and several prominent citizens of our country, had in a statement demanded for a debate in the Parliament on the Uruguay Round of GATT negotiations. This demand has been renewed recently by senior leaders of all major national parties, including the ruling party while rejecting the DDT. The National Working Group, while appreciating the stand taken by all political parties, expects these parties to set up teams of experts to examine DDT for a more comprehensive response.

2. VIEWS OF THE WORKING GROUP ON SPECIFIC ISSUES

The detailed views of the Working Group on all issues are contained in the Annexures. We submit below our principal conclusions and recommendations (to be read alongwith the Annexures):

2.1. Agriculture

2.1.0. The DDT proposals will wholly undermine India's prospects for agricultural development;

2.1.1. reduce price support for agricultural commodities;

2.1.2. constrain government's ability to build and maintain buffer stocks to guarantee national food security;

2.1.3. abolish much needed subsidies for seeds, irrigation, power, fertilizers and other inputs vitally needed for spreading new technologies;

2.1.4. prevent the government from maintaining and strengthening the existing public distribution system;

2.1.5. require India to open its market for food imports;

2.1.6. leave our farmers at the mercy of the powerful multinational corporations by extending intellectual property protection to seeds, plants and other bio-technological innovations.

2.2. Trade Related Intellectual Property Rights (TRIPs)

2.2.0. The DDT proposals will result in the creation of manufacturing and trading monopolies, greater domination of multinationals over agriculture and industry, slower diffusion of new technologies and raise barriers to technology transfer and absorption.

2.2.1. The DDT denies the right of government to frame its own intellectual property regime in line with perceived developmental and technological interests;

2.2.2. takes away the sovereign right of the country to exclude certain subject matters from patentability in order to serve its specific national interest;

2.2.3. introduces product patent for all inventions, including food, medicine and chemicals which will prevent the development of better adapted processes for use by the national enterprises for the introduction of cheaper medicines, chemicals and other products (the prices of medicines in India are the cheapest in the world);

2.2.4. extends protection of intellectual property rights to plant varieties in the form of plant breeders' rights which is bound to result in increased prices of seeds, greater domination of agriculture by MNCs and retarded diffusion of new varieties;

2.2.5. provides for a uniform patent term of 20 years as against terms for patents ranging from 5/14 years in the Indian Patent Act, 1970, which will lead to longer monopoly over our trade and manufacture by the MNCs;

2.2.6. provides virtually no scope for a system of compulsory licenses to ensuring the working of the patent in the country of grant as detailed out in the Annexures and thereby eliminates all possibility of imposing obligations on the patent holder in national interest;

2.2.7. seeks the introduction of reversal of burden of proof which will unjustifiably increase the power of the title holder at the expense of the domestic entrepreneur, in particular the small and medium-sized enterprises;

2.2.8. rejects special and differential treatment for developing countries;

2.2.9. does not in reality provide for any transnational arrangement because India will have to accept applicaitons for the subject-matters excluded so far from its laws from January 1993 itself for the purpose of grant of protection from the date of filing of application for the remaining duration of rights from the year 2003; and lastly,

2.2.10. extends the exclusive marketing rights for five years after the grant of marketing approval in the interim period when product patent application is pending or under consideration.

2.3. Trade Related Investment Measures (TRIMs)

2.3.0. The DDT proposals on TRIMs will undermine economic and technological self-reliance. The DDT seeks the removal of all TRIMs within a period of five years, and

2.3.1. extends national treatment to the foreign investors which will lead to lack of control over the direction of foreign investments for the country;

2.3.2. seeks removal of performance obligations imposed on the foreign investors in respect of use of local raw materials, components and equipment, exports, earning of foreign exchange, technology transfer requirements, etc.;

2.3.3. gives the foreign investors in fact better rights than our investors.

2.4. Institutional Matters

2.4.1. The DDT establishes a system of cross-retaliation which legitimises and universalises the Special 301 provision. The inclusion of safeguards provided in the Dunkel Draft Text is of no help here.

2.4.2. The Dunkel proposals should not assume the form of a single undertaking. Separate legal status for TRIPs, TRIMs and GATT should be provided in an effective manner.

2.4.3. Dunkel's Text needs much closer examination for the ambiguities in it.

2.4.4. The GATT Secretariat should have no role in nominating members to the GATT Dispute Settlement Bodies. An alternative dispute settlement system should be worked out to safeguard sovereign rights of contracting parties.

2.5. GATT Rules

2.5.1. Article XVII B, pertaining to the use of quantitative restrictions by developing countries to overcome their balance of payments difficulties has been rendered considerably ineffectual in the Dunkel Draft Text. Developing countries, particularly in recent years, have experienced severe strains on their balance of payments which in turn lead to the burgeoning of their external debt burden. Under such circumstances, these countries need to adopt measures to ameliorate their payments crisis, but Dunkel's proposals will not allow them to do so.

2.5.2. The Special and Differential Treatment allowed to the developing countries has been largely withdrawn in Dunkel's Draft Text. Special provisions have been provided for in an explicit manner only for the least-developed countries as defined by the UN. The withdrawal of special status enjoyed by other developing countries would create a situation where spurious equality of treatment has been applied to the unequal participants in the world economy—the developed and the developing countries.

2.6. General Agreement on Trade in Services

2.6.0. Developing countries agreed to the inclusion of services in the Uruguay Round Negotiations on the condition that the negotiations on GATS would be treated as a parallel track and not linked to the negotiations in goods. The DDT includes services in the same dispute settlement mechanism which establishes a system of cross-retaliation and effectively makes it a part of the single undertaking.

2.6.1. The DDT proposals will result in the control by multinational corporations of vital sectors such as financial services, telecommunication, media, education, health, etc. and will cause distortions in respect of the allocation, utilisation, mobilisation and creation of resources for development.

2.6.2. The Dunkel Draft Text (DDT) package

2.6.2.1. provides access to foreign service enterprises and grants them national treatment in the sectors opened on a request and offer basis;

2.6.2.2. fails to make any specific commitments for increased participation of developing countries in world trade;

2.6.2.3. makes extremely weak provisions to deal with business practices that restrain competition and restrict trade.

2.6.3. Within the GATT framework there are severe implications of opening up of our financial services to foreign interests. In India, financial institutions are obliged to fulfill obligations in priority sectors. The foreign financial institutions would not be undertaking such obligations and this would ultimately result in our financial resources getting diverted from priority sectors.

3. IMMEDIATE TASKS

3.1. The DDT, instead of opening new vistas for the development of the world, will lead to Latin Americanisation of the East and South. It does not offer strategies for strengthening scientific and technological capabilities of the South. On the contrary, it would ensure imprisonment of talents and resources that have been built up at great sacrifices in the South over the last half-a-century. Instead of developing self-reliance (as in Gandhiji's call for Swadeshi), it will open the way for unlimited control by Multinational Corporations of the developing countries' economies. Instead of offering full scope for the use of highly skilled personnel from the South, it will now clear the way for the very organised financial, communications and transport service corporations of the West to strangle the nascent development of the service sector in the developing countries. Dunkel's text ignores the demand of the developing countries for a 'new international economic order' to which the developed countries had agreed to earlier. In its place, Dunkel now is attempting to resurrect the old colonial order.

3.2. The unravelling of the Dunkel Text has already started. Officials of the European Community have rejected Dunkel's proposals. Japan and South Korea have serious doubts. Even the US is pulling in the contrary direction. It will be totally discriminatory if the developing countries were not permitted to suggest changes. Mobilisation of the developing countries is, therefore, essential. Moves are already afoot in this direction. A photocopy of the report appearing in the Special United Nations Service (SUNS) on the meeting held by the G-77 on January 13, 1992, is attached herewith. We would plead that India actively play a central role in safeguarding the interests of the developing countries which are now better informed about the GATT issues after the submission of Dunkel's Draft Text.

3.3. The Working Group has been suggesting mobilisation of developing countries for over two years. Even with our meagre resources, we ourselves organised a Third World Patent Convention in March 1990. Its declaration was acclaimed worldwide. We are prepared to organise a similar convention of NGOs if helped by the government. Last time we had received such support. A meeting of this nature could be useful in generating public opinion in these countries.

3.4. Copies of the full text of the Dunkel's Draft should be made available to all political parties and media and should also be placed in the Parliament Library without any delay so that our country's representatives in Parliament get an opportunity to study the proposals for an indepth debate in Parliament.

4. CONCLUSIONS

4.1. We trust that our views would be given serious consideration. In conclusion, we would again urge that the government should issue a White Paper and make a Policy Statement on its stand on all the GATT issues. There should be an extensive debate in Parliament, among the people and the media. Considering that the Dunkel's Draft Text is full of complex issues, a high-powered commission of eminent jurists/judges and scholars in other disciplines be constituted to analyse critically the implications of the Global Package. The commission should also be empowered to take expert testimony on various issues. The recommendations of this commission could constitute an important input in the discussion of these issues.

4.2. Time is of the greatest importance. It is rapidly running out. The people, the parliamentarians, political parties, the press are all becoming restless. They are impatient at the worsening domestic economic situation. There is a massive upsurge of a popular resentment at the influence of external forces—the IMF and the World Bank. We are deeply disturbed to find that our government is echoing the voices of these outsiders; that it is becoming insensitive to the people's concerns. The GATT has joined the IMF and the World Bank, thereby completing the unholy Trinity. On this Republic Day, we urge the government to show that it, and not the unholy Trinity, is incharge here.

Annexure 1

AGRICULTURE

1. Special and Differential Treatment

1.1 The text prepared by Arthur Dunkel does not recognise the right of developing nations to Special and Differential treatment in general. Special and Differential Treatment as we have known it, is really available only for the least developed countries in the Dunkel Draft. Some concessions given to developing countries in terms of longer transition periods, lesser obligations on reductions, etc. cannot be considered as Special and Differential Treatment. Special and Differential Treatment, whcih is a recognition of the different structural position of the developing countries in the world economy, is absent in the Dunkel Text.

2. Import Access

2.0. It will be wrong to assume that India can be prevented from being affected by the provisions on market access by taking recourse to the provisions on balance of payments. To begin with, the balance-of-payments provisions are applicable only on those sections dealing with tariffication (see page L.25, Dunkel Draft). They are not applicable on those sections where market access is being negotiated on the basis of the requirements on current market access and minimum market access.

2 1. The opportunity for developing countries to invoke the balance-of-payments provisions and thus escape from the rigours of tariffication, has been severely impaired by the changes proposed on the balance-of-payments provisions in the Dunkel Draft Text. This is due to the fact that the right to invoke balance-of-payments provisions has been eroded both for existing quantitative restrictions and even more so for the introduction of new quantitative restrictions.

2.1.1. The Dunkel Text proposes that the governments will have to announce 'as soon as possible, time-schedules for the removal of restrictive import measures taken for balance-of-payments purposes' and that justifications have to be provided in case time schedules are not announced.

2.1.2. The text not only says that preference has to be given for 'price-based measures' such as import surcharges when any action is taken for balance-of-payments reasons but also that in case quantitative restrictions have to be applied in a "critical balance-of-payments situation", "justification shall be provided as to the reasons why price-based measures are not an adequate instrument". (p. R.1, Dunkel Draft)

2.2. The Dunkel Draft proposes that current access opportunities cannot be less than the average annual import quantities for the years 1986-88 or what was permitted to be imported during that period, whichever is higher.

2.3. Developing countries such as India have to give a minimum access opportunity of two per cent of domestic consumption in 1993, to be increased to 3.33 per cent by the year 2003. The minimum access opportunity is to be implemented on the basis of a tariff quota at a low or minimum rate.

3. Domestic Support

3.1 The Dunkel Draft does not provide any Special Treatment for the developing countries in the case of price support to farmers. It requires a reduction in the support by developing countries of a minimum of 13.3 per cent, by 2003, in all the cases where the domestic support is more than 10 per cent of the value of production. This will prevent the government from using the instrument of subsidies to change cropping pattern.

3.1.1. The price support is to be calculated by comparing the fixed external price and the administered price in the country, in the base period of 1986 to 1988.

3.2. The ability of the government to give subsidy for agricultural inputs has been severely curtailed in the Dunkel Draft. It allows exemption from reduction for agricultural inputs, only in the case of the subsidies for low-income ro resource-poor producers. This will have major implications for the diffusion of new technologies. The reduction of input subsidy would be applicable, for example, not only to chemical fertilisers but also for bio-fertilisers or new varieties of seeds.

3.3. Another most crucial aspect of the Dunkel Draft Text on internal market is that related to the public distribution system. According to it, the PDS as existing in India will have to be given up since only those eligible on the basis of "clearly-defined criteria related to nutritional objectives" can be given subsidised food.

3.4. The Dunkel Draft further reduces the role of governments by removing the right of governments to intervene in the market. It stipulates that "food purchases by the government shall be made at current market prices". This is applicable for purchases made even to maintain stocks for food security reasons or to support public distribution. This provision will have serious consequences during periods of high food prices.

4. Export Competition

4.1 The developed countries are not required to eliminate export subsidies but only required to reduce their budgetary outlays and quantities by 36 per cent and 24 per cent by 1999. This means that developing countries will continue to be faced by subsidised imports from the developed countries.

4.2 The Dunkel Draft Text allows forms of domestic support which can be used by the developed countries to continue to support their agriculture. These are provisions such as the one on decoupled income support (income support delinked from production) and on regional assistance (assistance for backward areas). Already as a part of its agricultural restructuring programme, the European Community decided in 1986 that 48 per cent of the Community's agricultural land could be designated as less-favoured area. These types of support in developed countries allow the farmers to export below the cost of production.

4.2.1. The Dunkel draft does not protect the developing countries from this kind of subsidised imports, since Article 7.3 states that these subsidies shall be considered as non-actionable for the purposes of countervailing measures.

5. Political Position

5.1. The Dunkel Draft Text does not make a distinction between government support to promote self-reliance and food security and the subsidy to promote exports. This allows the developed countries to interfere in the internal policies of the developing countries.

5.2. The Dunkel Draft Text practically eliminates the capacity of any government to intervene in a sector as vital as agriculture. This is particularly debilitating in the case of the developing countries with backward agriculture.

Annexure 2

TRADE RELATED INTELLECTUAL PROPERTY RIGHTS (TRIPs)

1. The Dunkel Draft Text on TRIPs basically ignores the major concerns of the developing countries including India. No consideration has been given to the underlying fundamental policy objectives of our national system for the protection of intellectual property, including developmental and technological objectives. India would forfeit the right to frame its own intellectual property regime in line with perceived developmental and other social and economic interests after signing the proposed text.

2.1. Acceptance by India of the proposed substantive norms and standards would imply the abandonment of the efforts since the mid-1970s to reform the Paris Convention for the protection of industrial property in favour of developing countries. The proposed TRIPs agreement in fact constitutes a reverse movement. It completely nullifies the progress achieved in the process of revision of the Paris Convention.

2.2. It should also be noted that in all those cases where the TRIPs Text is silent or ambiguous, the jurisprudence and the provisions of the Paris Convention would apply. Article 2 states that "in respect to parts II, III and IV of this agreement, parties shall comply with Articles 1-12 and 19 of the Paris Convention 1967". In other words, on signing the TRIPs text, India would be accepting automatically:

2.2.1. the provisions and jurisprudence of Paris Convention where the TRIPs text is silent or ambiguous; and

2.2.2. revision of the Paris Convention in favour of developed countries.

3.1. The sovereign right of the country to exclude certain subject-matters from patentability in order to serve its specific national interests has been considerably watered down in the TRIPs text.

3.2. The Indian Patents Act, 1970, makes exception in respect of certain claims. All these areas which are considered not patentable in India would have to be covered by patent rights. Product patent would have to be granted for all inventions. If the process patent system is changed to product patent in the field of chemical inventions, the adverse impact on India's current research activity would be considerable. Because of its stage of development and size of business, India has concentrated on applied process research and incremental innovations in the form of improvement engineering. Such work will receive a severe setback.

3.3. Since the work on applied process research or improvement engineering are essential buidling blocks for the upgradation of its S & T capabilities at the current stage of development, India will be granting intellectual property rights in these subject-matters at the risk of accepting technological dependency for all times to come.

4. The TRIPs text demands the extension of intellectual property system to plant varieties either in the form of patents or in the form of plant breeder's rights. The proposed change is bound to result in increase in prices of seeds, greater domination of agriculture by multinational companies and slower diffusion of new varieties. These would be in sharp contrast to the experience of the Green Revolution where the new varieties of seeds evolved by the government institutions percolated down to the fields in a short span of time with very little cost to the individual farmer. Our farmers will have to face great hardship due to the new regime.

5. As against patent terms of 5/14 years in the Indian Patent Act, 1970, the new patent term would be 20 years for all sectors. As the TRIPs text provides for product and process patents, it would be possible for the multinational companies to extend their absolute monopoly to a period longer than 20 years through any number of spells of process patents, especially when 'Reversal of Burden of Proof' is provided for under process patenting.

6. The requirements for ensuring "working" of a patent have been considerably diluted. There is no specific provision for compulsory licensing in the TRIPs Text. All the substantive requirements of

compulsory licensing in the Indian Patents Act, 1970 would have to be dropped. The provisions such as the grant of exclusive licences and grant of compulsory licences for export purposes would have to be deleted altogether. It would not be possible to maintain the current provision of licence of right. The TRIPs Text permits strictly compulsory licence only in the case of a national emergency or other circumstances of extreme urgency or in case of public non-commercial use. There is another provision which allows for the grant of a non-voluntary licence. When such use is authorised to permit the exploitation of a patent ("the second patent") which cannot be exploited without infringing another patent ("the first patent"). But here too the restrictive condition is added that the invention claimed in the second patent shall involve an important technical advance of considerable economic significance in relation to the invention claimed in the first patent.

7. The grant of non-voluntary licences for other use provided in the TRIPs Text is specially allowed only on the grounds of anti-competitive use of patent rights. The adoption of minimum standards and norms concerning abusive use have been changed in the developed countries in the past few years in favour of multinational corporations. Further, at the international level, there are no standards limiting the use of abusive practices in the area of technology transfer. The draft international code of conduct on the Transfer of Technology, which attempted to establish discipline, is yet to be finalised. The developed countries have not allowed successful completion of the Code Negotiations. Similarly, the UNCTAD Code of Conduct on MNCs is also blocked because of the developed countries. It should therefore be quite clear that the discretion of the government to lay down the terms of the patent rights and the conditions under whcih they should be exercised, has been drastically curtailed without any countervailing limitation on the discretion of patent owners as to how they may use or abuse such rights in the territory of the granting state.

8. As against the current provision of fixed royalty linked to turnover, the TRIPs Text provides that "the patent holder shall be paid adequate remuneration in the circumstances of each case, taking into account the economic value of the patent". This would imply a substantial financial burden for the Indian enterprises seeking non-voluntary licenses from the foreign patentees and a heavy drain on foreign exchange.

9.1. There is a claim that the Dunkel's Text is silent on the question whether importation is regarded as working of a patent or not. In fact, there is enough in the text to suggest that improtation would have to be treated virtually as working of patent. For forfeiture and revocation of patent there are clear implications of Article 27 (i) which states that "patents shall be available and patent rights enjoyed without discrimination" as to the place of invention, the field of technology and whether products are imported or locally produced. This provision in the TRIPs Text would debar completely the government from making in its law any provision for revocation of patent merely on the ground that the product is being imported.

9.2. It is also clear that a compulsory licence issued on the ground that the product is being imported, will be treated to be in conflict with the legitimate interests of the patent-holder as defined in the Article 8 and 30 of the TRIPs Text. Further, we must recognise that wherever the TRIPs Text is silent or ambiguous the jurisprudence and provisions of the Paris Convention which are currently under revision would apply vide Article 2 which states that "in respect of paras II, III and IV B of this agreement, parties shall comply with Articles 1-12 and 19 of the Paris Convention 1967". And the Paris Convention in essence treats importation as the working of a patent. The impact of treating importation as the working of a patent will be that the country will become dependent on imports in a big way. There will be unacceptable delay in the indigenisation of production. Due to the monopolisitic regime that will get created, products would be sold at exorbitant prices.

10. The implications of the new provision relating to 'Reversal of Burden of Proof' for the Indian entrepreneurs are enormous. There is a need to appreciate the precarious position of the Indian inventor of an alternative process when it is viewed in the context of the enormous market power and material resources which the multinational companies can mobilise. The offer of such a pre-emptive legal resource to multinationals is to make a mockery of encouraging development of indigenous technology. In the words of the UNCTAD Trade and Development Report, 1991, the derogation from *onus probandi* principles "unjustifiably increase the power of the title holder at the expense of small and medium-sized enterprises". Our acceptance of the provision relating to this 'Reversal of Burden of Proof' will lead the Indian entrepreneurs into vexatious litigation. They will be spending money

to defend their knowhow rights rather than allocating resources for the development of indigenous technologies.

11. The TRIPs Text rejects special and differential treatment for developing countries. There is no possibility of formulation of reservations by developing countries in respect of specific provisions and obligation in the text.

12. The claim that the TRIPs transitional arrangement involves a concession to India is totally unfounded. The claimed transitional arrangement provides for a time bound mechanism aimed at allowing governments to bring their national laws into conformity with the proposed TRIPs Text. The proposed transitional arrangement gives a period of ten years to a developing country like India to change its law. But the same TRIPs agreement takes away also the benefit of this transitional arrangement through Article 70.8 which provides for pipeline protection. Because of this clause of pipeline protection India will have to accept applications for the subject-matters excluded so far from their laws from January 1, 1993 itself, for the puprose of grant of protection from the year 2003 for the remaining duration of rights effective from the date of filing of the patent application. It is a well-known fact that it takes some years for the patent-holder to develop knowhow linked to the concerned invention. The pharmaceutical companies have been themselves stating that it takes eight to ten years from the date of filing a patent to market a new pharmaceutical product. This implies that they require protection for new products basically from the year 2003 which India will be granting as per the TRIPs text. Another clear implication is that in the fields of technology protectable by the applications accepted from 1993 for consideration in 2003, no risk investment will be undertaken by the local enterprises. Many of the ongoing technology development projects in public research institutions and in-house R&D units of Indian enterprises will have to be dropped because there will be no use to pursue further work on them.

13. Further diluting the so-called advantages of a ten-year transitional arrangement provided to the developing countries to change from process to a product patent regime is the exclusive marketing rights provided to an applicant applying for a patent right under Article 70.8, mentioned above. Article 70.9 provides that an application under Article 70.8 "shall be granted exclusive marketing rights for a period of five years after obtaining the market approval". This exclusive marketing right would prevent other companies from introducing a product during the period of market protection.

14. Article 39 provides that for obtaining marketing approvals, information regarding undisclosed text or other data would have to be protected by the concerned national authority in the territory of which such approval is sought. Protection and the consequent non-disclosure of such information which Article 39 grants in such vital areas like drugs and agricultural chemicals, would not be in the larger public interest.

Annexure 3

TRADE RELATED ASPECTS OF INVESTMENT MEASURES (TRIMS)

1. India will have to remove all TRIMs within a period of five years from the date of entry into force of the agreement.

2. Foreign investments will then have absolutely no obligation towards any contribution to our economy in the shape of export performance or even of earning foreign exchange for servicing their own imports and dividend repatriations. It will not be possible to impose any restrictions on imports of raw materials, components and equipment.

3. The DDT proposals extend national treatment to the foreign investors. They deny government the right to place obligations on the foreign investors. Multinational corporations will be totally free to indulge in global corporate planning and ignore the development objectives of the host country. In reality, these proposals imply that the foreign investors would be enjoying better rights than domestic enterprises.

Annexure 4

INSTITUTIONAL MATTERS

1. The Dunkel Draft on institutional matters, on the integrated disputes settlement system as well as the understanding on Rules and Procedures governing settlement of disputes contain provisions which have disastrous implications for India. The idea that because the rules on dispute settlement have been made "time bound, automatic and judicial" in approach, it could be to our advantage is entirely incorrect. It flows from the tendency to view the dispute settlement system in isolation from the legal regimes in different issues areas, and the fact that the scope of the Dunkel Draft extends to critical areas like intellectual property rights, trade related investment measures and services. When, however, account is taken of the fact that the rules which have to be interpreted involve sovereign economic space, and that these have been written in favour of the developed countries and further

that disputes are to be resolved by intermediatory bodies like 'panels' which are to be nominated by the GATT Secretariat and finally that cross-retaliation is permissible, it becomes clear that a "time-bound, automatic and judicial" approach is to the advantage of the developed countries. In brief, the implication of the new DSS is that the developed countries can enforce iniquitous rules involving our sovereign rights promptly and effectively.

2. The Dunkel Draft provides for a system of cross-retaliation which gives legal sanction to the US Special 301 provision, as well as globalises it. It is, therefore, empty to claim that the new disputes settlement system has 'implications' for those countries whose domestic law contains provisions for unilateral retaliation." Where is the need for unilateral retaliation when the interests of the developed countries like the United States have been written into the TRIPs, TRIMs and GATS texts, and cross-retaliation is legally permissible. The US, for instance, has invoked the Special 301 provision against India stating that it provides inadequate protection in the area of intellectual property rights and therefore threatened to retaliate in the goods sector. The unilateral cross-retaliation threat is necessitated by the fact that at present GATT does not either provide for rules governing TRIPs or it follows, for a system of cross-retaliation. But once the demand for 'adequate' protection is conceded and a system of cross-retaliation is legally sanctioned, the need for unilateral retaliation disappears. Why would a state involve unitlateral measure when it can secure its interests through a multilateral mechnaism? What is worse is that the Dunkel Text now gives all developed countries the right to cross-retaliate. It has thus universalised the Special 301 provision.

3. It is being argued that while cross-retaliation has been provided for, it is permitted only as a last resort and further that the safeguard of arbitration has been included. These claims represent the proverbial clutching at straws. The first claim is hardly credible when it is remembered that it is precisely because in some sectors there is no scope for retaliation that the developed countries have insisted on a cross-retaliation provision. In other words, cross-retaliation is not permitted as a 'last but rather as a first resort. The "hierarchical structure" is almost a priori exhausted. Therefore, also the resort to arbitration with respect to whether the principles and procedures concerning cross-retaliation have been followed is going to be of little consequence. What is more, the provision relating to cross-retaliation has been drafted in a manner that the principles and procedures would easily be conformed to. For instance, the shift of retaliation across sectors or agreements is permissible if the sanctions within the same sector/agreement are "not practicable or effective. The words' practicable or effective" are broad enough to cover practically any situation.

4. The Dunkel Draft does not confer separate legal status on the TRIPs, TRIMs and GATS agreements. All claims to the contrary are incorrect. The claim that the TRIPs, TRIMs and GATS texts have separate legal status would only be meaningful if states are allowed to keep out of these separate agreements in case they are not viewed in their national interest. However, this option is not available, or rather ruled out, by the fact that the Dunkel Draft has been presented as a single understanding and what is more cross-retaliation across agreements is permissible completely negating the meaning of separate legal status of individual agreements.

5. The Dunkel Draft is, as is evident, an extremely lengthy, technical and complex document. It, therefore, needs to be closely scrutinised for ambiguities and silences in the text which could later be utilised by the developed countries to secure interpretations in their favour. For example, in our view Article 27 para (1) of the TRIPs Text which states that patent rights are enjoyable without discrimination as to whether "products are imported or locally procured" can be interpreted to mean that importation must be treated as the working of patent. Thus, an article by article scrutiny of the Dunkel Draft must be done with immediate effect.

6. The proposed disputes settlement system will ensure that the interpretations of a developed country contracting party will prevail whenever it is involved in a dispute with a developing country. As provided in the text, in case of a dispute where consultations between parties fail, a 'panel' shall be established at the request of one of the parties. This panel consisting of three members is to be nominated by the GATT Secretariat. This should be unacceptable. It would not be an exaggeration to assert that once the GATT Secretariat is empowered to nominate the Panel the possibility of a dispute being settled in favour of a developing country will be drastically reduced. The fact that a developing country national can be nominated to the panel at the request of a developing country party will be of little avail for a majority of the members will be normally from the developed countries. The same will be true of the appellate body. Therefore, an alternative disputes settlement system must be worked out and presented in the negotiations. ■

Pressler and Proliferation

G.S. BHARGAVA

The US Senator, Larry Pressler's gratuitous confirmation of Pakistan's capability to fabricate nuclear devices, alongwith his simultaneous endorsement of India's non-military intentions in the matter, has evoked two kinds of reaction within the country, both off the mark. The first is the sense of elation with which the officials have interpreted it as vindication of India's refusal to initiate or respond to de-nuclearisation efforts in the region. The second is Lal Krishna Advani's demand for the exercise of India's "nuclear option".

The reasons for the American Senator's loquacity on a subject on which officials and even legislators are wont to be diplomatic are not easy to fathom. It can be hubris or he may be projecting the hard face of the US Administration. It reminds one of Henry Kissinger's warning to Zulfiqar Ali Bhutto in 1976 that the US would make "an example" of Pakistan for its refusal to abandon a plutonium reprocessing effort, except that Kissinger was then the Secretary of State and he did not involve India in settling scores with Bhutto. Ultimately, Washington prevailed upon France to abort the deal for establishment of the reprocessing plant, for which Paris has now agreed to pay a compensation of 130 million dollars to Islamabad.

As a result, many in Pakistan suspected American acquiescence, if not involvement, in Bhutto's subsequent murder at the hands of Gen. Zia-ul-Haque. Bhutto had claimed in his pre-execution testament that Pakistan was "on the threshold of full nuclear capability" and that "all we needed was the reprocessing plant", short-circuited by the US. It has led to a widespread sentiment among the Pakistani elites that the key to their country's independence and progress lay in nuclear weapons and defiance of Washington was essential for the assertion of their nationalism. A similar situation had prevailed in Pehlavi Shah's Iran with well-known results.

Although Gen Zia had sent Bhutto to the gallows, he did not—or could not—give up the effort to acquire nuclear weapons capability. The only change was that instead of the plutonium route pursued by India and sought to be emulated by Bhutto, Pakistan set out to build enriched uranium Bombs. As a result, first, the Pakistani military was drawn into the programme, while Bhutto for his own reasons, would have retained civilian control over the project, brandishing it for political and personal aggrandisement purposes. Secondly, from Bhutto's personal obsession to be the father of the Pakistan bomb, it became a national cause.

In March 1987—about a decade after Bhutto's execution—Dr Abdul Qadir Khan who is in charge of the clandestine Kahuta uranium enrichment plant told Kuldip Nayar in a controversial interview that he had succeeded in "upgrading" enrichment of uranium "to 90 per cent to achieve the desired result". He also immodestly added that India had yet to match Pakistan's record in the enrichment field and that "what the CIA has been saying about our possessing the bomb is correct." Touched to the quick, an official of the Indian nuclear establishment retorted that they, too, could do it.

No doubt Khan's interview was later sought to be denied but within a few weeks Gen Zia told the *Time* magazine that "Pakistan has the capability of building the Bomb whenever it wishes.... Once you have acquired the technology, which Pakistan has, you can do whatever you like." Compared to such assertions by the scientist in charge of the project and the then President of Pakistan, the US Senator's statements are not revelations warranting the kind of glee in the South Block or the demand voiced by Advani.

More importantly, notwithstanding Zia's declaration, the then US President, Ronald Reagan, had more than once overridden the Symington Amendment to foreign assistance legislation to enable Pakistan to receive economic aid and concessional military supplies. The last occasion was in 1988 when Reagan certified that Pakistan was not seeking to make nuclear weapons. That had put paid to Rajiv Gandhi's expectation that the US would formally acknowledge what its intelligence agency had been saying. Two years later, however, President Bush let the present Pressler version of the amendment prevail denying aid to Pakistan. That Pakistan's usefulness as a strategic ally and conduit for US arms to the *mujahideen* had ceased with the withdrawal of Soviet troops from Afghanistan, should not be overlooked in this context.

This is not necessarily to imply that Washington is insincere in its efforts to curb the spread of weapons of mass destruction but to highlight that the concern is coloured by the primacy of geopolitical considerations. Viewed in this perspective, Pakistan's capability and intentions affect India more than they hurt Pressler's ego or conflict with US priorities of the time. As an American academic once said, India, Pakistan or any other Third World country cannot pose a nuclear threat to the USA in the foreseeable future. But during the Cold War years there was the danger of a showdown with nuclear weapons in South Asia or elsewhere, triggering an East-West global confrontation with chances of escalation to the nuclear level.

That fear has now dissipated. So, for India or Pakistan the danger of a nuclear war is more immediate than global. There is, of course, the effect of such a calamity on the fragile international system. The US has a stake in it and so have most other countries, including India and Pakistan. In the words of Alva Myrdal, a consistent friend of India who had joined forces with our Vishnu Trivedi in facing the super powers in the 18-nation Disarmament Commission, "... in disarmament nothing can be done if one does not consider the broader, long-term interest of the world, where one's security is part of the more general picture..." So, it will be suicidal to wait for the disappearance of nuclear weapons from the face of the earth for India and Pakistan to agree to give them up.

India has to decide whether it is in its interest to let Pakistan pursue its weapons potential to the logical conclusion and match or overcome it in the name of deterrence or whether both should agree to freeze it at their present levels so that the possibility of use of the weapons in a future conflict is eliminated. India's threat perception becomes relevant in this connection. K. Subrahmanian, a former Director of the semi-official Institute of Defence Studies and Analyses, had once seen a sea-based threat from the US. That was in the wake of the despatch of a US Seventh Fleet task force into the Bay of Bengal during the 1971 war. I do not think even he shares that fear now. Considering America's conventional arms superiority it does not have to pose a nuclear threat to India for whatever purpose. The same is the case with the UK and France which even Subrahmanian never regarded as sources of threat.

As far as China is concerned, as Rajiv Gandhi had said, we have lived with its possession of nuclear weapons and acquisition of ICBM capability for over 20 years and can do so in the future. Further, China should have no incentive to use nuclear weapons against a non-nuclear adversary. It may be tempted to do so only if and when India weaponises its existing technical capability and develops a credible delivery

[redacted]

different from the conventional strategy. Because of the awesome destructive potential of nuclear weapons their actual use is unthinkable. Even in a low-level nuclear combat with millions of fatalities there will be no winner, apart from the doubtful survivability of the crude weapons. It is more so in the case of close neighbours like India and Pakistan. Radiation is no respector of political boundaries.

Secondly, a nuclear threat, to be effective, has to be doubly credible. Flaunting the weapon is fraught with high risk and low return. Israel is an instance in point. Tel-Aviv has made it clear that only when it is faced with extinction—which some Arab states had once vowed to wreak on it—will it make use of its known but undemonstrated nuclear weapons arsenal. The adversaries got the message and deterrence seemed to work. Further, by preempting acquisition of the capability by hostile neighbours like Iraq it has ensured that there is no India-Pakistan-type situation in the Middle East.

There is no comparably credible nuclear doctrine for India. There cannot be because the threat India faces is qualitatively different. The scenarios projected by experts are extrapolations from the European situation at the height of the Cold War and have no relevance in our region. For instance, India cannot—hypothetically speaking—threaten Pakistan with nuclear destruction to stop it from meddling in Kashmir. The bluff will be called. India cannot even threaten to unleashn a full-scale conventional war—for obvious reasons. It is more so in Pakistan's case. In other words, avoidance of hostilities during the last one decade of intense mutual tension is not a case of nuclear deterrence but the result of past experience that a military conflict between the two cannot be conclusive.

Finally, India's weapons capability is built largely on the production of safeguards-free plutonium in inefficient power reactors. It cannot go on indefinitely because of the economic cost, among others. The exchequer is subsidising heavy water to the tune of Rs 41,00,000 for every tonne. The import input of the missile programme is also unduly high. Pakistan is even more vulnerable in this respect.

Thus, both countries will be condemned to a blind race in the acquisition of primitive capabilities, without reliable command and control procedures and without

Non-Proliferation: Tough Times Ahead

GURSHARAN S. DHANJAL

Senator Larry Pressler's statements made during his recent visits to India and Pakistan add upto the following:

One, his finding that Pakistan has already acquired nuclear weapons.

Two, that India after demonstrating in 1974 its ability to explode a nuclear device, took a voluntary decision not to move towards weapons capability.

And three, that Pakistan along with certain West Asian Islamic countries, and some of the newly independent Central Asian Republics could form a fundamentalist group of nations possessing nuclear weapons. Such a development could effectively write 'finis' to the entire non-proliferation exercise in our world.

The net effect of the assessment of the nuclear situation in the subcontinent presented by the US Senator is that there is a dangerous asymmetry, because Pakistan has a readily deployable cache of horror bombs while India does not. Therefore, there was hardly anything surprising in P.V. Narasimha Rao's summary rejection of the US-sponsored Camp David-type summit of all concerned to resolve the issue of nuclear non-proliferation in South Asia. In fact, the rejection came at the right time. There was a danger of intelectual busybodies lapping up the concept, if only for the seeming novelty of it.

While India had reason to be pleased at the clean chit it got from Pressler over the bomb, and the assurance that the Pressler Amendment will not be extended to it, one cannot help wondering if the Senator's enthusiasm for a Camp David-type is not misplaced. What Pressler perhaps meant was that the US, as a friend of both India and Pakistan, could act as an honest broker between them.

But his idea suffers from serious infirmities. First, as Prime Minister Rao himself has pointed out, India and Pakistan have bilateral relations, and meet from time to time to discuss matters of mutual concern. They do not, therefore, need a mediator. Secondly, in what essential way would a Camp David-type conference be different from the five-nation meet on a nuclear-free South Asia which Pakistan has proposed and India shot down? The Camp David model for ending Indo-Pak differences would presume a convergence of views in the two countries on essential elements that constitute their national policies. There is no evidence of that.

Lest there be any room for confusion about Pakistan's intentions, a spokesman at Islamabad declared that his government had no desire to give up its nuclear programme. Since this programme has caused President Bush to suspend US military and economic aid to Pakistan on the assumption that Islamabad means to acquire nuclear weapons, Pressler's efforts towards non-proliferation in South Asia should have been confined to Pakistan.

However intense the Senator's commitment to the cause of nuclear non-proliferation, he is unlikely to be helped in his mission even by his compatriots. There is still a school of thought in Pentagon that believe that, as a trusted ally, Pakistan should not be pushed too hard on the aid and non-proliferation issues. The danger, according to this perception, is that Pakistan may then move closer to an intransigent China and an Islamic fundamentalist Iran. Such views apparently are not inconsiderable, as is indicated by reports that the State Department also is inclined to waive the Pressler Amendment for resumption of aid to Pakistan.

Since Pressler himself now associated a nuclear threshold Pakistan with an emerging Islamic fundamentalist community of nations in the region, tackling a wayward Islamabad should be the primary charge of Washington. US will be under pressure to formulate a long-term policy towards a Pakistan in the vanguard of a group of Islamic nations some of whom may also emerge as sources of nuclear threat. Pressler, Washington and even Pentagon should ponder whether the spectre of nuclear proliferation in Central Asia should not demand greater attention than South Asia. After all, the one nation which exploded a device way back in 1974 receives a good chit from the Senator while the other, on the threshold or beyond, is today a common factor between South Asia and Central Asia.

It seems that the time has come when India ought not to leave itself unprotected against a possible Pakistani threat, more so after the hints it is said to have dropped in summer 1990 to US shuttle diplomat Robert Gates who now heads CIA that an Indian escalation on the conventional plane would invite immediate Pak nuclear retaliation. Successive governments have so far allayed public misgivings by offering the bland assurance that Indian forces will never have to fight an unequal war, but this may no longer suffice. Bomb advocates were, as it was, demanding a less ambiguous declaration of a matching capability and they would now cite the Pressler certificate of India's nuclear virtue to press their case. There is no gainsaying the need for paying very careful thought by the government to evolve an appropriate answer consistent with the overriding national interest in safeguarding the country from nuclear blackmail.

Therefore, in judging what national interest requires, it will be a tragic mistake not to take into account the strength of international sentiment against proliferation. While India cannot indeed put its security in jeopardy to keep in the good books of friends, however powerful, there is also no case for rejecting out of hand any ideas for preventing a nuclear conflict. The argument that it is too late to think now in terms of stopping because the Rubicon has already been crossed is indeed weighty but it is not conclusive. All restraints, including such detailed and intensively policed one, like Salt-II are in essence confidence-building measures because their effectiveness depends in the ultimate analysis on each side desisting from evasive subterfuges.

Signing the non-proliferation treaty is no doubt meaningless in the South Asian situation; a nuclear-free zone too will be a misnomer. But the case for a solemn agreement not to be the first to use the bomb still remains valid, not least because it will be in keeping with India's passionate pleas for outlawing the horror weapons. ■

Thoughts on Republic Day Celebrations

AJIT BHATTACHARJEA

What we read and saw depicted so graphically in photographs on the front pages on January 27, is no less than a national tragedy. Our tricolour, unfurled hastily in a curfewed square in Srinagar, guarded by soldiers with automatics at the ready, by an outside political leader with no local following. What was the message conveyed except raising the flag in hostile territory?

Yet, this was the same Lal Chowk in which crowds had massed to cheer Nehru and Sheikh Abdullah and hail Kashmir's accession to India. It was the same Srinagar where I had watched the people welcome Indian troops flown in to defend the city against Pathan tribals sponsored and supplied by Pakistan, with local trucks and their drivers ferrying them to the front. Where a hastily-raised local militia, composed mostly of Muslims, policed the streets and guarded vital installations when the Maharaja's police had fled.

That is the national achievement that the scene in Srinagar on Republic Day—a day set aside to celebrate our constitutional commitment to popular self-rule—converts to tragedy. More than ever before we need to remember how and why the people of Kashmir entered the Union, if steps are ever to be taken to regain their confidence. I had the privilege of witnessing some of those events and have written about them before. It seems appropriate to recall the details now to establish that they were not a dream, but a historic reality.

October was ending when I first glimpsed Kashmir from the window of a Dakota barely clearing the Banihal. It was weighed down with an unusual load: the seats and passenger fittings had been taken out to accommodate a large fuel tank strapped down in the cabin. A friendly pilot had agreed to squeeze in a cub newsman on the flight from New Delhi. Domestic air services had been suspended and their aircraft commandeered to airlift soldiers and supplies to Srinagar. Hundreds of well-armed tribals had plundered their way to within five miles of the dirt airstrip at Badgam before being halted by the first contingent of Indian troops flown in on October 27, 1947. Maharaja Hari Singh, who had fled to Jammu, had reluctantly signed the instrument of accession to India. It was accepted after the accession was endorsed by the National Conference leader, Sheikh Abdullah, who had just been let out of jail.

◆

AS we circled to land three days later, the Valley looked peaceful. Green fields interspersed by rushing streams, poplar-lined roads, tall chinar trees, their leaves turning russet, the blue waters of the Dal Lake. Beyond Srinagar, however, spirals of smoke were evidence of the burning and looting that had delayed the tribal drive on Srinagar, enabling our troops to land at the nick of time. Several aircraft were being unloaded at Badgam. Next to the unprotected airstrip, the road was lined with trucks and buses, with their local drivers waiting to ferry men and weapons to Baramula road, where the raiders had been pushed back a few miles. Nearer the capital, groups of the National Conference militia, armed with *lathis,* were guarding the bridges and patrolling the roads. If one or two of the bridges over the numerous canals and streams had been blown, the lead troops could not have stemmed the invasion. Yet, in the heart of Srinagar, shops were open. The roads were full of people of all communities. There was no hint of communal discord, unlike Delhi where post-partition tension continued until Mahatama Gandhi's martyrdom.

I was again in Kashmir a year later, on assignment for *The Hindustan Times.* Two other correspondents shared a houseboat with me on the Jhelum. Tourists were scarce and the roads emptied in the evenings, but we never felt insecure. By then regular Pakistani troops were openly in the battle, but our soldiers continued to enjoy local support. Weapons were loaded only at the front. This was evident on trips well outside Srinagar. On one occasion, the popular Indian commander, then Major General KS Thimmaya (later Chief of Army Staff) took Sheikh Abdullah in his jeep all the way to the Gurez Valley, recently wrested from Pakistan. I followed with his ADC. We were welcomed all the way and had to be watchful only when within range of Pakistani artillery. Later, while the war was still raging, I accompanied Sheikh Abdullah and his wife on a morale-boosting tour of the Valley. We travelled in a single car, with no security guards. We never felt the need of any. He was made

Do We Need a New Constitution?

S. VISWAM

For the last two decades, a number of political scientists and thinkers in India have been chasing the presidency mirage. As a way-out of the numerous political challenges and problems confronting the nation, they have been advocating a systemic change, either through an entirely new Constitution or through substantial modifications to the existing one. From time to time, and especially when problems accumulate and strain the polity, they have been calling for constitutional reforms on the one hand, and the replacement of the parliamentary system by a presidential system on the other.

Some see in the advocacy of the presidential system an attempt towards greater and sinister centralisation of authority while others argue that if the parliamentary system has not enhanced the strength and quality of the polity over four decades, it ought to be abandoned. Over all, the temptation to attribute the shortcomings of the polity to the parliamentary system has been all too strong, and those who advocate a systemic change do it in the belief that the present Westminster style of democracy is neither suited to the genius of the Indian people nor workable. The alternative projected is invariably a resort to the presidential form, based on either the American or the French models or on a combination of both.

The latest to meet the proposal for a new Constitution consistent not only with the internal conditions in India but also the revolutionary changes sweeping the world is former diplomat and administrator B.K. Nehru. Delivering the Ranganathan Memorial Lecture in the capital recently, Nehru spelled out in some detail his vision of a new India based on a new Constitution which would not only place real power in the hands of the people at the lowest level of administrative and political hierarchy but also ensure durable stability at the Centre.

The last issue of Mainstream *(Republic Day Special) carried a contribution by B.K. Nehru, captioned, "A Fresh Look at the Constitution", based on the S. Ranganathan Memorial Lecture, which he had delivered on January 12, 1992. The above contribution is a response to B.K. Nehru's lecture by the eminent journalist who is at present the chief of the New Delhi bureau of* Deccan Chronicle, *which has published it.*

Since the suggestion for a systemic change comes from one of the highly respected public figures of the country who has had a wealth of experience not only as an administrator but as an observer of the functioning of Indian democracy, Nehru's views, which undoubtedly are timely, need to be taken seriously. He has not been the only one in India who has had reason to be disenchanted with the present system. He is in the distinguished company of a number of political observers who have faced something of a dilemma in suggesting remedies for extricating the Indian polity from its strains and stresses. The idea of a systemtic change, from the parliamentary to the executive presidency, was first articulated in the late seventies and early eighties when national politics was in deep ferment and there were signs of the country breaking up under the weight of conflicting pulls and pressures. It is not surprising that the idea should be again projected at the present moment, when things are certainly not rosy on the national political landscape.

But first, let us have a peep into the scheme of things envisaged by Nehru. The premise, for a change is that first, the present Constitution is such that it almost inevitably and increasingly catapulted into seats of power the more undesirable elements of society. "The proportion of criminals and history-sheeters in the legislative assemblies of the country have been increasing from election to election."

Secondly, the will of the leaders at the Centre, State and district levels was being substituted for the laws of the land.

Thirdly, under the present system, unpopular decisions, even when imperative in national interest, cannot be taken because "the vote has become our god".

Fourthly, both inefficiency and instability are inevitable when the political life of a Chief Minister depends on hordes of rapacious legislators whose hunger for power, pelf and loaves and fishes of offices knows no limits.

And lastly, elections have become so expensive that there is no possible honest way in which "that kind of money" can be raised.

Nehru, therefore, suggests that there is need for new Constitution mature enough to provide the transition to a peaceful, honest, just and progressive nation, a Constitution which can fully reflect the aspirations of the people by giving due recognition to the panchayats at the village level serving as a reflection of their will and ensuring a stable government at every level. The new Constitution should be based on the essentiality of separation of powers, the legislature must be separated from the executive by making it impossible for any member of the legislature to hold any office of profit under the government including a ministership. This would immediately and automatically reduce drastically the attraction of becoming a legislator.

Nehru would have the President elected by a large enough electoral college, on the basis of proportional representation and a single transferable vote. The country should be notionally divided into four zones (north, east, south and west) and the successful candidate should be required to get not only an overall majority of votes cast throughout the country but also a specified minimum percentage of votes in all the zones. Further, the executive President should have a fixed tenure of years (making a second term impossible) without any possibility of his removal during that term except by impeachment for moral delinquency. The same terms of tenure would apply to the Governor, but in Nehru's concept, the Governor would also be directly elected by the people of the State.

◆

BEFORE assessing the merits and demerits of these undoubtedly novel and far-reaching proposals, it needs to be admitted that by and large there seems to be consensus among political thinkers in the country over the reasons why the existing system seems unable to deliver the goods. The first of these reasons is the manner in which legislators get elected and the second is the manner in which they behave after getting elected. The extraordinary loopholes in the People's Representation Act, which are taken advantage of by both the candidates and the electorate, have generated a widespread demand for electoral reforms. A national debate has been on in the country for the last two decades on the extent and depth of the needed reforms; but unfortunately, while piece-meal changes have been effected, a comprehensive system of reforms has yet to be introduced despite the availability of any number of suggestions and ideas, some of them emanating from the Election Commission itself. Secondly, it is also an accepted fact nowadays that an average politician's concept of public service is the acquisition of a ministership either at the Centre or in the States with all the attendant perks of office and status.

Giving expression to this view, President Venkataraman, while inaugurating the Governors' Conference last month, described the "lure of office" as the "foremost infirmity in a politician" and went on to say that defection was its barest manifestation. Referring to the enormous size of the Ministries in certain States, the President noted the "instances where almost every legislator of the ruling party has had to be placated with ministership or ministerial type of sinecure." Our body politic, he added, cannot carry so much adipose without detriment to the heart of the democratic functioning. The absence of a limit to the size of the Ministry encourages hopes of office in a defector.

"Democracy is the worst system but there is none better," said Winston Churchill. The world over his remarks have echoed and re-echoed, and the last word on the controversy over the supremacy of democracy versus totalitarian was effectively delivered last year when country after country in Eastern Europe opted for a systemic change and embraced democracy. The reference point of debate in India is not over the efficacy of democracy, which fortunately has dug deep roots but over the instrumentality of its conduct and functioning. To those who have abiding faith in the sanctity and validity of the present system, the question of a shift to the executive presidency is a non-issue. To others, it is very much a live issue as Nehru's assessment hints at.

It has often been asked why the talk of a systemic change was unheard of in the days of Jawaharlal Nehru, and why did the advocacy of changeover to the presidential form surface in the late sixties and early seventies when Indira Gandhi was at the helm of affairs. During the Indira Gandhi era, when much merit was seen in the presidential system, the controversy tended to revolve around a single individual (often a single family) and her political fortunes, future and career. When leaders like Abdul Rahman Antulay and Vasant Sathe championed the cause of changeover in the seventies and early eighties, the demand was seen as an attempt to convert Prime Minister Indira Gandhi into President Indira Gandhi. A sense of dread at the already powerful Indira Gandhi becoming an even more powerful President Indira Gandhi seemed to have gripped the national psyche, leading many observers to decry the proposal for a systemic change.

Commenting on the controversy, civil liberties leader and former Judge of the Bombay High Court, Justice Tarkunde had said: "The presidential form of government is very dangerous because it consists of a tremendous concentration of power in the hands of one person, which is likely to lead to the destruction of democracy and establishment of authoritarianism. The concentration of power has been the path followed by a number of countries in the Third World. Look at Pakistan and Bangladesh. What India needs for the proper functioning of democracy is decentralisation of power. We are a country of many cultures and in such a situation democracy can only mean a diffusion of power. I regard the presidential system as the greatest danger to India. It would be the beginning of the end of democracy.... A change in the Constitution would require an amendment to Article 368, the overruling of the Keeshavananda Bharati judgement of the Supreme Court and going before the people. A two-thirds majority would be required to change Article 368 of the Constitution which gives Parliament its constituent powers. An alteration in the basic structure of the Constitution cannot be made by Parliament which is a creation of the Constitution. A change can only be made following a referendum which gives Parliament the power to change the structure of the Constitution."

◆

IN the late seventies, it so happened, probably because of an increased sense of neglect, that a number of Pradesh Congress Committees in northern States began clamouring for convening a constituent assembly to usher in the presidential form. As if responding to the clamour, the then Congress President, Dev Kant Barooah, set up a Committee under the chairmanship of Sardar Swaran Singh with Abdul Rehman Antulay as its Secretary, to examine the Constitution and recommend changes. The Committee's report never saw the light of the day. After the supercession of three Supreme Court judges (A.N. Grover, J.M. Shelat and H.R. Khanna) in favour of Justice A.N. Ray as the Chief Justice of India, there were roars of protests and the independence of the judiciary was seen as coming under threat. The Opposition's refrain at that time was: "First hit the bureaucracy, then the judiciary, then the press and ultimately the army." A changeover to the presidential system, with herself ensconced as President, was seen as the ultimate destination of Indira Gandhi's strategy to strengthen herself,

The debate over the systemic change received short shrift during the Janata era. However, one Congressman who has assiduously been promoting the resort to executive presidency is none other than Vasant Sathe, who tried to refine the entire concept by making it more attractive to the sceptic. In his book *Towards a Social Revolution,* formally released on January 14, 1984, by no less a dignitary than President Zail Singh himself, Sathe stressed the need for a "national authority which should be elected directly by all the citizens of the country". Such an authority was necessary to maintain the unity and integrity of the country as a nation, and this turn would automatically impel the growth of more than one national party operating at the national level. Sathe envisaged the direct election of the President, the Vice-President and the Prime Minister. They would be answerable to Parliament in matters of policy but they would not be liable to be removed by Parliament except by way of an impeachment requiring a two-thirds majority of both houses. All this could be done just by amending Article 52 to 56 of the Constitution. Sathe defined the need for reorganising the parliamentary system and creating a nationally elected authority with the mandate and sanction of the entire nation thus: "Fissiparous tendencies having strictly regional, parochial and chauvinistic appeals are raising their heads, threatening and endangering the very unity and integrity of India as a nation. We have seen from experience in this very subcontinent that it does not take long for a nation to disintegrate if parochial and linguistic considerations overpower and dominate the feeling of a united nation. It is therefore a matter of serious urgency for all intellectuals and thinking people in the country to start a debate for considering ways and means and steps required to be taken to prevent any such unfortunate development."

In his latest book, *National Government: Agenda for a New India,* Sathe argues in the chapter *The Changing Political Systems,* that the President in India is not, in terms of our Constitution, just a titular head like the monarch in the UK. Under our Constitution, the President is an elected authority, elected by an electoral college consisting of members of both Houses of Parliament and the members of legislative assemblies of the States. "If we were to provide under Article 54," he adds, "that the President would be elected directly by the entire electorate of the nation in a national election, the character of the sanction behind the chief executive would undergo a basic structural change. This would ensure a sense of unity and oneness among the 540 voters of India who will be together electing this one individual. This will promote the growth of party organisations at the national level when they will be required to organise an election campaign, back one individual as head of the country, overriding considerations of region, caste or creed."

The basic difference between the theses of Vasant Sathe and B.K. Nehru lies not so much in the ultimate destination of change but in the methodology. Sathe would prefer a change affecting the top, while leaving the other structural entities like Parliament and legislatures intact, even while retaining the present arrangement in the States. Nehru, on the other hand, advocates the radicalisation of the entire system, through an entirely new Constitution which would provide for the very kinds of safeguards in terms of national unity and integrity which Sathe also has in mind. But in Nehru's scheme of things, a number and variety of structural changes will be required at the State level too inasmuch as he contemplated an elected Governor also. The federal concept, which is basic to the Indian system as it exists, will have to undergo a substantial change, opening the door to a confrontation and conflict on occasions between an elected President and an elected Gövernor. It is not clear how Nehru hopes to overcome the eventuality to an elected President at the Centre having to dismiss an elected Governor in a State and bring the State under President's rule. Secondly, Nehru's concept would probably require a thorough overhaul of the constitutional provisions governing Centre-State relations, always a thorny issue in India and one which is still in the process of refinement in terms of the recommendations of the Sarkaria Commission.

The ultimate question however is whether the people of India, who have gone through the experience of ten general elections and as many as 275 elections to Assemblies, are ready for a systemic change. Their conduct and approach to statecraft have been conditioned by four decades of education in a particular process of governance and response to it. Not without at least several years of intensive education can their mindset be influenced to accept an entirely new form of system which will bring along with it a totally new administrative, political and electoral culture. There will have to be years of prolonged and informative national debate before the country can be readied for a change of systems, and this is probably why the controversy over a systemic change is at present confined to the top echelons of the intelligentsia and not percolated down below. ■

AJIT BHATTACHARJEA: Republic Day

(Continued from page 25)

welcome and cheered at every step.

Nor was there any trace of hostility evident on subsequent assignments and holidays in the valley, though the newly-educated younger generation complained in the coffee house and the university that the best jobs were going to outsiders. Tourists camped in the remotest corners of the Valley, feeling far more secure than they did in the cities they came from elsewhere in India. Political discontent surfaced after Abdullah was detained in 1953. But even in 1965, Pakistan made no headway when hundreds of infiltrators were sent into the Valley. Many were handed over to the police by local villagers. Nor was there any attempt to embarass our troops when war broke out later that year; or, again, in 1971. In 1989, Farooq Abdullah condemned secessionism at a public meeting in Lal Chowk.

Armed militancy became a serious threat and found local support when New Delhi's commitment to secularism began to be widely questioned and the abrogation of the constitutional safeguards embodied in Article 370 threatened. Pakistan made full use of the opportunity. We need to investigate the reasons objectively and reverse them if the tricolour is to flutter in Srinagar again as a symbol of allegiance, not Central authority.

THE lessons to be learnt extend beyond Kashmir. Armed unrest is not limited to the Valley, though alienation has gone furthest there. Throughout the country, the manner in which the Republic Day is observed has become a demonstration of state power, not the celebration of popular self-rule that it was meant to be. Inheriting the style of British imperialism and aping the defunct Soviet Union, the armed and police forces dominate the occasion.

As a result, there is minimal public participation. Those admitted arrive as silent spectators and leave as soon as possible after the VIPs. Excessive security has made things worse. More and more, the parade has become an official, urban, VIP-dominated function; unfurling the flag a symbol of power rather than popularity. "We, the people.," proclaimed to give the Constitution legitimacy, are ignored. Yet, if they are not encouraged to feel part of the system, they cannot be expected to resist the extremists, whether described as terrorists, militants, insurgents, Naxalites or infiltrators.

After more than 40 years, it is time that we junked the parades and encouraged instead voluntary, self-organised, non-official celebrations dotted all over the countryside. That would express and generate popular support for, and commitment to defend, the Constitution and the rights it guarantees. ■

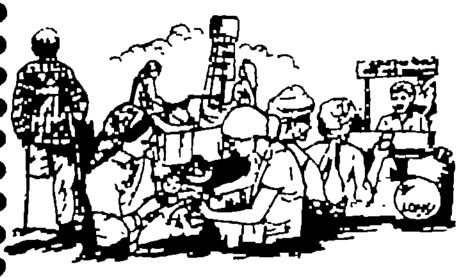
Spectrum OF HARYANA'S PROGRESS

HARYANA
Silver Jubilee Year
1991-92

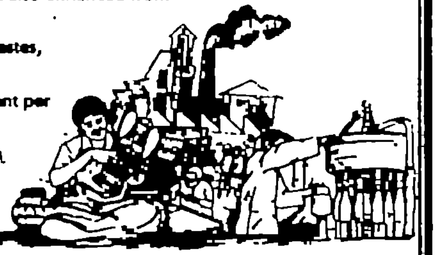
The Republic Day is the sanctum sanctorum of our Sovereign Socialistic Secular Democratic Republic. On this day we resolve to work hard to prove ourselves worthy of our Constitution.

Haryana, which is about one percent of the total area of the country, has taken rapid strides for creating a glow of joy on face of every Haryanavi. We have recently launched a 25-Point Programme with a motto of "Peace and Development" for bringing economic prosperity and social justice, establishing a rule of law by strengthening the democratic institutions and caring for the Economically Weaker Sections, the Backward Classes, the Scheduled Castes, the Youth and the Old, the Women and the Children.

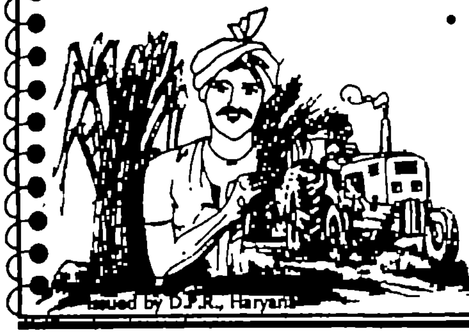
Today, we have legitimate claim to boast of our spectacular progress in various fields :



- Foodgrains production targetted to be increased to 102.40 lakh tonnes in 1992-93. A big Fruit and Vegetables Marketing Complex planned to be set up at Kundli in district Sonipat in the near future.
- First State in the country to give the highest support price of sugarcane of Rs 49 per quintal to its sugarcane growers.
- A production incentive scheme incorporating waiving of interest of last seven years on cooperative loans.
- Irrigation water for tails of all the distributaries. Optimum utilization of available water resources. Repair and desilting of all the canals and water-courses.
- Efforts are afoot to complete the SYL canal at the earliest.
- The limit of investment on rural industries enhanced from Rs 2 lakh to Rs 5 lakh for getting the subsidy.
- Only State in India to supply 55 per cent of its total power to the rural sector as against All India average of 25 per cent.
- Old-age pension to 7.50 lakh senior citizens of 60 years or above @ Rs 100 per month on rationalised economic basis. The pension of widows and handicapped also enhanced from Rs 75 to Rs 100 per month.
- Full protection ensured to rights and liberties of the Scheduled Castes, Backward Classes and Weaker Sections.
- Free education for girls upto graduation level. A drive for attaining cent per cent literacy and enrolment of school going children.
- Potable drinking water supply for all the villages and Public health amenities at all the religious and cultural places by March, 1992.
- Per capita health expenditure now increased to Rs. 69.50.
- All damaged roads being repaired on priority basis.



- Construction of 10,000 houses during the Silver Jubilee Year out of which 60 per cent for L.I.G. persons.



- Facilitate employment to at least one educated member in each family. Employment opportunities or training for employment to five lakh youth during the next five years.

On this auspicious occasion, I call upon one and all to contribute whole-heartedly towards the task of making a happy and prosperous Haryana, maintaining peace, national unity and integrity, communal harmony and amity.

Bhajan Lal
Chief Minister, Haryana

Issued by D.P.R., Haryana

Choosing the Man of the Year

H.Y. SHARADA PRASAD

Madhu Kishwar and Mrinal Pande might not approve of the gender chauvinism implicit in the idea of a Man of the Year, but they won't be able to fight this journalistic convention. *The Illustrated Weekly* has picked Prime Minister Narasimha Rao for the honour. *Time* magazine's choice is Ted Turner of the CNN for the reason that he has "influenced the dynamics of events by turning viewers in 150 countries into instant witnesses of history".

Time covers set a high standard for draftsmanship. The stories backing up the covers are absorbingly readable. Above all, the magazine takes care to see that its choices are not too predictable but have an element of surprise. In this our *India Today* and *Sunday*, ought to take a lesson from their prototype. I recall how V.P. Singh figured on several successive issues of *Sunday*, for example, when he was still believed to be a shaper of events.

Even *Time* is partial to the US Presidents. It is natural for journals of a country to be obsessed with its head of government. But in the case of *Time* there is the added belief that the US Presidents determine the world's agenda—even if they have to go as car salesmen to Japan. Also, for all its claim to being a journal with global coverage and readership, *Time* is really a house magazine of the United States.

A few days ago Chandan Mitra told us in *The Sunday Observer* that in his travels from Kanyakumari to Tanglang La in Ladakh, he had found that one of the factors contributing to Indian unity was the BBC. According to him, the BBC was listened to at every wayside eating place, and cited by every *dhaba* owner as authority for the authenticity of news. Whether we can go as far as saying: "No BBC, no India", many Americans believe that *Time* and other American journals, like Hollywood films, hold the world together. After all, is not *Time* published from several cities round the world and is the most reached-out-to journal in airport lounges and municipal reading rooms?

But let us give *Time* the credit that is its due. It is run by superb professionals who know how to create the sensation of omnipresence and omniscience—omniscience not only about political goings-on but about the worlds of science, art, films and fashion. *Time* prose, with its spicy crunchiness, is widely imitated. Everybody who reverses the order of noun and verb in a sentence thinks he is *Time* smart. But it is hard to beat *Time* in its capacity to ensure that fact-studded, opinion-stuffed prose is still racy. Rarely has *Time* exposed the hypocrites or belonged to that part of the Press which believes in afflicting the comfortable and comforting the afflicted. Its forte is not investigation but packaging. *Time* is like America—in a melting pot. Into its prose are thrown in the latest hearsay, the newest vogue words, many alliterative adjectives, and nouns used as verbs. The wonder is that this mixture is not a gooey mess but is light and crisp. *Time* is a triumph of the art of rewriting.

What the magazine does even better, not unconsciously, is the propagation of the American image and the American way of life. Where the State Department and CIA fail, *Time* succeeds.

Take the very choice of Ted Turner as the Man of the Year. Turner was not exactly popular with the US Government for the way he enabled President Saddam's face and voice to be seen and heard the world over. That very thing proved that he possessed the quality Americans admire most—enterprise.

But *Time* has canonised him not for his nonconformism but his ability to take advantage of the possibilities created by modern technology and built up a worldwide market for his product. I don't know whether Henry Ford ever made it to the *Time* cover. But Ted Turner's qualities are like Henry Ford's—not innovation as such, but exploitation.

To recall the *Time* citation, by making millions upon millions in a hundred and fifty countries instant witnesses of history, Turner has influenced the very dynamics of history. But does the second half of the formulation follow from the first? Did the fact that his mug was seen in a hundred and more countries give added confidence to Saddam? It is true that telecasting the question-hour of Lok Sabha makes MPs better dressed. But will zero hour be less tempestuous if that were telecast? It is true again that once the people of the former Soviet Union could receive satellite-cast television signals, the government there could not practise thought-control. But did the fact that people elsewhere could see their travails in any significant way embolden the East Europeans rise against the Red lords? Can they hope that tele-pictures of their shortages will really spur the nations of the world to go to their aid? To what extent does globalised television really affect *realpolitik*?

It is difficult to guess what would have given Ted Turner greater pride—marrying Jane Fonda or being hailed as the Man of the Year.

But what essentially is a Man of the Year? What are his qualifications and how is he to be identified? Even if we do not all subscribe to the Carlylean maxim that heroes it is who make history, did the *Time* Man of the Year "influence the dynamics of history" in 1991? Most people in the 150 countries that *Time* speaks of would say that that the title should belong to Boris Yeltsin (who was the *Newsweek's* cover for its first issue in the New Year). Mr Turner's CNN is good business, but Boris Yeltsin of CIS is bigger news.

A tip to *Time* for its 1992 Man of he Year. It should be Christopher Columbus posthumously. For, if he had not "discovered" the New World exactly 500 years ago, in 1492, where would *Time* be? Time past and Time future are both contained in Time present, to amend T.S. Eliot. ■

SUMIT: A Fruitful Odyssey

(Continued from page 4)

for him in preparing for the forthcoming British poll, but also to direct the activities of the new UN Secretary-General, Dr Boutros Butros-Ghali, who gave sufficient indication of his capacity as a seasoned diplomat. But he could not conceal his avowedly pro-West proclivities that had won him the coveted post.

Nevertheless, the summit did mirror the concerns and apprehensions of the Third World and that happened to be of no mean importance with India playing a prominent role in that exercise.

◆

IN bilateral talks Narasimha Rao's first meeting with Bush as India's Prime Minister, though brief, was marked by a reasonable degree of warmth. According to Narasimha Rao, the meeting was a success as India was able to put across its viewpoints on various issues more lucidly than before. There was a certain measure of similarity of views as reflected in Bush thanking the Indian Premier for having forged full diplomatic ties with Israel, and both leaders expressed satisfaction over the increasing economic ties between India and the US. However, differences over the NPT, the GATT and Super 301 were quite palpable. Narasimha Rao made it amply clear that the differences had to be acknowledged but they could be narrowed down—no question of conceding to a take-it-or-leave-it stand.

Narasimha Rao's talks with Yeltsin and Li Peng achieved a fair degree of success with the former agreeing to back India on Kashmir and explaining the reasons for his delay in visiting India (now he is due to come in either late September or early October this year) apart from discussing bilateral economic issues of vital concern. Li Peng conveyed China's shared perceptions with India on global issues of interest and agreed to hold the next meeting of the joint working group on the border at the level of the Foreign Secretaries in late February or early March.

The meeting with Major did not achieve anything tangible but Narasimha Rao was explicit enough to transmit India's position on the various subjects constituting the agenda of the summit meeting.

In a speech at the UN General Assembly in November 1961 Jawaharlal Nehru had called for a "new way of thinking" and a "new development of humanity" abjuring the old outmoded outlook. He had also said:

> The last years of difficulty and crisis have brought out more than ever before the importance of this organisation. Indeed one wonders what the world would be like if the United Nations ceased to be or did not function Therefore, it is of the highest importance that this great organisation should not only function but should function with effectiveness and with the support of the countries represented here.

Thirty years later, in a world substantially different from what it was at the end of 1961, P.V. Narasimha Rao, as the ninth Prime Minister of independent India, has left a distinct imprint on the UN Security Council making a valuable contribution towards reinforcing the UN system on the lines spelt out by his distinguished predecessor. This is particularly noteworthy in view of the complexities of the present-day scenario in the changing global environment.

◆

IF Narasimha Rao powerfully articulated India's concerns at the UN Security Council in the current world situation, his performance at the annual Davos international symposium organised by the World Economic Forum (WEF) was more striking as he projected, in a remarkably objective presentation, the essence of India and its problems both in the historical perspective as well as the present conditions.

Straying frequently from the prepared text—and thus giving greater substance to his observations—Narasimha Rao did not confine his speech to "global cooperation and mega competition", the theme of his presentation. Instead he dwelt on the positive and negative aspects of the present global scene as also India's role in the changing situation. He spoke of the politics of consensus his administration was trying to promote and traced it to the very ethos India had evolved over the ages.

> Consensus is not my innovation, not my discovery. It is the heritage of Indian culture It is the consequence of what India has stood for since millennia. The minority government has come in handy to me to return to the tradition from which we had strayed a little in the last few decades... You cannot rule by sheer majority. By that you can get votes but you cannot win the hearts of the people . Matters are much more complex than dividing them into black and white. There are so many shades of grey that you cannot possibly do without consensus.

These were words refreshingly new, words one is not used to hearing from Congress leaders in recent years. Suddenly one sensed the overwhelming influence on Narasimha Rao of the democratic spirit upheld by Jawaharlal Nehru.

That became more evident shortly thereafter. On the positive side of the balance of contemporary events, the end of the Cold War had resulted in a situation, he said, where issues were no longer overlaid by East-West confrontation. "There is now a greater chance of being true to our consciences than before," he affirmed. He referred to the massive upsurge of popular will across the globe bringing democracy and representative governments to the vast majority of the peoples. After a long time "democracy has attained a compulsive and almost universal validity" thus unfolding a "new and historic opportunity....to bring about a new structure of internaional relations in a free and uninhibited atmosphere, a structure which is equitable, democratic and responsive to the needs of humanity as they are actually found on the ground". Hence the prospect of putting into effect a "genuine system of collective security based on a more active role for the UN".

On the negative side, the continued existence of substantial numbers of nuclear weapons and other weapons of mass destruction was a source of tension.

> There is an attempt to perpetuate these arsenals in the hands of a few countries who justify this on the basis of the need for 'policing'. The concept of policing is not quite fail-safe and may become counterproductive in the long run. Besides, one must guard against East-West confrontation being transformed into a new type of North-South confrontation.

Referring to the break-up of the erstwhile Soviet Union, he traced the consequential spurt in nationalistic and sub-nationalistic trends in its different parts to the fact that such a development "has happened mostly in areas where the safety valve of democracy was not so far available". In contrast India with its democratic structure was able to contain and defuse such pressures.

> This would perhaps indicate one aspect of the efficacy of democracy in defusing tensions arising out of plurality. What the world has to scrupulously avoid is the temptation to encourage tendencies that can lead to chaos and confusion, political instability and economic crisis.

Of particular importance was his mention of the "danger of a new ideological orthodoxy replacing the old, imposing on our minds and prescribing rigid predetermined models for vastly different countries". Even while accepting the need for "a much wider role for the market principle, a congenial atmosphere for entrepreneurship, fewer controls on economic activity", he underscored that "for countries where poverty and destitution are pervasive, the state cannot absolve itself of the responsibility to involve in economic decision-making" adding: "It has to accept the responsibility to ensure a minimal degree of social welfare to its people." In Indian society an "individual is important but at the same time there is a strong sense of community interest as well". Hence his strong plea to let nations and societies to "determine their own specific socio-political and economic system even while asserting the universal values of democracy and humanism and acknowledging the greater efficiency of the market principle in most forms of economic activity".

The new wave of democracy, in his view, "will not be sustained if sufficient attention is not paid to development". He eloquently explained this point by asserting:

> Authoritarianism feeds on economic discontent; the foot-soldiers of fascism are drawn from the ranks of the desperate and the dispossessed. The democratic spirit is an universal value and aspiration, but strong and enduring political institutions are required to nurture and sustain this spirit. Economic crisis and social tensions cannot provide the environment needed for such institution-building. Development, therefore, becomes a precondition for sustaining democracy. It is in our own interests as democracies to keep development at the very centre of international concern and cooperation. It is not safe to assume that development will automatically follow democracy. This combination has to be consciously worked for and brought about.

This was an elaboration of the point he had made at the Caracas G-15 meet.

Characterising India as a "self-confident democracy", he said:

> The Indian mind is democractically oriented through and through. It has a combination of individualism and collective wisdom in action, which has been demonstrated for thousands of years. Whether it was a monarch or an emperor at the top, the Indian society did not allow its spirit of democracy and harmony to be lost down the centuries.

Thereafter he brought into focus the anonymity as well as autonomy of social life throughout Indian history.

> That has given us the assurance manifested in our repeated demonstration of an ability to absorb shocks and crisis and emerge with political institutions and commitment to democracy, even stronger.. What is important is that our democratic institutions have been able to contain such conflicts and provide the means for their resolution through the political process.

◆

ON the Indian economic experiment he gave a highly realistic assessment of the country's achievement of self-sufficiency in food with a modest surplus in most years.

> When you consider that India has a population of 840 million people, that is no mean achievement, although highbrow economists may not acknowledge it and in any event, success does not attract as much attention as failure.

He further underlined that the self-sufficiency was attained with the low consumption pattern of the bulk of the populace but stressed that such a pattern had existed for centuries at a stretch. This too was reflective of the Prime Minister's wise objectivity.

With the growth of a skilled and experienced scientific and technical manpower in the country and the attainment of a degree of maturity and sophistication the economy was "naturally ready, willing and even eager to accept the challenge of the marketplace".

Seen against this backdrop, Narasimha Rao asserted, the economic liberalisation process "is the logical continuation of the strategy of development adopted by India". The process would take the country to a new and higher level of growth.

> The decisions we took were well-considered. The process will continue and is irreversible precisely because of the background I have explained. The people of India have accepted these changes as necessary and the results of the parliamentary by-elections in November last year removed all doubts on that score.

He was confident that "with its vast and growing market India can become a powerful engine for the growth of the Asian as well as the global economy". This, he underlined, "is of great significance at a time when growth in several developed economies appears to be decelerating and access to their markets is becoming more difficult".

The Indian people's passionate attachment to the unity of the country alongside democracy was a testimony of their wisdom, he said, adding:

> The Indian polity does face challenges from terrorism, religious fundamentalism and separatist tendencies. However, these challenges have not overwhelmed the country and our political institutions have demonstrated sufficient flexibility and capacity for innovation to meet

these challenges.

Reiterating that economic reforms would continue and accelerate, he did not hide the problems "in the short run": constraints due to inadequate infrastructure, the persisting rise in population and slow progress in eradicating poverty, illiteracy and disease. However, pledging to open up economic activity to the extent possible, he said:

> I believe that your partnership with India in its march towards development would be mutually rewarding.

Then followed a series of questions. Narasimha Rao handled them with effortless ease, his repartees being greeted with warm applause. For example, in reply to a query as to whether India would give investment protection guarantee, he said:

> If you mean by it nationalisation of foreign companies, we have enough of nationalised industries, we don't want to add to them. There will be no nationalisation of foreign industries.

Again, on the issue of 100 per cent ownership to foreign companies, he said: "We will welcome those who are willing to help us in creating the infrastructure in a big way." But if there was a choice between setting up a fertiliser factory and installing a lipstick producing firm, his preference will be for the former because we need it. "My preference and concessions will be according to my primary needs," he underlined. India was a huge market which would become evident just by skimming its surface, and yet the objective of the government, he emphasised, was to enhance the purchasing power of the people. He repeatedly stressed the need to plan for 840 million people, not 150 million. The message was clear: planning for the top layer of the populace as had been done in the recent past was not the perspective of the present Indian Government.

In this sense he was able to blend the new with the old. So effective were his answers to such queries as cutting down budget deficit, and the debureaucratisation of the polity that Prof Klaus Schwab, the WEF founder-President, who was chairing the session and had earlier complimented Narasimha Rao for having uncaged the Indian tiger, concluded the session with the words:

> India has arrived. It is no longer in an ideological strait-jacket. It has the right Prime Minister at the right time.

◆

THE symposium at Davos, the picturesque Swiss ski resort, attracts a large number of prominent figures from business and industry the world over. No doubt Narasimha Rao's frank, candid and straightforward remarks left a highly favourable impression on the participants and several British industrialists among others said they were delighted at the new Indian approach. In contrast to Pakistan Premier Nawaz Sharif's lacklustre address—although he also spoke at length on opening up the Pak economy—that had drawn a lukewarm reaction, Narasimha Rao was able to evoke a wider and warmer response.

Yet the participants had their own priorities, the focus being on the various constituents of the Commonwealth of Independent States, Eastern Europe and South Africa (President de Klerk, ANC leader Nelson Mandela and the Inkatha chief Buthulezi were all invited to Davos) while Mexico and Brazil too were getting more attention than India and Pakistan. One can be hardly blind to this ground reality.

Nonetheless, the gathering found several CIS constituents like Ukraine, Russia and Kazakhstan displaying considerable interest in promoting ties with India. At a dinner hosted by Indian industrialists assembled at Davos in honour of the Ukrainian head of state, Leonid Kravchuk, the latter made an earnest appeal to Indian business to invest generously in his republic. He had a useful meeting with Narasimha Rao. Alexei Fedorov, an adviser to the Russian Vice-President, Alexander Rutskoi, was frank enough to mention the difficulties in the rupee-rouble exchange and assail Indian politicians for their lack of comprehension of Indo-Russian relations, but was confident of the two governments capacity to amicably resolve the bilateral problems to forge a new kind of enduring relationship bereft of the past understanding based on the Cold War approach.

The Davos visit of Narasimha Rao was punctuated by a meeting with Nawaz Sharif that apparently turned out to be a routine affair with India reiterating its concern over repeated Pak interference in J&K and Punjab. Narasimha Rao did quite a lot of plain-speaking referring in particular to the Pakistan-to-Kashmir march threat by the JKLF. Nawaz Sharif at a joint press conference after the talks was exceedingly sweet and suggested that 1992 be made the "year of reconciliation" in Indo-Pak relations. But within less than 48 hours the Pakistan Premier called for a Pakistan-wide bandh on Kashmir. Narasimha Rao, however had made his point: the ball was in Pakistan's court to improve Indo-Pak ties.

◆

THE imponderables are definitely high, the odds quite heavy. And yet despite the difficulties before India in the changing world scenario Narasimha Rao confidently presented the Indian policies—both foreign and domestic—in the two gatherings at New York and Davos drawing encomiums from informed public opinion not taken in by temporary flashes of intelligence but impressed by maturity, experience and sincerity all of which the Indian Premier displayed in abundance.

Narasimha Rao has by his openness and fortright elaboration of the Indian viewpoints once again enhanced India's stature in the international arena. This outcome of the trip to New York and Davos will help the country to reap rich dividends in the coming days even if the global atmosphere turns unfavourable due to a conspiracy of circumstances. A fruitful odyssey, indeed. ■

SUPERANNUATION SCHEME

How to prevent key employees from leaving you...

LIC's Group Superannuation Scheme – for increased employee loyalty and morale, and tax savings.

LIC's Group Superannuation Scheme provides an added incentive for employees to continue in their current organisation. It guarantees regular post-retirement income, based on number of years in service and last salary drawn or contribution made.

- Contributions (inclusive of PF), are tax-deductible up to 25% of salary.
- If implemented retrospectively, up to 80% of contributions (with respect to past years of service), are allowed for tax deduction in the year of payment.
- Interest accrues at 11.4% to 12% p.a., depending on the size of the fund.
- For those who are members of LIC's Group Gratuity Scheme, higher interest rates will be applicable for both schemes. The Superannuation scheme can also be linked to life insurance cover.
- On retirement, a choice of pension-payment plans is available.
- A scheme can be tailormade to suit statutory requirements or specific needs of clients.

For more information and advice about the scheme, send this coupon to your local LIC Divisional Office.

I am an employer.
I'd like to know more about
LIC's Group Superannuation Scheme.
Please send me full details.

POLITICAL NOTEBOOK

The New Challenge

The very fact that elections have taken place in Punjab after 57 months of President's Rule is in itself an important development in the light of the grim realities in that trouble-torn State. It marks the assertion of the democratic process because no matter how weighty the arguments are in favour of stalling elections, postponement of the poll exercise always calls into question the essence of the parliamentary democracy this country has opted for itself since its independence from foreign yoke.

Regardless of the outcome of these elections for 115 Assembly and 13 Lok Sabha seats in the State, reports from Punjab indicate a peaceful poll and a very low turnout of voters. Against the background of the conditions prevailing in Punjab this turnout need not be scoffed at. That a part of the electorate has exercised the right to vote in spite of the pall of fear, especially in the Punjab countryside, is of no mean significance.

Even if these elections have been held under the shadow of the gun and apprehensions of largescale ballot tampering, the efforts to organise the poll have not been in vain precisely because these endeavours by and large conformed to the mood of the Punjab populace although a very large section of voters chose to keep away on account of a variety of factors. These factors barely need elaboration. The terrorist-secessionist threat manifest not only in the 48 hour bandh the militant groups called on February 18 but also in their declaration of "curfew" all over the State till the scheduled end of polling on February 19 alongside the *fatwa* that "violation of the curfew will result in a death sentence" constituted a big deterrent to the voter turnout. The trend of polling shows that while the Akalis boycotted the poll and the Congress-I hardly campaigned, confining themselves to indoor meetings, it was left only to the Left, the BJP and the BSP to risk open campaigning. To overlook this in any analysis of the Punjab elections would be a costly error.

There is, however, no gainsaying that the Congress-I Government at the Centre has, even while carrying out its assurance of holding elections and restoring the democratic process in the State, given sufficient testimony of again mishandling the Punjab problem. Not only did it not strive its utmost to reverse the approach of the various Akali factions to the Punjab elections, it did not care to take active steps in the direction of redressing the principal grievances of the people that have sought to alienate public opinion in the State from the national mainstream, and thus imparted a further fillip to the secessionists' nefarious

designs. Despite the Prime Minister's public announcement that the Centre would implement the provisions of the Rajiv-Longowal Accord, the statement was not followed up by any concrete action to that effect before the poll. Nothing was done to assuage the feelings of those who justifiably demand stringent punishment for the perpetrators of the 1984 anti-Sikh riots in the aftermath of Indira Gandhi's assassination. At the same time measures to suppress dissent, to browbeat those peacefully urging the public for poll boycott, and to indulge in all forms of electoral malpractices to assist the Congress-I struck at the roots of the ethos and values the world's largest democracy has all along upheld.

However, while decrying these one cannot possibly take a negative approach to the Punjab poll. This journal has all along stood for the speedy revival of the democratic process in the State by holding elections despite heavy odds.

The Punjab poll is a lesson for both the Centre and the Akali leadership. While the Centre must realise that it can no longer behave in the same irresponsible manner it sought to tackle the Punjab problem in the last few years, the Akali leaders must engage in some self-introspection. They have always stood for the restoration of an elected government in Punjab. But when the time came to elect such a government they needlessly called for poll boycott thereby refusing to shoulder political responsibility, something not expected of the experienced leadership of a mature political organisation like the Akali Dal.

Both the Centre and the State Government that is to be sworn in have onerous responsibilities to bear. The Centre must honour, in letter and spirit, its commitment—made by no less a person than the Prime Minister himself—to implement all the provisions of the Rajiv-Longowal Accord. Since this did not happen before the poll, it is imperative to do so now that an elected government is taking office in Punjab. And the elected State Government's priority task should be to help bring back the militants to our democratic polity.

Punjab today poses a greater challenge than ever before for the political leadership of the country. There is no time to lose. If the situation in Punjab can be stabilised, its impact is bound to be felt in the Kashmir Valley as well.

Not only will such a development demonstrate to the world the durability of India's democratic edifice, it will prove once again that the political process alone—and not administrative measures or executive fiat—can help to resolve such sensitive problems even if they are aggravated by direct interference from across the border.

February 20 S.C.

COMMENTARY

By Decree Alone

NIKHIL CHAKRAVARTTY

With barely a week to go before the Budget session of the Lok Sabha, there is naturally considerable trepidation about what's in store for the common man. All the indications have made it abundantly clear that it may be a harsh Budget, at least for those in the middle and lower income groups, who constitute the overwhelming majority in our society.

A peculiar feature of the dramatic economic reforms of the last eight months has been that practically every major item has been sprung as a surprise upon the country, without preparing the public by explanations and discussions, not to speak of debates.

In fact, whatever debates have taken place were mainly after the decrees were announced and not as an exercise to psychologically prepare the public. One has to concede to the critics of the government's reforms that they have been more active than their advocates, and it has been mainly at their initiative that the government has in some cases been compelled to respond. As one looks back, there was only one jamboree-like gathering of economists right at the very beginning which was noteworthy for the generalities uttered in support of what's become a cliché today—namely, integrating the Indian economy into the global course. No details were given about the design and the pattern of the economic reforms in the offing.

Although the Finance Minister was at the beginning vociferous in claiming that his reforms packet was entirely *swadeshi* and not a Fund-Bank model, it was later found that his prescriptions have been largely dictated by the IMF conditionalities. The persistent tardiness in the government's release of the correspondence with the IMF and the copycat submission to the IMF *dikat* as revealed in that disclosure, has led the public to believe that whatever the Finance Minister's personal credentials as an economist, there is no gainsaying that he and his team have totally identified themselves with the Fund-Bank position, without the least originality on their part. There were many distinguished people in the government in the past who were inclined to the IMF line, but none of them carried out so totally, to the very dot, the IMF behests.

Leaving aside this bankruptcy in the thinking on economic issues in the government, what is strange is that there has been no effort at conditioning even the ruling Congress party, not to speak of the public at large, about the entire packet of proposed reforms, and the implications of each of the measures. Obviously, nobody in the government or in the Opposition questions the need for economic reforms in principle. But there are widespread misgivings about the impact of the specific reforms programme of the present government on different sections of the people, particularly the lower income groups.

The overall impression so far created by the government's economic measures is that these will widen the existing disparities to a point which is likely to generate unrest that may have serious social consequences. This is a question which the Finance Minister seems to evade answering all the time. The Prime Minister has been talking all this time that the new process is irreversible, but little has so far been done to enlighten the public about the totality of the actual reforms and what these are supposed to bring about for the country, and for different sections of the people living in this country.

This is by no means an unreasonable complaint. When in the early fifties, Jawaharlal Nehru's government decided to go in for industrialisation in the classical Industrial Revolution model of first building the heavy industries, he assigned it to Mahalanobis to openly interact with leading economists in the country together with many distinguished figures from different countries of the world so that there could emerge out of their collective wisdom a model suitable for a developing country of our complexity and diversity and level of development.

This debate was purposely kept on for nearly two years, before the Second Plan-frame was produced and that Plan-frame was widely debated in many forums apart from Parliament before the specific measures were enacted. The entire intelligentsia of the country—not merely a band of economists—were involved in this nationwide debate.

Compare that exercise with the present one under Manmohan Singh. On every issue, the government has been fighting shy of talking to the public in detail. There is a conspicuous lack of any interaction whatsoever. Even Ministers are not clear what to say or not to say. The distance between Mahalanobis to Manmohan is the difference between open, democratic debates and the abject carrying out of the Fund-Bank orders.

◆

ONE Minister talks of the rupee being soon made a convertible currency. The present writer has asked as many as four fairly senior Ministers who denied any knowledge of such a move, while one of them totally discounted such a possibility in the near future. The point to note is that the ruling establishment itself is kept in a state of ignorance on such a major issue as bringing structural reforms in the economy of the country.

Coming to the more specific questions, there has been an equally conspicuous absence of any effort at elaborating, for instance, the Exit policy. For one thing, the Finance Minister chose to announce it categorically, not in the country but in the assembly of Fund-Bank bigwigs at Bangkok. Since then, the trade unions and others concerned with labour have been asking the government to spell it out. But the government has throughout been fighting shy of explaining its position. When cornered, the Ministers promptly say that nobody would be thrown out of job.

What sort of Manmohan Exit policy is this that nobody would lose his job? Such a mystery needs to be cleared up particularly in a democracy like ours. One can of course understand the government's predicament and consequent hesitation in announcing any policy that would be patently unpopular. But if the government is in no position to muster public support for a policy, would it not land itself in a situation of large-scale discontent which ultimately would strike at its own precarious stability.

Accountability is essential in a democracy. The Finance Minister confidently assured only seven months ago that there would be no double-digit inflation. But now inflation, by official calculation, is reported to have gone beyond 14 per cent.

In these intervening months, nothing extraordinary has happened that could have upset the Finance Minister's estimate of last July. Then, does he not owe an explanation to the public what went wrong, why his Ministry had gone so wrong?

This is not just a simple question of a ministerial lapse. If at such a crucial moment, the Finance Minister can make such a serious mistake, what confidence would the public and Parliament have on his being given such a major assignment as overhauling the entire economy? Are we in safe hands? Such a question will neither be unfair nor far-fetched.

It is all very well to talk loudly about integration into the global economic trend, but to carry out such a gigantic task while maintaining one's economic independence, requires competence of the highest order—not those borrowed from the Fund-Bank storehouse, which has a rather unsavoury record of ruining many of the developing economies. Above all, such an undertaking has to be in the open, by patiently explaining to the public all its implications, and enlist their trust and confidence. Otherwise Yeltsin-like anarchy will destroy the fabric of our democracy. ■

Economy: Time to Change the Pilot

RAJESH MAHAPATRA

About a week before Dr Manmohan Singh presented his Budget in Parliament last year, a journalist in a leading economic daily wrote: "Pilots would probably understand what India is into now: the fourth stage of take-off. There is no turning back...If everything goes just so, India would well become a rather a nicer place to live in." Further adding a note of caution, he wrote: "The problem is that the room for manoeuvre is tiny and the margin for error large."

In the subsequent days to follow, the Budget was presented, the much acclaimed Industrial Policy Resolution tabled, and half a dozen policy measures that marked the historic break from the past were pushed through. India was, indeed, into the fourth stage of take-off. And a bit of luck has favoured not all but some. Prima facie, it now seems that the above efforts have resulted in significantly improving the foreign exchange reserves, thereby containing, if not overcoming, the BOP crisis in the short run, putting negative speculations regarding capital flight to rest and resolving "the crisis of confidence in the immediate context". All these, however, were not achieved without any quid pro quo. The immense social and economic cost involved had to be borne (and is being borne) by the people at large, more particularly by those in the lower rungs of the socio-economic ladder.

It is being suggested (rather propagated) by planners and policy-makers, bureaucrats, the media, the big business—who of late have started talking about poverty alleviation, spread of education, not to mention a pollution-free environment in the interests of the poor—and the political leadership of this country that opting for such a trade-off in the short run was in the greater interests of the people.

◆

SIX months have passed by since the last Budget was presented. In the North Block hectic activities are once again on. The Finance Minister will be delivering his second Budget speech on the 29th of this month. A fresh package of promises and tall claims is already in the pipeline. Before reflecting on these Budget related claims it is necessary to have an objective assessment of the government's performance, rather the short run yields of the IMF package, which incidentally happened to be identical with our policy-makers' understanding of the crisis of the Indian economy.

On July 24, 1991, while delivering his Budget speech in Parliament, the Finance Minister outlined three major objectives. First, the Budget would reduce the fiscal deficit to 6.5 per cent of the gross domestic product; secondly, the Budget was to be growth oriented—the real GDP growth rate being projected at a modest four per cent; and finally, the Budget was not to be inflationary in its impact. To top it all, he prefaced his Budget by calling it an attempt towards "adjustment with a human face". The developments in the past six months, however, point to the contrary.

News of price rise hit the headlines every second day. The average rate of inflation during this period was of the order of 14 per cent—reaching its peak of 16.3 per cent in the month of September and refusing to decline below 12 per cent in the winter months when prices usually show a seasonal decline. Though officials in the government would like to take their cue from the fluctuations in the wholesale price index (WPI), reports from the buyers' market suggest that the common man has to buy his essentials at a price 30 to 40 per cent dearer than before. A host of factors, ranging from increased transportation costs to issue, price hikes has contributed to creating a persistent inflationary pressure. Most of it is on account of the rise in foodgrain prices. Following a cut in the fertiliser subsidy, the government hiked up the procurement prices—the third in a row since 1988. This generated inflationary expectations in the foodgrains market. Speculative forces were at work in a big way. In fact, a Cabinet note, reportedly circulated in late December, attributed the inflationary pressure to a vast increase in the "proxy holding power" of the farm sector. In order to maximise their speculative gains, the grain traders, rather than take delivery of grain at the time of harvest, were asking the farmers to hold on to the stocks till a future date.

At this juncture the government should have taken immediate and effective steps to counter the

GATT as Instrument of Re-colonisation

SURENDRA J. PATEL

BACKGROUND TO URUGUAY ROUND

The rich countries had for two centuries dominated the international scene. Following the tidal wave of colonial liberation in the post-Second World War period, the developing countries organised themselves as the Group of 77. They initiated in the United Nations and the UNCTAD a wide series of negotiations with the West aimed at establishing a New International Economic order (NIEO). I need not go into the details of all the initiatives that the Group of 77, as it came to represent the developing countries, launched in that Golden Age (1966-1980) of the South's entry on the world scene. That was the Age we could be proud of. But public memories are so short that there is a danger of forgetting them altogether.

This background is pertinent to what is happening now. The Uruguay Round is in a sense an act of turning the negotiations on the NIEO upside down. The developing countries had gone through a disastrous decade during the 1980s. They had been burdened by falling export prices caused by recessions in the West, severe balance of payments crisis, budgetary deficits and heavy external debt. They were forced to borrow from both the IMF and the World Bank, and submit to their structural adjustment programmes. (What a historical hijacking even of names this was, since the very notion of structural change and structuralism were the contributions of the developing countries.) This, however is not the place to discuss the South's crisis, though I intend to take that up in another context.

Taking advantage of the difficulties of the South, of its despair and disarray, rich countries, like proverbial moneylenders, seized the initiation in the 1980s. They opened a new front by slamming the door on the North-South negotiations to establish the NIEO.

It was the period when the growing movement towards accommodation and development co-operation between the North and the South was destroyed. The Third World was in a disarray. The rich countries started their own offensive. They changed both the stage and the substance of the North-South negotiations. Over 50 countries, desperate for foreign loans, had to accept the IMF's and the World Bank's structural adjustment programmes.

It was against this background that the conservative governments in the West launched the Uruguay Round of Negotiations in the GATT. The United Nations and the UNCTAD, the universal fora for the North-South, were dumped. And the GATT, an obscure organisation till then, was resurrected. The GATT was upto that time a small, sleepy organisation, housed in its make-shift quarters in the shadow of the UNCTAD and the Palais des Nations, was made by the West the central body for most far-reaching negotiations.

It is important to recall that while this shift in the stage was being made, the North-South negotiations had come a long way. The revision of the Paris Convention to bend it to serve the development interests of the South countries, the Code of Conduct on technology and the code for the transnational corporations had made considerable progress towards their completion. But the United States led the way for the Uruguay Round of Negotiations, which effectively slammed the door on all aspects of restructuring the global economic relations between the rich and the poor countries.

The stage was changed from the United Nations system to the clubs of the rich countries—the GATT and the IMF and the World Bank. The United States spearheaded the drive to negotiate in the GATT a vast package of issues, which were mostly out of the competence of the GATT. In place of its earlier somewhat boring work on tariff reductions, the GATT was now made the centre-piece to re-establish more firmly—and not to

Dr Patel was the Director of the Technology Division of the UNCTAD (1969-1984). He is now a Visiting Professor at the Sardar Patel Institute of Economic and Social Research, Ahmedabad. This contribution is taken from the statement he presented to the Cabinet Sub-Committee on Arthur Dunkel's Draft of the Final Act on Uruguay Round of GATT Negotiations, January 1992.

change—the earlier unfair old order. The GATT was chosen because the developing countries did not have the advantage of being organised there, as in the United Nations system, as the Group of 77. Moreover, the GATT offered leverage for pressure by the West, as it could use the GATT's provisions for trade sanctions across the board, including cross retaliation.

In the name of trade, and the over-extended "trade distortions", the GATT under the Uruguay Round of Negotiations was to deal with a very wide basket of subjects, such as agriculture, commodity trade with special emphasis on textiles, investment measures, intellectual property rights, trade in services, new rules for the GATT, and the creation of a multilateral trade organisation.

Four years of negotiations upto the autumn of 1991 in the GATT had left many issues unresolved. It was then that Arthur Dunkel, the Director-General of the GATT, presented his draft of the Final Act of the Uruguay Round, as a package on a "take-it-or-leave-it" basis.

This background is of critical importance for assessing the present stage and the substance of the negotiations. In conclusion, it can thus be seen that there was a change in the stage of the play—from the United Nations to the trinity of the GATT, the IMF and the World Bank. There was at the same time a change in the very substance of the play. That Draft Final Act of Arthur Dunkel is not for promoting development cooperation and accommodating the entry of the developing countries on the world stage. Instead, it is aimed at establishing insidious control over the decision-making processes in the countries of the South. That is, now the process of "re-colonisation" has begun.

II

DUNKEL DRAFT TEXT (DDT): SELECTED ISSUES

The subject coverage in the Dunkel Draft Text (DDT) is so wide that I will have to be severely selective. I will take up agriculture and intellectual property rights in some detail because they affect the very vital sectors of our economy—agriculture and industry. Other subjects will then have to be discussed only in a summary fashion.

(1) Agricultural Development

The Dunkel Draft Text will pose some very serious problems to our future agricultural development. An overwhelming majority of our people live in the countryside. Agriculture for them is not merely a means of survival. It is indeed a way of life for them. No wonder our government has always attached a very high priority to overcoming our food insecurity. Import dependence under the US PL 480 was to be rapidly replaced by the development of our agriculture. We therefore pioneered the 'Green Revolution'. Agricultural-output rose three-fold. India became a model for the agricultural development of the South countries.

How was this vast upsurge of agriculture promoted? The government took the initiative. Our research and development network was set in motion. The Indian Council of Agricultural Research was activated. Generation after generation of new varieties of high-yielding seeds were developed. Input packages, combining seeds, fertilisers and pesticides were evolved. The government played an active role in organising the research, in extending irrigation, in providing credit facilities on easy terms for agricultural inputs and for the purchase of agricultural machinery and implements. It gave price supports and adequate marketing facilities. It gave the much-needed subsidies for irrigation, water, power, fertilisers, pesticides, farm equipment, etc. so that our agriculture would prosper. This is old history, but it is recalled to appreciate how the DDT will affect our future development.

If the Dunkel Draft Text is accepted, all this will be undermined. Our network of past policies will have to be scrapped or seriously modified. This will include subsidies for irrigation, water, power, fertilisers, pesticides, credits, price-support schemes, and building up of buffer stocks. Our Public Distribution System will have to be seriously altered. India's domestic market will have to be opened up for imports of food products from outside.

Not only that, the Dunkel Draft proposes that seeds, plants and biogenetic substances and innovations will have to be patented, or given patent-like protection. Genetically modified living organisms will have to be patented. Germ plasm, orginating mostly in the developing countries, will be privatised, developed and patented by external multinational corporations. India would have to import seeds, plants and all the advances flowing from the new biogenetic research. The costs of such imports, imposed by the giant multinational corporations, will be high. Such dependence in the vital area of agricultural development will have very serious consequences.

The DDT favours the interests of the developed countries. It does not make any distinction between the interests of the rich countries and the development needs of the Third World countries. The subsidies in the Western countries are intended to raise farm incomes and build up unmarketable surpluses of food supplies. They then give more subsidies to sell the surpluses in the world market. In the developing countries, the position is different. Their need, in contrast, is to raise food output to feed their people, to attain a degree of food security to tide over poor harvests in times of bad weather. Their need is to establish a network of Public Distribution System to supply food at reasonable prices to the vast majority of their people.

Dunkel's Draft shows no concern for India's need to assure its agricultural development. Its acceptance will sweep away all the policies and institutional structures which we have built at great sacrifices since independence to ensure our agricultural progress.

(2) Trade-related Intellectual Property Rights (TRIPS)

The GATT had never seriously dealt with intellectual property rights. The legitimate fora for these were the UNCTAD and the World Intellectual Property Organisation (WIPO). It should be recalled here that as early as 1961, India had joined Brazil in calling for a close examination of the adverse effects the patent system may have on the development of the Third World countries. There was much subsequent discussion in the UNCTAD on the need to change the patent system so as to serve the development interests of the South. India took the lead and changed in 1970 its old patent law, the early origin of which dated back to 1858—a 'gift' given by the British rulers a few months after the suppression of the insurrection of 1857.

After independence, the adverse impacts of that patent law were closely examined by two Committies—the Justice Bakshi Takchand Committee (1948) and the Justice Rajgopal Ayyanger Committee (1957). They found that the patent system granted import monopolies to foreign enterprises. After the reports of these two Committees, there were long discussions in the Joint Select Committees of Parliament and in both the Houses. Two decades of intensive discussions had taken place before the Indian Patents Act of 1970 was adopted. In many ways, this Act was rather modest in the changes it proposed. But soon it became a model for other developing countries. Agrentina, Brazil, Chile, Mexico, Egypt and several other developing countries framed their patent laws on the Indian model. Whenever I visited the countries of the South in all the three developing continents, I felt proud to receive vicariously compliments from these countries to India on its new patent law.

It is important, therefore, to recall the main features of this law which has become India's national heritage based on a national consensus arrived after a long consideration. Its main features may be briefly summarised here:

i) The Patent Act (1970) changed the very objective of the patent system. No longer was it to serve only the external interests. The new patent system was to become an instrument of our own national development.

ii) Patents were to be granted for promoting their use in the national production system, and not merely for granting import monopolies.

iii) In order to promote the use of foreign patents in our country, the system of compulsory licences was strengthened (Section 84).

iv) A novel system of licence of right (Article 87) was introduced to overcome the weaknesses and the enormous delays involved in obtaining a compulsory licence. Provisions were also made for the revocation of patent grants (Article 89). The Patents Act changed the very operation of the patent system in several ways, for instance:

   a) It excluded from patentability a wide variety of items in order to safeguard public interest, for example, agriculture, food, medicines or drugs, chemical products, atomic energy.

   b) Most important was its provision to exclude from patent grant products resulting from chemical processes. Process, and not product, patent became as was the practice in all newly developing countries (NIC) of the nineteenth century, the established norm.

   c) It introduced a system of variable duration for the patent grant ranging from five to 15 years.

   d) It made the registration fee for the patent progressively proportionate to the economic importance of the patented innovation.

Soon after the establishment of the Indian Patents Act, the multinational corporations of the West mounted strong pressure on the Government of India to join the Paris Convention, and to amend the Patents Act.

The Dunkel Draft on intellectual property rights (TRIPS) wholly changes the very substance and the framework of the Indian Patents Act. Instead of strengthening our scientific and technological capabilities, it moves towards scuttling them. Instead of promoting self-reliance (Gandhiji's call for *swadeshi*), it will open the way for unlimited control by multinational corporations of our domestic market. Instead of giving us freedom to exclude certain sectors from patentability, it will force us to patent everything, including agricultural and biogenetic innovations. Instead of including only processes in patent grant, it will force us to extend patent protection also to products. Instead of reducing the duration of the patents, it will extend their term to 20 years. Instead of strengthening the system of compulsory licensing and licence of right, it will practically abolish them. Instead of encouraging the use of patents at home, it will establish import monopolies. In short, instead of safeguarding our public interest, it will serve private interests of foreign corporations.

The patent law which helped our pharmaceutical and chemical development and formed the basis of our advances through our own research and development system, will have to be altered fundamentally. In consequence, the prices of drugs and pharmaceuticals, currently the lowest in the world, will sky-rocket. Several eminent jurists have said that the acceptance of the Dunkel Draft will also require even changing our constitutional provisions. That is the reason why all political parties and as many as 250 Members of Parliament—indeed a working majority in the current session—have come out against altering the Indian Patents Act (1970).

3. *Trade-related Investment Measures (TRIMS)*

The Dunkel Draft Text calls for foreign investors to be given the same treatment as our national investors. In legal terms, they are to be given national treatment. There will be no obligation on them to use our domestic resources, materials, semi-manufactured products, technical skills and managerial personnel. Nor will we be able to regulate the flow of dividends, and control transfer pricing through which the multinational corporations drain away foreign exchange resources of the developing countries. Many of our Acts (FERA and MRTP), for instance, will have to be changed, or scrapped.

Let me just paint a picture of what could happen in India. I do not intend to be apocalyptic, but the scenario is not wholly unreal. Through structural adjustments imposed by the IMF and the World Bank, our public sector units are being privatised. In addition, we will have to follow a strict exit policy for a large number of our public as well as private enterprises which are sick (incidentally,

[redacted]

in India could well force India into a situation under which consortia of the Western countries could, for $10-20 billion, establish dominant control in most of India's industrial units. $10-20 billion at the devalued rate of exchange would come to roughly 25 to 50 thousand crores of rupees, an amount which is quite high for us as it is equal to 75 to 150 per cent of India's exports and to six to 12 per cent of its GDP, but it could well be almost equal to the total of the industrial assets which are traded on India's stock markets. Therefore, 25-50 thousand crores of rupees is a huge sum for India. But $10-20 billion is not so large a sum for any combination of the foreign banks and corporations. We need not forget the sharp public concerns in Europe at the invasion of American capital in the early post-War years; nor should we overlook the deep American sentiments aroused recently against the invasion of Japanese capital in their country.

4. *Services*

The Dunkel Draft on services opens up a wholly new avenue in world trade for controlling our economy. Upto now, only trade in goods was regulated by international conventions. There are no universal rules or disciplines for trade in services. The United States has led the drive to establish such rules for services mainly because it wants to promote the entry of its service corporations in banking, insurance, telecommunications, travel, transport, etc. in foreign countries. In these areas the US corporations have a distinct comparative advantage. Such entry will at the same time undermine the public utilities and national enterprises which have played a central role in the developing countries (and indeed in Western Europe). The Dunkel Draft would force India to open its domestic markets for penetration by the multinational corporations. The entry of their service corporations will bring in its train the imports of a package of equity capital, other equipment and other goods.

While forcing us to open our doors to the foreign service companies, the Dunkel Draft is silent on areas in which India has a comparative advantage, for example, in consultancy services, in professional skills and even in labour services. It is argued that these areas are regulated by the immigration laws of the developed countries.

We may examine them briefly. There will be no serious opening up of the Western markets in textiles during the transitional period of some 10 years. The Dunkel Draft postpones any serious opening up of trade in textiles to the end of the transitional period. Even then, it offers only an uncertain liberalisation in early twentyfirst century. If this is offered as a concession, it is nothing less than a joke on the negotiators from the developing countries.

6. Multilateral Trade Organisation (MTO)

The most scandalous provision in the Dunkel document is the creation of a Multilateral Trade Organisation (MTO). This institution in collaboration with the IMF and the World Bank will have the power to review our trade policies and practices. It will be empowered to impose retaliations and cross sanctions. It will no longer be necessary for the United States to use Special 301 for bilateral pressure of sanctions. The GATT will take this task over and universalise it—applicable to all countries.

The GATT will thus be added as another instrument for enforcing the IMF and the World Bank conditionalities for structural adjustment. The Dunkel Draft indeed goes even further. It provides for the GATT's collaboration with the IMF and the World Bank in promoting, monitoring and enforcing a market based growth strategy for India. The trinity (IMF, World Bank and GATT) will then take charge of our policies for domestic development. Instead of home rule, we will have foreign rule—in a word, 're-colonisation'. These three will undermine our sovereignty. The decision-making processes for India's development will be externalised, even when some of the measures are introduced in an Indian voice. The age of colonial liberation will be replaced by the hegemony of the developed countries.

III

CONCLUDING OBSERVATIONS

In conclusion, I wish to underline that there is no basis on which the government can accept the Dunkel proposals without serious modifications in them. The National Working Group on Patent Laws has mobilised our scientists, economists, lawyers, journalists, Members of Parliament, leaders of political parties, non-governmental organisations and industrial bodies. They have asked the government repeatedly to take the people, Parliament, the political parties and the press into confidence. To all these demands, the government has so far turned a deaf ear. The country is in a disarray.

The silence of the government raises some very fundamental doubts. It would seem as if the government believes that it will be able to accept the Dunkel proposals without strong domestic opposition. This will not be the case. It is time that the government informs the GATT in no uncertain terms that India cannot accept the document on a 'take-it-or-leave-it' basis. It should specifically indicate the areas of India's disagreement with the Dunkel Draft Text. These will have to be renegotiated beecause they adversely affect the very livelihood and development interests of our people. India is too large a country to be dictated to by foreign pressures, imposing mechanical deadlines decided by the calendar of American elections. Our long-term interests cannot be staked on such a flimsy time-table. Ours is a large sovereign democratic country. We are a part of the international community of nations. We must therefore call for an intensive national debate on all the issues, both in Parliament and outside.

Time is of the utmost importance. It is running out. The people, parliamentarians, the political parties and the press are all becoming restless. There is a massive upsurge of resentment against the exercise of pressure from external institutions—the IMF, the World Bank and the GATT. Our own government is echoing the voice of these outsiders. It is becoming a prisoner of these pressures, insensitive to the people's concerns. The GATT has now joined the IMF and the World Bank. We therefore urge the government to make it clear that the people of India, and not the external trinity, are in charge here at home. ■

Unchaining the Reserve Bank

J.D. SETHI

The autonomy of institutions and their accountability to society are two simple demands accepted universally in democratic theory. In India, the attitude of the ruling elite has been ambivalent. The world's most heavily written Constitution did not provide guarantees for institutional autonomy. Consequently, the power elite easily manipulated with impunity institutions in the service of legitimate or illegitimate power. Arbitrary intervention by the government, the overloading of institutions with an array of contradictory objectives, procedural supervision exercised by higher authority without stating the reasons, appointment of incompetent and politically motivated personnel, misuse of resources, corruption both by insiders and outsiders, absence of internal autonomy, etc. are some of the commonplace maladies of our institutions.

Nehru was, paradoxically, the builder and eroder of institutions. How and why he planned things in this manner is important but does not concern us here. What concerns us is the simple fact that he left behind a number of institutions, set up by him, either underdeveloped or in a shambles. The remaining task of destroying both the functionality and autonomy of institutions was left to his successors, most prominently Indira Gandhi who openly corrupted, divided and destroyed the institutional edifice set up by her father or what existed before him, and often by the use of extra-constitutional methods.

The Reserve Bank is one such institution whose primary responsibility is the administration of monetary policy as distinguished from or alongwith other policies, particularly fiscal public investment policies. The Reserve Bank of India, like all central banks all over the world, was given several functions to perform. For instance, the Reserve Bank is a bankers bank; it is a banker to the government; it is the final dealer and authority in foreign exchange transactions and rates; it is the guardian of the nation's monetary resources; it administers government debt and it is called the lender of the last resort, etc. All this is commonplace but when put into action, the results are not always the same. The Reserve Bank has never told the public how these functions were eroded by the government.

In developing economics in which financial intermediation is restricted to urban areas, the central bank is the most authoritative and powerful promoter of financial institutions such as banks, and financial intermediaries, development banking, cooperative banking, etc. It is a long list. In essence and law, most of these functions belong to the area of the government but the government itself has delegated them to the Reserve Bank as is done in other countries. But this delegation has drawn attention away from the manipulation of the Reserve Bank by the government.

It is one thing to expect the monetary authority to reconcile a variety of objectives and produce a trade-off between conflicting ones. It is quite another to fix monetary policy and pressurise this authority to lose its identity. Economic objectives do take precedence over monetary objectives but since the two have distinct areas, the latter cannot be made so subservient to the former as to lose its own control and authority.

If the economic policy is wrongly formulated and the monetary authority through monetary policy is obliged to reinforce it, the results could be disastrous. This has often happened in India. This is clearer when fiscal policies are expanding because monetary policy should be somewhat contracting to moderate the inflationary impact of the former. However, an expanding fiscal policy may get reinforced by an expanding monetary policy to facilitate credit-monetary support to the government budget. Notwithstanding all kinds of credit restrictions imposed by the Reserve Bank, the situation in India is more like the last mentioned relationship.

For the past four decades, the government has kept the Reserve Bank, its resources and control over the banking system, in absolute captivity. In the name of appropriating bank finance for the development at government expenditure and the public sector, the commercial banks were obliged to invest nearly one-third of their deposits in government securities and that at an interest rate determined by the government, and not by the open market rates. It is often ignored that till the middle of the sixties when the public sector expanded fast, the government got bank finance at less than five per cent per annum.

Over and above that the government never felt constrained in issuing Treasury Bills which corres-

The author, a noted economist, is a former Member of the Planning Commission.

ponded to the level of the budget deficit and the interest on which was nearly zero as it was reduced to an inter-governmental accounting. The fiscal deficit as distinguished from the budgetary deficit included all government borrowing plus the budget deficit financed by resort to the printing press.

The Reserve Bank was left with control over the residual resources through which it was obliged to reconcile all the conflicting objections. Consequently, the system faced the challenge of mounting internal debt as well as rapid increase in the money supply. The Reserve Bank was given no control over the former but in respect of the latter, the Reserve Bank was made helpless. The control over the money supply could only be exercised by squeezing the credit to the private sector which often hurt both trade and industry. When the history of the Reserve Bank would be written, it would indict the Bank for retarding rather than providing growth, even while achieving rapid financial intermediation. The Indian paradox was marked by a financial institutional revolution which pushed these institutions to utter bankruptcy.

◆

THROUGH its various studies, the Reserve Bank has tried to create the impression that it has a theoretical model for the demand for money and it uses this model to control the demand. This is utterly false and is not acceptable to the economists. The Reserve Bank is a victim of its own delusion.

The demand for money could be determined by finding a historical trend by fitting a simple or complicated regression equation—all kinds of equations have produced the same result—but the supply determination of money was constrained by the prior government demand on it. The demand to fill the budgetary deficit determined the money supply. Over the years as the deficit increased, the money supply increased two to three times of real growth of the economy, thus building up a continuous inflationary potential which in turn further expanded the deficit as the elasticity of tax revenue to money supply income, money, etc. declined over the years.

Economists made the mistake of looking at only the tax elasticity with respect to income which was subject to change in tax rate and was not a reliable indicator. In the long run, the big business did not suffer. Only medium and small industries were squeezed, leading to lakhs of units either closing down or getting sick. Monetary policy became captive both of the government and the big business.

The Reserve Bank tried to manage, as best as it could, credit money in the short and seasonal periods but it lost control over long-term trends or the expansion of money supply and credit. Long term supplies were determined by the government draft on the Reserve Bank. Through the strict conditions imposed on it, the Bank worked between the limits of the needs of the priority sectors as laid down by the Planning Commission on behalf of the government by way of differential interest rates ceilings on credit and the minimum needs of business. Thus the government's financial profligacy and recklessness were covered by the Reserve Bank and the Planning Commission.

How much the expansion of money supply is non-inflationary and how to keep it at that level were heroic tasks which increasingly got out of the control of the Reserve Bank. In fact, there is no concept of non-inflationary money supply left to work with. Economists with their pet theories dub the Reserve Bank policy as monetarist, Keynesian, Hawtrian, developmental, etc. They are indulging in simple half-truths. The concepts of high-powered money, CRR, SLR, currency-deposit ratios became instruments of financial anarchy. But they are useful to make policies if the Reserve Bank has a real control over them. Money supply, credit creation and distribution interest rates, etc. are set by the Indian fiscal rather than the monetary authorities. The so-called selective credit control exercised by the Reserve Bank has been an appendage of fiscal policy and the Reserve Bank's ego.

Even within massive government controls and reckless fiscal policy, the most critical instrument left with the Reserve Bank was the Open Market Operations. It is a great pity that the Reserve Bank never effectively used it and surrendered the instrument to the government for maintaining a low price of the public debt and low interest rates and an acceptable profile of the government debt. No central bank in the world has ever surrendered the autonomy of the open market operations as the Reserve Bank has and only for this reason its delinking from the government is called for.

When faced with a complicated and difficult situation, the Reserve Bank has come out with its own bonds for sale to the public. Anyone could hold these bonds for any amount and pay no tax on them. This is a sign of the Bank's total erosion of its own autonomy. It need not be emphasised that the monetary and fiscal authorities have opened the final window for the government to grab whatever it can, without bothering about the consequences or the expansion of the fiscal deficit. The Reserve Bank's surrender to the government is complete and it came at a time when the autonomy of the Reserve Bank was most needed to stop the government expenditure going berserk (its fiscal policies having lost all restraint).

Nevertheless, whereas the government's policies have done enough damage and created a lot of monetary instability, the Reserve Bank did try to limit the damage in the first three decades, but unfortunately, under the Rajiv-Indira regime, it was obliged to adopt policies which created further instability. The eighties probably constituted the worst period for the Reserve Bank's role in generating monetary instability. If this mischief is to be stopped, autonomy is absolutely essential.

The present Governor of the Reserve Bank does not evoke confidence either among the bankers or among the business. He has shown no sign of independence or even full understanding of what is happening. He seems to have given up even the earlier stated objective of keeping the credit limit of non-inflationary monetisation of the economy and some additional credit for productive public sector activities. The government has played havoc with the bank by violating both these objectives and nothing in the world can justify the domination of the Reserve Bank by the government. The government has been totally irresponsible in creating excess money and liquidity in the system on the one hand, and mopping it up for its own wasteful expenditure on the other.

◆

IN recent years, the Reserve Bank has totally failed to control the overdrafts to the State Governments, despite making a lot of noise about it. The States are right in condemning the Reserve Bank for practising gross discrimination between the Centre and the States. In reality, there is no such thing as State deficit, whether or not the Reserve Bank allows overdraft beyond the limit. Ultimately it creates a deficit in the Central Government.

Professor P.R. Brahamananda has in a study stated:

> It is clear that the Reserve Bank of India does not enjoy even the semblance of autonomy as per law. That it does not enjoy autonomy by convention or by courtesy is well-known. The Central Government, in effect the Finance Ministry, has bossed over the Reserve Bank both in essentials and in detail. It is not that the top officials and minions of the Finance Ministry are themselves the bosses. The Finance Minister and the government at Delhi, the political rulers of the parties in power, have been the overlords of the Reserve Bank. They have treated the Reserve Bank as their 'creature'. The Reserve Bank has had no control over the scale of its (forced) lendings to the government. The Reserve Bank has been asked year by year, to purchase the ad hoc treasury bills issued to it; in return the RBI has continuously replenished the case balances of the government. Like Draupadi's inexhaustible vessel getting replenished with food, the amount to the credit of the government in the Banking Department has been continuously filled and refilled with cash balances by the purchase of ad hocs and issuance of bank notes and their transfer to the government's account.

The Reserve Bank has contributed a lot to the mismanagement and failure of commercial banks, despite the authoritarian dictats issued to the banks at regular intervals. Commercial banks face profit squeeze. Because of a lot of window-dressing, the real picture remains unclear, but some banks become quite sick and the Reserve Bank, despite its strong elaborate monetoring activity, is not clear how to avoid the collapse of some banks.

The Narasimham Committee has suggested fundamental changes in the working of the banking system. Its recommendations fall mainly into two categories: first those which would reduce the government's draft on the banking system and the second, which would give the Reserve Bank some autonomy from the Finance Ministry itself that had set up the Committee. But the government has the habit of killing the recommendations of its own committees. This must not happen if the monetary system is not to collapse and inflation is to be brought under control.

This is not the place to go into the details of the report of the Committee. Those recommendations which are connected with the autonomy deserve mention. For instance, the recommendation to reduce the statutory liquidity requirements to 25 per cent over a five year period and limit the credit for the priority sector upto 10 per cent of the aggregate credit can only be administered if the Reserve Bank can say no to the government. More importantly, in view of the terrible shape of the banking system the suggested reorganisation of the banks and other financial institutions is just not possible if the Finance Ministry keeps its hold on the Reserve Bank. The banks with large debts have taken shelter under the plea that the government has been ordering them to provide credit in the name of one objective or another. This is partly true but the banks themselves have been guility of misusing this provision. Let us not ignore the fact that bank managers are the most corrupt lot. They have learnt a lot from their bosses, the IAS personnel.

The autonomy of the Reserve Bank cannot be guaranteed if the government keeps nominating its Directors. In fact, even under the existing law, the government should have been more considerate towards the viability of the banks by withholding the temptation of nominating all kinds of people as Directors who simply forwarded instructions of the Finance Ministry and who instead of protecting the interests of the Reserve Bank allowed them to be subverted.

It is not often realised that the Indian financial bureaucracy has become the most powerful class within our class spectrum. If bank managers are opposed to the privatisation of banks, it is because they are unwilling to give up the enormous power they enjoy and the money they pocket on loans. This class can do a lot of damage or good to the economy. Only an autonomous, powerful body can control them. The autonomy of the Reserve Bank has become a matter of great urgency and a national imperative. ■

Hindutva and Perversion of Nationalism

SUKUMAR MURALIDHARAN

At a juncture when the national consensus seems to be crumbling under the twin assault of terrorism in Punjab and armed insurgency in Kashmir, the Bharatiya Janata Party (BJP) has chosen to press ahead with its politics of ritual *yatras*. The party President, Murali Manohar Joshi's triumphal procession from Kanyakumari to Kashmir concluded on a note of farce on January 26. In a less publicised, but nevertheless significant, development, the Rashtriya Swayamsewak Sangh (RSS) commenced a *Vivekananda Bharat parikrama yatra* from Calcutta on January 12. The latest in the series of *yatras* is expected to culminate at Kanyakumari in the month of December, after wending its way through a 22,000 kilometre route across the country.

The RSS-BJP combine obviously believes that the malady of national disunity and discord calls for drastic remedies, which only it is in a position to administer. And with self-doubt and indecision seeming to have gripped the national political apparatus, it is not surprising that the *ekta yatra* struck a responsive chord in various sections of the country.

A large part of the reason is the seductive simplicity of the message of the *ekta yatra*. Among the stated motivations for the journey, the foremost was that of reasserting the unity and indivisibility of India, and of focusing the nation's attention upon the primordial cultural solidarity that makes it one. Since the majority in the nation is Hindu, the cultural ethos of the nation is Hinduism. The secessionist tendency in the Muslim enclave of Kashmir, the *yatra* asserted, would be thwarted by the combined will of the Hindu majority. If a minority in Kashmir should insist on its right to self-determination, then it would be swamped by a majoritarian tide.

The ideologues of *Hindutva* had carefully laid the groundwork for this assertion of the majoritarian will in Kashmir. While reflecting interminably upon his tenure in the State, the former Jammu and Kashmir Governor, Jagmohan, observed in his most implausibly titled book, *My Frozen Turbulence in Kashmir*, that the key to a resolution of the problems in the State would be a "reformed, reawakened, and rejuvenated Hinduism". In an article inspired by a reading of this book, Swapan Dasgupta (*The Times of India*, September 30, 1991) ruled out the possibility of a "permanent Muslim rapprochement within the Indian republic", and suggested that there may be no alternative but the "demographic Indianisation" of the Kashmir Valley. And at just around the same time, Arun Shourie was laying out the *modus operandi* for such a process: all the security personnel involved in the operations in Kashmir, he proposed, should be given the title to buy land in the Valley, and presumably, to make the Valley their home (*The Economic Times*, September 29, 1991).

Ulster and Palestine Revisited?

The upshot is fairly clear. The Indian Army should conduct itself as a colonial army of occupation. And the Indian Government should inaugurate in the Kashmir Valley, a systematic process of colonisation, much in the manner of the British in Ulster, and the Jews in Palestine. That these suggestions do not in any way conflict with their own assertions that Kashmir is an integral part of the Indian nation, shows that the latter-day proponents of *Hindutva* share their forebears' ability to reconcile the irreconcilables.

The *ekta yatra* reaffirmed a theme that was highlighted by the former President of the BJP, L.K. Advani, in the course of his infamous *rath yatra* of 1990. The target of that mobilisation was the Babri Masjid at Ayodhya—a monument allegedly built in desecration of the sacred spot marking the birthplace of the primeval Hindu hero, Lord Ram.

Advani had then been completely unrepentant about the virulent agitationist programme launched to take over this spot. And with a style and clarity that his successor conspicuously lacks, he had outlined the basic principles of *Hindutva*: Hinduism is the basic ethos of the land, the cultural foundation of Indian nationalism. The revival of Hindu solidarity is coterminous, if not synonymous with national renewal. None of the national heroes who wrought India's freedom from the colonial yoke thought it necessary to apologise for the fact that they drew their inspiration from the Hindu religious tradition, he argued. And this point, he further underlined through reference to the various parallels between the mobilisation for the Ram Janmabhoomi, and Bal Gangadhar Tilak's revival of the Ganapati festival at the turn of the last century, Gandhi's campaign for the protection of the mother cow, and Sardar Patel's active support for the reconstruction of the Somnath temple.

Each of these historical parallels calls for attention. Spurious reinterpretations of history are the staple of the ideologues of *Hindutva*. Thus, we have Girilal Jain writing *(The Times of India*, December 17, 1991), that Indian culture and ethnicity, "cannot be said to be rooted in anything other than the Vedas". And this is so, "not only because nothing older survives but also because nothing basically alien to them can be located in any part of the land".

Girilal Jain's equation of ethnicity with culture is bizarre, as indeed, his effort to assimilate the diversity of Indian cultures to the Vedic tradition. Equally extravagant is the BJP ideologue, K.R. Malkani's claim, made during a polemical response to the novelist Mulk Raj Anand's criticism of the *ekta yatra*, that the concept of the "nation" is specifically Vedic in origin *(The Hindu*, January 10, 1992). By implication, therefore, the idea of a Hindu nation is a millenia old, and has nothing to do with more recent historical developments.

All this represents strong medicine for the ills of the Indian nation. And while on this theme, it is necessary to ask whether a "permanent Muslim rapprochement within the Indian republic" is at all possible, given the wide currency that such tendentious interpretations of history enjoy. Rammanohar Lohia, the great proponent of an indigenous brand of socialism, put it rather aptly:

> The force that separates most is a particular view of history. Groups and communities are formed *principally* through the view they hold of what has happened. .. The Hindu *and Muslim views of their common* history have differed in the past as they do today, and that is the main *cause of their separation* in identity and action.

Can this nation of diverse faiths, plural identities and syncretist traditions ingest this bitter medicine of Hindu unitarism? As an ideological programme, Hindu nationalism does not represent anything novel. It dates from rather early in the history of the anti-colonial movement. Though it professes to unite, Hindu unitarism only succeeds in dividing, because it is not merely different from unity; it is its very antithesis. Once before have the people of this country paid a heavy price for the pursuit of this homogenising view of nationhood. And the price to pay in the years to come could be equally high.

Early Days of Hindu Nationalism

Among the early propagandists of this view of Hindu nationalism, the trio of great radicals from the days of *swadeshi* movement—Bal Gangadhar Tilak, Lala Lajpat Rai, and Bipin Chandra Pal—rank very high. Tilak was convinced that "religion is an element in nationality"; and his reading of India's subjugation to the British strongly harked back to a mythical golden age which had been lost:

> Vedic religion was the religion of the Aryans from a very early time. ... During Vedic times India was a self-contained country. It was united as a great nation. That unity has disappeared bringing on us great degradation and it becomes the duty of the leaders to revive that union.

Lajpat Rai took much the same line, though in his case, the inspiration from concurrent European experience, filtered through the ideology of the Arya Samaj, was unmistakable: "Is Hinduism entirely devoid of any basal principles on which the foundations of a church national could be laid?" he asked in a debate with an ideological opponent of his time. And he answered the question in the negative, since he had "substantial reasons to maintain that Hinduism is at least as much a religious nationality as its sister faiths, Christianity or Islam".

And in a statement that is confoundingly tautological, but would nevertheless bring joy to the heart of K.R. Malkani, Lajpat Rai further opined that "the ideas of nationality and patriotism are as old as the different countries into which the earth is divided, as ancient as the distinctions of race and religion that have been existing in this world from times immemorial and pre-historic".

And yet, this belief was based less on an understanding of the culture and material life of the mass of the Indian people, than upon supernatural faith and superstition. This is apparent from a few sentences, where Lajpat Rai confesses—with a transparent honesty and candour that today's ideologues of *Hindutva* lack—that his comprehension of Hindu scripture was limited:

> The fact is that the best and the most glorious period of Aryan supremacy is yet a closed chapter to us. Almost the whole of the pre-Buddhistic period is shrouded in mystery. Even the literature that has reached us is so full of allusions, enigmas, signs, and names and is written in such an archaic language that the whole thing seems to be a mystery. According to the best of European authorities, the language of the Vedas is so full of obsolete and archaic forms and expressions that the whole seems to be a cipher which with the best of efforts might take years to decipher.

Yet the magical qualities of these inscrutable texts were such that the Lion of Punjab was prepared to suspend credibility and assert that the Hindus, "directly or indirectly, profess to accept the Vedas as their religious scripture", and believe that these are "the words of God" and "infallible".

Two things are apparent here: the effort to model a Hindu religion—a "national church"—upon European analogues, and a dependence upon European interpreters of the Indian scripture. In his memoirs written after retirement from active politics, the great Bengali nationalist, Bipin Chandra Pal, admitted quite candidly, that the invention of the Hindu tradition was directly inspired by the European experience.

Particularly powerful in their influence upon the development of Hindu nationalism, were the German philologists such as Max Mueller, and the Theosophical Society of Colonel Olcott and Madame Blavatsky. The Aryan theory of race, developed by German philologists around the middle of the nineteenth century, had a profound effect in this regard. Purporting to show a common ancestry for the people of Europe, Persia and the northern Indian sub-continent, the Aryan theory of race carried connotations of racial equality which came as sweet music to the rising Indian upper castes.

At the hands of Tilak, the Aryan theory of race became a manifesto of Hindu revivalism. In the first of his efforts at Vedic interpretation, *Orion*, Tilak argued that amongst all the Aryan peoples, only those in India had preserved all the great traditions of the race, "with a super religious fidelity and scrupulousness". In his later work, *The Arctic Home in the Vedas,* Tilak went even further, celebrating the "vitality and superiority" of the Aryan races, "as disclosed by their conquest, by extermination or assimilation, or the non-Aryan races, with whom they came in contact...".

The Popular Tradition

It is a characteristic feature of this ideological stand-point that it was totally insensitive to those who may have been at the receiving end of this process of "extermination and assimilation". The Aryan theory of race was, in this respect, a two-edged sword, which could as well have been used against the Hindu nationalist position. And such an anticipatory rejoinder had indeed been prepared by the great Marathi visionary and social reformer, Jyotirao Phule, at least two decades ahead of Tilak's Vedic excursus.

The word "Hindu" occurs but rarely in Phule's political discourse, and the word "Aryan"—so critical to the greater vehicle of Hinduism—only with a load of negative connotations. Phule's pathbreaking social reform work is well known, and this alone entitles him to a far greater position in the history of the Indian awakening, than has been accorded to him. The reason for his relative neglect, undoubtedly, is that he went too far in opposing the ideological trends that were soon to establish their dominance.

In 1867—four years ahead of Dayanand Saraswati's Arya Samaj—Phule founded the Satya Shodhak Samaj, or "Truth-Seeker's Society". He disagreed with the two main reformist organisations that existed then—the Bombay-based Prarthana Samaj and the Calcutta-based Brahmo Samaj. He went so far as to denounce their efforts to sanctify the "political designs" hatched by "Brahmin brains", and to propagate the reactionary tenets of the Vedas and the Bhagwad Gita.

Phule's rediscovery of Indian traditions followed a course diametrically opposed to that of the Hindu nationalists. He was able to put into perspective many of the moral ambivalences in Hindu scriptures by interpreting them as rationalisations of the Aryan conquest of a *shudra* homeland. Thus, King Bali—the *asura* king who was banished from his kingdom by the trickery of Vaman, an incarnation of Vishnu—became the central icon in the *shudra* pantheon.

The power of Phule's imagery is very apparent. To this day, the putative day of King Bali's return to his kingdom remains the major festival of the State of Kerala. And the lower castes of Karnataka and Maharashtra celebrate Diwali—the quintessential Brahmin festival, supposed to mark the return of Shri Ram to Ayodhya—as the day vouchsafed for Bali's annual visit to his people.

Phule's movement of radical social reform—characterised by the militant self-assertion of the lower castes—did not long survive his death in 1892. The political terrain towards the end of the nineteenth century was captured by the Hindu nationalists and the genteel Anglophiles of the Indian National Congress—the former beginning by then to enjoy a distinct ascendancy.

While Phule was alive, the Congress had been obliged to recognise the aspirations that he represented. Together with the annual meetings of the Congress, an Indian Social Reforms Conference was also held. In 1895, the Hindu nationalists led by Tilak, heady from their victory in the Age of Consent Bill agitation, effectively wrecked this convention. Rather than risk a split in their ranks, the more cosmopolitan elements of the Congress agreed to remove social reforms entirely from their agenda of action.

The case of the nationalists was aptly put by Lajpat Rai: "Reform is revival and revival is reform". While national consolidation was undoubtedly important, this should be based entirely on rational foundations, said Lajpat Rai. And "nothing can be either national or rational which is against the spirit of the Vedas."

These conceptions of Hindu nationalism only succeeded in alienating the entirety of the Muslim and lower caste populations. With the inauguration of competitive politics from around the end of the nineteenth century—in the shape of a limited degree of local self-government—the alienation of the Muslims only deepened.

As the British progressively vacated the political space of governance, allowing incrementally higher levels of Indian participation; the compulsions of communal mobilisation became more acute. Electoral politics in British India remained the preserve of a select few. Even as late as 1936, the franchise remained subject to stringent property qualifications, so that almost 80 per cent of the adult male population, and virtually the entire female population, remained out of its ambit.

The property qualifications had very different implications for the various communities. The Indian Muslims, who had initially been rather reticent in taking to Western education and commerce, remained economically rather backward. Strict enforcement of the property qualification would have given them a far lower number of voters than their proportionate strength in the population. The constitutional device adopted to overcome this limitation was that of separate electorates. There was undoubtedly an element of imperial "divide and rule" in this calculation. But the Muslim leadership clung tenaciously to constitutional guarantees of separate electorates because of the relative economic backwardness of their community.

The Hindu nationalists were completely averse to the idea. Lajpat Rai denounced the concept as "a denial of the principle of nationality" and a "partition of India". But it never occurred to him that a solution could take the form of broadening the franchise, and diluting—if not eliminating—the property qualification.

Electoral Politics and Hindu Consolidation

Among all the historical personalities who have contributed to a Hindu consolidation, the name of E.A. Gait must rank very high. A statistician of some merit, Gait found himself in 1911, directing the census operations of the Imperial Government of India. With representation in the scheme of political reforms then being proportional to the numerical strength of the various communities, the census was expected to provide the basis for important constitutional decisions.

E.A. Gait took upon himself the onerous taks of enumerating the number of "Hindus" in the Indian subcontinent. Towards this end, he sent out a questionaire to the various provincial Census Superintendents, listing a series of criteria that supposedly qualified a person for the appellation of "Hindu". The responses he obtained were so diverse that he was driven to the conclusion that "the Hindu residuum is a most heterogeneous mixture". In certain regions, he found, upto 50 per cent of the population normally classed as "Hindus" failed to answer to most of the criteria for such classification. But the question being beyond his comprehension, Gait decided in favour of not altering the conventional scheme of classification.

In a history of the Arya Samaj written in 1915, Lajpat Rai recorded the profound sense of disquiet that orthodox Hindu nationalists experienced as a result of the Gait circular. But the end-result was a happy one, in Lajpat Rai's estimation:

> The Gait Circular had a quite unexpected effect and galvanised the dying body of orthodox Hinduism into sympathy with its untouchable population, because that was so necessary to avert its downfall.

However, the main body of Hindu nationalism remained resistant to the idea of social reform. In 1917, the Depressed Classes Federation, under the chairmanship of Narayan Chandavarkar, met in Bombay and resolved that the reforms then being worked out, should guarantee the Depressed Classes "the right to elect their own representatives in proportion to their numbers".

The Government of India Act of 1919 failed to accommodate this demand. And the Congress continued to remain apathetic. When the next round of reforms was being negotiated at the Round Table Conference of 1931, the Imperial Government decided, in response to the representation of B.R. Ambedkar, that a separate electorate for the Depressed Classes would indeed be introduced. Few then anticipated that the decision would produce the kind of reaction it did from Mahatma Gandhi.

In a letter to the British Prime Minister early in September 1932, Gandhi affirmed that if the decision on separate electorates was implemented, he would be faced with no alternative but to undertake a fast unto death. In separate electorates, he said:

> I sense the injection of poison that is calculated to destroy Hinduism and do no good whatever to the Depressed Classes.

When his exhortations failed to yield the desired result, the Mahatma commenced his epic fast on September 20, much to the bewilderment of even close associates like Jawaharlal Nehru.

In the event, Gandhi was successful. Ambedkar retreated from his insistence on separate electorates, in return for an assured representation in legislative institutions. But certain questions from the "epic fast" still remain unanswered. Why, for instance, did Mahatma Gandhi not consider the denial of franchise to vast sections of the country, and the separate electorate for the Indian Muslims, to be causes equally worthy of his attention?

It is crucial to note here that it was not the militant tradition that saved the day for the supposedly united and indivisible Hindu community, but the benevolent paternalism of Gandhi—in Jawaharlal Nehru's words—the "religious and sentimental" approach that the Mahatma had patented in his approach to political questions. And it was precisely this tradition of tolerance that Hindu nationalism ultimately had to physically liquidate.

Ambedkar had yielded ground in 1932, but he remained unreconciled. Recapitulating these events in 1943, he seemed still intent on carving out a separate set of legislative institutions for the Depressed Classes. And his rationalisation of this demand carries a ring of contemporaneity:

> The Untouchables are not opposed to freedom from British Imperialism. What they refuse to be content with is mere freedom from British Imperialism. What they insist upon is that free India should be made safe for democracy. Starting with this aim, they say that if no provisions are made in the Constitution to cut the fangs of the Hindu Communal Majority, India will not be safe for demcoracy.

But the Depressed Classes question was by then becoming peripheral. Hindu-Muslim antagonisms were hardening, propelling the country inexorably towards the holocaust of partition. Taking over as the Prime Minister of independent India, Jawaharlal Nehru knew at first hand what the disastrous consequences of religious nationalism could be. His practice of statecraft was marked by the effort to evolve a secular consensus, quite distinct of the appeal of religious loyalties. The Nehruvian consensus asserted that the state represented Indians of all cultures, denominations, and linguistic affiliations. The Indian people had in concert fought for their freedom from colonialism, and constituted themselves in the Indian state, which represented their will. As a microcosmic reflection of the Indian people, the state would guarantee equality and access for all, irrespective of religious, linguistic, or cultural affiliations.

It is no wonder then that independent India has suffered its worst episodes of communal tensions when the state has shown signs of retreating from this commitment. Such an episode occurred in the mid-1960s, when the Nehruvian consensus was shattered by the military debacle against China, and the economic crisis following upon the 1965 drought. Another such chapter—perhaps yet unclosed—began in the early-1980s, when Indira Gandhi realised that pandering to communal sentiments could be a useful ploy to stay politically afloat.

This cynical game finally claimed Indira Gandhi's life. But her son and political successor carried it to absurd lengths. Before long, however, the conflicting pulls of governance compromised Rajiv Gandhi's communal gambit. And starting with the *Ram shilanyas pooja* of 1989, the BJP seized the initiative in the game of communal mobilisation.

In its propaganda, the BJP consciously harks back to the founders of the Hindu nationalist traditions, such as Tilak, Lajpat Rai and Bipin Chandra Pal. But the similarities clearly are peripheral. Lal, Bal and Pal were men of indubitable courage, who had to work with a relatively undeveloped historical tradition. In their struggle against a colonial power, they had to improvise and invent a tradition that could serve as a reference point for the millions of people that they sought to mobilise. That in this effort they invented a tradition that alienated large sections of the Indian people, does not detract in any way from their historical role in the Indian freedom struggle.

But what precisely is the BJP fighting against, in an independent and sovereign India? Is a minority of a hundred million Muslims in this country of 850 million such a threat to the image of Indian culture? Or is their political agenda summed up by that good citizen of Ahmedabad, who does part-time duty as an activist of the Bajrang Dal? This latter day hero of Hindu nationalism found his acquisitive instincts in urban real estate thwarted by a certain Muslim gentleman. By engineering a small riot, he found that he could possibly get this prime piece of urban real estate vacated to his profit. And what better occasion could there be for this pursuit of profit than the arrival of the *ekta yatra* in the city of Ahmedabad? What better guise could commercial poaching take than that of Hindu nationalism? ■

GARDEN FRESH ASSAM
TEA

India is the world's largest producer, exporter and consumer of tea.
The country produces from the ordinary to
the best teas, yet the Indian consumer does not get to
drink the best. That is why APEEJAY, which is
the 4th largest tea producer in the country, has decided
to introduce its selectively picked high quality pure
Assam tea direct to the consumers.

This is pure Assam tea from our own tea gardens.
Make it the way you normally make your tea and it will
give you a superb flavour and liquor.
Drink this tea for 3 months and you will
never want your old brand again.

Assam Frontier Tea Ltd
Empire Plantations (India) Ltd
Singlo (India) Tea Co Ltd

A Crisis of Leadership

EKRAM KHAWAR

Where does the Indian Muslim community find itself today? Pushed to the centre-state of a vulgar discourse masquerading as 'nationalism' and caught between the murderous intents of Thackerays and Ritambharas at one end and the suicidal rhetoric of the Bukharis at the other; between the 'Hate *yatra*' sponsored by the suave 'DCM-Toyota Guru' and the political brinkmanship of the Shahabuddins and Saits; between the communal stance of a 'national press' and the avariciously inflammatory role of an over sympathetic Urdu press; between the opportunism of major political parties and an apathy verging on antipathy of the state machinery, this beleaguered community, even after more than four decades, continues to grapple with the onerous problems relating to its existence.

Viewed from an isolationist, exclusivist vintage point, the collective political experience of Muslims of the Indian sub-continent, for most part of this century, is reminiscent of a great Greek tragedy. Such a view, specially in view of the academically more fashionable yet metaphysical tendency of counterpoising the 'particular' against the 'general' would prima-facie appear to be an example of intellectual bankruptcy arising out of apathy to the collective sufferings of the teeming millions. Yet such a view becomes necessary, in view of the continuing tragedy of Muslims as a social group, and also to analyse the role and contribution (sic!) of the so-called Muslim leadership to the course of its political 'destiny'.

◆

THE continuing tragedy of Muslims, as opposed to most other contemporary social groups, lies partly in the fact of its continued adherence to a defunct set of identity and politics largely responsible for its ghettoisation, serving both as a grand sanctuary of psychological refuge as well as a whipping stick in the hands of forces antagonist to it. Here, one may have a tendency to hark back on the nefarious role of aggressive communal organisations belonging to the great RSS family which continues to attract the attention of the liberal intellegentsia, though surprisingly, the share of responsibility of the Muslims' politico-cultural leadership in the overall plight of Muslims is yet to be properly highlighted. It becomes absolutely necessary, precisely because of this, that the conduct of this leadership is judged vis-a-vis the interest of the very community it purports to serve. And needless to surmise that the political conduct of this elite leadership in the totality of politics as practised by it, amounts to nothing less than an act of political harakiri; wilful or otherwise. Rather, as one proceeds through the recent history of the sub-continent it becomes apparent that the conduct of the Muslim leadership smacked of apathy and indifference, if not of outright contempt to the plight of the common Muslim.

Does one need any proof? Not at all! Even if one chooses to look at things from a selfishly communal angle (leave aside any thought of national or human angles) and even casually glances through the official statistics of those massacred in the twin dramas of partition and the Bangladesh liberation movement, the short-sightedness and historical culpability of the elite Muslim leadership is established beyond any doubt. And this by all accounts poor leadership, will be seen in still poorer lights if one has the temerity of taking into account the continuing tragedy of Muslims in terms of their overall political experience in India as well as in Pakistan.

Even though the gallery is full of heroes, it is against this backrop that the heroes are to be judged.

The 'Qaid', we are told, leaving behind a lucrative personal career, joins politics on a 'nationalist platform' but soon, thwarted by certain elements, he is convinced of a murky Muslim future in a predominantly Hindu India and the inevitability of Pakistan—the panacea and the 'promised land'. Once having come to the conclusion he did all that was necessary to secure a 'dignified' place under the sun for his Muslim brethren with a single-minded devotion and vengeance as if he was determined to get his pound of flesh as well as to teach his erstwhile detractors a thing or two. And sooner than anyone could have visualised, Pakistan was a reality. The 'Qaid' thus succeeded in his great mission against heavy odds and in the process redeemed himself as well as the community. Never mind the millions who fell down on the way and the millions uprooted. Never talk, for only the weak-hearted talk, of a saga of blood, toil and tears and the deep wounds to remain open in the Muslim psyche for generations to come. Gentlemen! as was only to be expected, Pakistan has already answered to all the problems of Muslims. The 'Qaid', after all, has passed into history and whether one accepts its raison d'etre or not, Pakistan, the fruit of his labour, is already a reality.

But what happened, way back in India, after partition? They have all gone, some in their 'Dakotas' and some by the 'Peshawar Express'. The 'dreg' representing the peasantry and the common man (to use a much maligned word) is left behind, readying to find its place in a predominantly 'Hindu' yet secular India; readying to get over its historical guilt and finding itself at the bottom of the social ladder. Is it a wonder that in such conditions there is a drought of active Muslim leadership till the leftover fumbling Indian Muslim begins to find his bearing and starts asserting himself? And as if to embody this newly found assertion there arrives Syed Shahabuddin.

◆

SYED Shahabuddin—a bureaucrat turned politican—intelligent, educated in a modern way, well-versed in the art of real politik and having the requisite intellectual capacity to lead the community, joins politics on a national platform, becomes a Central Minister in the Janata Party Government and it seems that now, after all these years, the Muslim community will fight for its emancipation in collaboration with other secular democratic forces. But lo and behold! the JP Government falls like nine pins and there we find Syed Shahabuddin clamouring for a seat in the Bihar Rajya Sabha and there, he is stunningly defeated by the negative votes of his own party colleagues! Such a state of affairs cannot go on. It won't be allowed to. It once again proves the desirability as well as efficacy of politics veering round the community.

No wonder that Shahabuddin too finds that now onwards only his Muslim identity is to take him forward. And did he have to wait long? No! The Shah Bano case, thanks to a sudden and maliciously 'pro-women', over-jealous attention of a national press whose real character was to be known in the tumultuous days of October 1990 only, presented itself as a God-sent opportunity. Syed Shahabuddin does not squander the chance, rather he seizes it with both hands. The *Ummah* is convinced of the dangers to its faith over and above those of life and property which it is used to. The Muslim psyche through persuasion, disinformation and even deception at times is keyed up to such a hysterical state that the mere grant of alimony to a divorced wife is made out to be an unpardonable affront to the Islamic code. And whatever differences of opinion did prevail within the community were drowned in the ensuing cacophony. But do such trivialities as grant of alimony to divorced women really matter? What really matters is that the 'faith' has to be redeemed and that, too, to the benefit of the leadership. The Muslim leadership does benefit to be sure. Rising on a wave of self-righteous Muslim indignance, Syed Shahabuddin again finds himself in that august office known as Parliament and ensures that the interests of the community are served in the best possible manner. What other than the enactment of a Muslim Women Protection Act could serve it better?

Even though a proper study of the sociological factors underlying the recent rise of militant Hinduism is essential for a fuller understanding of it, yet it would require naivette of a very special order to assume that such actions as manifested in the call to boycott Independence Day celebrations; issuance of ultimatums amounting to calling upon the Muslims to compensate for the inaction of the government to stop the *rath yatra;* the hue and cry raised against the court verdict in the Shah Bano case and the much recent hobnobbing of the so-called Muslim leadership with 'sword-brandishing' politicians of dubious credentials have had no role to play in the communalisation of the Hindu middle class on a scale unknown before.

Nay! it would be almost childish to expect this leadership to display any sense of responsibility or restraint since the very existence of it rests on the prevalence of a sense of insecurity amongst the Muslims and a set of political gimmickery centring around it. Naturally enough, the more this sense of insecurity; real or imaginery, is heightened, the more is the prospect for the leadership to shine and thrive and thus understandably a very strident and emotionally loaded stance has to be assumed in all public postures so as to keep the mind (and thereby political behaviour) of the *'millat'* on the right track.

Need one say that the 'real champions' of the *millat* have learnt their lessons quite well, so much so that almost in the footsteps of the politicians even the cultural leadership uses the same plank as a permanent strategy to keep their industry going, much to the peril of the *millat*. That perhaps is the compelling reason why the dominant voice of the Urdu press continues to be directed towards maintaining and heightening a persecution complex in the Muslim psyche by 'exposing' the acts of omission and commission of an 'antagonistic' Indian state.

◆

IS it by a grand design or just by a purely fortuitous chance that such vastly different personalities as Imam Bukhari, Syed Shahabuddin and Shahid Siddiqui, not to mention the smaller fishes, are all found talking in a similar vein, with subtle differences, if any, of style, ornamentation and emphasis only. Understandably so! Because given their priorities, the only logical endeavour has to be in the direction of weaning the Muslim consciousness away from secular parties and politics.

Wo will pose the question relating to the continued existence of the Babri Masjid in the face of a well-orchestrated assault by the BJP and sister organisations? Does it owe its existence to Syed Shahabuddin, Imam Bukhari and the BAMC or does it owe it to the political assertions of secular parties and secular citizens of the country, an overriding majority of whom happen to be 'Hindus'? But no! if someone has the gumption of putting his faith in the secular Hindus for the protection of such chiefly Muslim concerns as Babri Masjid, there can't be any doubt about his/her suspect loyalty to the community. By some quirk of fate such has been the irony of Muslim politics that such a saner voice as that of Maulana Azad fails to convince the Muslims of the dangers inherent in the creation of Pakistan while at the same time a thoroughly Europeanised, polished lawyer speaking a language of dangers, despair and impending doom, is able to sell his idea of Pakistan and yet could be the 'Qaid-e-Azam'! ■

MUSINGS

Journey's End

MRINAL PANDE

Photographs freeze strange moments for posterity; moments beyond the pale of words. One such image that lingers on in the mind is that of a dead man lying sprawled in a deserted street in Srinagar. Rilke's lines come to haunt you: "An empty-horrible alley, an alley in a foreign town, in a town where nothing is forgiven." A thin trickle of the nameless man's blood flows down to the edge of the photograph. This ultimate loneliness of a man's end is captured by someone who was doubtless being hurtled to the airport after the BJP supremo had unfurled the national flag under unprecedented security.

The only ones who look pleased in the photographs are the leaders of the *yatra*. Some even seem to raise their hands in benediction. Newspapers also reported the (post-unfurling) rhetoric that urged a putting down of terrorism with a firm hand and village by village combing operations, to flush out terrorists.

It is hard to believe that all terrorists in the Valley today are Pakistani infiltrators. It is even harder to believe that it is possible to suggest mowing down human beings thus, and smile. Is it the sound of the guns then that seems to have pleased those happy men? It is, one wonders further, a pleasure generated by mouthing what, to them, is a rational policy; or could it be a sentimental reaction to their own unacknowledged softness? Like the joy of children playing at being blood-thirsty pirates?

◆

AFTER twenty or thirty years

have passed, how will all those generators of joy and grief: those that have thus died, agitating for a separate nation or protesting against caste-based reservations, be remembered?

Perhaps they will be called "our misguided citizens". Perhaps it may even be said that a foreign hand was guiding them; a hand that wished to see India disintegrate and colluded with opportunistic political groups in the Opposition. Or perhaps a monument (or monuments) may be raised in memory of those who might be called selfless harbingers of liberalism and sanity. They might even be reclassified as counter-revolutionaries. Political and seminarist talk will centre around the then ruling party's mistakes, as if the death of so many were an absent-minded miscalculation.

Like sex, we Indians mostly do not like to talk about the incendiary mix of consumerism, caste and religion vis-a-vis terrorism and the state. In seminars and columns all talk about consumerism, casteism and communalism is couched in a socio-economic jargon. We choose to overlook the obvious; that those that died and are dying daily thus, are not mere socio-economic cliches; but impatient and vulnerable individuals with a name and an ethnic identity. Sometimes heroically idealistic, at others foolishly naive, these people are mostly those who have known nothing of politics, except the passions it excites.

We also need to face up to the ugly fact that the grand consumerist nostalgia for the past and a feudalisation of our upwardly-mobile young that is sweeping the country today, is also lending legitimacy to the extreme Right-wing advocacy of militancy and a view of the state as a strict patriach, *a la* the Hindu Puranas. The ethnic chic of Delhi's Hauz Khas Village and the bizarre ceremonials that the Toyota-riding *ekta* and *Ayodhya yatras* indulged in publically, are somewhere DNA-related. Few of our socio-economic analysts have, however, pointed out to the people that this cross-breeding of a feudal past and a Right-wing ideology is also very likely to have adverse economic consequences before long.

While our Prime Minister unleashes sweeping economic reforms; the social structure stays undeniably unchanged. A society that continues to idolise old family (as *khandan, kula* or a caste) background (and by implication family money) is bound to sneer at the hard money that comes through professional expertise, hard work and creativity—prerequisites for effective restructuring. This is why our vocational training institutes and skill-upgradation courses in the service sector continue to be allocated a very lowly status, while glimpses of immense arbitrary powers and the feudal lifestyle of the IAS officials and MPs continue to lure hundreds of professionals—professors, engineers and doctors, into the stronghold of colonial-style power. Sooner or later, this confusion of values is bound to show up in our GNP as well. Stories are aplenty already, about how when our senior managers and Ministers with their amateurish Raj and feudal yearnings have sat across negotiating tables with trade representatives from other countries their "officers and men" approach, and their aristocratic-disdain for, and their suspicion of, what to them is the "lowly *bania* culture of trade and commerce", has put most formidable road-blocks in the path to a just, civil and mutually cooperative exercise of give and take. A faulty mindset, not faulty policies or unfair trade restrictions, have mostly lost us valuable contracts and frittered away benefits and the NRI goodwill the country has needed so desperately all along.

◆

TO come back to the Valley, it is true that poverty and unemployment are major factors behind the present alienation of the local people, but we must remember that there have been worse poverty and unemployment in the past. Why is it that the droughts and famines of the sixties and the seventies did not lead to similar segregationist/terrorist outfits in Bihar and Madhya Pradesh? Or to the mental callousness that today prevents a large number of Indians from registering their protest at the daily sight of fellow-citizens lying shot dead in deserted alleys of our curfew-bound towns, like stray dogs.

If the *ekta yatra* has pointed out something positive, it is, one: that citizenship without community is empty rhetoric. Perhaps the real need today is not to use guns to protect 'public interest' but to try and build a society that embodies public interest. And two: the need for political settlements between the individual and the society to determine the rights and obligations on both sides.

One does not know, though, if this was something the *yatra* leaders had set out to explore. But then neither did Columbus, and look what he discovered! ■

Crowd Intervention in Indian History

An Overview of Popular Resistance Coterminus with the 1946 RIN Mutiny

ANIRUDH DESHPANDE

The fortysixth anniversary of the historic RIN mutiny fell on February 18, 1992. To mark the occasion the following article is being carried here. The article is based on the paper the author, a Research Scholar in the Centre for Historical Studies, School of Sciences, Jawaharlal Nehru University, New Delhi, presented at an Informal Evening Seminar on South Asia, Lent Term 1992, at St John's College, Cambridge on January 9, 1992. —Editor

Kaam hai meraa taghayur,
Naam hai meraa shabab,
Meraa naara,
Inquilaab, inquilaab, inquilaab.
—verse by Josh Malihabadi sung by mutineers on board the 'Kathiawar' a rebel ship of 1946 (trans: My task is to change, my name being youth and my slogan is revolution).

Albert Soboul once wrote that the history of the French Revolution, that great watershed of modernity, would be incomplete without an analysis of the activities of the sans-culottes in it. And that meant complementing the exhaustive researches of Georges Le Febvre with more studies of urban crowds which invaded French history during the late eighteenth and most of the nineteenth century. Their's was a totalising mission even as individual scholars pursued different paths. As Soboul pointed out in his book *The Sans-Culottes* (Princeton, 1980), p. xvi:

> The French Revolution was a total phenomenon, stemming from a process that embraced every aspect of historical evolution. Its historiography reflects the movement of history; various aspects of the totality are revealed to successive historians who bring out new data previously concealed behind the enormity of the total phenomenon. Furthermore, the Revolution opened a number of possibilities: whenever a new one is brought to light, it reveals another aspect of the revolutionary past, thus enlightening the historian, and also the politician, if he has eyes with which to see.

Historical researches, informed in large measure by rigorous interdisciplinary approaches and historiographical disagreement, of scholars like LeFebvre, George Rude, Eric Hobsbawm and E.P. Thompson have added immensely to our knowledge of crowds in history. Crowds as definite identifiable social aggregates now appear composed of contextual individuals and not as abstract eternal 'mobs' comprising the omnipresent 'rubble' or 'riff-raff' to be harangued, swayed or ideologically constructed at will by outsiders. Such historiography analysing the composition of crowds, their tendencies and relation with extant social issues has enriched social history tremendously besides damaging the elite view of the 'mob' forever. The concentration of attention on the movement of the popular orders and their 'everyday' in societies passing through active and passive conflict is inspiring and places the problematic of 'agency' firmly on the historian's agenda.

◆

INDIAN historiography of 'popular protest' is new. Within it scholarship has tended to concentrate more on rural groups perhaps finding in them a remoteness that refreshes new and radical history writing in India. The search to redefine the past of the working classes, so long entrapped in trade union or labour history, is also yielding newer perspectives on working class lives, thought and action. The necessary logistics for crowd studies are thus being prepared but the urban crowd still awaits specific scrutiny. Crowds have been glanced at by writings on nationalist protest and communal riots in general. While in the former case, as depicted repeatedly in the official media, members of crowds dissolve into 'freedom fighters', in the latter case they appear as 'hooligans'. Crowds appear, fleetingly, submerged in the ranging controversies about the nature of Indian nationalism and its converse communalism.

In Indian history, specially after 1918, urban crowds became increasingly active in rising nationalist protest. The mass protest against the Rowlatt Bill and the following Non-Cooperation-Khilafat movement involved heterogeneous urban crowds in large measure. Conversely, crowds—perhaps with homogeneous compositions—were also associated with growing communalism and communal riots between peaks of nationalist agitations. Later during the Civil Disobedience movement and the Quit India upsurge, urban crowds were once again conspicuous. Indeed throughout the twentieth century, like the middle class, crowds have swung between the moments of nationalism and communalism in modern India. With urban and economic history growing and the focus of Indian social history shifting to working groups, the material for contextual monographs on crowds is now being forged. Hopefully, developing historical-sociology will identify the meaning, energy, will and the mental world of contemporary and historical urban crowds in the near future.

In social science today 'nation', 'nation-state', 'nationalism', 'communalism' and 'secularism' are no longer sacrosanct concepts. Fresh ground gets broken in historiography as riots and crowds, hitherto uncomfortable and painful aspects of our past and present, now become centrally important to any serious discussion on Indian mentalities. The time seems to have come to detach the crowd from the scheme of a deliberately sanitised nationalist discourse on the history of Indian society. The crowd with tremendous hidden potential can become one of the significant departing points in modern Indian historiography. Significantly, the new paradigms stressing the need to understand the will of a people, hitherto ignored by history, emanate from a radical critique of political ideology and, its academic corollary, historiography in the present.

The scope of this paper as a particle of Indian historiography is limited. It simply tries to understand crowd responses during the Royal Indian Navy (RIN) mutiny. No attempts are made to redefine mega concepts like nationalism. The paper also does not provide a chronological 'blow by blow' account of the RIN mutiny and for that readers could consult the references given in the endnote. At the same time we are not apologetic at all in treating the event of February 1946 as a great moment of celebration for popular and collective anti-colonial action. In the year 1945-46 nationalism appeared as a popular will to unitedly act against the British and all that they stood for. The long-standing ideology or programme of nationalism, supposedly leading India towards an independent nation-state, was *conspicuous by its absence in the arena where the real action lay*. In so many ways the great moment mirrored modern India where hope and despair paradoxically remain united to this day.

II

THE RIN mutiny of 1946 sparked off 'disturbances' in several Indian towns and various forms of popular resentment against the British rule were visible in the energetic crowd activity coterminus with the mutiny. The mutiny also inspired poetic passions with Saahir Ludhianwi writing the following on it:

> *Wo kaun saa jasbaa thaa jis-se farsooda nizaame zist hilaa,*
> *Jhulse hue viraan gulshan men ek aas-umeed ka phool khilaa,*
> *Janata kaa lahoo faujon se milaa,*
> *Faujon kaa lahoo janata se mila.*
> (A passion shook the crumbling system of life bringing a flower of hope to a parched garden as the blood of people and soldiers flowed together.)

Popular sentiment and rebellion supporting the RIN cause was influenced deeply by resurgent post-War nationalist mood focussed on the much analysed, publicised, represented and misrepresented Indian National Army (INA). The conjunctures which momentarily conditioned plebian interpretations of a nationalist message were also predicated upon the effects of the Second World War on Indian society. With an eye to the historical context of fractured Indian protest against colonialism this brief paper tries to understand certain aspects of post-Second World War 'popular protest' in India. First we see Bombay, the storm centre of the RIN revolt, and then follow it up with some comments on Karachi. Combined with a concluding remark these sections try *raising more questions about nationalism and crowds in general than answer them.*

The prelude to the uprising of February 1946 in Bombay was the serious anti-authority riot during the Subhas Bose Day celebrations signifying the extreme popularity of the INA issue. Bitter crowd-police confrontations between Janauary 23 and 25 left twenty two civilians dead and more than six hundred rioters injured. During these days rioting occurred mostly in the predominantly proletarian areas, notably Parel, Kalabadevi and Girgaon. The crowd, comprising middle class students, factory workers and large sections of the urban poor, who were hit hard by wartime conditions, reacted violently against symbols of foreign and state oppression including the police. Crowd action was meaningful and looting was confined to grain shops and places containing large sums of cash. Visibly rejoicing crowds forced the rich to abandon their vehicles and walk on the roads with them. At the same time, ties and hats, as symbols of British cultural domination, were snatched and often burnt in huge bonfires. Random crime against Indian middle class property or person was absent from the riot as the crowd carefully chose its targets even though theft had increased considerably during the War. Communal violence associated naturally with the crowd and ostensibly feared by leaders and authorities alike was absent even as crowds often broke away from half-hearted middle class leadership. Finally, to restore declining order, a harried police resorted to heavy and indiscriminate firing against largely unarmed crowds for almost two days. The invasion of the crowd into Bombay's 'normalcy' was marked by a specific pattern of crowd activity seen in the way the socially heterogeneous crowds stamped the city with their will, almost dictating terms to the state, between January 24 and 25, 1946.

◆

BETWEEN February 18 and 20, 1946, an unprecedented mutiny, surprising the state and the political parties, swept the RIN establishments and ships stationed in Bombay. The young mutineers using military transport successfully conveyed their intentions to the people of Bombay and the curious onlookers around naval establishments. Till February 19 the officials, underestimating the potentially explosive situation, allowed ratings free access to the city and the latter used this opportunity to address the message of a massive rebellion against the British to popular sensibilities in Bombay. Though the mixed crowds of Bombay became involved in the RIN mutiny on February 18 there was little indication that the initial curiosity would soon give way to an upheaval of unsurpassed magnitude. The astonishing speed with which a riot was converted into an uprising by the largely working class crowd is testimony to the fact that a tremendous popular anti-colonial will existed in Bombay in the beginning of 1946. On Februrary 20 as the rebels were confined to their establishments by the army, rumours about British excesses against them began to circulate. The next day large fraternising crowds led by students thronged the Gateway of India, bringing food for the rebels. As boats came in to collect the hampers the RIN ships flew the Congress, League and Communist flags together and this symbolic unity of Indians against the British profoundly affected popular perceptions of the event. The dialectical unity of the moment became clear soon as the crowds began to carry the three major flags bunched together.

On February 21 and 22 several moments of the RIN revolt combined to inspire a popular rebellion in Bombay. First in a day long skirmish between the British army and the mutineers casualties were reported. Then by evening the political isolation of the rebels became clear promoting the urgency felt by the swelling crowds who could hear but not see the firing taking place. Simultaneously Godfrey, the Flag Officer Commanding, RIN, went on air with his 'submit or perish' speech threatening the destruction of the RIN. Between February 19 and 21 heavy reinforcements had poured into Bombay signifying the importance of the event and stimulating popular sympathies for the RIN rebels. On February 22 the CPI called for a general strike the next day and even as the Congress opposed any disruption of normalcy, Communist and Socialist cadres held about fifty public meetings urging people to join the proposed *hartal*. Militant students combined and led a procession through the museum and fort areas with bystanders of all hues joining in large numbers. In the afternoon, deepening the sense of panic prevalent in the city, a Royal Air Force formation flew low over Bombay to intimidate the mutineers. An ultimatum publicising state intentions of using maximum force was also released to the press. In a city buzzing with extraordinary military activity rumours, justifiably deriving legitimacy from state actions and pronouncements, spread rapidly. The substantial presence of British personnel with tanks, armoured vehicles and automatic weapons indicated a major crisis and the collective mentality forged in the crowds by the moment believed, somewhat rationally, as an official report put it, that revolutionary changes were imminent. This fired the crowd's belief in a major engagement between the forces of order and rebellion. The point for the crowd's intervention had come as it launched a counter-mobilisation to oppose the might of the state.

On February 22 large crowds fired the first salvo by attacking jewellery stores, European commercial firms and business houses, government grain shops and petrol stations. Patrolling police parties and British soldiers were resolutely attacked particularly in the proletarian areas where the police had emerged since a long time as the most organised repressive force against the working class. Elsewhere, Europeans and vehicles carrying them were singled out for assault. A government in retreat declared a half holiday as the crowd came into its own, snatching the initiative totally from the students. The social content of protest became clear as the police parties which fired on crowds were hemmed in by hundreds of angry protestors. An alarmed media, unable to sift chaff from the grain, decried the 'goonda raj'.

◆

OVERNIGHT demonstrations of "turbulent crowds" were transformed into determined attacks on state property as the crowd imposed its will on the city. The government servants were often asked politely to leave before their offices were sacked. Later crowds vent their anger on the Europeans and Indians in Western attire who were often chased for long in the streets before their ties, hats and coats were taken away and burnt. Order broke down, transport was paralysed and the police proved totally inefficient. Even military vehicles wer often attacked and burnt and one large crowd even tried to move towards the Naval Headquarters. Police *chowkis* were torched with gay abandon and at least one whole patrol was stripped and paraded. In another widely reported incident a police inspector narrowly escaped being immolated due to the timely intervention of a local *dada*. By the evening, three weary and desperate British battalions had shot dead 97 people largely in the working class areas including Mrs Kamal Donde of the CPI and treasurer of the Parel Mahila Sangh. The hundreds of injured included Kusum Ranadive who was shot in the leg. The following day the police was replaced completely by the Essex, Leicestershire and Second Border regiments of the British army as the contest became more severe.

On Saturday February 23, as the mutineers surrendered and the major Indian political parties dissociated themselves from the violence raging in Bombay, the British army moved decisively against the crowd. Faced with armoured carriers and machine guns the crowds took to defence. Now comprising the working classes only, it shrank to the narrow pathways of the proletarian wards where the final pitched battles were fought on hurriedly erected barricades. In a ferocious street fighting about 200 Indians were killed and the British regiments could gain control over the city only by Sunday morning when the police gathered courage enough to move in and arrest hundreds. Between February 21 and 24, 64 grain shops were pillaged and an estimated 125,000 lbs of sugar was seized by the hungry crowds. On February 23, behind the barricades money lending establishments and provision shops were plundered by crowds comprising members of the working class and the urban poor. Whereas provision shops hoarded food and other necessities which had become scarce and expensive for the poor in 1945-46, the moneylenders' places contained cash and records of working class indebtedness.

The Bombay crowd, moved by the RIN mutiny, soon travelled far away from the modest goals of mobilisation and protest set by the student and Left cadres. A riot was swiftly converted into an uprising by the poor against the conditions imposed upon them by the War and all those played a significant part in perpetuating these conditions. The deeper meaning of crowd actions, involving extreme hatred of the police and symbols of the British rule, was located in the everyday life experience of the socially alienated and the politically disaffected working class of Bombay. The War had only sharpened the existing divisions in society, bringing internal contradictions to a point of resolution by collective crowd action. The entry of the Bombay crowd, with a history of organised working class protest, into the space created by the RIN rebels transformed the act of mutiny into a fierce popular uprising against colonial authority and its props. Significantly, throughout the event the meaning of crowd activity remained clear and crowds did not conform to the stereotype 'mob' so preferred by a bourgeois media, colonial authorities and political leaders alike. Finally, despite the extreme violence involved in the event and the socially heterogeneous composition of the crowds, communal tension was absent from crowd response.

In Karachi, identifiable crowds composed of discontented boatmen, fishermen, students, dockyard labourers, artificers and mechanics became sympathetically involved in the RIN mutiny from February 21 onwards. The next day they were addressed by the Congress and CPI leaders who soon retreated in the face of increasing crowd militancy. Street violence continued for two days in which symbols of British domination and state power were relentlessly attacked, and, wherever possible, destroyed. In several areas, the police and the military too were jeered and stoned by the crowds.

Historical research, informed by psychology, sociology and anthropology, indicates that such crowd actions occur in a continuum within which, as LeFebvre points out, the construction of a collective frame of mind precedes the event. The RIN mutiny was the moment which transformed post-War crowds, as everyday aggregates, into what is known as a 'state of crowd'. This was also visible in the crowd's will to overcome fragmented consciousness in an attempt, predicated upon hope, to transcend the limits imposed in everyday life by historical realities. In Karachi, too, military mobilisation against the rebels, specific geographical factors and the battle between the sloop 'Hindustan' and the British army stimulated popular passions creating the immediate ambience of riot. But even there, as we have tried to point out elsewhere, the mentality of protest was underlined by the socio-political context of the Second World War. The roots of crowd response were certainly well-entrenched. In Karachi, the movement of crowds did not become a flood because it lacked the canvas of Bombay. Nontheless, a shaken administration, despite forewarning, remained out of control for two days.

◆

IF crowd responses in Bombay and Karachi were socio-politically meaningful, even rumour, that motor of riot and protest, was contextual. We have seen how the atmosphere of Bombay during the revolt was conducive to the spread and popular acceptance of rumour. Perhaps due to the want of strong direction, with leaders dithering and then absenting, rumour as a relevant message created instant stories reflecting and fashioning popular belief at the same time in Karachi. The context of rumour was formed of its connection with state mobilisation against the rebels, the generation of collective political consciousness in the short term and the specific topography of Karachi. Rumour also forced information into conformity with collective mentality and unsubstantiated newspaper reports only helped this process by legitimising popular belief. Hence, as news and rumour became inextricably intertwined, the difference between orality and written messages was dissolved.

The element of panic infused in social assemblies by heavy troop deployment and firing also helped in making rumour the dominant form of communication between crowds in different areas. Similarly, rumours about Indian troops, especially Baluch soldiers with ethnic implications in Karachi, being sympathetic to the mutineers catered to the crowds' need for allies in a difficult situation. Here several factors in conjunction were creating the milieu of popular rebellion in post-War Indian cities. Inefficient post-War demobilisation, the drain of War and poor rains in 1945 and the well-orchestrated partisan Congress politics around the INA trails stimulated latent tendencies of protest in urban crowds as well as large sections of the armed forces in 1945-46. A pre-formed and hope-induced collective mentality in consonance with the moment of the RIN mutiny thus got created. Rumour hence came to be located in the popular belief that a massive movement against the British was imminent anytime in 1945-46. Thus the crowds identifying with the mutineers often carried the Congress, Communist and League flags bunched together *even expecting these parties to unite against the British.* This partially explains the largely 'secular' nature of popular rebellion attending the RIN mutiny.

The socially heterogeneous urban crowd favouring the INA and the RIN cause and rising for its own sake as well from the end of 1945 till February 1946 was anti-authority in action and; significantly, 'secular' in orientation. As the high tide of post-War nationalism swiftly declined after February 1946, popular moods began to swing from hope to despair and blame and consequently crowds became socially homogeneous and rioting increasingly communal. Thus the changing complexion of national politics became reflected in crowd composition and actions as much as in political shifts of middle class groups generally considered aware and socio-culturally sophisticated. In several ways, street rebellion in this specific period of Indian history reminds us of the anti-imperialist will characterising earlier popular nationalist unrest in colonial India. The Quit India, economic effects of a World War, the INA, problems of post-War demobilisation of the armed forces and the RIN mutiny were some aspects of the larger conjuncture characterising Indian history in much of the 1940s. Only when crowd responses, involving an undiscovered interpretation and message of protest, between September 1945 and March 1946 are studied as a complex outcome of these factors do we confront the force of popularised nationalism in everyday Indian life after the War. Nationalism in 1945-46 above ideology and programme became a message to act and the crowds responded enthusiastically. The specific importance of the crowd and the lessons we can draw from its moods and movement will be lost to historiography and posterity if 1945-46 is treated either as just another year in the overarching 'transfer of power' or a hurriedly assembled last chapter in a 'history of modern India'.

III

THE RIN mutiny involved about 30,000 ratings and almost all the naval establishments and ships. Geographically spread over the whole subcontinent, popular reactions to it varied. In smaller towns where far flung establishments struck work peacefully usually students demonstrated in support. In Calcutta, where the INA proved popular, students led solidarity moves. In Karachi, where the INA issue had energised an anti-British mood the brave ratings provoked a long riot within which as the crowd became more assertive the intervening leaders and students retreated. In Bombay, the stronghold of Quit India, the mutiny symbolised *a majority against imperialism,* also because Bombay boasted a history of working class struggles before and during the Second World War. An embattled and concentrated working class combined with the INA emotion and the February mutineers to launch the last heroic uprising against the British. Even in Bombay, the initial involvement of crowds could not be 'organised'. Soon the crowd seized the initiative and later, in defence of freedom, won fleetingly, barricades in working class neighbourhoods were erected. ■

Author's Note

This paper is based largely on my unpublished M. Phil dissertation 'The Royal Indian Navy Uprising and Popular Protest, 1946', submitted to the Centre for Historical Studies, School of Social Sciences, JNU, New Delhi, under the supervision of Dr. Majid Hayat Siddiqui, in October, 1987. Readers interested in details about Karachi can see Anirudh Deshpande, 'Sailors and the Crowd: Popular Protest in Karachi, 1946' in *The Indian Economic and Social History Review*, Jan-March issue, 1989. A detailed account of the RIN revolt is also to be found in the following books: B.C. Dutt, *Mutiny of the Innocents*, Bombay, 1971; S. Banerjee, *The RIN Strike*, PPH, 1954, New Delhi, 1981; and Satyindra Singh, *Under Two Ensigns*, New Delhi, 1985.

It is on the Kashmir soil, that Islam and Hinduism are being weighed now. If both pull their weight correctly and in the same direction, the chief actors will cover themselves with glory and nothing can move them from their joint credit. My sole hope and prayer is that Kashmir should become a beacon light to this benighted subcontinent.

ASHUTOSH

Where does India exist in the Kashmir Valley? The time has come when this seemingly absurd question needs to be asked objectively and investigated in its totality. This writer was in the Valley for more than a week and could not locate a place there, either at the existential level or at the epistemological one, where one could sense the existence of the sovereign Indian state, as we know it.

We were told that Kashmir is a heaven on earth. Heaven it is but it now debars all outsiders from 'India' with a grim and sort of determined politeness. The non-violent *samaskaras* have seeped through the Kashmiri psyche but today with fire in their eyes, children of Laldad (a woman Sufi saint) and Hamir Kabir (founder of Islam in Kashmir) have taken to arms and even ten year olds can be heard swearing by their motherland that they should sacrifice lives for Kashmir. *'Ham Bharat ke gulam hain, Hamen Azadi chahiye, kaum ke vaste'* (We are slaves of India, we want freedom, for our society).

Abdul Rashid, a Class VI student, has seen his brother shot in the legs by the security forces. He was looking after his brother in the hospital when we asked him: "What do you want? To go to Pakistan?" He replied; "No, *azadi.*" "How will you get it?" "Through arms." "Did you use them?" "No. But I would love to. They (militants) don't allow us." "Aren't you afraid of dying?" "Why? I will die for my *kaum.*" Abdul Rashid is not the only child of his kind; others of his age are now echoing the general mood in Kashmir.

Since one-and-a-half years ago, when Jagmohan had just left his *Frozen Turbulence* and Gary Saxena had taken over from him, the situation has deteriorated from bad to worse from India's point of view. One hears gun-shots more often in the Valley. The number of bunkers have increased enormously in the city specially in 'Down-Town' area in the old city of Srinagar. What is amazing is the new atmosphere of casual defiance in the Valley. Earlier one saw how cross-firing could frighten the Kashmiris for a day or two. One shot fired was enough for the closure of the entire market. Now even if someone is killed (security men, militants, civilians) within half-an-hour life becomes normal, market shutters are put up. People have learned to live with terror and bullets. Many friends confirmed this, and said: "When we go out, we and our family members are not sure whether we will be back... we are not bothered."

But it will still not be justified if one were to state that the entire population approves of the militants' way of struggle. There is a microscopic minority in the Valley who still believes that arms cannot produce a lasting solution. They agree sadly that they lost the initiative and goodwill within and without, the moment their boys decided to launch an armed movement. The logic is simple: when Palestine could not achieve independence despite worldwide sympathy how can we, the juvenile militants, do? The militants counter this angrily: "Yes, we also know the creative power of *ahimsa,* the might of the Gandhian *lathi,* but we are living in an age where might is right. Gandhi could muster a victory for India because he was dealing with the British who are traditionally an intelligent race. India, in contrast, has from the beginning imposed its security forces on our heads. How can one talk of peace to a man with a gun?"

Microscopically discovered, this section of the society feels that India can win Kashmir through love, not by guns. They categorically state that some saner elements are still there but they need to be protected, preserved and encouraged. These elements are apprehensive of Islamisation of Kashmir and its merger with Pakistan. But they also want a liberated democracy after gaining independence. Alas! no one listens to their voice in the Valley. Neither do they have the guts to open their mouth in public.

◆

LIKE the citizens, the Jammu and Kashmir police and the local bureaucracy are also either sympathetic to the cause of *Azadi* or plainly afraid of openly siding with India. We were told that the police and local bureaucracy voluntarily and regularly pay part of their salaries to the militants. This is one reason that to date no police vehicle has been ambushed or any squad attacked and killed by the militants except those who happened to be informers or were suspected of helping the Indian security forces. The author felt much safer in the company of an old bearded J&K police driver than in a BSF truck, being escorted by four lorries of jawans holding automatic weapons. This fact is also known to the higher ups there. They agreed that to be safe in the Valley is to be with either the JKP or the militants. For those aware of this it was not surprising that the DGP's office in the Police Headquarters was blown up in Srinagar. Planting a bomb is the easiest thing to do in Srinagar because of the sympathetic JKP. The newly appointed DGP, B.S. Bedi, has rightly demanded for his own team to work in the Valley.

Obviously, the targets of militants in the Valley are the BSF, the CRPF and the Army who have no trust in the local police and bureaucracy. Even senior officials are thoroughly checked five-six times while coming from their residence to the office. Ordinary curfew passes issued by the DM or the police have no meaning for the security forces, specially, the army. They insist on the passes issued by their own officers.

Army and police officials are also the targets of the media and human rights organisations who constantly blame them for killing innocents and raping Kashmiri women. Reacting to these charges one army jawan said: "We are also humans. We work 18 hours a day. We do not know the local dialect. People despise us like pigs. They don't support us in nabbing militants. We are fired at from windows, from roof-tops. Naturally we reply in kind. How can we know who is a terrorist and who is not? When I'm fired at, at that time my prime duty is to save myself and my colleagues. What would you do if you were in my place?" Another jawan said to us: "*Sahib,* when we go for searches in the houses of militants, we are told by the inhabitants to crawl under piles of bedding and then their women are told to sleep upon those piles. Now you tell us, what can we do? If we remove them physically they cry rape and accuse us of playing with their bodies. If we don't, we suffer the wrath of our officers and the stigma of incompetence."

It is true that these jawans are on duty round the clock except for four hours with a meagre salary of two thousand rupees including allowances, be it rain or snow. When everyone sleeps in –2°C at night, they are awake under the sky, always under threats of bullets or rocket attacks.

On attrocities, another jawan said: "We are asked to act with restraint and not to fire back. Sometimes we are told to produce ***khokhas*** (fired bullets). How's it possible? *Ham apni jaan bachayen ya khokha khoje* (should we save our lives or look for *khokhas*)?" There is another complain: "We catch militants without caring for our lives but they are set free to save their (politicians') sons and daughters. And we unnecessarily antagonise militants." "*Sahib, imandari ki baat hain ham desh sewa karne nahi aye, apne bachcho ka pet palne aye hain* (honestly speaking, we are not here for the sake of patriotism but to feed our children). Is this the way to play with our lives?"

At this point the alienation of the security forces in the Valley seems almost total. In a Marxist framework they are not only alienated from the masses, from the JKP and local bureaucracy but also from their work, except from their colleagues. As one jawan said: "This is our 90 per cent home." Indicating other jawans, he said: "We are more than brothers."

Fortunately or unfortunately, such are the conditions under which India exists in the Kashmir Valley today. Only those who unfurl the Tricolour in the Valley in thirteen minutes time and shout "*Bharat Mata Ki Jai*", can be blind to the state of affairs in the freezing Valley. ■

Calling bookworms everywhere!

Here is good news about the best in books!

The Book Review is India's only national review of books, covering the world of contemporary books on a wide canvas. Now 15 years old, **The Book Review** is today a household name among the book lovers of India, even in the farthest corners.

The Book Review is published bi-monthly and includes in its overview not only English language work, published in India and abroad, but also books from the many Indian languages. Reviews written by eminent writers and scholars cover a wide variety ranging through politics, history, literature, sociology, development studies, economics and the arts to women's studies, international relations management, environment, fiction and children's books.

Federalism and Nation-building in India

R.C. DUTT

The tumultuous events of 1991, apart from the implications they carry in political, economic and social spheres, and the worldwide repercussions they may have, have highlighted two important trends in human affairs: One is the centrifugal trend which emphasise separate identities based on religious, linguistic and cultural variations, and the other the centripetal, born out of political and economic imperatives. The former has undoubtedly been stronger in recent years, specially in the erstwhile socialist states, but the latter force has also been at work not only in Western Europe but in various other regions and areas of interest too, where efforts to project collective identities continue.

What are the catalysts that unleash these forces? Why have attempts to build up states failed so disastrously at least for the present, in the Soviet Union and in Yugoslavia? Could these failures have been avoided, and if so, how? What is the mix of policies that would balance the centripetal and centrifugal forces and lead to the ideal solution?

Federal India—A Design for Change by Prof Rasheeduddin Khan; Vikas Publishing House Pvt. Ltd.; pp. 146 including appendices and bibliography; Rs 150.

Recent events not merely raise these questions but provide ample materials for their study. They will indeed be eagerly studied; for they are relevant to all countries which have a variety of cultural groups with differing identities, actual or potential. For a country like India, with her multiplicity of religions, languages and cultural patterns, the relevance is obvious. India has already embarked on the path of forging unity out of her diversity by emphasising the common identity which has always underlined her variety. The question is whether she is on the right path to achieve this unity.

◆

TO answer this question a study has appeared from so erudite a scholar as Prof Rasheeduddin Khan at a moment which, on account of the developments referred to, could not have been more opportune than the present. The book was indeed published before the developments in the Soviet Union and Yugoslavia took their present shape, but there were ample indications of these developments which could be taken into account.

The author is fully aware of the dangers of outlining a design for change in social affairs which recent events in the Soviet Union have emphasised, for he states in his Prologue (p. 2) that "sometimes events acquire momentum neither anticipated nor apprehended by those who generate change". Little did Gorbachev "anticipate or apprehend" that *perestroika* and *glasnost* that he had initiated would result in the complete dismemberment of the Soviet Union. And yet, as Prof Khan rightly points out, this cannot be taken as a counsel for inaction or for cynical indifference, "leading to acceptance of the *status quo* as the unchanging destiny of human life". But it does counsel great caution, and it is in this light that the suggestions made by Prof Khan need to be viewed.

The basic thesis advanced by Prof Khan is that India is a *federal nation* whose hallmark is "unity of polity and plurality of society". (p. 29) It is not, he further contends, a multinational state as the Soviet Union was, nor a multi-ethnic state as the United States is. Its variations are region specific, he argues, and so India must be regarded as an instance of multi-regional federation. This latter proposition is, however, not so evident because not only the main religious communities, the Hindus, the Muslims and the Christians are found in most regions, but even the tribes, the *adivasis* as they are called, are strewn all over the country, interspersed among non-tribal population. The fact that they tend to live in groups does not make them region specific.

An important distinction drawn by Prof Khan is between the "melting pot" of ethnic differences that the United States is and a "bouquet" that a federal nation should be. (p.30) The distinction is valid, and Prof Khan is right that the Indian approach can only be the latter. Having accepted this, it must at the same time be pointed out that Indian history has been one of cultural assimilation. From the dawn of history hordes of invaders—the Aryans, the Sakas, the Huns, the Pathans and the Moghuls—have descended on the country, and to a large extent been assimilated to produce a composite culture. This process of assimilation cannot be forced, but at the same time it should not be obstructed. It should, on the other hand, be encouraged. The "bouquet" concept must, therefore, be accompanied by an awareness of its limitation, and provide for safeguards in its application.

Prof Khan rightly observes that the "very survival and preservation of the democratic culture in India, in the four decades of its existence as a sovereign republic, remains the biggest source of strength of the people, providing opportunity for constructive change and better achievements in the future". (p. 34) What follows from this is that the basic concepts underlying the sovereign republic must not only be preserved but made acceptable to the masses. Perhaps the most important concepts in this respect are (i) that the Union is indestructible, and (ii) loyalty to the Union must supersede other types of loyalties, to region, religion, language or caste. The most important task, therefore, is to propagate these concepts. Construction of a new federal balance in India is necessary only to the extent that it contributes to this task.

To construct a new federal balance, however, Prof Khan has suggested four measures. They are:

(i) Territorial reorganisation of States on the basis of maximum homogeneity within and maximum identity without;
(ii) Amendment of the Constitution for increasing the autonomy of the States;
(iii) Activisation of the *Panchayati Raj* and *Nagarpalika* system; and
(iv) Building a new federal-national consensus to fight communalism, casteism and separation and to defend the values of democracy, secular polity, federal nation-building and social justice. (p. 34-35)

While the last measure is entirely unexceptionable, and should indeed be the first and most important measure to be undertaken, the other three measures need words of caution, and indeed careful consideration.

◆

PROF Khan is of the view that having reorganised the States on the basis of linguistic homogeneity the stage "has now arrived in which we have to go from large, administratively unwieldly, politically troublesome and economically unequal though linguistically homogeneous States to a more rational reorganisation based on the principles of techno-economic viability, socio-cultural homogeneity, administrative and political manageability". (p. 40) There is undoubtedly force in the argument that a large and unwieldly State like Uttar Pradesh is not only difficult to administer but functions from a centre of power that is remote from the lives of the great mass of the people. There could, therefore, be little participation of the people in the acts of governance, such participation being restricted only to the exercise of such powers as are devolved on the *panchayats*. It may also be conceded that socio-cultural homogeneity, by avoiding conflicts, makes for harmonious development, but it cannot be overlooked that it also impedes the natural process of assimilation, which can be encouraged only by close proximity of different cultural forms. Nothing, for instance, aids national integration more than comradeship of persons drawn from different parts of the country in the armed forces, or, for that matter, in national all-India projects. On the contrary, "maximum identity without", one of the criteria proposed for reorganisation of the States carries the danger of identities being developed narrowly and being projected to conflict with other identities. It also carries the danger of endless demands being made of changes in the States' boundaries, if not of further subdivision, on the basis of narrow loyalties. A division of the southern part of West Bengal from which the present writer originates, for instance, into two States on the basis of no pronounced cultural variations except existence of tribal belts in one of them only emphasises distinctions where none exist.

The next suggestion made by Prof Khan is that the Constitution should be suitably amended to increase the autonomy of the States. The desirability of making the States as autonomous as possible is not denied, but before the Constitution is amended the basic scheme of the Constitution needs to be considered. This scheme is that while wide powers may be given to the States, the Centre should have reserve powers to call the States to order either when these powers are exercised in a manner which undermines the values of the Constitution, or when an emergency arises which calls for firm action by the Centre. Emergency apart, this is the rationale for the power reserved to the Centre to dismiss State Governments. It is also the rationale for reserving certain laws passed by the State Legislatures for approval of the President. These powers have undoubtedly been abused by the Centre, but the question is whether such powers should be governed by conventions as has indeed been recommended by the Sarkaria Commission, or they should be abolished altogether by an amendment of the Constitution. The latter course is open to danger, as can indeed by illustrated from the present situation. The BJP Government in Uttar Pradesh, for instance, may, under pressure from Hindu fundamentalists or otherwise, embark on a course of action at Ayodhya or elsewhere which grievously harms the secular character of the Constitution. Should the Centre look helplessly on and not protect the Constitution?

The reason for reserving such powers to the Centre is not because the Centre is constituted by men wiser or more loyal to the Constitution than the States, but because the Centre by its very composition with persons drawn from various cultural and religious groups is more likely in its collective judgement to maintain the balance which the Constitution calls for.

The Sarkaria Commission has, by and large, restricted its recommendations to the basic scheme of the Constitution. They, therefore, deserve earnest consideration. It is difficult to agree with the author that the recommendations of the Commission, "even if accepted and implemented, would still leave much to be desired in creating an authentic federal polity". (p. 55) The further recommendations listed by Prof Khan to the extent that they go beyond the scheme of the Constitution, deserve to be rejected summarily on this account.

The third important suggestion of Prof Khan is to activate the *Panchayati Raj* and *Nagarpalika* system. There would be general agreement with his view that "what is required is a national consensus of the political parties and social forces to use the Panchayati Raj as an instrument for deepening democratic consciousness and for carrying forward at least a part of the unfinished task of social change and social justice". (p. 66) I am sure, however, he will agree that this task, namely, that of social change and social justice, can be accomplished only if devolution to panchayats is accompanied, if not preceded, by measures to ensure that the poor and the lowly are freed from the clutches of the "higher caste" landlords and moneylenders. The nauseating frequency with which atrocities are still being committed on the *Harijans* do not indicate that this has happened. In the present conditions there is a danger of the Panchayati Raj becoming one more instrument for denying the benefits of development to those for whom they should primarily be meant.

◆

WITH all the criticism advanced above, however, the fact remains that Prof Rasheeduddin Khan has rendered a signal service by initiating a debate on Federal India. This service is all the more valuable as it comes from a person who ardently believes in the values of democracy, secularism and social justice on which our Constitution rests. He also believes in "a healthy reconciliation between regionalism and nationalism", and is of the opinion that "like chauvinism, unhealthy regional or sub-regional patriotism is equally cancerous and disruptive". (p. 84) His vision indeed extends to regional groupings which transcend nation-states because, as he points out, the demands of modern market economy, the requirements of technology and the necessary cultural inputs "cannot be adequately available just in one country, nor their benefits, as the economies of scale are not restricted to single sovereignties". (p. 88)

With this outlook there can be no difference. Differences can still be there about the means to achieve this vision. These need to be discussed. "In the decade of the nineties," as he puts in the Epilogue (p. 89), "there is need for a vigorous, informed and enlightened discussion about the central concept of Federal India." So indeed there is, and one can only hope that Prof Khan's book will not only be widely read, but equally widely discussed to achieve the required consensus. The views expressed by him on devolution and decentralisation representing, as it does, the views of a large section of the people, will, one hopes, be taken up in a serious debate that he has initiated.

The task of nation-building is by no means complete in India. The primordial instincts of regionalism and linguism, which have overwhelmed the Soviet Union and Yugoslavia and dismembered them, do exist in India too. The danger from these forces cannot be discounted. The primordial instincts cannot and should not be suppressed. All cultural forms, all languages and all religious beliefs should be allowed not only to exist but flourish, but care should be taken that they do not conflict and lead to separatism. That way lies fragmentation, and consequent stagnation, for progress in the modern world, economic, technological and even cultural, depends to a large extent on the scale of operation. A balance needs to be struck, and such a balance can only emerge out of a Great Debate which, hopefully, Prof Rasheeduddin Khan's present volume will initiate. ■

MAHAPATRA: Economy

(Continued from page 4)

impact of the speculative forces such as flooding the public distribution system (PDS), resorting to administrative clampdown on the hoarders, etc. Instead the government chose to do just the opposite. It raised the procurement prices in spite of the negative anticipations regarding the kharif output; signed up contracts in the name of self-sufficiency to export rice and wheat; and pushed through measures that would provide impetus to the food processing industry. As if this was not enough, it went for a hike in the issue prices in the month of December. On a point to point basis, grain prices in December 1991 ruled 23 per cent higher than those in the same month in the preceding year.

In an inflationary situation, the poor not only pays a higher price for what he buys, but looses an additional part of his real income to the rich, for inflation is a merciless redistributer of income in favour of the profit earning or the rentier class as against the wage earning class.

To make things worse, the economy was hit by a recession. Industrial production registered almost a zero growth rate. Some sectors like manufacturing, mining and quarrying even registered a negative growth rate. Adequate public investment could have been some answer to this problem. But the real impetus to public investment was missing for a long time. The fiscal profligacy of the eighties had helped the consumer goods industry to flourish in a big way. Now, with the era of fiscal profligacy gone, strict import curbs and a severe credit crunch arising from a tight monetary policy had made things difficult for the industry; more so for the small scale industries who depend on the institutional source of credit. This would mean closing down of an ever increasing number of sick units and a large scale retrenchment of labour. As the media reports about the government's plan of offering a "golden handshake" to the personnel guarding those departments that have now been rendered unproductive, the private sector is already bidding farewell to its employees that include even persons in executive rank. The real rate of growth of the GDP has fallen far short of expectations. Reports from the official quarters suggest that it may go down to 1.5 to two per cent in the current financial year—half of what was earlier expected at the time of the Budget. Real incomes are falling. For the common man there is no relief in sight.

So much for fiscal discplining. Even on this front the Finance Minister seems to have got all his numbers wrong. No wonder, the North Block appears to be more busy in adjusting the revised figures for the fiscal year of 1991-1992 than in preparing for the forthcoming Budget. Till the end of December, the customs collection fell short of the projected figures by Rs 3613 crores. With a marginal increase of 0.6 per cent in the excise collection, the overall decline could be of the order of Rs 3000 crores. Then Rs 2000 crores was the loss on account of the sudden distruption in trade between India and the Soviet republics. In a desperate bid to contain the fiscal deficit to Rs 39,000 crores (the adjusted figure), the government has finally opted for the much feared cut in outlays for the social sector Outlays for the subsectors of rural development and housing were slashed down by Rs 500 crores each.

As of now, the objectives that were set out six months back stand defeated. The journalist's apprehension of being trapped in the margin for error has come true. Nor has India become a better place for most of its inhabitants. The commitment of the country's political leadership to the WB-IMF duo has proved stronger than the government's accountability to the people at home. Yet the Prime Minister has the gumption to say: "There is a humane way to everything that is done in India", and the Finance Minister admittedly maintains: "The impact of the adjustment process is bound to be painful for sometime...but the gains would soon start to trickle down."

◆

IS it too late to ask if there is any other way out—a way that would rescue the country out of the current economic mess, a path that would ensure allround growth of the economy without asking the poor to pay the heaviest price and above all a strategy that would not make us surrender our economic sovereignty to the vested interests outside the nation? The answer is in the affirmative. It is not a too late. It is in this context that the forthcoming Budget could mark a fresh beginning by redefining the agenda for macromanagement in the days to come.

The imperative is to formulate the right kind of fiscal policy that would simultaneously tackle the problem of inflation as well as check the recessionary trend. This would call for raising revenue through methods that are non-inflationary in their impact and, on the other hand, not resorting to any cut in capital expenditure. This can be done even while meeting the fiscal deficit target of five per cent of the GDP in the year 1992-93 which is projected at Rs 32,500 crores. Going by the government's past record (or, for that matter, the experience of the Latin American economies), to argue for a cut on the expenditure side would be tantamount to

COMMUNICATION

Remembering Hamdi Bey

Thank you for reprinting from *Newstime* Sashi Sahay's tribute to Hamdi in *Mainstream* (December 14, 1991).

I knew Hamdi for nearly 25 years. For the better part of my stay at Guwahati I was very close to him (that is, till he was transferred to Lucknow) and during the first few years in *Aaj Kaal*, we were colleagues in the same paper. Indeed, it was Hamdi who insisted on my joining *Aaj Kaal*.

His qualities both as a journalist and a human being far outweighed his vices. There are many saucy stories about his drinking habits. But what made Hamdi different from others was that he never lost his thinking faculties.

I remember one incident. It was a cold winter night at Guwahati. Hamdi had been drinking since the evening. By eleven in the night when he was totally drunk, the teleprinter bell rang. There was a request from *The Statesman* office in Calcutta to send, then and there, an analytical piece on some fresh developments in Nagaland.

Hamdi told me: "I cannot type. You sit at the teleprinter. I will dictate, you type." Walking unsteadily he came near the TP machine, and stood leaning against the wall. And started dictating. It was a superb piece that he dictated. And it was carried by *The Statesman* the next day. This was Hamdi. Others in his place would have, by then, soiled their clothes and gone into a stupor.

I remember another incident. A request came from *The Statesman* editorial department that some articles on different aspects of Assam's life should be obtained from some specialists. Some specific names were mentioned. Hamdi wanted to know what would be the rate of payment to the authors before he approached them for articles.

The editorial reply was that the articles should be sent first and "if found suitable" these would be published and "suitable payments" made. Hamdi flew into a fit of rage. "What do these... (he used an expletive) think they are?" he burst out. And I found him sending a caustic reply on the TP which began with the sentence:

> These men are eminent people in their respective fields. They will not cast their specialised pearls before the editorial swine unless they know that what they write will be published and be paid for.

Only Hamdi could dare do this and get away with it.

---

legitimising the idea of cutting down the expenditure on social overheads. In fact what should be emphasised is an increasing outlay for the social sector and a proportionate cut in the non-Plan expenditure, thereby retaining the same total expenditure level.

Assuming that the fiscal deficit in 1992-93 would have gone upto Rs 43,000 crores otherwise, the government needs to raise an additional amount of Rs 10,000-11,000 crores on its revenue front if any cut is ruled out on the expenditure side. Broadening the direct tax base through simplification of the existing tax structure and administrative clampdown on tax evaders and tax avoiders constitutes the answer. Treating the family rather than the individual as a taxing unit, taxing at source, evaluating property tax on the basis of "site and services' value are some of the, so to suggest, concrete measures in this regard.

It is very unfortunate that only 0.7 per cent of the country's population pay taxes, and the country has one of the highest marginal rates of taxation. It is rather tragic to learn that a lotterywala or a bidi factory owner remains as the highest tax payer, while the corporate doyens lobby for a relaxation in corporate tax rates. The underworld man is given "three cheers" when he disburses a meagre amount of his wealth into the real money market and the farmer is asked to pay a higher price for his inputs, for he has been a free rider so far. This trend needs to be earnestly reversed. Some estimates suggest that the amount of black money is about Rs 1,80,000 crores. If one-fifth of this amount is tapped and taxed accordingly, the Finance Minister's commitment regarding the fiscal deficit can be fulfilled. This will not only contribute to bridging the fiscal gap but also be non-inflationary in its impact. If Dr Singh could push through his radical measures of liberalising the economy in the existing political environment, he can do this too. It is disheartening to learn of the "informal constraints" that have crept into many of our senior economists' calculations who suggest otherwise, for the above mentioned framework is not compatible with the existing political structure.

If the latter is indeed the case then it is time for the political parties to give precedence to the political agenda over the agenda for macro-management. It is time to change the pilot in the cockpit. Towards this end, the parties in Opposition should vote against the government in the ensuing Parliament session if the Budget proposals fail to represent the interests of the majority of the country's populace. ■

Net Profit	Rs 77 52 crores
Foreign Exchange Turnover	**Rs 260.00 crores**

In the unaudited financial results for 1990-91, ITC has registered significant growth on all fronts—with a record 58% increase in foreign exchange turnover being the high point For ITC, the Rs 260 crores turnover in foreign exchange is the outcome of an increased thrust in the international business arena

Working closely with domestic producers to attain world standards, ITC is carrying the 'Made in India' mark with pride across the globe. Among its diverse trade ambassadors are quality tobaccos, oilseeds, tea, coffee, spices, marine foods, home furnishings, leather goods and garments Additional foreign exchange is earned by its Welcomgroup hotels in India and through the Bukhara chain of restaurants abroad.

Turning potential markets into advantages with strategically-located foreign offices, ITC is well set to further consolidate its position as the 'Indian International'.

VOL XXX NO 19 SATURDAY FEBRUARY 29, 1992 Rs 5

POLITICAL NOTEBOOK

Shameful !

The Union Finance Minister's response in Parliament to the Opposition members' serious allegations hurled against him on the basis of a specific report in the influential daily, *Indian Express*, has established the fact that the World Bank was indeed involved in blatant interference in this country's policy-making processes This is undoubtedly a matter of utter shame for the Indian nation, one of the striking features of whose significant advance in domestic and international affairs has all along been pursuance of independent policies based on freedom of judgement. The assumption of Dr Manmohan Singh to the post of the Union Finance Minister has given a go-by to that independence on which rests the sovereignty of our nationhood. This is the most ignominious development related to the so-called structural adjustment programme that the Finance Ministry is carrying out in the name of 'globalisation' at the behest of the World Bank and the IMF

There are two aspects of the present controversy The first is connected with the issue of Budget leak' as a result of the correspondence between Dr Manmohan Singh and the World Bank (that is, the Finance Minister's "Letter of Development Policy" to the Bank dated November 11, 1991 requesting for a $500 million loan that embodies several commitments to the World Bank, and the 43-page reply from the World Bank President, Lewis T Preston, dated November 12, 1991 recommending the loan to India while laying down 25 conditions which the Government of India is expected to meet by April-May this year) This point has been forcefully projected in the Lok Sabha by all sections of the Opposition with members openly charging the Finance Minister with such a grave breach of privilege The Finance Minister's reply only confirmed the charge.

But the second issue is no less noteworthy. It pertains to the open dictation of terms and conditions to the Government of India by the Fund-Bank that the Finance Ministry and its head do not regard as an affront to the nation. Dr Manmohan Singh could have, without in any way divulging anything related to the 1992-93 Budget proposals he is due to present in Parliament on February 29, categorically underscored that regardless of the 25 conditionalities referred to in the aforementioned letter of the World Bank President, the Government of India would take decisions on its own on the specific measures suggested. His inability to do so has strengthened suspicions in the public mind that the steps underlined in the World Bank chief's correspondence were actually being implemented This really amounts to mortgaging the country to the foreign moneylender.

The conditionalities are, in short, so humiliating that no self-respecting nation can ever stomach them. The basic thrust of these conditions, *inter alia*, is directed against the public sector Imagine a multilateral financial institution based in Washington ordering New Delhi "to implement the initial phase of an action plan to eliminate within three years (that is, by the end of fiscal year 1994-95) budgetary transfers and loans to sick central public sector enterprises. "; to finalise and approve the "detailed programme for disinvestment of 20 per cent of equity in selected public enterprises, to yield Rs 25 billion", and to complete execution of this programme by the end of 1991-92, to "progressively increase the private equity share in profitable central public enterprises to 49 per cent within three years". What is

the *locus standi* of the World Bank to lay down such terms? Simply because the Fund-Bank is extending loans to us?

Dr Manmohan Singh would have won kudos from the nation as a whole if he would have himself released these conditionalities way back in November last and declared his rejection of such terms—as was done by T T Krishnamachari with regard to the then World Bank President Eugene Black's clamours for rupee devaluation in the sixties But he has done just the opposite. Even when the issue of the IMF loan was being debated in Parliament last December, the Finance Minister kept silent on the Bank's conditions. By so doing he devalued the august office he has been currently holding.

The role of the Opposition in the entire episode, as reflected in its vociferous protests in Parliament, is in full conformity with the public mood in India. Gauging that mood the Congress ranks are equally shocked by Dr Manmohan Singh's misconduct The Indian people never forgave those who sold the country in 1757 The same fate awaits anyone seeking to bring back in independent India the new breed of Sahab Bahadurs, this time from the banks of the Potomac

The Mirzaffars cannot have the last laugh The nation's sovereignty cannot be mortgaged.

February 25 S.C

RAILWAY BUDGET

A Harsh Deal for All Passengers

S. SETHURAMAN

The Railway Minister C K. Jaffer Sharief, has the dubious distinction of delivering a massive blow on rail users with an all-time record of Rs 1366 crores by way of revision of fares and freight through his Budget for 1992-93.

The Railways can certainly have a sense of pride on their overall performance, and the finances are reasonably in good shape While the investment needs of the Railways for the future are huge, and transport is one of the most vital sectors of the economy which cannot be neglected, for the fifth consecutive year the tariff structure has been arbitrarily revised without providing any rationale for the increases.

Year after-year, the Railways keep talking of "social burdens" they are supposed to be carrying to justify the sharp rises in fares and freight, and yet, they are ending up with surpluses and the growth trends in both freight and passenger traffic have remained buoyant.

It is true that restructuring of fares and freight every year adds up to gross traffic receipts strengthening Railway finances but there are no corresponding gains in efficiency in services With an expanding base of the economy, the Railways were able to lift an additional 74 million tonnes of freight during the Seventh Five Year Plan and in 1991-92, the increase is estimated at 19 million tonnes The Budget for 1992-93 assumes another 17 million tonne increase in freight to a total of 354 million tonnes in revenue earning traffic and a five per cent rise in passenger traffic which, by themselves, should generate more revenue so that the stiff increases in fares and freight could have been held down somewhat.

Roughly, fifty per cent of the additional yield of Rs 1366 crores would come from passenger traffic, which is made up of 75 per cent of second class travellers, excluding surburban services It is this class, by no means affluent, that is being fleeced every year. Of course, passenger fare increases are non-inflationary and the Railways continue to indulge in the propaganda of increases made being "minimal"

Taking the three Railway Budgets 1990-91 to 1992-93, the long-distance second class passengers have been made to pay a total increase of Rs 70 or more per ticket. For upper class passengers, George Fernandes, the then Finance Minister (who did not spare second class passengers either), came up with a 17 per cent increase in 1990-91 and Jaffer Sharief has followed up with a 20 per cent increase each in two successive budgets He cannot wait for the recommendations of the Railway Fare and Freight Committee which he set up last year

The freight rates were revised by seven per cent from April 1, 1990, by 10 per cent in 1991-92 and now by another 7.5 per cent excluding certain essential commodities. The tariff increase on coal is only four per cent "in order to contain the inflationary pressures in the economy". Sharief's freight increases will have no bigger impact on the wholesale price index than 0.074 per cent, according to the Railway Board officials. Unlike the Railway Board, the Finance Ministry concedes that revision of administered prices and tariffs is a contributory factor for high inflation.

Even with such steep levies designed to leave a record surplus of Rs 563 crores in 1992-93, the Railways do not promise much for the year ahead The Railway Plan for the year is fixed at Rs 5700 crores as against Rs 5325 crores in 1991-92—which means no increase in real terms—but the budgetary support will further come down from Rs 1694 crores to Rs 1200 crores for 1992-93 while the balance will have to be met by internal resources inclusive of Rs 1200 crores of borrowings by the Indian Railway Finance Corporation.

On the financial side, the substantial improvement, which did not justify the order of tariff increases proposed, is reflected in the surplus of receipts over expenditure rising to Rs 435 crores from the budgeted Rs 235 crores in 1991-92 This has helped the Railways to show a higher return on capital-at-charge (percentage of net revenue to capital) at 8.3 per cent as against the budgeted 7 2 per cent and the 6.9 per cent in 1990-91.

With a surplus of Rs 563 crores budgeted for 1992-93, the percentage would further improve to 10.9 per cent while the operating ratio (working expenses in relation to gross earnings) will be only 87 7 per cent as against 92 per cent The Railways will be making larger provisions for the Depreciation Reserve Fund (Rs 2300 crores) and in dividend payment to General Revenues (Rs 1150 crores) More importantly, the Railways expect to liquidate the indebtedness to general revenues, which was of the order of Rs 683.90 crores at the end of March 1992 Sharief, therefore, claims that the Railways have made their contribution towards reduction of fiscal deficit of the government.

The Railways are yet to finalise the Eighth Plan scheduled to start from April 1, 1992 though the objective is to achieve an increase of 83 million tonnes incremental originating revenue-earning traffic over the 335 million tonnes targeted and realised in 1991-92 A shift in priorities is, however, emerging in regard to investments with emphasis on gauge conversion, to convert at least 6000 kms from metre to broad gauge so as to minimise

Political Economy in Today's India

CHANDRA SHEKHAR

The following statement was released by the former Prime Minister on February 23, 1991. The document has 11 appendices which are not being printed here for lack of space. —Editor

Nationally accepted policies are being drastically changed in quick succession today. The very foundations of the philosophy evolved during the national struggle for India's independence have come under serious questioning by the ruling circle. There have been isolated expressions of unhappiness, by the Opposition parties as also within the ruling party, but there has been no organised, informed and studied protest against the recent policy changes which have serious and long-term consequences.

Taking advantage of the political uncertainty at home and with the support of international vested interests, the rulers have unleashed these measures without caring for long-term implications. For the first time in the history of independent India, the outside powers have systematically attempted to reduce India as a puppet state in the hands of foreign multilateral institutions and the most industrialised and powerful nations. Poverty for the Indian people is not new; but we had national pride. Now even national pride has been compromised, if not wholly mortgaged. People are dazed and the seriousness of the proposed changes has not been fully grasped, even by the Opposition political parties.

Bureaucratic Clique deciding for the Nation

It is equally unfortunate that in government services, again for the first time, a division has been sought to be introduced between the World Bank loyalists and those who still dare to struggle for India evolving its own policies. Adherence to national pride and self-reliance is at a discount. It is rewarding to defend the multinationals, and to preach free trade and philosophy of *laissez-faire*.

The emergence of a clique in the government system which takes pride in talking and behaving in a manner which belittles and ridicules the traditions evolved during the freedom struggle is shocking. They openly want to give India a break from planning and the philosophy of socialism which in their opinion is the cause of the crushing poverty of the country. One even gets an impression that the leadership is also behaving like a 'prisoner'. How else could one explain that the top leadership shows little concern of the initial consequence which is indicated by phenomenal price rise?

These new policies were announced without any discussion and debate at various levels. Ministers announced drastic policy revisions one after the other. What was evolved after years of discussion, experimentation and experience was altered on the advice or direction of those who are hardly conversant with the realities of our social and economic life and certainly do not identify with the poor of this country.

Discussions at different political and academic fora permit wider understanding and help in crystallising opinions for policy-making. While final decisions at democratic fora are adopted on the strength of numbers, such discussions influence the formulation of majority opinion in the legislature which is bound to remain sensitive to public sentiments and the interest of the people. To introduce major policy changes without going through these established democratic and political norms is a dangerous trend. It creates conditions for the emergence of dictatorial tendencies and cannot remain insulated from the extraneous forces that are determined to blackmail and undermine the decision-making powers.

The manner in which decisions are being taken to open up the Indian economy has left many Indian businessmen in a quandary. Industrialists, big or small, have seldom fought against governments or political parties in power. They choose to remain on the right side of the administration and the establishment. They do not take risks. The same is true of senior civil servants and business executives of public enterprises. In private discussions, a large many conscious, nationalist and professional people express their total disgust with the so-called 'liberalisation package'. How can an Indian entrepreneur accept that India needs imported technology, foreign machines and management to produce breakfast foods, soft drinks, underwears, shirts and *dhotis*, chocolates, potato chips, *papads*, ayurvedic medicines, shoes, face creams, bathroom tiles, 'Superman' and 'Batman' comics and 'Barbie' dolls? The collaborations approved during the eighties for such elite consumption, non-essential, foreign-exchange draining and repetitive collaborations present a sad picture. The new dispensation doesn't even consider the phenomenon worth noting. It is an insult to Indian technical manpower, Indian entrepreneurship in big, medium and small scale sectors. Much worse, however, is the utter disregard for national interest, additional foreign exchange cost and the acceleration of unemployment through these steps.

Media Manipulated

The media has been successfully manipulated by a few top economic policy-makers to project only the government's views and systematically kill the voice of dissent. The way TV news and discussions were conducted during the last few months indicate how the entire mass media was well orchestrated.

In India we had felt proud that academics were encouraged to express themselves freely. Independent public institutions and places of higher learning and research cannot be pushed to become dependent on private funds. These have to be supported through public funds as they help in evolving and analysing public policies. This cannot be left in the hands of private vested interests. It is unfortunate that even academics have been issued veiled threats. Those who express independent opinion are deprived of financial support. It is a matter of utmost concern and any such attempt should be resisted not only by academics but also by all those who have faith in free and fearless discussion on public issues.

In its bid to woo foreign investment the government announced at an international forum that all the Opposition parties have been taken into confidence on the new economic policies, and they supported it. One is shocked when such false claims are made by the topmost political leaders and government functionaries. Why such shortsighted, patently untrue statements are made by persons in charge of the nation's future? Is it not a fact that the major Opposition political parties are against the main thrust of the recently announced policies?

New Economic Policy hits at the Roots of Equity

The most disturbing thing about the New Economic Policy is that it is surreptitiously undermining the Social Contract as embodied in the Constitution. The running theme of Social Equity constitutes the distinguishing and prized characteristic of the Constitution. The Preamble, the Directive Principles, the Fundamental Rights, other special provisions in social and economic spheres and the whole edifice of specific legislative instruments subsequently fashioned—all these have articulated and translated the three basic aspects of this theme:

- the inter-personal equity
- the inter-regional equity
- the inter-social group equity.

A series of safeguards have been developed and built-in to protect and further these concepts. What the New Economic Policy seeks to do is to dilute and even eliminate such safeguards systematically and one by one, in the name of "liberalisation". Witness the whole process of virtual abolition of the MRTP Act which was intended to further the objective of reducing the prevailing concentration of economic power. The emphasis of the New Economic Policy on the "incentives" to be provided to creators of wealth has obvious adverse implications for inter-personal equity. The virtual suspension of the planning process and industrial licensing severely constrains the possibility of bringing about regional equity. The polity is already strained by the tension among different groups because of real or perceived unjust inter-se distribution of power among different social groups. The unthinking pursuit of the New Economic Policy will only aggravate these tensions, thus endangering the very fabric of the Indian polity.

Like "liberalisation", the two other euphemisms which are being bandied about are: "globalisation" and "integration with the world system". In this context, we should not forget the recent events in other parts of the world. The examples of Yugoslavia and the USSR are clear enough on one point. The urge for globalisation and integration was most pressing in the relatively better off parts of those states. The precondition for such "integration with the world system" has in effect proved to be "disintegration" of the erstwhile polity. We can ignore these realities only at our peril. Let us not forget that the Indian polity as we have witnessed in recent decades is rather young. It needs to be nurtured and developed with care and compassion. The gains of global integration are bound to be confined to a few, the relatively better-off social groups and the regions of this polity. The vast hinterland and the large majority will only bear the burden of adjustment. Let us not lightly dismiss the explosive implications of the process.

Eighties, the Beginning of the Crisis

It is no secret that the entire package of liberalisation was evolved and promoted by the World Bank and the IMF. It was not evolved by Indian academics, civil servants or political ideologues. Adoption of the package of policies was insisted upon if India desired to have financial support from multilateral agencies. This package could not have been accepted in the seventies. This was accompanied by a profligacy in spending in the past as if "money did not matter". It is the result of that profligacy over the past few years, more so over the period of seven years, that we came to such a critical pass. In the eighties, thanks to reckless and irresponsible economic policies, the country squandered its foreign exchange reserves, borrowed heavily—internally and externally. In fact, foreign currency loans were used to support current revenue expenditure. The country was brought to bankruptcy and there was a real threat to India becoming a defaulter. All this is a well-known history of the recent past.

The tragedy of Indian political life is that we hesitate to fix responsibilities upon those who brought India to the brink of bankruptcy. It is good to avoid witch-hunting; but we must identify the guilty. And an objective inquiry into the factors that caused the serious balance of payments crisis is imperative. For instance, trade deficits and external debt went hand in hand during the eighties. We, however, had been chasing the mirage of manufactured exports with the help of foreign technology. While the scale of technology imports rose rapidly, employment in the organised private manufacturing actually shrunk. It is high time that a group of independent experts is asked to document and analyse the period of the eighties to draw lessons for the future.

Free Market for Whom?

The so-called liberalisation/restructuring package aims to place more reliance on the 'market'. The stated aim is to introduce competition in the Indian economic system. While the plea for competition sounds attractive let us not forget that it is a forerunner of monopoly. Establishment of monopolies is a natural and logical consequence of competition over time. Free competition has always led to concentration of economic power in a few hands. Greater the concentration in private hands, the more it would work against public interest. It is because of this realisation that even a country like the United States of America has the most powerful anti-trust laws. In India, however, the present government seeks to liquidate even whatever anti-monopoly legislations the country had. The present policy would ultimately lead to the MNCs occupying strategic position in the economy.

Salvation in Foreign Investment

It is being claimed that the new policy would end FERA. What for? Why? To benefit whom? These questions being inconvenient, are not permitted to be raised at public fora, not to speak of political discussion beyond the small clique of 'all knowing' men. The policy-makers on their part are falling to the concerted propaganda and are behaving as if India's salvation lies in attracting the MNCs. Policies are being formulated and expectations built without any reference to the contribution of foreign capital to the Indian economy so far. For instance, promoting India's exports and earning net foreign exchange has never been on the MNCs' agenda. They would do so only if there is no alternative. Leaving them free would have disastrous consequences for the economy.

The government's surrender to the MNC lobbies is further evident in its allowing foreign brand names. This would be a severe blow to the interests of the Indian entrepreneurs and would ensure perpetual MNC control on Indian markets. Let the policy-pushers answer two simple question: *one*, what was the role of foreign investment in the development of Japan and South Korea; and *two*, what is the share of foreign branded good in their exports?

Ironically the champions of free trade prefer to ignore the fact that a substantial part of the international trade amounts to inter-branch transactions within the MNC organisations. With increasing strategic alliances among major MNCs such transactions are bound to increase further in future.

Freeing the Import Trade

In line with the philosophy of abdicating its role in formulating and administering public policy, the government has virtually abolished the import licensing policy in the name of liberalisation. It is forgotten that the licensing instrument has protected the domestic industry from dumping of cheap and obsolete technology. The small scale industry, public sector and even the private sector is alive today only because it has been protected from unfair import competition. These very sectors are threatened by the changes over the last one year.

The removal of actual user condition on OGL imports and the large scale use of Exim Scrips for imports by actual users has put the indigenous sector at a disadvantage vis-a-vis foreign goods. It is believed that the new import policy due on April 1 this year may even open the imports of consumer goods.

Experience shows that import licensing is the only effective way to control imports. The tariff mechanism is not very effective since under-valuation defeats the control. Reforms may be needed. But they should be carried out with national interests necessarily subordinating to foreign interests.

Public versus Private Sector

It is being made out that the debate on public sector has been decisively decided in favour of the private sector. Indications are that but for the resistance of the trade unions and the brakes applied by the foreign lending institutions, the government would have gone ahead faster with its privatisation moves. There should not be any defence for inefficiency or deliberate mismanagement irrespective of whether it was in the public sector or in the private sector. This is possible only if the state retains direct control over the operations of both the sectors. On the contrary, during the eighties the possibility of public policy influencing private sector operations was gradually weakened with the surrender of the monetary policy mechanism.

The arguments in favour of privatisation or increasing reliance on the private sector do not hold good if one also takes an objective look at the performance of large Indian private companies.

Warning Signals

There is a certain kind of reforms which the system can accept, absorb and use for its own betterment. Going beyond those limits may start jarring the system itself. Do we want to give up the vision of a society which is based on democracy, independence and social equity? Globalisation of the system beyond a certain point, one is afraid, may lead to such changes in the price structure and in the institutions and in the corporate industrial structure and the industrial base, where growth may be attained at some distant point of time in future but social equity will be given up forever.

A poor society has to keep on supplying wage goods at a price affordable to the poor sections of the population and jobs to the poor workers. If wage goods are made costly only a fewer and more skilled and high income earning workers may afford them, and its natural consequence will be large scale unemployment and poverty. Already there are clear indications in this direction. One should not ignore the resultant social strain and the capacity of the system to absorb it. Undue haste inspired by alien economic interests may prove disastrous for the stability of the social and political structure.

(Continued on page 34)

Essence of Our Swadeshi Movement

GOVINDACHARYA

The BJP's swadeshi jagaran abhiyan *has evoked a wide variety of reaction. That is why we are publishing the following article by the General Secretary of the BJP and inviting the readers to a discussion on this important subject. A slightly abridged version of this article appeared in* The Sunday Times of India.

—Editor

We were a prosperous nation, our society was stable. From time to time we used to make necessary changes in the mechanisms and instruments for the smooth functioning of the society. We were stable, not static, We had our own modes, mechanisms, checks and balances too for steering the society towards progress.

Even 3000 years ago we had foreign trade. Our ships crossed the oceans. It was not just in the field of yoga or spiritualism that we excelled. We experimented with several types of governing systems in this country when Plato was still writing about governance. Decentralised, self-regulated systems were the modes in the social, political and economic aspects of life too. Our astronomers were the first to learn that it is the earth which revolves around the sun and not vice versa. The achievements of Hindu mathematics, decimal system, chemistry have now been acknowledged by all. In the field of art, dance, music, sculpture and literature we have contributed to the global heritage.

Recent studies have shown that in Chengulpet district where the soil is average and irrigation facilities normal, per hectare yield of paddy equalled the achievements of the Green Revolution era in the northern belts of our country. They neither used big dams for irrigation nor chemical fertilisers and pesticides. Even two centuries back the calorie intake of our poorest of the poor, the landless labourer, was higher than that of a British farmer.

Dharam Pal's works give enough information about the state of education, science and technology in India in the eighteenth century. Firstly, because of affluence we were a bit casual in keeping track of the goings-on in other parts of the world. Our prosperity caught the eye of foreign invaders. They could not hurt or damage much.

◆

THE rise of the East India Company was most ruinous for our country. It started functioning in India from 1615. In 150 years they could carve out an empire. This period coincided with the period of the Industrial Revolution, the Renaissance and the French Revolution. Large scale production was their need. Resources were in abundance. They needed to speed up. And thus came the needed technology of those times, which had a certain type of colonial background. The state patronage, missionary activities also helped them in enslaving the minds of the people, particularly the literates and a section of the political leaders. The British exploited. Our society bled.

Alien thought processes, superstructures, technology, methodology, mechanisms, checks and balances, and value systems were thrust upon us. The situation was like a square peg in a round hole.

When we started rebuilding our economy after attaining independence, our foreign exchange was on the plus side.

We went in for planning our economy. In that we did not assess properly our specialities, our resource potential, our work force. We were enamoured by the glitter and glamour of the West and also by the efforts of the Stalinist state apparatus of the USSR.

So the efforts were on to delink ourselves from our assets and tie ourselves with the processes of those countries. They had special advantages of colonial rule. We had none. But we did not attach much importance to this factor. We neglected the decentralised mode of production. We went with a begging bowl for capital. Rate of growth and percolation theory became the guidelines. We were harbouring a myth that industrialisation meant development. And industries would generate employment, would remove poverty, would raise the standard of living of the masses and would put us on the world map in the position of the leading nation of the East.

But it was not taken into account that situations were drastically different and in a way unique in India's case. For us capital formation was the problem: Our people had the habit of saving more than the West. Working hands were abundant. Agriculture was the base. India represented one-seventh of humanity, but had only four per cent of the world's resources whereas the USA had four per cent of population and 40 per cent of the world's resources. After strenuous effort of nearly four decades the food-grains production reached around 177 million tonnes in 1990-91 compared to 50 million tonnes in 1950-51. The GDP has crossed Rs 200,000 crores today from Rs 42,871 crores in 1951. The per

(Continued on page 33)

An Alternative Economic Programme

Towards Inward-looking, People-centred Development

KAMAL NAYAN KABRA

The characterisation of the crisis of the Indian economy as one of insolvency looming on the horizon is straightaway linked to a sort of predetermined response advocated with high-voltage publicity for resorting to the IMF loan with all the infamous conditionalities. The confidence in India's ability to honour her international commitments reached its nadir and "India was left at the mercy of the foreign creditors and donors". (Jalan, B., 1991; p. 216) For avoiding defaults, financing imports and a number of public projects and programmes, it is considered essential to regain the capacity to borrow internationally as "access to international commercial banks was closed". (Statement of the Finance Minister, *The Times of India*, December 17, 1991; p.6) For this urpose, huge borrowings from the various windows of the IMF and the World Bank are presented as the only option open to India "for restoring confidence and dispelling fears of default". (*Ibid)*

This is an option the acceptance of which implies that shortsighted, market-friendly approaches to 'planning' and policies for continuing on the same path as we have followed so far can be continued and the unwanted baggage of ineffective, cosmetic policy measures can be discarded. It is these measures which are made the scapegoats for all the failures and distortions experienced so far. It is widely admitted that these measures remained, by and large, inoperative or ineffective. However, it is not even asked what was the real nature of the model that operated. Obviously it was the market forces which gnawed at the stated statist model of pursuing equity through growth. Thus the failures of this model are, in effect, the failures of the market model as well. This grim reality is not even reflected upon by the votaries of wholesale marketisation and privatisation.

Avoiding Default: Recipe for Status Quo

It is maintained that India must live up to her unblemished record of honouring international commitments in order to avoid, what is called, the 'national shame' of being branded a defaulting nation. The entire economic crisis syndrome seems to be built around this concern verging on obsession. It seems the authorities do not consider any price too high for averting the 'catastrophe' of default. Thus efforts are on to contract large-scale loans (reportedly amounting to US$ 7 to 8 billion) from various windows of the IMF and the World Bank. A wholesale exercise of rewriting almost every aspect of macro-economic, fiscal, monetary, trade, industrial and other sectoral policies has been undertaken with a view to establish credentials with these multilateral agencies. Even on the political and diplomatic fronts, postures acceptable to the West are being adopted. The concerns arising from foreign trade and payments situation have been permitted to extend to every sphere of the economy in the name of bringing about the so-called structural adjustment, macro-economic balance and long-term policy reforms.

The author, a noted economist, is a Professor at the Indian Institute of Public Administration, New Delhi. This article is based on a chapter of his book, entitled Economic Crisis in India: An Alternative Perspective, *which is coming out shortly.*

This concern and orientation seems to arise from the realisation that we have to continue during the foreseeable future with the policy of meeting our investment-savings gap, trade deficit and current account deficit by means of a mix of commercial and concessional borrowing from abroad. It also implies that we are not visualising any important changes in the relative priorities currently accorded to various socio-economic objectives. This means the government intends to continue its almost single-minded pursuit of the primary objective of economic growth through capital accumulation, technological upgradation, international competitiveness and greater cost-consciousness. Other objectives are sought to be achieved as secondary consequences of the growth-process. For continuing with the pursuit of 'more of the same' continued use of borrowed funds is essential. An adjustment of policy instrument to this end is what the 'policy reform' and 'structural adjustment' seem to be concerned with, resulting in tightening of the belt for the masses.

Thus the 'new' policy design seeks to change only the *mix of instruments* and not the objectives and their *inter se* priority. For this change of instruments with greater 'openness', marketisation and external orientation, supported in the name of a very vague concept called 'globalisation' (does it mean that the Indian economy has to be integrated with a handful of developed countries having one-fifth of the world population but controlling 85 per cent of the world's income?), the imperative of even larger capital inflow from the rest of the world, particularly the early industrialised Western countries, the multilateral agencies, and the MNCs, acquires added urgency. If this perspective on objectives, their content, prioritisation and temporal sequence is accepted, enlarged inflows of foreign capital in various forms are an unavoidable necessity. This necessity underlines the need for maintaining our creditworthiness, which requires further large-scale borrowing with all the attendant terms and conditions.

Even with this perspective, it would have been prudent not to shout from the housetops that we have no option but to take recourse to the IMF-World Bank borrowing and not to give in to speculators in the foreign exchange markets, or to adopt such blatantly panicky measures as phsyical transfer and sale of monetary gold. Careful economic diplomacy does help protect the national interest. But with out-Harroding Harrods keen on huge external loans (a roundabout pursuit of the much-derided soft-option as far as the better-off sections are concerned and a dubious method of avoiding default by repaying with freshly borrowed amounts from the same old set of lenders) and its use as a pretext for forcing a new set of policy instruments and sharpened market-friendly approach on the country, abundant caution in such delicate matters easily becomes a casualty.

Need for a Different Set of Objectives

Thus it must be recognised that any quest for an alternative policy-frame is possible only when a different goal-structure, with a different order of priorities and values, taking the growth of output as a means rather than an ultimate desideratum and self-justifying end, and going in for direct and primary pursuit of social equity and self-reliance, is adopted. However, even with the growth of the GDP as the basic objective, it is possible to downgrade the role of external finance and borrowing and give greater role to domestic liberalisation and domestic resource mobilisation.

But this latter option is not qualitatively different from the one the authorities seem to have adopted. We do not want to go into this variant with greater role to domestic capital, both public and private, more sincere attempts to promote relative price stability, lower capital-intensity and more employment opportunities. These can be achieved to a limited extent within the confines of the prevalent policy regime with some modifications towards greater role for medium and small, dispersed and decentralised industrial enterprises and concomitant changes in the policy of providing infrastructural facilities, and fiscal, monetary and trade polices, de-bureaucratisation and de-politicking with the economic administration. This would amount to a recharging and cleaning up of the so-called Nehru model.

It is possible to regard a switch to this kind of non-monopoly, relatively widely-based model with reduced but nonetheless important role for the external sector as a transitional stage for a really genuine people-centred development. The latter would need both a greatly modified market and public sector and decentralised, participative planning and a qualitatively different interaction with the rest of the world. The people-centred development would not involve autarky: it would involve *selective, planned linking with the rest of the world,* particularly with the South and not just, or primarily, with the North. Not only trade flows in goods and services but also with respect to financial flows—but with increasing degree of genuine reciprocity—would be needed.

A strong inward-orientation, based on sizeable expansion of the home market in which strong symbiotic spread effects galvanise each sector, is essential to provide the basis for selective, mutually-beneficial linking based on non-hegemonic reciprocity in international economic relations. This would involve a total rejection of the Dunkel Draft proposals for the GATT negotiations which have surprisingly been endorsed by the apex organisations of India's trade and industry!

The Context

Let us try to outline the context of the alternative we intend to project. It is not based on any emotional or other kind of attachment to the existing policy regime which is a highly distorted version of the intentions expressed in many of our Plan documents. We do not uphold or support the inherited policy regime, particularly its excessive centralisation, bureaucratic and political discretionary approach leading to massive and systemic corruption, its ideological commitment to the primacy of growth, fond hopes regarding the relative autonomy and meutrality of the state, regressive pattern of financing, its top-down character, neglect of the actual micro behaviour pattern of trade and industry, neglect of the motivation and behaviour of the external economic agents (private, governmental and multilateral), reflecting unilaterally their narrow interests, despite the posture of enlightened self-interest as partners in progress, etc. Thus non-acceptance of the policy perspective unfolded by the present government should not be taken to imply any endorsement of the *status quo* in which lies the genesis of the present crisis.

On the contrary, the alternative expounded is based on a different vision of society. That vision is not timid and myopic, submitting to the presently entrenched forces because they rule the roost and getting overawed by the prospects of a long struggle needed for its fructification. It is based on the perception that people themselves have to be the agents for changing their destiny, making use of all the institutions and possibilities available. After all, the state and the market both are incomplete organisations for development and their complementary role is necessary to involve and energise many other institutions. What we are presenting is no complete, *a priori* determined alternative. It is only an outline of some alternative policy proposals which can be combined together in many different ways and can certainly involve proposals we have not been able to think of and modifications and improvements of those discussed here below.

Short-Run Adjustments

No alternative can be implemented without a short-term immediate programme which can rid the economy of a number of distortions, at least partially. A number of such short-run steps are common between various alternative policy-paths including the one which is being implemented by the government. However, the content of such measures of macro-economic adjustment can be quite different. Some important elements of this short-term package are:

(1) Drastic cut in the current wasteful public expenditure. This cut should not cover long-run, productive capital and current expenditure like on power, transport, other infrastructure, social consumption for the weaker sections (though wasteful methods of construction and delivery must be changed and closer-targetting introduced in social spending). Cut in the Central public expenditure should involve establishment costs reducing huge expenses on administration which is full of pomp, show and extravaganza inconsistent with the country's needs, capacity and ethos. These administrative expenses should be gradually brought down to extremely austere levels. An agency with adequate power should apply the axe with a mandate to effect at least a 25 per cent cut in Central spending without reducing long-term capital formation. Similar exercises have to be undertaken at the level of the State Governments and Central and State public enterprises.

(2) Similar austerity has to be enforced on the corporate sector by sutiable changes in corporate taxation and company law. Not only does this sector account for a large part of wasteful consumption which leads to the soaring of industrial costs, but it results in unaccounted private gains at public expense and set up a snowballing process of consumerism and cost-push inflation.

(3) Compression of imports, particularly of the inputs going into luxury goods, as also initiation of steps to reduce malpractices which increase foreign exchange outgo and leakages.

(4) Following from the previous point, there should be a reduction in the production of goods with heavy import content, like Maruti cars, white goods, etc. for a period of two years. These goods should largely be sold in foreign markets during this period. Limited domestic sale should attract heavy customs and import duties while their exports should receive incentives. It is ridiculous that Rs 800 crores should be advanced as credits at 12.5 per cent interest for buying frivolities like personal passanger cars or that new Boeing aircrafts should be purchased for Rs 2000 crores—a sum more than the total consumer subsidy (as distinct from food subsidy) on cereals under the PDS. Defence spending should come under tight scrutiny.

(5) Fresh external borrowing should be based on strict calculation that each loan is self-liquidating, that is, creates capacity to earn or save foreign exchange needed for interest payment and amortisation. No external borrowing to finance rupee projects or rupee component of projects/programmes should be undertaken. A small loan from the IMF under simpler set of terms may be availed of. Mobilisation of NRI resources, gold holdings and plugging of avenues of illegal flow of funds with a view to reduce external indebtedness should be attempted.

(6) Simplification of direct tax laws, by removing all kinds of veiled concessions and deductions so that the formal and effective rates of taxes tend to become similar. Strict enforcement of these laws, imposing criminal liability for wilful breach, is also called for. The contribution of direct taxes must be increased and external borrowing and deficit financing curbed to modest levels consistent with price stability.

Such a package should be pursued vigorously in order ot correct the fiscal imbalances and external insolvency crisis. Restructuring of public enterprises and their financial management, their pruning by making the state move out of terminally sick units in low priority areas (which means subsidy to the better-off sections using the products of such enterprises), greater autonomy to professional management for servicing the objectives for which the PEs have been set up, particularly by eschewing unaccountable meddling in their affairs by politicians and bureaucrats, are among the steps which brook no delay.

This is not an exhaustive list. But the basic point of such exercises is to correct the wrong practices and distortions which have piled up during the last four decades. These steps can provide a basis for effective socio-economic planning for development which is responsive to our basic long-term problems.

Why is our Home Market Narow and Small?

One basic factor responsible for the present crisis, whose intensity has increased during the 1980s but has been present all along, has been the narrowness of the Indian home market.

The limited size of the Indian doemstic market is a direct reflection of widespred absolute poverty. It is true that, thanks to sustained increase in the GDP, the overall size of the Indian market is much larger today than it was on the morrow of independence. But in terms of the average purchasing power per person (reflected in the per capita private final consumption expenditure), the home market is considerably small. In 1988-89, the per capita private final consumption expenditure was Rs 3250 only at current prices thus giving a daily purchasing power of barely Rs 8.90 (at current prices) to an average Indian. In 1980-81, the comparable figure was about Rs 4. It is apparent that, even after accounting for distributional skewedness, there is little purchasing power to sustain sizeable industrial growth, particularly because industrial growth itself generated limited spread effects owing to its capital and import-intensity, concentrated ownership and control, and generation of a large unaccounted economy.

Relative poverty also contributes to a small home makret, particularly for simple, low-priced goods. Such goods can be produced by our relatively abundant local physical and human resources with small increases in investment in each case and marginal improvements in traditional technologies. The limitation of the size of effective demand follows from the highly skewed distribution of productive assests, skills, socio-economic power and access to public goods. The resulting distribution of income concentrated in the hands of the high income groups creates a pattern of demand requiring highly capital-intensive, import-dependent and energy-intensive commodities. The persistence of cultural colonialism and the assoiated valub system also contribute to a pattern of demand which is neither rooted in our culture nor based on local needs and indigenous resources.

It has been suggested time and again, and with some amount of cynicism, that even with acute absolute and relative poverty, India has a vast market consisting of the middle and upper income groups. This market consists of, say, the top 10 per cent of the Indian population. This number is considered in absolute and comparative terms large enough to sustain modern industrialisation, particularly since it controls a large chunk of national income and wealth. It is indeed true that the bulk of industrial growth of India is based on the purchasing power concentrated in the hands of this minority. This factor is a part of the problem and cannot form part of the solution. Large numbers of landless agricultural workers and the ineffectively employed people are able to buy little of the products of our industry. It has been seen that whenever we have been fortunate enough to reap a succession of two or three good harvests, the unplanned inventories of procured wheat and rice have accumulated to costly and embarassingly high levels. This derives in part from a certain degree of inelasticity in the lifting of cereals from the public distribution system. Our abysmally low average income and expenditure levels, with observed skewedness, too indicate that goods of industrial origin can hardly enter the consumption basket of large sections of society to a reckonable extent.

As a result our industrial growth acquires an enclave character and becomes the basis for social dualism. Vast numbers of the working poor who flock to urban areas as a result of a combination of push and pull factors fail to find employment in these enclave industries. They can become neither industrial workers nor consumers of industrial goods, except marginally through the mechanism of the urban informal sector.

The question is: how far can such enclave industrialisation with its involutionary processes go on without hitting the limits of the market? A detailed and thorough answer would require a lot of disaggregated analysis of the consumption data, demand pattern and marketing problems faced by different industries for products in different price ranges.

However, some qualitative, historical facts are quite indicative. Modern industrialisation has a history of over a hundred and forty years in India, of which the last four post-independence decades were in the framework of public investment based national planning. Despite impressive growth, diversification, completion of the production cycle in many areas, a vigorous entrepreneurial class, development of infrastructure and financial services, plentiful availability of raw materials, excess supply of skilled labour and technical-managerial personnel, organised industry remains an enclave with less than eight million employees, who alongwith other non-organised segments of industry, contribute a little over a quarter of the GDP. About 45 per cent of the secondary sector's main workers are employed in rural industries, about a half of them in household industries. Even in urban industries, over 15 per cent work in the household sector. It is clear that modern industries remain a restricted phenomenon.

It is this inability of industry to reach a commanding position which has made the service sector the leading sector of the economy. It can also be seen that agriculture has come to demand a number of inputs like fertilisers, pesticides, gunny bags, implements, electric machinery, etc. But despite all these factors, industry impacts the lives of only a minority of Indians and has not been able to enlarge its compass.

Then, many of our industries producing modern gadgets or their inputs, are not able to reap the economies of scale. Part of the reason may probably be the licensing policies. But whenever market forces make it profitable, Indian business has been able to bypass or defeat the licensing policies. Thus a major factor preventing the industry from realising the economies of scale may well be the limited size of the domestic market. The slump that entertainment electronics, automobiles (which is now facing a buyer's market after a long period of sellers' market), are facing is perhaps an indicator of the market limits which these industries have encountered so soon.

Thus one can see that use of the processes of market-deepening as the foundation for sustained industrial growth has a definite impact on limiting the rate and distorting the pattern of industrialisation and limiting its spread effects. *It cannot industrialise the entire economy, involve the bulk of the population and make for an integrated, homogenised and humanised society.* It spawns dualism, increases social and economic distances and disparities. The costs of these disparities in the form of social tensions, threat to nation-state, social harmony and orderly society are too heavy to be ignored. Thus the naive belief that one can ignore the majority of Indians and industrialise India seems to rest on a misreading of history, current experience and processes of economic change. The less one says about the values behind this mimetic view of industrial growth the better.

Limited efforts towards redistributive policies like land reforms, formally progressive taxtion, provision of basic needs, etc., could not make any tangible impact on the distribution of income or creation of a vibrant home market which embodies the needs and wants of the general masses clothed with effective purchasing power. It is true that during the 1970s anti-absolute poverty programmes were initiated in order to activise through direct public outlays the 'pull-up' effects to make up for the non-realised 'trickle-down' effects. However, the essential nature of these programmes was to provide a modicum of purchasing power which was thinly spread over a large number of people and areas by means of, at best, semi-productive programmes. These highly visible programmes were incapable of creating through their own productive contribution the wherewithal for the sustenance and enlargement of these programmes with a view to cover the entire mass of the indigent people over a foreseeable future and give them a human status and standard of living.

This weakness was further accentuated by large-scale leakages owing to the defects of the delivery system. This created a number of bureaucratic and political intermediaries at the grassroot level who thrived on the leakages from these poverty-alleviation programmes. This group of political and bureaucratic operators associated with the anti-poverty programme provide the political underlings and muscle power for mobilising political support for the ruling formations. The shortcomings of these programmes also intensify because these are neither integrated within a macro-economic framework nor do they form parts of integrated micro-level plans.

However, the absolute financial outlays on these schemes appear huge and attractive and become handy tools for mobilising popular support in our competitive pluralistic polity. It is also true that these programmes do, to some extent, increase the purchasing power in the rural areas and, to some extent, even in the hands of the relatively poor. However, the methods of financing the rising public outlays during this period tended to be inflationary and imposed a cut on the living standards of the poor masses. The resulting financial stringency slowed down the growth of social consumption directed towards the poor. The semi-productive nature and leakages from these programmes also contributed to the inflationary pressures.

Hence, the net positive impact could have been lower than indicated by the size of financial outlays or person days or work reportedly created.

The net result of such programmes was to create a dependency syndrome among the poor people. They tended to make the state paternalistic. They were used to build the 'image' of political personalities. Such programmes tend to give the impression of concern for the interests of the poor. However, they are incapable of bringing about among the poor an independent capacity to overcome poverty and backwardness. They are also incapable of ensuring collective mass empowerment which is the precondition for genuine development. Such programmes cannot improve the share of the poorer sections in the distribution of productive assets or meet their essential basic minimum needs, or improve their access to public goods or expand the home market in order to provide the foundations for indigenous, sustained, inward-looking development.

However, these programmes are great political assets in the sense the high absolute amounts spent on them can be flaunted as testimonials of the government's commitment to the poor. The relative size of these programmes is not large enough to overshadow the basic well-springs of the demand for industrial goods originating from the market-determined primary distribution of income and wealth. Thus the industrial growth has to remain riveted to a small segment of Indian society where through the open market and the black economy operations significant market-deepening is taking place. This is also sought to be supplemented by an outward-looking pursuit of export markets. Thus these token anti-poverty programmes cannot contribute to the realisation of a society which is in accordance with our democratic and humanitarian values leading to people-centered development based on the use of the potential made possible by the scientific and technological revolution.

Basis for Inward-looking Development: Expanding the Home Market, Social Security for the Poor

Is there a way out? The very factors of heavy concentration of land ownership and control which underline the need for a quick and democratic land reforms programme also underline the political difficulties in successfully accomplishing these programmes of land reforms. The manner in which concentration of assets in the industrial and service sector has increased and provides effective resistance to redistributive measures like taxation (taking the form of 'tax revolt' as manifested in the burgeoning black economy) suggests that the conventional instruments for fostering equity are too slow and modest and teethless to be able to make any worthwhile impact, particularly in the context of the severity of the initial maldistribution found in our midst.

An alternative could perhaps emerge if the limitations of the existing anti-poverty programmes are realised and corrected. If these programmes are to become viable, provide a basis for sustained development, improve the ecological balance, do not become a permanent burden on the exchequer and do not make people dependent on these paternalistic programmes, it is essential that some qualitative changes are introduced in these programmes. In such an eventuality these programmes would not remain fire-fighting operations for containing social tensions, or for reducing the embarassment of mounting unsold stocks of food in the midst of under-employed, semi-starved millions.

These programmes would have to be endowed with positive thrust and made a basis for collective self-empowerment of the poor masses. This can come about if a minimum level of participation in economic activities and sharing in the national cake can be introduced by means of a massive enlargement and qualitative improvement of the employment generation and asset distribution programme commensurate with the size and nature of our problem of ineffective unemployment. Such a programme and policy will have to be based on the premise that a minimum human standard of living and active participation for every ablebodied adult is the first draft on our national resources with the highest priority and without it development efforts cannot make sense. And we have the capacity to do it. In a real and wider sense, this is a productive programme par excellence.

It would mean the introduction of *a nationwide employment guarantee programme* which ensures that every willing and healthy person is given an opportunity to participate in economic activities, activities which are not mere digging-holes-and-filling-them-up-again variety of works but are capable of generating assets, improving skills, providing essential public services like health, education, nutrition, controlled price distribution of essential goods, environmental improvement, prevention of pollution, etc.

It means such a nationwide programme has to become the bedrock of local level planning and public intervention. The scale of such programmes has to be such that every willing adult is provided work on minimum living wages in the vicinity of his/her habitat, say within the daily commutable distance of 15-20 kilometres on various public or semi-public works or works through people's own voluntary organisations. The variety of activities which can be taken up is really staggering: agriculture, land improvement, irrigation, watershed management, soil upgradation, contour-bunding, social forestry, dairy farming, fishery, poultry, elementary education, running of FP shops, production of bio-fertilisers based on agricultural, animal and forest wastes and its marketing, flood prevention, building roads, schools, community centres, public conveniences, tapping of non-conventional renewable sources of energy, training, etc.

Programmes of rural industrialisation based on local resources, upgradation of conventional skills and production for the local and specialised markets can get a real boost through these programmes because the purchasing power injected through these programmes can provide the most essential and presently seriously missing element, that is, the market. If something like Rs 15,000 crores per annum are devoted to these programmes of employment guarantee, at least Rs 10,000 crores worth of demand for industrial goods would be generated. If it is raised to Rs 20,000 crores in order to provide complementary inputs to labour, the market expansion, direct and through multiplier effect, would be so much more. It would create waves of secondary and subsequent employment, capital accumulation, technological improvements and improve the standard of living of the masses in a composite, inter-related manner. Over time such activities and the purchasing power injected through them, the training in skills and micro enterprises and the support provided by improved level of social consumption can lead to a series of subsidiary socio-economic and institutional ripple effects. Thus, in course of time, the people's own initiative and resources can provide an increasing amount of work and income-earning opportunities, reducing the need for state-supported programmes. This programme would provide the most effective condition for the enforcement of minimum wages and gradually change the character of our labour market. A beginnning of the process of real empowerment of the people.

If such activities are confined to standard unskilled and semi-skilled activities with a planned gradual improvement of productivity and the skills through gradually increasing use of tools, equipments, energy and raw-materials, there is little doubt that this programme will provide a sound basis for inward-loooking, democratic, people-centred development. It would not amount to chasing the mirage of modernisation, high-tech and international competitiveness without first providing to the citizens at large an opportunity to overcome their total non-participation, pauperisation and marginalisation. Recent estimates by the Planning Commission have shown that an annual amount in the region of Rs 15,000 crores would be sufficient to make a beginning of the National Employment Guarantee Programme with a provision for unemployment allowance to those who cannot be helped through such programmes. Taking the recent population trends into account and with a view to strengthen the productive content and multiplier affect of this programme, it may be better to assume that something like Rs 20,000 crores may be required for implementing these programmes through various grassroot level organisations under the framework of systematic micro-level planning. This programme would increase the viability of the people and provide them a stable means of livelihood even without having access to land. While the empowerment through the non-landlords' dependent employment may create informal pressures for the implementation of land reforms, the pattern of demand arising from such widely distributed incomes may provide a basis for inward-looking, non-mimetic industrial growth. It would not strain our balance of payments.

With improved non-land based viability, the poor may be better placed to resist the informal pressure of the landlords which prevents the implementation of land reform measures. This generalised social security would also become a basis for the enforcement of the minimum wage laws in the agricultural and non-agricultural rural activities. This programme would create widely distributed effective demand on the basis of which rural and small town household, informal and small industries can thrive without the excessive and perpetual dependence on schemes of subsidies or preferential discrimination. There is little doubt that such a programme will change the complexion of India's development strategy and efforts and would amount to an effective and realistic beginning of people-centred, democratic development.

A programme of this kind is the fundamental basis for putting an end to our elitist orientation at home and the dependency mentality annd unhealthy external orientation. It is also a programme around which a multiplicity of other programmes for health, education, controlled fair price distribution of essential goods for the balanced development of society and its individual members can be initiated. It is the most effective, most desirable and entirely feasible alternative which can be initiated. We have financial, physical, managerial and organisational resources for it. We need to overcome our conventional mindsets and subserve the most basic interests, that is, the interests of the poorest of the poor. ■

MARCHING AHEAD FOR PROSPERITY TO FARMERS THROUGH COOPERATION

The National Cooperative Marketing Federation of India Ltd (NAFED) is the apex organisation of Marketing Cooperatives comprising 29 State Federations and nearly 6000 Primary Societies in India.

NAFED undertakes marketing of primary and processed agricultural commodities such as oilseeds, cotton, pulses, tribal produce, fresh and processed fruits and vegetables, onion, potato, poultry and agricultural inputs etc. in India and abroad, with its network of four Regional Offices and 32 branches located in the Country.

NAFED is the Nodal Agency designated by the Government of India for undertaking price support operations in 16 commodities and also market intervention operations in some commodities.

Apart from a whole lot of other activities NAFED also

●

OPERATES FRUITS AND VEGETABLES PROCESSING FACTORIES AT DELHI, VELLORE AND JABLI. ALSO RUNS COLD STORAGE, GODOWNS, AND OIL PROCESSING UNITS IN THE COUNTRY.

●

UNDERTAKES MANUFACTURING AND DISTRIBUTION OF AGRICULTURAL INPUTS SUCH AS TRACTORS, AGRICULTURAL IMPLEMENTS, BIOFERTILIZERS ETC;

Communism at the Crossroads

MODHUMITA MOJUMDAR

At its recent party congress in Madras, the CPI-M leadership, for the first time since it broke away from the undivided Communist Party of India some 27 years ago, had its wisdom questioned by the rank and file. It was only by promising to keep an open mind on the disturbing trends in the world communist movement, at least for the time being, that the differences could be papered over. Now, a committee will be set up to study and analyse the developments that started with Gorbachev's *perestroika* and *glasnost,* and led to the collapse of the USSR itself.

Though some individual delegates did use the choicest of Marxist rhetoric to call Mikhail Gorbachev names, this was not considered enough of a solution by the rest. For the first time, the wisened old leaders of this Stalinist party admitted that they did not have pat solutions and pat responses to the greatest-ever crisis facing the global future of communism itself, and not just one brand of communism questioning the genuineness of another brand—as happened on all previous occasions that marked the turninig points in communist thought and praxis, starting with Trotsky's Fourth International.

The question, at this point of time, is whether the CPI-M (or, for that matter, the Indian Communists in general whether they belong to the CPI, the CPI-M or any of the M-L groups, not to speak of the miniscule, pro-Congress-I coterie that Dange came to lead in his later years) has developed the tools over the years which would enable it to examine where and how things have gone wrong, whether or not it is communism itself that has soured or merely a particular, aberrant manifestation of it.

The problem with the Indian Communists is that they have time and again sacrificed the national outlook in order to be able to keep their extra-territorial loyalties intact—all in the name of the world communist movement and a global perspective. The British Raj found in the Indian Communists an ally when the Soviet Union joined Britain and her allies in the battle with Germany during the Second World War. For, what was to the rest of India and her nationalist leaders a unique opportunity to dislodge the British from their deadly grip on India, became a "People's War" to them the moment Stalin's Red Army was directed to fight Hitler's hordes. Subhas Bose, once a friend, became an enemy of the people. It was long after the event that the CPI owned its "mistake" in this matter and the Communists of India started paying lip service to the memory of Bose—though whether this was out of any genuine regard for Netaji or in shrewd realisation that, but for this, they will make no political headway in West Bengal, is a matter that is debatable. The green signal for this came from Moscow when, although it did not have any special word of commendation for Bose, it went to the extent of "rehabilitating" Gandhi—something for which not only the Indian Communists, but the Congress Government of India too, was truly grateful.

When Mao's China developed differences with the USSR and provided the second pole to world communism, the Indian Communists were compelled to choose between Moscow and Beijing—leading to the first split in the CPI. Thereafter followed a strange period during which the CPI came increasingly close to the Congress. The CPI-M and the other Left parties also found merit worth supporting in Indira Gandhi when she nationalised the banks and abolished the privy purses of princely titles, but they soon realised that these were Pyrrhic victories notwithstanding the brave, new socialistic rhetoric and the amendment in the Constitution incorporating socialism as one of the cherished goals. With the ultra-Left breaking away from the CPI-M and raising battle cries in the name of Mao, the CPI-M went through a period when it fought both the "Right Communists" and the "Left extremists", although like the CPI, it too found merit in the Government of India's "progressive" foreign policy. Indeed, the CPI was perhaps more consistently Marxian, as it, by and large, also supported the Congress Government's domestic policies—the axiom being that the foreign and domestic policies of any government together formed a whole; and to praise one, while denigrating the other was like saying that the egg was good in parts.

However, it was this ideological "consistency" on the part of the CPI under Dange that brought it to discredit during the notorious Emergency that was clamped down on the country in 1975 by an Indira Gandhi fighting to save her seat with her back to the wall. This was partly due to pressure from the Soviet Union and partly because it fitted in with Dange's own temperament. The post-Emergency period therefore saw the CPI admitting its "mistake" once again in having supported the domestic policy of Indira Gandhi, though it was left only to the M-L groups to be critical of New Delhi's foreign policy in which both the major Communist Parties that counted found much merit. This was simply because India had virtually reduced itself to a satellite of the Soviet Union; a satellite that had its uses, given the enormous goodwill it had in the developing world—particularly in the context of the non-aligned movement. Indeed, it was largely because of New Delhi that the NAM took the most peculiar stance that one of the superpowers—namely, the USSR—was a natural ally of the non-aligned nations! It was presumably this stance that endeared the GOI to the bulk of Indian Communists who considered the 1971 Indo-USSR Friendship Treaty (which was in reality a thinly veiled defence treaty) as yet another feather in their cap.

Neither the CPI nor the CPI-M (nor, for that matter, the M-L groups) had, however, taken much note of the developments in communist thought, analysis and praxis as it had developed among the Communists of the USA and Western Europe in the sixties and seventies. Some of the most scathing criticisms of the USSR were penned in this period by Herbert Marcuse who, far from being a Communist-baiter, was critical of Moscow because of the hiatus between what it preached and what it practised. It was not communist ideology that Marcuse criticised, but the totalitarian, repressive regime with its many aberrations that Moscow and its satellite nations tried to palm off as the genuine stuff. In addition to this, revulsion for the Soviet system of the state manipulating the people's lives and thoughts had at last permeated into the non-ruling Communist Parties of Europe who valued the freedom that parliamentary democracies gave to citizens of every political persuasion, including the Communists, and so no merit in the Soviet (or the Chinese) model. Indeed, in a bid to distance themselves from the kind of regimes that flourished in the Communist Parties of Italy, Spain, France and so on countries under the control of the Communist Parties, had denounced the ideal of "dictatorship of the proletariat" and the very ideology of Marxism-Leninism. Yet, although they themselves derived their freedom to preach their own brand of politics from the freedom of thought and speech guaranteed to them in a parliamentary democracy, the Indian Communists obstinately refused to have their eyes opened by men like Marcuse and Berlinguer.

◆

IN addition to the terror tactics and domination over the people with the help of secret police, the so-called socialist states had failed their peoples by not being able to provide an acceptable alternative to the dazzling consumer culture of the capitalist countries that beckoned them from across the iron curtains which had been set up around them by their Communist masters. Indeed, Mao had tried to push through a Cultural Revolution in China—but that, too, had ended in a fiasco. In the post-Mao period, China had coveted investment from the capitalist countries, having opened up its economic stops for the purpose—but denied the people the freedom that goes with it. The Tiananmen Square massacre revealed how Man, even in China, does not live by Chou-mien alone. But the Indian Communists had no word of condemnation for this barbaric deed against their people by the Chinese rulers who are notionally their representatives. Their response to what Beijing does today and what Moscow sought to do yesterday, under Gorbachev, clearly reveals that the Indian Communists are not so much opposed to *perestroika* (economic reform) in a Communist-ruled state as *glasnost* (openness). But, above all, their minds are set in a groove from which they can make only programmed responses. It is such mechanical responses that they permit their rank and file.

The committee that the CPI-M seeks to set up to examine issues is, therefore, unlikely to find for communism a new relevance—suited to the new times and new aspirations of the people. And yet, India with its rich and variegated tradition, with tolerance being its hallmark, could have enriched communism in more ways than one, giving it a human face. Perhaps the call for a Fifth International should go out from India. But then, at the Madras congress the CPI-M did not even bother to invite delegates from a majority of the fraternal parties which it considers as untouchables because of their commitment to openness at every level of party functioning and government. Will it be able to provide leadership to the world at the present juncture, when it is disillusioned sufficiently with communism to want to throw away the baby with the bathwater? ■

Niyogi's Murder and Trade Union Movement Today

MUKUL

The murder of Shankar Guha Niyogi, the famous trade union leader of the Chattisgarh region in Madhya Pradesh, has a deep significance for the trade union movement in this country. Niyogi has been murdered at a time when the aggressive reach of the new economic policies under the dictates of the World Bank-IMF are becoming more widespread and anti-worker. With their existing institutional defences under attack, the industrial working people today face the prospect of being sidelined into effectively unregulated industrial estates. Niyogi was murdered when thousands of contract workers in the Bhilai industrial township were engaged in a long struggle under his leadership. Though this ongoing struggle raised basic economic demands, like minimum wages, overtime, PF, permanency, etc. of the unorganised working people, in that process it was, however, also throwing a challenge to the existing industrial policies, the socio-political equilibrium of the ruling class and for the BJP-led State Government.

Niyogi has been murdered when the new economic policies of the Congress-led Central Government are being actively supported by the BJP-led State Government, and that is why the Chattisgarh region of MP is again on the brink of a new phase of heavy industrialist-criminal-bureaucracy conspiracy for which a CBI inquiry needs to be instituted. In the light of it, trade unions must take a closer look at the new economic policy and the challenges to trade union politics in contemporary India.

I

THE economic crisis is not something new in the history of independent India, but this time alongwith it, a general crisis has also developed in various facets of society, a crisis that manifests itself in the constant shrinking of the sphere of secular, progressive ideology vis-a-vis the rise and development of communal, consumerist and Rightist ideology; the break-up of the so-called socialist system, and a sharpening of the inner contradictions in the policies and ideology of the Leftist forces in the country.

The most characteristic feature of today's crisis is the combination of a cyclic economic crisis with dangerous structural and policy adjustments under the overall dominance of the World Bank, the IMF and the developed capitalist countries. And along with it a deep ideological and political crisis. This reflects the ideological bankruptcy of the ruling class today as it believes that the only hope to overcome the present economic crisis lies in the imported colonial designs of the international financial institutions. And the political crisis manifests itself not only in the 'non-governance' of Punjab, Assam, Jammu-Kashmir and the rising terrorist-separatist activities in the country but also in the political instability and the failure of development policies in being able to check the various socio-economic problems of the country.

The various contradictions inherent in the new economic policy package are bound to accelerate the process of government repression, social turmoil and unrest. The free market capitalist economy, with the close interrelationship of international capitalist order, can increase the industrial production and market potential, but this so-called progress cannot halt the process of continuous erosion in the living and working conditions of the majority of the working class people. The World Bank-IMF package may somehow increase the shrinking foreign exchange reserves of the country, but in this very process, both ideologically and economically, national sovereignty is bound to get undermined and fettered. Also, the role of the various democratic institutions in the country, like Parliament, judiciary, trade unions, democratic rights organisations, will be constantly curtailed. An example of this is the fact that the Finance Minister, Dr Manmohan Singh, ignores the existing national platforms and announces the new government policies regarding the public sector at the World Bank-IMF meet in Bangkok. Or the Indian Ambassador to the USA defies the Indian Government's policy on the GATT negotiations and Intellectual Property Rights and dares to openly campaign in support of the US standpoint.

This is the background of the murder of Shanker Guha Niyogi. The actual murderers could be some professional criminals hired by industrialists, or it could be a conspiracy of the local administration-police-contractor combine. But had it not been for the offensive of the new economic policies in the country, and a particular State Government led by the BJP which is openly repressive against the workers, peasants, tribals, environmentalists, youth movements, nobody would have dared to conspire and murder a trade union leader in the course of an ongoing and protracted labour movement.

For the last 15 years, Niyogi had been very much active in a militant and fast growing workers' movement in the Chattisgarh region. Various State Governments, whether led by the Janata Dal, the Congress or the BJP, had been equally repressive and hostile to the workers' movements, especially the rising Chattisgarh Mukti Morcha in MP. But in spite of all this, the physical existence of the trade union leader was never threatened in such a manner. The ghastly murder of Niyogi is very painful and shocking for all the democratic forces in the country, not only because he was a very militant and dynamic trade union leader who tried hard to break the traditional boundaries of trade union politics in India today, but also because his murder reveals the cruel reality that our industrial and economic development policies have reached a stage where even the existence of basic trade union politics and its leadership is unacceptable.

In fact the murders of Safdar Hashmi and Niyogi have a common context and continuity, which is important to note: Safdar was primarily a cultural activist but alongwith it, he was also a member of the CPM and Niyogi was an unorthodox trade unionist having a political proximity with the People's War Group and the IPF. But both became the victim of the same cruel forces of politics and economy. When Safdar Hashmi and his Jan Natya Manch were performing a street play in the Sahibabad industrial complex near Delhi, in support of the industrial workers' movement for the lawful revision of minimum wages, he alongwith other members of his group was fatally assaulted by the local Congress-I leaders. This was the period of the new economic policies of the Rajiv Gandhi era which by that time were thoroughly exposed and defeated due to their inherent weaknesses. The bankruptcy and increasing isolation of the ruling class provoked its local workers. Now again under the leadership of P.V. Narasimha Rao and Manmohan Singh the new economic policies are acquiring a new offensive in the country. And in this environment, a man who was leading a long battle of contract labourers for some minimum trade union demands in the Bhilai industrial complex was killed.

The ruling class often expresses identical reactions in defeat and victory. The economic policies of Rajiv Gandhi and P.V. Narasimha Rao here become identical in their content and impact. And in this process, the fate of Safdar and Niyogi becomes the same. This is the situation that has emerged on the socio-economic plane of the country today. And if this new situation cannot be challenged by new priorities and a new unity, then the militancy of a trade union on the one hand and all-India actions of the central union on the other will prove to be futile. Yesterday it was Safdar Hashmi, today it is Shankar Guha Niyogi and tomorrow it will be Thankappan, Shamsul Islam, Suneet Chopra, Brinda Karat or Megha Patkar.

II

THE murder of Niyogi also testifies to the fact that in recent years various conservative, anti-national and repressive forces of the Indian society and economy have got intermingled and have acquired a character of a united all-India body. Thus in terms of economic policies, it makes no difference that the Centre has Congress and Madhya Pradesh has BJP rule. The economic policies of the Central Government receive a rousing welcome by the State Government in this case and in this process these measures reach remote far-off areas of Chattisgarh. The Durg-Bhilai District Industry Centre provides detailed information about the proposed massive industrialisation under the new economic policies with the consent and even participation of the State Government. In the Chattisgarh region, the pre-independence and post-independence period witnessed two different phases of industrialisation. Now the third phase of massive industrialisation has arrived.

Apart from dozens of new small medium ancilliary industries, rolling mills, there is for the first time big sponge, iron, cement, food processing and electronics industries coming up, owned by the big industrial houses of the country. The Prime Minister, the Finance Minister and the Coal Minister of the country express their concern about workers' productivity and trade union movement, and this concern also finds similar expression in the words of the Raipur Commissioner:

> So many industrialists want to come to Chattisgarh. But when there are labour movements, how will they come here? This is the question of the development of Chhattisgarh.

The new economic policy threatens the employment and living of the unorganised-organised sector workers of the country. And Niyogi felt the pulse of this threat during his long struggle in an Opposition-ruled State when he said:

> There were many attacks on us, tomorrow we will have to face other rounds of more dangerous attacks. There can be an incident which can be nerve shattering.
> I know that they are after my life. (Excerpts from Niyogi's public speeches and tape-recorded statement.)

It is also significant to note that the conservative, fascistic and anti-people tendencies of society are complementary to each other. One conservatism feeds on the other, and this is more dangerous in the context of the BJP-led MP State Government where the offensive of the new economic policy is taking a fascistic overtone due to the patronage of an openly communal state.

In Madhya Pradesh, the nature of the communal state identifies and relies upon a 'Hindu identity'. To build this Hindu identity, it explicitly implies the repression of various caste, class, linguistic and regional autonomous movements. Various subaltern groups, organised working classes and their organisations are the central targets of this kind of state repression.

In MP, the *rath yatra* of Advani reached earlier, and now the *vikas yatra* of Manmohan Singh is taking the same path. Both the *yatras* strengthen the same conservative, anti-people forces in the society. There are many examples to support the case of the BJP being a firm supporter of the new economic policies of Manmohan Singh. When the Central Government was only discussing the various options for the privatisation of power and transport sectors, the BJP-led Himachal Pradesh Government actually privatised power, transport and education sectors in the State. And very recently the BJP affiliated central trade union, the Bhartiya Mazdoor Sangh, opposed the call of the all-India industrial strike on November 29, 1991, which was against the economic and industrial policies of the government.

The murder of Niyogi has received nationwide attention, but under the BJP Government, the Chattisgarh region has witnessed various assaults on the workers' movement that have gone largely unnoticed. According to police records, over a thousand workers were arrested in one year of the Bhilai labour movement, more than 1300 workers have been terminated from their services, and many-a-time peaceful demonstrations and processions of workers have been attacked by police and anti-social elements. And this is not specific to the Bhilai labour movement alone. Sometime ago, when the unorganised rice mill workers of Avanpur and Rajim in the Raipur district were agitating for their legal and minimum demands, the police fired indiscriminately, in which one worker was killed and many more seriously injured; labour leaders were arrested and threatened with *jila badar*. What do these facts signify?

III

THE industrialisation of Chattisgarh has some striking aspects which are important to observe, more so in the context of present day labour movement.

Chattisgarh can be divided into two broad categories: the Chattisgarh plain and the Chattisgarh plateau. The plain area was once known as the 'rice bowl of India' for its abundant rice crops, while the plateau which surrounds the Chattisgarh plain from three sides was famous for mineral deposits and forests. Chattisgarh being very rich in mineral resources, shaped the industrialisation of this region in the recent period.

During British rule garo-based small industries were set up. Rice mills, dal mills and oil mills were prominent among them. Some forest based industries were also set up in the 1930s. Chattisgarh has the distinction of having a textile mill at Rajnandgaon as early as 1895 and a jute mill at Raigarh in 1935. But the establishment of the Bhilai Steel Plant in 1960 dominated this region, covering an area of over 31 square kilometres and employing more than 50,000 workers. The Bhilai Steel Plant has given rise to Bhilainagar where the permanent workforce of the BSP, their dependents and those serving them constitute the majority. Most of this permanent workforce are migrants from Kerela, AP, West Bengal, etc. and are usually more skilled and better educated than the Chattisgarhi workers.

The BSP intensified the growth of ancilliary industries in this area and now at least 120 small and medium scale units are in operation. The whole region has 18 big, 50 medium and more than 60,000 small industrial units; more than a hundred steel based units, more than a dozen solvent extraction plants, many oxygen, gas and mill cement plants. It is clearly an impressive canvas of industrialisation. And the Bhilai Industries Association spokesman is somewhat right when he claims that "for the industrialisation and development of the Chattisgarh region, some credit also goes to those industrialists who established industries in an environment of initial difficulties and discomforts".

But this industrialisation obviously changed the entire Chattisgarh region and also led to various stresses and strains.

Firstly, the Bhilai Steel Plant and its ancilliary industries have altered the composition of the workforce in the industrial areas, with serious consequences. The population of Bhilainagar in particular has shown a phenomenal growth over the past 30-40 years. The migrant working population has not only increased but they dominate the better positions, because of the traditional backwardness of the Chattisgarhi people.

These regional divisions among the workers have been effectively institutionalised by the capitalists for their own narrow interests. This division has taken an anti-worker stance, so much so that the Chattisgarh Mukti Morcha was forced to take notice of this during the course of their struggle in Nav Bharat Explosive, Nav Bharat Fuse and Hanuman Industries:

> Industrialists always take the side of *pardeshia* people. And Chattisgarhi workers are terrorised and beaten up by these *paradeshia* workers. *Pardeshias* live within the factory premises and work on contract, even on holidays.

This goes on to show that the trade union movement of the Chattisgarh region was not powerful or conscious enough to break this division.

Secondly, Chattisgarh witnessed one of the most intensive industrialisation of modern India. Despite this, however, Chhatisgarh remains one of the most backward regions of the State in terms of the various socio-economic parametres, such as per capita income, average level of literacy, rural electrification or availability of primary health facilities. The region has the largest backward population in the State. Continuous drought, non-irrigated land and unemployment have forced the Chattisgarh people for seasonal or permanent migration in search of livelihood and Bilaspur in particular remains one of the most problem prone areas in the country.

Thirdly, distorted industrialisation which did not care for local needs and environmentally sustainable development, also created different layers of the working class. There are public sector workers fully secured by public sector national network and central trade unions. There are permanent, regular workers of big private industries governed by various wageboards and labour laws. There are *Chattisgarhi* and *Pardeshia* workers. There are contract workers and temporary workers. In fact, the whole lot of ancilliary industries is based only upon contract and temporary workers. This division of the working class has reached such dangerous proportions that the contract workers, who are the nerve-centre of industrialisation here, are also the worst victims of exploitation and suppression and are in total isolation.

IV

IT is unfortunate that the trade union movement of Chattisgarh region also became the victim of this working class division. Though Shankar Guha Niyogi and his Chattisgarh Mukti Morcha very courageously tried to break the isolation of a vast number of contract workers and organised them in militant manner, they too got trapped in their politics because of trade union rivalry, lack of organisational structure and, more importantly, their undefined, unclear political stand.

Actually, narrow economic and class interests based on unsustainable exploitation of natural resources, consumer culture and alienation tends to blind both, capitalists as well as the workers. In the Bhilai industrial complex, various industrialists are not at all defensive or apologetic regarding the contract workers and their problems. Thus the owner of the Simplex Group of Industries, Arvind Shah, clearly states that "there are only 10 permanent workers in maintenance. All the other 2000 are contract workers hired by various contractors because here the work depends mainly upon fluctuating orders. The regularisation of contract workers and betterment of their working condition is not possible because industries have to compete with various small and home based industries in the state and with other industries outside the State."

The spokesperson of Bhilai Industries Association even went further: "There are workers' problems and discontent, but industrialists are not responsible for this. It is not the responsibility of industrialists to undo the workers' poverty and inequality."

It is ironical that the expressions and opinions of the Bhilai Steel Plant workers and their union are not very much different. Besides, the Bhilai Steel Plant workers and their union remain totally aloof from the Bhilai labour movement of the unorganised sector. Even the murder of a trade union leader and the brutal repression of a working class movement in the same region did not shake them. The Steel Workers Union (affiliated to the INTUC) is a recognised union of the BSP since 1960 and its Secretary feels proud when he says: "There are two types of workers in Bhilai. Among public sector workers, there is no sign of any unrest or movement. Apart from the BSP, two other big public sector unions are affiliated to the INTUC. Not even a single worker here belongs to the Niyogi union. There was no activity here even after Niyogi's death. The BSP workers get a minimum wage of more than Rs 2000 per month, housing, medical, education facilities, LTC, scooter allowance, various types of interest free loans and other benefits."

And the General Secretary of the Leftist trade union of the AITUC is more vociferous against the Chattisgarh Mukti Morcha when he states: "There can be no cooperation with the Niyogi union. His union is heavily clouted by Christian missionaries and controversial bodies like the PUCL. Whosoever will fall into the CIA trap will not be alive. No permanent worker supports Niyogi's union. We command the support of permanent, regular workers."

And the General Secretary of the CITU complains: "Although Niyogi had launched a genuine struggle, in that process he also tried to replace the Leftist unions, especially the CITU unions. There was a typical trade union rivalry and the Chattisgarh Mukti Morcha never initiated a joint struggle in the Bhilai industrial area."

Niyogi also felt the pinch of this divided scenario when he painfully narrated a situation in a public meeting during the course of the struggle: "I have two sons. When one son goes to a factory, they curtail his every right, and exploit him cruelly. When my son stands against this exploitation, demands high rights, they give knife to my other unemployed son and say, 'Go stab your brother'."

This is the most unfortunate aspect of the trade union movement today that after Niyogi's murder, there was not even a token protest in the Bhilai Steel Plant and other public sector plants, where thousands of workers work. There was not even a one day industrial strike in the Bhilai industrial areas, where every central trade union exists, with its own substantial following. When central trade unions and federations organised a one-day industrial strike against the new economic policies of the government, there was not even a mention of the death of this trade union leader or of the heroic struggle of Bhilai's unorganised workers. On the other hand, the Chattisgarh Mukti Morcha is organising thousands of contract workers, but its struggle is separated from the nationwide workers upsurge against the new economic policies.

V

SHANKAR Guha Niyogi and his Chattisgarh Mukti Morcha were successful in diversifying their movement to various streams of society and they also tried to build an alternative political force in the region. Militant and expanding trade unionism seems to be a solid basis for this alternative politics. The trade union politics of Niyogi proved that the working class movement and politics can be a powerful vehicle for social transformation and political mobilisation.

Workers in the unorganised sector had been given priority focus by Niyogi and his organisation. The Bhilai unorganised-contract labour movement changed the area in a number of ways. Thousands of unorganised workers of this area acquired a new sense of identity and courage. The movement successfully broke the existing traditional exploitative structure based on the nexus of industrialists, politicians, administration and even trade unions.

However, the Bhilai labour movement also brings into focus some serious weaknesses of the trade union movement today. Till a few years back, the central trade unions, especially the Left ones, were quite active and powerful in the Bhilai industrial complex. But they slowly left their militancy and their activities died down. When the Chattisgarh Mukti Morcha tried to fill this serious void, the traditional trade unions did not cooperate with his movement. They failed to realise the importance of the Chattisgarh Mukti Morcha, especially in the era of new economic policies and the upsurge of BJP's communalism.

The Chattisgarh Mukti Morcha's movement also proved that there is a rising trend of autonomous working class movement, with its specific ideological and regional character. Whether it is Chattisgarh, Jharkhand, Maharashtra or Tamil Nadu, the traditional Left parties have failed to grasp this situation and in fact they are always visible in their opposition to these autonomous, regional movements.

On the other hand, it is equally true that the Chattisgarh Mukti Morcha and its labour movement was hostile to both the Rightists and traditional Left forces in the region. They searched for an abstractly defined '*Chattisgarhi* identity' and a weak organisational structure. This sometimes made their movement directionless. A recent reflection of this is the fact that the Chattisgarh Mukti Morcha's political articulation always swung between the Congress and the Janata Dal during the recent elections.

But this is the right time to ask certain questions: When the various conservative, communal and neo-colonial forces have become aggressive on the national and organised plane, is it possible to counter them with regional autonomy and militancy alone? Is it correct to let people like Niyogi be murdered and keep such movements isolated? Will Niyogi's death give some impetus to some serious rethinking in our trade union movement today? ■

A Demeaning Exercise

BALRAJ MEHTA

The annual festival of multinational business corporations at Davos this year was the big event for the Government of India and the Indian media. The selected group of media-men who were invited to accompany the Prime Minister, P.V. Narasimha Rao, to cover the event went gaga on this dream assignment. The Prime Minister of India, it was reported with all the fervour that could be commanded, got as many as 40 minutes at prime time before the glittering assembly of tycoons, with its titular head himself presiding over it. They did not let pass the churlish comparison either that the Prime Minister of Pakistan was given only 15 minutes of their benign attention.

It was, however, not just the points scored in the Indo-Pak rivalry which was the cause of so much satisfaction and glee. Thrilling also was the certificate handed down by the President of the so-called World Economic Forum, R. Klaus Schwab, that India at last "has the right Prime Minister at the right moment", evidently for the multinational corporations to do profitable business with. If he also added the damper that foreign investments to India, which the Prime Minister had gone to woo, would not necessarily follow him, this was appreciated as admirable realism which is the very hallmark of the world of big business.

Back home, after due care and assessment of the performance of Narasimha Rao at Davos, there was no hesitation in the media to hail "super salesman Rao", in the job of "marketing India". In the lingo of advertising and marketing, which is becoming very fashionable currently for those under the spell of market forces, it has been adjudged that when "even the finest products need packaging and marketing" and India being "far from the finest", Narasimha Rao had done an excellent job. It is evidently no longer considered demeaning in interested quarters openly to project, India as no more than a commodity for sale in the world market Narasimha Rao as the super salesman engaged in this difficult and exacting task. What may only make the cheer leaders of the effort that their hero, super salesman Rao, is putting up for marketing India somewhat uneasy is the messy state of affairs at home where this effort is not fully appreciated and the hurdles in his way are increasing and becoming more and more difficult to negotiate. The ideas of sovereignty, self-respect and self-reliance obviously seem worn out, incongruous and irksome to the marketing India enthusiasts.

What has, however, our super salesman Rao been able to do in the business of marketing India? He undoubtedly went in the heady environment of Davos for a lot of rhetoric laced with many cliches and sentimental outpourings, such as, for instance, presenting himself as a 71 year old man with 50 years of business in politics who expected to be trusted when he suggested that he had made India a nice and welcome place for foreign investment, that there was national consensus in favour of the red carpet he had laid out for foreign capital and there was no rolling it back. Narasimha Rao may have managed to be self-hypnotised when making such claims about his durability in the saddle and his ability to order affairs according to his lights. But he could not have carried much conviction or credibility with hard-headed businessmen at Davos or elsewhere who are still waiting and watching before committing themselves to invest their money in India except with great selectivity and care. This is evident from the inspection visits of businessmen and their delegations to India that have been taking place.

The Japanese and West German business delegations which visited around the time as the Davos assembly, laid down many conditions—21 to be precise—for acceptance before they would be in a position to invest in India in a big way such as the government headed by Narasimha Rao desires as the panacea for India under the programme of foreign financed structural adjustment of the Indian economy. They made it very clear that whatever "dramatic departure" from its past restrictive policy on foreign investment the Indian Government might have announced did not matter. What they sought was the comparative advantage among different investment markets. As a latecomer to the harshly competitive global market in prevailing conditions, India is required to be a better place than other developing countries to attract foreign capital. Hence the lists of "requests" which different foreign business interests are addressing the government in India. They add up to a whole package of preferential treatment for foreign capital not only in comparison to Indian business enterprise in India but also in respect of their competitors abroad. The latest of such requests is that protection to not only corporate business but also small-scale industry in India must be withdrawn.

Significantly, the foreign business delegations are making the point of their interest in only "pre-empting and competing" with rivals when and if any one of them might try to "capture" the Indian market. How far India would be willing and able to play on the rivalry among foreign interests for the control of the Indian market is, of course, a moot point. It must not be missed, however, that this rivalry too is being and will be increasingly used to extract competitive advantages at the cost, above all, of the development of indigenous industry and business enterprise in order to destroy all impulses and processes of self-reliant and self-sustaining socio-economic development.

◆

NARASIMHA Rao's attempt at Davos to lure foreign capital with the prospect of the exploitation of the "huge Indian market"—"if you get down to the people, it is mind boggling"—could not have carried much conviction or credibility either. The foreign investor is not interested in getting down to the people with no effective demand in the market. He goes for quick returns on his investment in foreign markets for recycling his investment resources in competing markets as well as security reasons. He, therefore, normally speaking, plans for the recovery of his investment in full within a period of five years and whatever comes afterwards is a bonanza for him. Foreign investment flows on the basis of the effective demand in the market of the host country at the time investment is made.

The foreign investor has no interest in going down to the mass of the impoverished and deprived in India or any other developing country. His assessment of the effective demand in the competing markets determines his investment priorities. The offer made by P.V. Narasimha Rao of all manner of "concessions" for foreign investors who would down get down to the people of India was indeed fatuous. His bright idea of putting down priority areas for foreign investment—lipstick versus fertiliser factory—too was pointless. It must have, in fact, caused cynical mirth among the tycoons at Davos. They must be well aware of the flourishing cosmetic industry catering to the whims and fancies of the affluent in India in recent years and the good business this has been for foreign companies. But the high place of Pepsi and Coca Cola in the government's order of priorities for foreign investment must have tickled them no end when Rao talked of this being no time yet to produce lipstick in India.

Narasimha Rao was, after all, not such a smart salesman as has been tried to be made out. In fact, he skirted or sidetracked issues of substance. So far as the people of India are concerned, it was a demeaning exercise in many ways. The very idea that foreign capital has special attributes to help in the striving for the development of the Indian economy and the uplift of the mass of the people is demeaning. Foreign capital generates profits from investment in the host country by the exploitation of its natural resources and labour. The appreciation of the value of investment and profits made helps to enlarge foreign stakes and eventually enable the foreign owners of capital to bring under their control large and strategic segments of the economy. This stage in the role of foreign capital has been reached under the present political regime over which Narasimha Rao presides.

The minority government headed by Narasimha Rao on its part, meanwhile, is becoming more and more reckless to make India look a paradise for foreign capital and Indian big business with collaboration tie-ups with foreign capital. It has used even the Republic Day celebrations to that end. The customary celebration of the fortythird Republic Day was overshadowed by many anxieties, severe tensions and grave apprehensions. But the official ceremonies did not care to touch any joyous chords of the people. The gloomy and forlorn flag hoisting in Srinagar by the leader of the official Opposition party under the protection of security forces from which the commonfolk, the ordinary citizens of the republic were barred alone attracted attention world-wide as the main event of the day in India. But it was not and could not be an event

which uplifted the spirits of the people of India or strengthened their hope and faith in the democratic, secular and socialist commitments enshrined in the Constitution of the republic. The attempts by the government to pass gimmicks for policy—from rigged elections in Punjab, make-believe planning of economic development, to a "revamped" public distribution system for vulnerable consumers and a fund set aside to partially compensate loss of jobs for the working people are turning to be pathetic.

The award giving exercise of the government on the occasion of the Republic Day deserves notice in this context. J.R.D. Tata may himself have been "stunned" by the award of *Bharat Ratna* to him. But the award also gave a message which must not be missed. Tata was being modest when he said: "I am just a businessmen" and averred that he had not done "anything to deserve this prestigious award". But he had accepted it "since it is the decision of the Government of India". Businessmen in India, however, are quite sanguine about their position. L.M. Thapar, a leading industrialist, said the other day that mere economic policy pronouncements such as had been made by the present government would not mean much unless corresponding changes are carried down the line at the "political and administrative level" It has not been fortuitous either that in the customary address of the President of India on the eve of the Republic Day, it was found necessary to call for a moratorium on all bandhs and strikes and strict discipline. This was obviously inspired by the hope of smoothening the way to the great transformation being pushed through is the economic as much as social and political order.

The message for the people of India is thus loud and clear. Businessmen in India have acquired an enhanced status in the present political regime. It marks a break with the traditions and ethos of the national movement which won freedom from the colonial yoke and established the Republic of India with commitments to democratic, socialist and secular order enshrined in its Constitution. What is being ushered in now is the businessmen's republic. It is remarkable that while its awards of *Bharat Ratna* for Subhas Bose and Maulana Azad have evoked controversy, *Bharat Ratna* to J.R.D. Tata has not been demurred at all, not even by the Left political parties. ■

Centre's Budgetary Position and its Effects on Allocation and Growth

K. OBULESU

The rapidly deteriorating financial position of the Indian Government is attributed, among other reasons, to the ever expanding functional responsibilities, inelastic financial resources, failure to maximise tax effort, impact of vast capital outlay on the programme of planned economic development,[1] excessive non-development expenditure, outlay on productive schemes which do not produce enough and improvident financial management.[2] Every one of them may be significant but collectively they bedevil the Indian fiscal scene.[3]

Table 1 gives the fiscal scenario of the Central Government. Between 1975-76 and 1978-79 the revenue account of the Centre was consistently showing a surplus since the year 1979-80. It shows a deficit which on an average was Rs 186 crores per annum in the period from 1975-76 to 1979-80. The overall deficit of the Centre during this period was, on an average, Rs 1062 crores per annum. This position had somewhat changed considerably during the period 1980-85 when the revenue account of the Centre showed a consistent deficit which, on an average, was Rs 2099 crores per annum while the average overall deficit increased to Rs 2137 crores per annum.[4] This position worsened still further during 1985-92 when the revenue account of the Centre has been showing a deficit of Rs 11,240 crores per annum and an overall deficit of Rs 7731 crores per annum.

Highlights of 1991-92 Budget

The Budget for the year 1991-92 presented by the renowned economist, Dr Manmohan Singh, aims at securing the macro-economic balance in the Indian economy by reducing the different types of deficits[5] which are shown in Table 2.

Additional resource mobilisation is attempted in a modest way to step up revenue receipts and certain subsidies like the one on the fertilisers or reduce borrow/removed with a view to reducing the revenue deficit. The overall deficit is also reduced compared with the earlier years. Fiscal deficit is proposed to be reduced from (Rs 43,331 crores) 8.4 per cent of the GDP to (Rs 37,727 crores) 6.5 per cent of the GDP. The Budget had been preceded by the devaluation of the currency to the

extent of 18 per cent, with a view to facilitating the borrower of funds from the IMF. The Industrial Policy announced subsequent to the presentation of the Budget provides for a large measure of liberalisation in industrial investment and enterprise. These recent initiatives have attempted to reduce the fiscal distortions and promote the market-friendly approach to development.

Fiscal Effects on Allocation and Growth

The developing countries of the Thrid World belong neither to the classical world nor the Keynesian world of depression. Their fundamental problem is under-development of resources and supply constraints rather than demand deficiency. The market mechanism is so dysfunctional that it results in gross misallocation of resources that governments are forced to resort to greater intervention.[6] But the governments are reluctant to mobilise financial resources in a non-inflationary way.[7] Increased resources through deficit financing on Keynesian grounds has led to accentuation of inflationary tendencies in most developing countries rather inflationary tendencies in most developing countries rather than stimulating their economic growth and development.

On the whole, the tax revenue has been inadequate to meet the development needs.[8] As such the only alternatives left with the government have been the programme of public borrowings, external aid and deficit financing on a very large scale. The effects of all these measures have been definitely inflationary during the past. In such a situation planning targets get adversely affected.

That deficit financing has a positive role in financing development expenditure is widely conceded. But there is a controversy regarding the ceiling to be imposed on deficit financing; the government's recourse to credit from the Reserve Bank of India has been steadily increasing during the 1970s and early 1980s. The total monetised deficit of the Union Government for the Seventh Plan period was Rs 39,488 crores upto March 30, 1990. The Seventh Plan document had envisaged a total uncovered resources gap of Rs 14,000 crores at 1984-85 prices. Even allowing for the rate of inflation over the Plan period, this projection has been exceeded by a substantial margin. This has grave implications for the Eighth Plan financing especially if a consensus is emerging on a 5.3 per cent growth rate in real GDP per annum during 1990-95. According to the Ninth Finance Commission Report, the Centre's revenue deficit will be Rs 80,638 crores during 1990-95.

Source: *The Hindu*, July 25, 1991, Madras, p. 11.

The Planning Commission finalised in 1989 an aggregate outlay for the Eighth Plan of Rs 650,000 crores at the 1989-90 prices tied to an annual growth rate of six per cent.[9] The uncovered resources gap assumed was in excess of Rs 40,000 crores. The Ninth Finance Commission says that it has taken care to check whether the transfers recommended would result in a situation where the Centre could not have a reasonable outlay in the Eighth Plan. It noted that around Rs 94,200 crores of budget support to the Central Plan at the 1989-90 prices should be possible during 1990-95 with the revenue deficit contained within a reasonable level specifically on controlling growth in revenue expenditure. The final Report of Commission has this to say: "Financial experts are agreed that the *sine qua non* for controlling the growth of revenue expenditure in the avoidance of inflation. This, in turn, requires strict limits to be placed on deficit financing."

The Nobel laureate Buchanan[10] has suggested a constitutional amendment in the USA to prohibit deficit financing. He notes that legislatures want more and more public spending in their constituencies, but are reluctant to raise taxes to pay for this spending. Hence, they have an inbuilt bias in favour of budget deficits, which have now made the USA the biggest debtor of the world. India needs checks and balances far more than the USA does.

The benevolent theory of state justifies unbalanced budgets resulting in deficit finance on welfare grounds. The predatory theory of state proceeds on the assumption that the ruling class alone benefits from increasing government expenditure at the cost of the neglected masses. The former theory justifies deficit financing even in the context of growing fiscal crisis while the latter theory is opposed to it. The predatory state encourages what Jagdish Bhagwati[11] calls directly unproductive profit-seeking (DUP) activities. There is a strong case in favour of automatic systems of control rather than discretionary control and moving away from controls to incentives which will minimise the budgetary deficit and hence the resort to deficit financing.

When public deficits need to be reduced, the economic cost of raising more revenue must be weighed against cost of cutting public spending. The only way to resolve the tension between austerity and growth is to combine fundamental fiscal reform with other measures in trade, industry, agriculture and financing. The narrow public revenue base in many developing economies can be expanded by cutting non-Plan expenditure, improved tax administration, broadening the tax base, lowering the tax rate and increased reliance on user charges for public services.[12] India is no exception and must resort to these measures in an increasing degree during the ensuing plan periods. ■

AN APPEAL

C. Achyutha Menon Foundation

Dear friend,

C. Achyutha Menon is no more; a matchless statesman, a humanist of impeccable integrity, a champion of the poor and the downtrodden, a writer of repute, he will be remembered for all time.

We purpose that a suitable memorial be instituted to cherish the message of his multi-splendoured life.

We request you to actively associate with the endeavour in this behalf and donate liberally to the fund being raised by the C. Achyutha Menon Foundation in furtherance of the above objective.

22-11-1991 Yours sincerely,

K. Karunakaran, E.M.S. Namboodiripad, G. Ramachandran, A.K. Antony, E.K. Nayanar, V.R. Krishna Iyer, Indrajit Gupta, P.P. Thankachan, Benedict Mar Gregoriose, Dr K.N. Pai, Dr K.N. Raj, Laurie Baker, P.K. Vasudevan Nair, Jyoti Basu, Mulk Raj Anand, Aruna Asaf Ali, C. Rajeswara Rao, P.N. Haksar, Thakazhi Sivasankara Pillai, Dr M.S. Swaminathan, Prof M.G.K. Menon, G. Parthasarathi, I.K. Gujral, Nikhil Chakravartty, K.R. Narayanan, A.K. Damoderan, K.P. Unnikrishnan, Chitta Basu, P.M. Sayeed, N.E. Balaram, Dr Poulose Mar Gregoriose, Poulose Mar Poulose, V.K. Madhavan Kutty, Dr I.S. Gulati, Dr Sukumar Azhikode, Dr M.S. Valiyathan, Dr P. Basak, Vaikom Muhamed Basheer, Vijaya Kumar (Hind Samachar), Ali Sardar Jafri, Malcolm Adisheshaiya, Dr C.T. Kurien, Khushwant Singh, Asghar Ali Engineer, S.G. Sardesai, Satyapal Dang, Mohit Sen, Shasi Bhushan, Ghulam Rabbani Taban, R.L. Bhatia, Prof K.N. Panikkar, Adoor Gopalakrishnan.

Has the Economy Turned the Corner?

N.K. SETH

The Finance Minister ought to be a worried man these days but apparently he is not. At any rate not much. One of the reasons for this complacency obviously is that he is hardly concerned about the political fallout of his new economic policies. That, apparently, is the headache of the Prime Minister. So far as he is concerned, he has convinced himself, and possibly the Prime Minister, that after India's success in obtaining a sizeable loan of more than two billion dollars and up to seven billion dollars from the IMF if the policy prescriptions of the World Bank and the IMF are followed, the Indian economy has virtually turned the corner. He is happy to tell the nation that the foreign exchange reserves which stood at Rs 2600 crores six months ago are more than Rs 8000 crores now. He does not explain how much of this increase is due to compression of imports, how much because of the loan from the IMF and how much due to the increase in exports following devaluation.

The truth of the matter is that the spurt in exports has not materialised, nor is it likely to materialise in the near future. The economy right now is perhaps in a more precarious state than what it was before the 'economic reforms' were initiated. The revenue deficit has not been reduced. It continues to be a whopping figure of Rs 13,850 crores. There have been shortfalls in customs revenue (Rs 3500 crores), excise duty (Rs 1000 crores), the outstanding IT dues are Rs 1300 crores. There is, therefore, hardly any hope of cutting the fiscal deficit to 6.5 per cent of the GDP as promised to the IMF unless there is drastic cut in military expenditure and in subsidies; and both cuts are virtually beyond the capacity of the Finance Minister.

When the Managing Director of the IMF was in India in October last year, he was quite categorical that the IMF would like India to cut its military expenditure. This has now been confirmed by the Governors of the Bank at the IMF annual meeting who reportedly agreed "that the possibility of military cuts in the developing countries deserves very careful study, as it would permit transfer of human and financial resources to help development and reduce poverty". The question is whether India can easily brush aside this advice from the IMF claiming that it is none of the IMF's business to interfere in such matters, when India is practically at the mercy of the IMF.

The problem with reduction in subsidies is no less difficult. The most significant subisidies are in the food and agriculture sector, a politically sensitive area. A World Bank study revealed that "subsidies for food and agricultural inputs totalled Rs 135 billion annually in 1989-1990 (3.1 per cent of the GDP) and exceeded public investments (Rs 110 billion), high input subsidies to agriculture for irrigation, electricity, fertiliser and credit". Having regard to the rich farmers' influential lobby which has successfully resisted so far even a debate on agricultural income tax, got loans waived arbitrarily and procurement prices increased, it is very doubtful if the Finance Minister can reduce the subsidies in this sector to any appreciable extent, despite the fact that "even moderate growth in the sector has come at a high cost, both to the Budget and to the economy". The foodgrain output of China is more than double that of India without such extensive subsidies to the agricultural sector as in India.

◆

SO far as the effort to cut public expenditure is concerned, the recent announcement of the Prime Minister about cut in the government staff and telephones, etc. need not be taken too seriously. In any case, it does not amount to much. If the government was really serious about cut in public expenditure, one may legitimately ask if the proposed Assembly for Delhi is a move towards economy. A total lack of realism and political will is obvious from the fact that an ambitious Eighth Plan with an outlay of about Rs 4 lakh crores in the public sector is being formulated. The Deputy Chairman of the Planning Commission has, however, admitted that the whole Plan will have to be financed from borrowed money, as the balance from current account is negative. One may very well ask if, in that case, there can be a Plan at all. Have we not already borrowed enough?

In fact, it is our propensity to borrow money to finance our extravagance which has placed India in the present state of virtual bankruptcy. We are already in an internal debt trap when we have to borrow more in order to repay the old loans but it hardly matters as these loans can always be paid in rupees by just printing notes. But the problem with foreign debt is different; they have to be repaid in hard currency which is in acute shortage in India. India is now the third most indebted country with a foreign debt of nearly 80 billion dollars and she has the liability to repay five to six billion dollars annually. A stage may soon be reached when we have to borrow from the IMF and the World Bank merely to repay the old loans. No one knows better than the Finance Minister that the grant of a loan from the IMF is not the end but the beginning of our problems.

Unfortunately, however, in spite of this, the Finance Minister continues to place more and more reliance on loans from multinational agencies like the IMF. He has admitted that India will have to depend on their help for the next three years or more, till adequate foreign investment is forthcoming. It is obvious from this that he is not only really worried but is also nervous as his economic reforms do not seem to be yielding results and he does not see the light at the end of the tunnel. Devaluation of the rupee has not resulted in any increase in exports; in fact there has been a fall in foreign exchange earnings from exports. Foreign investors, including the NRIs, do not seem to have been sufficiently impressed by the 'economic reforms' undertaken by him to invest money in India. Compression of imports and credit squeeze have only resulted in recession in industry and indiscriminate and hurried cuts across the board in subsidies have given rise to massive price increases in essential commodities. The result is that the common man is suffering and the Finance Minister seems to be unmindful of it. There are increases in the prices of commodities of daily needs like bread, milk, wheat, rice, sugar and the increases are quite substantial. And a hefty hike in taxes, direct and indirect, in the next Budget is on the cards. So the common man will be squeezed between runaway inflation and high taxes.

It seems as though the present government fears that it has a "potentially shortlived mandate for reform" and decided to capitalise on it "in a climate of crisis" as recommended by the World Bank in its 1992 Report. But the big question is whether this shock therapy, which is bound to result in mass unemployment and runaway inflation, can salvage the country's economy. The Finance Minister should know better than others that the transition from a centrally planned to a market economy which is being tried here is a painful and long drawn process. It would be unwise and risky to hasten it too much as events in the Soviet Union have demonstrated. The patience of the people should not be overtaxed as the PM himself seems to have realised recently.

◆

THERE is no doubt that China, a Communist country, has also realised that there is no alternative to the market economy in the new world, but it is trying to plan a smooth transition from the command to the market economy so as to avoid social and political upheavals as in the USSR. The first thing China has wisely done is not to depend on loans on multinational agencies like the IMF which enables them to pursue their economic reforms reasonably independently, unlike us. Further, the Finance Minister has himself admitted that while China has succeeded in attracting more than 50 billion dollar foreign investment, India has had a foreign investment of only 200 million dollars so far. In fact, according to the latest World Bank Debt Tables, India has had no net direct foreign investment after 1970. The real worry of the Finance Minister should, therefore, be how best and how quickly he can create a hospitable climate for foreign investment in India as China has done rather than worry about taking further loans from the IMF in the next three years. Sizeable foreign investment can not only help to partially overcome the foreign exchange problem but also assist import of latest technology which can develop exports through competition and cost efficiency.

In any case, India has still a long way to go before reaching the goal of a 'market-friendly economy'. She has many hurdles to overcome, as observed by *The Economist* in the "World in 1992":

> There are many gaps in the reform. The overblown public enterprises (especially the inefficient banks) and the bureaucracy remain untouched. Taxes are unreformed. It is next to impossible for companies to shut down and sack their workers. Resistance, especially to freer foreign investment, will be offered by the bureaucracy; and the Congress Party, which has a parliamentary minority and is nervous over the reforms, may turn on Mr Rao and Mr Singh. The fate of further reform in the Budget of March will be a big test.

The Finance Minister is presently under tremendous pressure from the World Bank and the IMF to accelerate the pace of economic reforms and the next Budget is bound to be an exceptionally harsh one in an effort to reduce the Budget deficit.

But the million dollar question is whether, despite all the heroic efforts which are being made to liberalise the economy, the economy will turn the corner and, if so, when and at what cost. It is almost certain that the economic reforms are not likely to yield any positive results; at any rate, not for the next three years or more. In the meantime, they are likely to aggravate the problems for the common man with massive unemployment, recession and inflation which could prove politically counterproductive for the government with a pro-poor image and an electoral promise to rollback prices within a hundred days. It is now time for the PM to step in and consider carefully the pros and cons of accelerating the pace of economic reforms which will have far-reaching consequences. Or follow the Chinese strategy of carefully planning a slow and smooth transition to the market-friendly economy, avoiding economic chaos, social and political unrest as witnessed in the former USSR. On balance, it looks safer to follow the Chinese model and avoid hurting the common man too much. ■

COMMUNICATION

Kashmir: Meeting the Challenge!

Sometime in October there was a press report that some "eminent citizens from all walks of life" had appealed to their fellow citizens to launch a Save Kashmir Movement all over the country and to demand "an unequivocal declaration from the government that it would treat all those who carry arms against the state as outlaws and it would have no negotiation with them".

There is little doubt that the demands of the "eminent citizens" were the outcome of the Home Minister's offer to the militants, when heavily guarded, he was enjoying his trip to Srinagar with his family and friends; the offer indicated that the government was willing to hold a dialogue with them provided they were willing to participate without any precondition.

Having said this, S.B. Chavan must have felt jittery, for having said too much. Flustered and confused, he corrected himself and quickly declared that after assuming power the new Congress Government saw no reason for any change in policy; he went even a little further, and made it clear that the Centre had no package deal to offer to the people of Kashmir. Though the militants rejected the offer unitedly, to the "eminent citizens" and also to one of our national dailies, the offer was a message to the militants, and it meant that "New Delhi's priorities are being dictated by those with guns".

Alarmed and resentful, the newly formed Save Kashmir Front organised a symposium on 'Kashmir: And How to Meet the Challenge!' It was held under tight security and only those who had been invited with cards were permitted to enter the Mavalankar Hall, the venue of the meeting. The speakers were well-known pillars of *Hindutva* and covertly anti-Muslim, and the invited, who had filled the hall, represented a veritable microcosm of the high caste Hindu India. Apart from the Kashmiri Pandits who were busy distributing sheaves of their 'Appeal to the Nation', one was greeted with *"Jai Shri Ram"* by the *Ram-bhakta* RSS men (a large number of them must have been specially invited as their Joint General Secretary, Prof Rajendra Singh, was one of the four speakers). Important BJP politicians were also there—with an unmistakable air of smugness, as no meeting on Kashmir can be held without their star speaker, L.K. Advani!

It was not easy to make out how many of those distinguished men, whose names appeared on the invitation card as members of the Kashmir Front, were present in the hall, but it might be of interest to mention a few: there were two ex-editors, Girilal Jain and Arun Shourie; Prabhash Joshi, the editor of *Jansatta*; and Swapan Dasgupta of *The Times of India*; the retired CAG, T.N. Chaturvedi, who is also a member of the Bharatiya Janata Party; two retired Ambassadors of the Government of India, one Foreign Secretary, and a Professor of JNU; the former Principal Information Officer, D.N. Munshi, was the convener. Among the four speakers, two have been mentioned earlier, the other two were Shakdher, the former Chief Election Commissioner, and Jagmohan.

Advani, the first to speak, knows how to politicise meetings; never shrill, never once raising his voice, completely at his ease, he killed several birds with his short half-an-hour speech. Pseudo-secularists lay bleeding, so did the government which "still talks of political solution", and all those who had given "special status" to Kashmir, "a grave discrimination against Kashmir", which, he recalled, "even, a Muslim member of the Constituent Assembly, Hasrat Mohani, had pointed out". By-elections not far off, the emphasis was not on

Ayodhya but on unity, "the test for India's unity today is not so much Ayodhya, but Kashmir". And "pseudo-liberalism", which argues that "if somebody demands secession he must have some genuine grievances", must be condemned unreservedly, said Advani. He lamented that "in their own country, two lakh Kashmiri Pandits have become refugees, but what is more tragic, that nobody even treats it as a problem, but if a person like me talks about it we are labelled communal". But, he assured the Pandits, "we will have to see how soon they can be sent back home." In that emotionally surcharged hall, these words had a tremendous impact; and when pointing to him, Shakdher said that India deserves a Prime Minister like Advani, there was tremendous applause signifying approval.

Prof Rajendra Singh is well-known for his crusade against the teaching of English, a foreign language, in schools; he condemned the double standard practised by the "leaders of the country". It was unfair to tell the common man in the Valley to be brave when the then "Home Minister had himself buckled under terrorist pressure and released militants in exchange for his kidnapped daughter," Professor Singh said. With the recent revelation that there have been several cases of the release of Congress-I leaders' relatives held hostage in exchange for militants, Prof Singh's criticism becomes valid. There is little realisation that indulging in such shady deals, which might be kept hidden from the Indian public, will make the government look very small indeed in the eyes of the very militants they want to exterminate.

There was general agreement that Pandit Nehru should have handed over the integration of Jammu and Kashmir to Sardar Patel. Shakdher recalled what the Sardar was alleged to have told Pandit Mavalankar: "I might integrate the 564 Principalities faster than Panditji integrates one."

Jagmohan gave several examples to illustrate how Article 370—the root of today's trouble—had alienated the people of Kashmir from the rest of India. "People who came to Kashmir in 1947, still do not have the right to vote for the Legislative Assembly, and we go on fighting for the Rights of the South Africans, the Palestinians," he remarked sarcastically. "Never buy carpets from Muslims," he warned, "for the money will go to the terrorists." But most of the facts he related are in his *My Frozen Turbulence in Kashmir;* the book is having a record sale, running neck to neck with *Crisis and Credibility* of B.G. Verghese. Both sized up the Human Rights people with rare perception; while Verghese implied that they were a pack of liars, Jagmohan was more explicit during his speech. He said in his inimitable language that "the Human Rights groups had descended like locusts in the Valley, as soon as the situation had started improving".

Though there was unanimous agreement that Aricle 370 must be abrogated, and that no political solution shall be permitted, Jagmohan was the only one who gave the prescription for meeting the challenge in Kashmir. According to him, conventional tactics would fail to counter the menace of the terrorists in the Valley. "To be effective," he said, "We have to organise guerilla tactics to counter with the guerillas in the Valley."

There was an air of exhilaration when the meeting was over. The Kashmiri Pandits knew who their friends were, and the BJP knew they had invested in a fertile territory. The meeting spelt out the specific demand of the BJP during the *ekta yatra* of Dr Joshi: *"Article 370 hatao, atankwad mitao, desh bachao!"*

The Front activists held a huge demonstration in front of the Parliament House, in spite of the police lathicharge. to denounce the government's get-together of discredited men who had fled from Kashmir, and cannot show their face in the Valley.

The Home Minister has made it pitifully clear that the government has no policy on Kashmir.

In order to hide its bankcruptcy, however, the government has virtually accepted Jagmohan's recipe of repression, calling it euphemistically flushing out; daily, any number of young men are being killed—flushed out. Whose sons are they? Whose brothers? Nobody knows, the family is kept in the dark. Those who are arrested are sent to the Army Interrogation Centres there being "humanely treated", administered only "mild pressure" since "no torture or third degree liable to cause serious injury is permissible" (*Crisis and Credibility*, p. 141); the suspects are let off. Hardly alive, they have to be carried to the Shoura Medical Institute by some citizens. There they lie, boys in their teens, with deep incisions on their heads and chests, and young men, critically injured—not just two whom the *Eyewitness* film of *The Hindustan Times* had interviewed (*HT*, November 4, 1991) with multiple perforations of intestines, stomach, and liver.

These atrocities must stop before the government can convince the world that there is nothing to hide.

When Victory is Not Mandate

SHASTRI RAMACHANDRAN

The Congress party has outdone itself by surpassing its own expectations in the elections in Punjab. This is cause for concern rather than cheer. The evident lack of any euphoria in the Congress underlines this. In fact the party is almost embarrassed to have won as it did.

It would be simplistic, if not patently incorrect, to read the results as the triumph of parliamentary forces over the predatory grip of extremism in the State. The fact that the motions of a parliamentary election have been gone through do not in any way validate the assumption that the normal democratic political process has been brought nearer. Democracy, in its familiar form, means elections. But all elections do not mean democracy nor do they reinforce democratic practices and values. Punjab proves the point.

In the first-past-the-post situation, three-fourths of the seats can be won with a third of the votes. The 28 per cent turnout of voters on polling day had already established that whichever party or combination of parties emerged victorious, the result would not be representative. The results now, even if the Congress has managed between 10 and 14 per cent of the votes, sanction the exception as the rule: that a "popular" rule is actually possible, almost certain, without a mandate. This is clearly a case of extreme constitutionalism. And, constitutional extremism has repeatedly proved to be counter-productive in the case of Punjab. The plethora of laws to curb terrorism and the successive measures in the last 57 months to restore normality have only worsened the situation.

After the 1985 Rajiv-Longowal Accord, the Congress committeed the folly of allowing a situation where the parties to the accord opposed each other in the elections. When the Akali Dal trounced the Congress, Rajiv Gandhi, much to the chagrin of traditional Congressmen, had the grace and candour to admit: "The party has lost but the nation has won." Today, in its hour of victory, the discomfiture of the Congress is telling.

◆

THE elections have reinforced the cynical conviction that it is force alone that can triumph in Punjab and that the political choice is between overawed by "adequate security" to participate in the 'political process' or being terrorised out of the turf by the fundamentalist-extremists. In the event, the fact that 72 per cent of the electorate did not come out to vote flies in the face of claims that the confidence-building measures have worked. If the 1989 elections to the Lok Sabha dismayed the country because of the victory of the militants, through coercoin and terror, the character of the victory is not very different now. The only difference is in the nature of the force. Intimidatory protection in the name of "adequate security" is a poor democratic alternative to terrorism.

The Congress has other reasons to be embarrassed. Its victory has sharpened the communal cleavage in Punjab. The results represent Hindu consolidation, which is ironically compelling the Congress to choose a Sikh for the Chief Minister's job. That the Congress, and not the Bharatiya Janata Party, has been the beneficiary of this communal consolidation will alienate the Sikhs further and increase hostilities.

This outcome of Hindu consolidation suggests one of two things: either that there is some truth in the charge that the party "managed" votes through the malpractices it has been accused of; or that the party, and not the BJP, has emerged as the main hope of Hindu communalism in Punjab. Neither of these can be comforting to the Congress. Yet, Hindu communalism and the consequences of "popular rule" by this elected by unrepresentative "majority" with a Sikh as a masccot will be the cause of the dangers ahead in Punjab.

The elections have pushed the Congress into the same position as a target for Sikh hostility where it was after "Operation Bluestar" and the 1984 Lok Sabha elections. The conspicuous lack of any attempt to ensure the participation of the Sikhs in the elections made this inevitable. It is possible, as reports suggest, that the Congress has lines of communication to some of the militant groups and factions (there being no identifiable Akali parliamentary party) and these would be utilised in the aftermath of the elections to bring them round with concessions and deals. Even if that were to materialise it would not be a proper or just substitute for the utter lack of legitimacy of the "popular" government. Essentially, this is a manipulative route and in Punjab, as the record shows from 1982, this approach has done more damage than help to end the bloodletting.

The secessionists have been provided precisely with the situation they need to press ahead their claims for "liberation" from a "Hindu-dominated state". They will advance every imaginable argument to buttress their case for "self-determination". Regardless of how perverse the logic of this campaign is, the election result will serve to enhance their appeal in a situation where passion rules over reason.

A sense of urgency in pursuing the cases against those suspected of instigating the 1984 riots could have succeeded in winning over at least a section of the moderate Sikhs. Instead the government not only dragged its feet but also went on the offensive to assert its odiously regressive stand on human rights. In the context of the Punjab elections, the Sikhs were bound to perceive it as a provocative rationalisation of the government's reluctance to proceed against the guilty. The healing touch that Mrs Indira Gandhi spoke of has hardly been in evidence. Instead fresh wounds were inflicted on the Sikh community and psyche in 1984 and these were further exacerbated in successive years.

The elections were an opportunity for the Congress to send out the crucial signal that the Sikhs would be dealing with a Congress party markedly different from the one in the eighties. In this critical test the Congress has failed for it has pushed Punjab further beyond the pale of parliamentary politics. ■

SETHURAMAN: Railway Budget

(Continued from page 2)

transport bottlenecks and promote development of the regions now handicapped for lack of sound rail infrastructure.

Higher provisions have been made in the Railway Plan for next year for both rolling stock acquisition and gauge conversion (Rs 1180 crores and Rs 555 crores respectively) while track renewals and electrification programmes are maintained at current levels. There is a reduction in provision for new lines as also for doubling of tracks. The targets for track renewals and electrification have been scaled down though the Railways hope to renew over 2300 kms of track in 1992-93 and ensure that the backlog in renewals is covered, especially on the high-density routes, by the end of the Eighth Plan.

The pace of electrification also seems to have slowed down from 83[illegible] route kilometres in 1990-91 to 675 kms in the current year and to 500 kms, the target set for 1992-93. This does not accord with the objective of energy conservation and reducing dependence on petroleum-based energy referred to by the Railway Minister.

The increases in Railway fares and freight have been Rs 622 crores in 1988-89, Rs 876 crores in 1989-90, Rs 892 crores in 1990-91, Rs 584 crores (for less than eight months of 1991-92 or about Rs 950 crores in a full year) and Rs 1366 crores in the Budget for 1992-93.

These increases are becoming harsher and do not seem to have any impact on bringing down what are regarded as social costs, that is, rendering certain services below cost. As long as these subsidies remain intact, it helps the Railways to go on "rationalising" the tariffs without being accountable for efficiency and productivity. The Railway Minister may head off criticism with fare concession for which he has enough cushion in his hefty package. ■

GOVINDACHARYA: Swadeshi Movement

(Continued from page 6)

capita income crossed Rs 2500 from Rs 1127 in terms of the 1980-81 prices.

But all along our development model has been alien. The path was not suited for our needs and conditions. But we adopted it. We expected that by inviting multinationals we would be benefited in four ways—we would speed up capital inflow, technology would be upgraded, unemployment situations would be eased and we would get substantial foreign exchange earning through exports and that would improve the balance of payments position.

But what have we achieved today? The outdated technology of the West and dirty industries have been dumped in our country. Due to wrong policies the MNCs have not been involved in those sectors which were needed by us. But Pepsi Cola entered the consumer goods sector. Pepsi had promised 50,000 jobs for the youth in Punjab; they have provided nearly 500.

In this total perspective of our economic situation, perspective if one looks at the *swadeshi jagaran abhiyan*, it can be concluded that it is not merely a campaign to hinder the sales of MNC-produced goods. Nor is it a battle between foreign and Indian capitalists. This campaign overtly is centred around educating the people to use goods manufactured in India by Indians. It is a campaign with a non-partisan approach. It is not a party programme.

The appeal is for voluntary simplicity and simplicity. The *swadeshi jagaran abhiyan*'s wider aspects are: (a) Are we ready to understand and appreciate Indian conditions and needs and forsake the distortions created by the glamour and glitter of the prosperous West? (b) Are we sensitive to the fact that India's prosperity is not confined to merely 170 million people but to the whole 85 crores? (c) Are we ready to learn from the mistakes of the past? Are we ready to understand that the resilience and stamina of our economy have rested with the traditional sector and not with the modern industrial sector?

The debate will lead to a change in the mode of production, ownership rights, our values and approach to life itself. One can rest assured that the organisers of the *swadeshi* movement are quite aware of these dimensions and also confident about what they want to achieve. The battle has to be fought at the level of *swarajya* and not *surajya* alone. ■

CHANDRA SHEKHAR: Political Economy

(Continued from page 5)

Dunkel Proposals: Prescriptions for Disaster for the Third World

The external pressure seems to be succeeding on another front too. There is no doubt that the Dunkel proposals are aimed at legitimising the dominance of the West over the developing world. Indications are that the government is going to ignore the reasons forwarded by different sections opposing India accepting the Dunkel proposals as they feel that "the criticisms arise either because of lack of understanding of the voluminous and complex document or because of preconceived notions".

If so, this would be the singlemost disservice the government would be doing not only to future generations but also to the Third World movement as such. One shudders to think of a future when the farmer would be bonded to the MNCs and when the factory employee would be nothing but a robot following a set pattern.

The government has no moral right to accept these proposals without a public debate. The issue should be debated in the Budget session of Parliament.

Agricultural Production

The Indian economy is facing the prospect of a severe recession starting from the current year 1991-92. Industrial production is showing zero growth. Agricultural production during the last three years is reported to have fallen; during the current kharif the decline expected is of the order of five to six million tonnes and one is not sure whether the rabi crops will make it up. Most likely the agricultural growth will also be zero this year and this will be in a situation when the food prices have been soaring and the government stocks have depleted. The overall growth rate of the economy in the current year may not be even one to two per cent. What is even more alarming is that there are no immediate prospects to lift the economy out of this situation in the next and the following years. We have had the fortune of having four good monsoons in a row after 1987-88. If the next year happens to be a bad monsoon year, the situation may turn into a disaster.

In the agricultural revolution in India three components have played a major role; one is the increased water availability for irrigation alongwith energisation of irrigation systems and the second is availability of fertilisers. The third, that is, the high yielding varieties of seeds respond much more to these two inputs. Given the limited land resources and large and growing population, we have no option but to keep on increasing our land productivity through intensive application of inputs if we want to remain self-sufficient in food supplies.

Giving up the objective of self-sufficiency in food has its own implications in the global political matrix. The withdrawal of subsidy for fertilisers in the last Budget has raised fertiliser prices and it is bound to affect use of fertilisers by small and marginal farmers who do not produce for the market and, therefore, do not stand to get compensated by rise in procurement prices. If they do not find fertiliser application within their means they will opt for other crops or low yielding varieties and thus the production will fall. Any further rise in fertiliser prices will severely affect the prospects of agricultural production and will come in the way of the objective of food security and self-sufficiency.

The Threat of Wheat Imports

The government has recently announced that it is going to import wheat. This imported wheat is likely to reach the Indian shores only when Indian farmers would be selling their wheat in the market. It appears that imports have been designed to depress the prices of wheat for the Indian farmers. The government is willing to pay the American farmers about Rs 5 per kg for wheat but wants to pay the Indian farmers only Rs 2.25. If the government succeeded in this design then in the next year farmers would not be producing enough of wheat and consequently more imports will become necessary and once again we would be at the mercy of foreign governments even to feed this nation.

When the proposal for importing wheat was initiated in the government, the price of wheat was being quoted at $110 per tonne. By the time the government took the decision, the prices had touched 180 dollars. Those who have assured the government that they would arrange country specific concession of 40 dollars per tonne, have ensured that this poor nation pays through its nose another 40 dollars over the price at which the original proposal of the government was based. We should not forget that any concession we get from any other nation has to be paid in one form or other.

Soaring Prices and the Common Man

The price situation is alarming. Inflation is already running at about 13 per cent annually. But what is even more alarming is that the foodgrain prices have increased by 28 per cent during the corresponding period. Prices of cereals and coarse grain have risen even faster than the others. The implication is obvious. The poor, the unorganised, whose consumption largely consists of cereals and such other items, will bear the largest burden of inflation. Their purchasing power will be squeezed much more than the purchasing power of those in whose consumption food has a small share. Food constitutes 75 to 80 per cent of the consumption basket of the poor while it is only 35 to 40 per cent of the consumption basket of the rich.

As the data thrown up by the consumption surveys reveal, the per capita consumption of cereals has remained stagnant for quite sometime and this in spite of the fact that the growth in cereal production has been more than the growth in population. This phenomenon is attributable to the adverse impact of inflation whereby the consumption of the poor declines, but the direct consumption of the rich does not increase because they are already consuming at a level which need not increase. If there is a decline in the production of foodgrains or the growth in production is slower than the growth in population, combined with the high rate of inflation and much higher increases in the prices of foodgrains, the consumption of the poor will decline. This will negate all the gains of the alleviation of poverty. The nutritional status of the population will go down and poverty will increase.

Grave Implications of Globalisation: The Case of Farmers and Weavers

How the globalisation and liberalisation of the economy would affect the farmers of this country who through their hard labour have made us self-sufficient in food and have saved us from the shame of carrying the begging bowl, becomes clear even when we consider one input crucial to this sector. The prices of urea in the world market, even in our absence in the world market, are ruling above $ 170 per tonne. The landed cost of this fertiliser to farmers in Punjab and UP without any subsidy or loss to a public sector corporation would be above Rs 6000 per tonne. The farmers who have yet not recovered from an increase of 30 per cent in the prices of fertilisers effected by the government only a couple of months back, would then be required to pay double the price than what they are paying today. How many small farmers, marginal farmers and farmers who mainly produce for self-consumption would be able to afford to buy fertilisers at prices above Rs 6000 per tonne?

It would, therefore, be logical to believe that if that happens, about 60 per cent of the Indian farmers would not be able to afford to apply fertilisers to their crops, which in turn would lower their output. As a consequence those poor farmers who in the last 20 years have been able to improve their lot from the position of eating 'once a day' to 'twice a day' would revert back to the same position at which they were on the eve of independence.

There are reports that handloom weavers in some areas have committed suicide because they could not afford to buy the hank yarn at the current level of prices of yarn prevailing in the country. This has happened when cotton prices from which the hank yarn is produced are ruling 10 to 20 per cent lower than those in the world market. During the current season the world cotton market is ruling easy due to high production in some countries, indicating that the world market prices of cotton in a normal year are going to be much higher. If the Indian economy gets globalised, prices of cotton would have to prevail at the same level as in the world market. As a consequence, hank yarn prices would further increase and as a result many more weavers would face ruination and their children will suffer starvation.

Even the common man working on a reasonable salary either in the organised or unorganised sector would be crushed under the price-spiral that is bound to take place in the Indian economy as a consequence of globalisation The wheat in the world market right now is being quoted at $ 180 per tonne. Adding to it the cost of transport and handling, etc. from American ports to the wheat eating belt in India would imply a retail price of above Rs. 7.50 per kg. How many low income consumers would be able to afford this level of price?

In the case of rice also prices are likely to get doubled from their abnormally high levels currently ruling in the Indian markets. Even at the current prices a large number of families are unable to get two square meals a day; when the price would get doubled widespread starvation may become a common phenomena.

We are facing difficult times. The problems are complicated. The pressures are enormous. There are no easy solutions. Hard decisions are to be taken. We need firm resolve to pool our resources. We have to introduce austerity in our spending. It should emanate from the top. Government spending has to be curtailed. Unproductive expenditure has to be stopped We have to depend upon the willing cooperation of our people. They can be inspired by the example set by the more privileged people. Let us be clear in our mind that we cannot call upon the poor to make sacrifices for the promised brighter future without corresponding changes in the behaviour of the rich. 'Liberalisation' to the rich provides an opportunity to the chosen few to enjoy the best that is available in the world without providing for the basic needs of our people. Mere assurances cannot enthuse them to cooperate. How can we think of a better future without the help of willing people?

We will have to arouse their faith in future. Their self-confidence will have to be preserved and strengthened. Our farmers will have to be given better facilities to produce more. Workers are to be inspired to contribute in meeting the challenges of today. This cannot be achieved by making them idle but by putting them to work. Only a few months back we were talking in terms of 'right to work'. Now we are aiming to give them 'freedom' to fend for themselves. This will not work. They cannot remain passive spectators of their own ruination. The possible unrest among the unemployed youth may become unmanageable.

We can tide over the crisis by uniting our people for a determined action With their will-power and capacity to create wealth we can manage our affairs. Hard work is possible only if our people are assured that they will be given opportunity to live a life of dignity. If by our utterances and actions we compromise with the dignity of the nation, then how can we inspire them to make sacrifices? The spirit of *swadeshi* and self-reliance has to be resurrected. If in the dark days of our history it could do the miracle, why cannot it work today?

If we need help from others, others also seek our cooperation. It is mutual. A nation of India's size and potentiality cannot be ignored unless and until we surrender the spirit to resist.

This spirit of resistance is to be inculcated in all sections of our people. Let us work together in that direction. No compromise with national honour. No surrender to outside manipulation and pressurisation. No curtailment of our decision-making powers. Let us depend upon our own. Let the people be aroused to preserve our national pride. The rest will follow. ■

POLITICAL NOTEBOOK

Time for Initiative

Now that the Beant Singh Government has taken office in Punjab and democracy stands restored in the trouble-torn State, the long-awaited political initiative to settle the Punjab problem does not brook the slightest delay. Despite the fact that barely 25 per cent of the electorate exercised their franchise in the Punjab elections, the turnout of voters being the lowest ever, and although the poll took place under the shadow of the gun (reflected not only in the terrorists' depredations but also in the massive mobilisation of the armed forces to ensure peaceful polling), there is now an air of expectancy in the State Both the Central and the State Governments have a major task to convince the Punjab populace that they are really serious in resolving all the outstanding issues facing the State This is precisely where the Narasimha Rao dispensantion has to strike a radical departure from past practice.

In his customary address to the joint sitting of both the Houses of Parliament on the opening day of the Budget session, President R Venkataraman began the speech by dwelling on the Centre's policy on Punjab While congratulating the "brave people of Punjab" for the "courage they have displayed in reaffirming their faith in the democratic process and in the abiding values of secularism and nationhood", he declared "The Government is committed to finding a just and amicable solution to all the outstanding issues in Punjab. The Rajiv-Longowal Accord was a step in this direction The presence of elected representatives will strengthen a meaningful dialogue and the participation in the process of all sections in the State "

These words are of weighty significance indicating a new course dictated by the ground reality and the exigencies of the present-day global environment No doubt the Prime Minister, while reiterating this commitment for a dialogue, has in a recent interview underscored that any solution in Punjab has to be within the framework of the country's unity and integrity. But this does not reflect any fundamental shift from the tenor of the President's address

Meanwhile, the Punjab Chief Minister has called upon the Akali leadership to eschew the path of confrontation and cooperate with his government in tackling the basic issues confronting the State This is definitely welcome But neither can the Akali leaders respond nor can there be any appreciable decline in the sense of fear among the Punjab populace unless tangible steps are taken on the lines indicated in the President's address Narasimha Rao is on record having publicly assured, before the elections, that the Centre would adopt the necessary measures once a popular government was elected in the State. It is now time for him to keep that promise without undue delay.

Several noted personalities, including the widely respected Communist stalwart Satyapal Dang, have spelt out the outlines of a political package for Punjab The element of terror still stalking the countryside being quite obvious in the latest aborted bid on Beant Singh's life, any reluctance on the part of the Centre to unfold the package would be a costly error and could invite the same disaster that overtook its predecessors to the detriment of the nation's overall interest

KAMAL NAYAN KABRA

The Indian economy is passing through an extraordinary phase, based only marginally on the inner logic of the economy. Many years of utter mismanagement seems to have brought us to the present impasse characterised by one, the abject surrender to the entrenched centres of economic and political power at home; and two, the pathetic nervousness in the choice of a self-defeating relationship with the external forces, particularly with the core group fo global economic and military powers.

The balance of payments and inflationary crises are, in a considerable measure, due to the continuous adoption of soft options which restricted and worsened the future possibilities. Some of the recent developments in the political, economic and ideological spheres on the national and international planes combined with one another to create an adverse conjuncture for the current budgetary exercise.

I

THE analysis of the prevailing economic situation in the Economic Survey 1991-92 represents an attempt to divert attention from these basic factors. The attempt seems to be to impose a package of measures jointly hammered out by the indigenous and external interests by exaggerating the crisis points and misrepresenting the character of the crisis. The internationally infamous features of the structural adjustment package and their detailed and time-bound specification for India by the Fund-Bank have also robbed their economic justification of its scientific validity and the budgetary exercises of much of their 'romance of secrecy and anticipation'. The additional factor is the consternation caused by the more than willing submission to these machinations by the present regime claiming to be the successor of those which had guided the NAM and ardently advocated the New International Economic Order.

The Economic Survey 1991-92 seems to be an attempt to reveal as little of the harsh economic reality as possible. Many of its statistical tables concerning macro-economic variables are just a literal reproduction of what the preceding Survey contained. There is no analysis of the trends in savings and investment. Symbolic of the neglect and downgrading of the employment objective is the mysterious stoppage of the data of employment in the organised sector at March 1989. Since the data on agricultural and industrial production are reported, one wonders why the hesitation to present the updated data on the GDP and related aggregates.

The statement regarding the "fairly robust growth rate of 5 to 6 per cent in the output of services" in 1991-92 and the data on the performance of the infrastructure make it all the more curious that the GDP figure is not given. Does it have something to do with preventing a close scrutiny of the claim of reducing the fiscal deficit to a pre-stipulated proportion of the GDP? With the Fund-Bank monitoring of dozens of macro-economic variables on a quarterly basis, ostensibly for ensuring repayment of their loans, one wonders why the country is not being taken into confidence on these crucial facts.

Some apparent double-speak in the Survey also causes concern. At one place, the Survey says:

> There has ensued an industrial recession in which *industrial investment* has slowed down (p 23, emphasis added)

Earlier one reads

> The response to the new industrial policy has been very encouraging The number of *investment approvals* given in 1991 has risen to 5538 from 3335 in 1990 3897 *investment proposals* were cleared between the announcement of the new policy on 24 July, 199. and 31 January, 1992 (pp 13-14, emphasis added)

◆

THE authorities take considerable solace from the "marked improvement in foreign exchange reserves" (amounting to Rs 11,410 crores). Exports in dollar terms were lower by five per cent during April-November 1991. However, imports declined over

The author, a noted economist, is a Professor at the Indian Institute of Public Administration, New Delhi the same period by 20.7 per cent. The trade balance deficit became lower. During the fiscal year 1991-92, Rs 3212 crores worth of drawals were made from the IMF. Commercial credits worth Rs 1559 crores were approved during the first half of 1991-92. Something like Rs 6000 crores in foreign exchange was collected by means of amnesty and India Bond schemes, bringing the known external borrowing during this period to Rs 10,771 crores (and some foreign exchange was in the kitty at the beginning of the current fiscal year). As the authorities too claim, they re-established the capacity to borrow by some policy changes to rebuild the confidence of the lenders. A crisis which erupted, *inter alia*, owing to reckless borrowing, without ensuring that each loan creates by its use the capacity to survice it and repay it, is sought to be set right by a replay of the similar borrowing binge. A poor farmer who contracts fresh loans to repay past debts is treated as worse than a defaulter: he mortgages his future as well. But our economic pundits and responsible political leaders consider it an achievement to be able to resume borrowing: the more the merrier.

The Survey goes on to say almost as much:

> **additional resources mobilised from the multilateral financial institutions and the IDB and Immunity Schemes were primary used for building up reserves and not to liberalise imports. (p. 16)**

The resolve not to liberalise imports, however, was shortlived and from the second half of the fiscal year, import relaxation was introduced. The reason seems to be that the import squeeze was counted among the factors for industrial slowdown and the slow growth of exports. The Survey gives data on annual rates of change in industrial production and non-oil imports (both moving negatively) for the first eight months of 1991-92. Simply by placing the data on two diagrams (see diagrams I and II) one can easily see that there is little correlation between the two.

Fig I

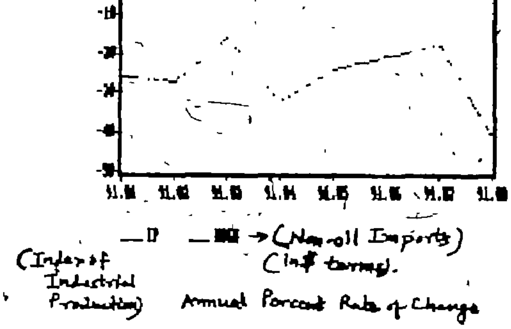

Fig- II.

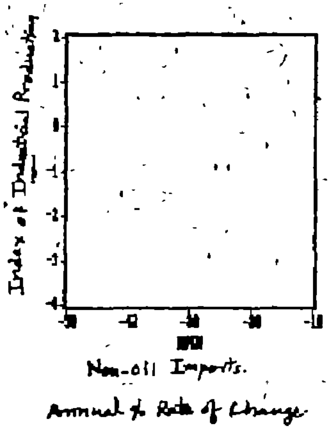

One has to probe deeper. A large number of investment approvals could not prevent the recessionary trends. Import compression too could not have been a major influence. Among better probables one may mention a sharp reduction in Plan and non-Plan public spending on capital account of the order of Rs 4575 crores.

Then, the excessive concentration of the manufacturing sector's growth in some elitist industries based on imported inputs in the 1980s may indicate a narrow and uncertain demand base, particularly after the saturation of the demand suppressed in the past. The buoyancy in black earnings and absence of any worthwhile tax draft on the high income groups indicate the weakness of any postulate of demand deficiency. The general spread of recession, except for beverages, tobacco and cement (although more worked in capital goods, exports and consumer goods industries) also point to same basic, structural factors, particularly because there was no slump in agricultural incomes either.

High interest rates; attraction of imported/smuggled substitutes; the growing demand for farm houses, holidays, artistic goods, various services; absence of price advantage for domestically produced luxury goods, partly owing to the operation of cost-push factors, etc. may have something to do with the slowing down of the leading industries of the 1980s. The Survey seems to oversimplify and misread the nature of the dynamics of industrial slowdown as also of its obverse, that is, the dynamics of industrial growth, particularly insofar as it continues to neglect labour-intensity, widening of the home market and the role of the informal sector. The market forces as they stand today cannot take care of these concerns.

Actually, the phenomenon of recession should have been viewed alongwith that of persistent inflation. A combination of lower fiscal deficit, smaller additions to the money supply and hefty increases in administered prices, mainly of universal intermediates, are considered adequate in the official perception for containing inflation. It is this perspective which makes the anti-inflationary thrust of the Budget strategy weak and incredible in almost every quarter. The Survey seems to ignore that the food prices are the major contributor to the current inflation. It also under-reports the growth of inflation. The index number of the wholesale prices went up by 18.5 points upto December 1991 and the food price index by 39 points, compared to 18.9 points and 30 points respectively in the preceding year.

The Survey is tight-lipped regarding the nature of our economic problems: the challenges we face and the adequacy of our policy responses and our institutional arrangements. It hardly sees anything beyond the BoP problems and inflation, giving the impression as though our external sector is the most critical one.

II

THE impact of this perspective and the underlying reasoning is writ large over the Budget for 1992-93. The Budget seems to have been taken as the major occasion for putting into place the new economic order the authorities have come to treat as the panacea.

It takes big strides on the road to marketisation, privatisation, globalisation, as well as the rolling back of the state, planning, public sector and inward-looking, people-centred self-reliance. It discards the figleaf of equity and social justice. Even the rhetoric on those lines is missing. What it says is, as the concluding para of Part I of the Survey puts it:

> *The Government has tried to expand the economic space in which people can exercise their initiative and ingenuity. It hopes to do more to expand their opportunities, to enhance their potential. But what shape the economy takes ultimately depends on what the people make of it. In that sense the future is in their hands. (emphasis added)*

Except for the use of the word 'people' in a special sense, meaning those who are players in the non-level field of the market and excluding those millions of poor, resourceless Indians who fail to enter the market, the statement neatly sums up what the Budget 1992-93 has done and what one should expect from it. The minority of Indians who are players in the market field have more space, more opportunities, fewer rules and a very considerate umpire. And yet, it warns, the government has done its bit.

> **We are travelling through difficult and uncharted terrain, where no action is without attendant risks, and success will not always be immediate.**

Thus, the future is in the hands of the people meanign the market operators, for whom the space and opportunities have been increased. But since the market is cruel, ruthless, uncertain and unsparing, the warning shot has been fired right with the word go.

Let us see what the Budget has done. It more or less completes the agenda of 'liberalisation'—liberalisation in an illiberal environment both at home and abroad. After all the progress we have made during the last four decades or so, our per capita output remains about two per cent of the super-rich, post-industrial nations. Our percapita daily final consumption is about one-third of a US dollar. With this initial position we are embarking on the path of globalisation for integration with the super-rich of the spaceship Earth, with the market and private, concentrated private, enterprises as the terrain and the players respectively and with the IMF and the World Bank as the umpires.

◆

LIKE a pale and halting imitation of the "Comprehensive Measures for Economic Stabilisation" announced in 1979 in South Korea, we can regard the present Budget as the magna carta of marketisation-privatisation-opening up. The liberalisation of the industrial trade, financial and foreign capital policies have been or are being completed. After a substantial restriction of the role of the public sector to mere eight activities, sizeable disinvestment in the PSUs, the entire infrastructure field has been opened up for the Indian and expatriate capital. They can raise capital from any nook and corner of the world—they are welcome and shall attract a lower tax of just 10 per cent. They can import capital goods, technology and raw materials (except for those on a small negative list to be announced) at substantially lower tariff. A financially beleagured exchequer has agreed to sacrifice over Rs 2000 crores in import duties. They do not have to beseech the RBI for foreign exchange: just go to the market and buy it. The market will determine the pattern of demand, give signals, spell out the relative profitabilities and allocate resources. We are to live according to the model set forth in Samuelson's Economics.

Huge incomes will be earned, capital gains made and wealth accumulated in this process. But one need not fear the tax chaps eager to reduce the sacks of 'hard-earned' moneybags into tiny pouches. The Budget propoosals amount to imposing negative income taxes on certain sections. Hence the market-friendly Budget will leave the enterprising with larger disposable incomes.

But would not the spectre of wealth tax scare them? Would not the high market values of the assets remain unrealised because realisation through sale would invite the capital gains tax? The fiscal experts appointed for reforming and simplifying the tax system suggested the remedies; the Fund-Bank threw its weight behind for their acceptance (of course without having so much as an inkling of what the expert committee's views are: you don't have to know the report if you know the guys who write them) and the finance minister (small initial letters deliberately chosen) willingly accepts them. Thus one may put tens of thousands of crores of rupees into 'productive' financial assets without having to pay any wealth tax. The threshold for wealth tax has been raised three times from the present level to Rs 15 lakhs. Since only about one lakh assessees declare wealth above Rs 10 lakhs, the new provisions imply that the wealth tax is practically abolished. The super-rich could not have a more friendly regime: the taxes which even the Western market economies impose are either non-existent or teethless in India. The abolishers of estate duty have no moral right to shed tears now that the game is furthered by their successors.

The capital gains are indexed and hence, substantially reduced. You cannot index the earnings of the poor workers facing real threats of loss of jobs, as exit or reorganisation of capital is already liberalised and more is on the way. But the gains of the 'enterprise' must be protected! Even in indirect taxes, the across the board increase of five per cent special excise, the luxury and white goods are exempted (partly by invoking the recommendations of a Marxist Chief Minister!). The real reason, of course, is to bail out those high-growth, high-tech industries from the ravages of the market forces. Naturally, a market-friendly approach has to guard against itself as well.

The external orientation of the system has been increased in many ways: more, large and growing areas for their operation; easy entry-easy exit; availability of financial instruments, lower tariff, retention of 15 per cent export earnings in foreign exchange and another 45 per cent at 'market rates'. Those MNCs which act as export houses and earn foreign exchange by exporting the produce of the artisans, small industrialists, farmers, horticulturists, etc. will have a large amount of their 'own' foreign exchange for financing imports. But their Indian, home market-oriented competitors will have to obtain imported technology, capital goods, raw materials, etc. by means of market-priced foreign exchange. The partiality of the partial convertibility has to unfold itself fully at the marketplace to enable one to realise the differential impact it would have. But its great profitability to the MNCs and their Indian affiliates is obvious. A Budget which increases the excise burden on Indian industry by almost as much amount as it reduces the burden of import duties certainly shows its colours: it improves the market access in India of the foreign capital.

◆

A related question is that of legalisation of gold imports at a duty of Rs 450 per ten grams. It is certainly true that an economic order which accelerates the growth of large accounted and unaccounted income and wealth, institutionalises inflation, encourages consumerism and puts a lot of value on conspicuous consumption, cannot contain the practically insatiable demand for gold. Given the price difference between the Indian and world prices of gold (of about Rs 1100 per 10 grams presently), a lot of gold is likely to flow into the country, benefitting to an extent Indians and people of Indian origin living abroad, particularly those few having the means to buy five kilograms of gold. It would provide some foreign exchange to the public exchequer as well. The 'partial convertibility' and gold imports are expected to reduce the *hawala* business. But much would depend on the large and flourishing tribe of gold-smugglers.

Are the gold-smugglers, with large resources, useful connections and extensive networks, going to go out of busineess? It would be naive to expect that they will look for new pastures and give up having anything to do with gold. What they may lose by way of reduced price differential, may be made good by the reduced cost of bringing gold into India, with the incredible 'advantage' of moving out from the underworld to the open, respectable

US Pressure on India's Nuclear Policy

JAGDISH R. HIREMATH

Nobody need be surprised that the public debate on India's nuclear options for the nineties has hotted up in recent weeks. Meanwhile, a steady stream of gentle persuadors from Washington has been descending on New Delhi, apparently not so much to read us the Riot Act, as to guide us on to the so-called path of reasonable response in the present nuclear age. In quick succession South Block has been host to a number of distinguished visitors—Reginald Bartholomew, the Under Secretary of State for International Security; Senator Larry Pressler of Pakistan's much hated Pressler Amendment; and Ronald Lehman, the Director of the US Arms Control and Disarmament Agency.

Not to be left out of this hectic exercise was the British Foreign Secretary, Douglas Hurd. And when Madhavsinh Solanki stopped over in Tokyo on his way back from the UN Security Council Summit, his Japanese counterpart, Michio Watanabe, did not miss the opportunity to urge India to sign the NPT, even hinting that Japanese aid may be denied to countries with nuclear weapons or selling conventional ones.

More recently, the outgoing US Ambassador, William Clark Jr, has thought it fit to concede that India need not sign the NPT. It would be quite adequate, it seems, if we were instead to evolve "a workable nuclear non-proliferation regime". It is difficult to decipher the difference in the end-result of these two alternative approaches. But it is significant that the envoy goes on to make a distinction between non-proliferation and the elimination of nuclear weapons which, according to him, would require a different set of measures and a very different time-frame.

Clark was apparently doing no more than dutifully repeating, in his own words, what had been said not so long ago by Ms Teresita Schaeffer, the Deputy Assistant Secretary of State for South Asian Affairs, namely, that the focus of US policy was "to encourage and develop a regional understanding on nuclear non-proliferation". Even Congressman Stephen Solarz, our consistent champion on Capitol Hill, is reported to have said at a recent Washington seminar on the "The Changing Face of Asia" that India should participate in the proposed Five Nations Conference on Nuclear Non-Proliferation in South Asia in order to terminate the potential threat that we face from China and Pakistan.

The author, a distinguished diplomat, was India's representative to the International Atomic Energy Agency (IAEA) between 1985-1989.

It would be evident from this brief chronicle of the immediate past that a well-orchestrated campaign has been launched to wear out our persistent refusal to change our nuclear policy, which has aimed at the total elimination of nuclear weapons from this planet and not merely to slap a peremptory embargo on their horizontal proliferation. It has been a policy that has found eloquent expression in recent years in the global appeals to halt the nuclear arms race that two successive Indian Prime Ministers issued, alongwith several world leaders, in 1984 and 1985, and which assumed its most concrete form in the "Three Stage Action Plan for General and Complete Disarmament" that Rajiv Gandhi presented to the Third Special Session of the UN General Assembly in June 1988.

In spite of the relentless efforts made by the US and its friends to persuade us to change track, South Block has gone out of its way on more than one occasion to state that we are not under pressure to sign the NPT. Of course, that is true in a strictly formalistic sense. But it must be recognised that the "other options" advocated by the NPT adherents would have the same disastrous effect of perpetuating the nuclear monopoly of the five weapons states identified and recognised in that treaty. It is also true, at least on the basis of publicly available information, that there has been no overt armtwisting to turn our steps to the desired direction. This contrasts vividly with what the redoubtable Ms Carla Hills has been holding out, with her armoury of Super 301 measures, to make us accept the US demands on trade, patents

Dunkel Text: An Assessment

DEEPAK NAYYAR

The author, a former Economic Advisor to the Finance Ministry, is presently a Professor in the Jawaharlal Nehru University, New Delhi. This article is a revised text of the author's oral presentation, made on January 23, 1992, to the Cabinet Sub-Committee collecting different viewpoints on Arthur Dunkel's Draft of the Final Act on the Uruguay Round of GATT Negotiations.

I. INTRODUCTION

The Director General of the General Agreement on Tariffs and Trade, Arthur Dunkel, has presented the Draft of the Final Act on the Uruguay Round of Multilateral Trade Negotiations. This document represents the outcome of a process of negotiations that began more than five years ago, following the Ministerial Declaration on the Uruguay Round at Punta del Este in September 1986. Thus, the Dunkel Text is neither an intellectual construct nor received wisdom. It reflects the bargaining strengths or weaknesses of groups of countries at different levels of development and the dynamics of the negotiations over time. This has been tempered, to a limited extent, by the multipolar nature of the contemporary world economy, in particular the conflict on agriculture between the United States and the European Community.

It is essential for us in India to make a careful assessment of the document, which has far-reaching implications and consequences for developing countries, in terms of our national interests. The object of my presentation on this subject is to highlight the strategic issues rather than to provide a systematic, let alone complete, discussion of the complex problems. To begin with, I shall situate the Dunkel Text in the wider context of the political economy of the Uruguay Round. Then, I shall provide an assessment of the outcome embodied in the Dunkel Text, with reference to our expectations. Thereafter, I shall elaborate on a few selected issues where the proposals in the Dunkel Text are a cause for serious concern. In conclusion, I shall attempt to make some suggestions in terms of the options available to us at this juncture.

II. THE WIDER CONTEXT

IT is necessary but not sufficient to recognise why and how the Uruguay Round is different from the earlier rounds of multilateral trade negotiations. The differences are much wider and deeper than its enlarged scope. The Uruguay Round is an ambitious and complex endeavour at many levels so that it is possible to miss the wood for the trees. In my judgement, an overall perspective is essential because the whole of the Uruguay Round is much greater than the sum total of its parts. Outside the limelight, in a setting of business as usual, the Uruguay Round is *de facto* engaged in defining the parameters and writing the rules for international economic relations between countries at very different levels of development. It is a new international regime in the making that extends beyond the movement of goods across national boundaries to international flows of services, capital, technology, information and personnel. This is the outcome of a planned strategy and orchestrated tactics adopted by the major industrialised countries. The object of the exercise is to put together, piece by piece in a jigsaw, the structure of a new system with corresponding rules of the game, in conformity with the perception and the interests of the industrialised countries in the world economy.

The political economy of the Uruguay Round is easier to discern in the context of the new issues when juxtaposed with the moves for institutional reforms and change. GATT type rules and principles, with provision for dispute settlement, compensation and relation, are sought to be extended to international trade in services, international investment flows and international transactions in technology. It is an altogether different world from the traditional concerns of the GATT relating to border restrictions on trade in goods. The quest for international regimes of discipline on trade in services, trade-related investment measures and trade-related aspects of intellectual property rights is closely intertwined with the interests of the transnational corporations, which are capital-exporters and technology-leaders in the world economy and for whom the new issues represent the final frontier intheir global reach. The organisation of production, trade and distribution on a world scale requires the unfettered movement of not only goods but also services, capital, technology, and information across national boundaries. From the viewpoint of transnational corporations, it is preferable that these rights are incorporated in multilateral frameworks, which give them legal rights, instead of bilateral concessions they would have to obtain through negotiations with national governments. It is plausible to suggest that the Uruguay Round represents a systematic endeavour on the part of the United States and the major industrialised countries to re-design the rules and the parameters which govern the functioning of the world economy, in part to suit the interests of transnational corporations for whom distinctions between goods and services, trade and investment, or technology and information, are of no more than academic interest.

The thrust of the Uruguay Round, as embodied in the Dunkel Text, extends far beyond the border paradigm of the GATT. The traditional concerns of the GATT were limited to international trade in goods. Countries negotiated market access at the border on a reciprocal basis and this was multilateralised through the GATT system. The international trading system now proposed extends beyond goods to services, technology, investment, and information. The result would be that market access in the industrialised countries, for goods exported by developing countries, which was guaranteed on a non-discriminatory basis (for sectors other than textiles and agriculture) under the GATT system, would now be conditional on the concessions that developing countries would be required to make in their intra-border economic regimes relating to investment, technology and services. Insofar as this would imply a transgression of sovereign economic space, it constitutes a fundamental departure from the GATT regime.

III. EXPECTATIONS AND OUTCOME

IT is worth recalling that in the discussions which led upto Punta del Este, where the Uruguay Round was launched, the developing countries were by no means enthusiastic. Indeed, in the realm of the new issues, it would be no exaggeration to state that the developing countries were most reluctant. Yet, once the Uruguay Round became a reality, the developing countries in general, and India in particular, did have a perception about their objectives in the negotiations and expectations about the outcome. At this stage, when we evaluate the Dunkel Text, it is necessary to outline the objectives and make an assessment of the outcome in relation to expectations.

In my judgement, India had three sets of interests in the Uruguay Round. First, there were the positive interests, such as the dismantling of the MFA and the provision for labour mobility in an agreement on trade in services, where we sought to capture some gains. Second, there were the protective interests, such as the preservation of Article XVIII B and the maintenance, if not strengthening, of Part IV of the GATT, where we sought to maintain the status quo. Third, there were the negative interests, such as those associated with trade related intellectual property rights and trade related investment measures, where we sought to limit the damage arising out of the proposal for new regimes. Last but not least, there was agriculture, not quite an old issue and no quite a new issue, where our interests were mixed and in parts unclear. It would be reasonable to ask: how does the Dunkel Text measure up to these expectations?

In the sphere of textiles, the dismantling of the MFA and a return to the GATT remains a distant promise. Indeed, there shall be no discernible gain in the form of increased market access, for seven years in the transition period of a decade. In substantive terms, liberalisation of international trade in textiles would begin only after the onset of the twentyfirst century. This cannot be construed as a concession to the developing countries, even if we ignore the history of the past three decades which witnessed extensions of the MFA, in duration and scope, time after time.

In the proposed General Agreement on Trade in Services, there is nothing on labour mobility, which would allow us to exploit our comparative advantage in services. The movement of labour from developing countries to deliver services in the markets of industrialised countries is a matter for bilateral;

sector by sector, negotiations. Given the immigration laws and the consular practices in the industrialised countries, the pobability of success is almost negligible. In sharp contast, the draft mutilateral framework for trade in services caters to the interests of the industrialised countries, which have a revealed comparative advantage in capital-intensive or technology-intensive services, even if this implies changes in the investment laws or technology policies of the developing countries.

Apropos the rules of the international trading system embodied in the GATT, Article XVIII B remains but has been diluted in comparison with the present situation, insofar as the provisions for notification and justification are far more stringent. As for Part IV of the GATT, which commended rather than mandated special and differential treatment for the developing countries, it stands abandoned. In the Dunkel Text there is a special povision only for the least developed countries, so that other developing countries, such as India, which are the contracting parties of the GATT, have been subjected to instant, *en bloc,* graduation.

It is clear that the Dunkel Text belies our expectations insofar as we have neither managed to effectively promote our interests in textiles and services nor managed to adequately preserve our interests in the rules of the GATT system. It is not possible to elaborate further on these matters here. However, the outcome in the spheres of trade related intellectual property rights and agriculture provides cause for serious concern. These two issues deserve both recognition and emphasis, because technology is strategic in the process of industrialisation and agriculture remains a source of livelihood for the majority of our people.

The uniform regime for the protection of intellectual property rights, proposed in the Dunkel Text, would mean important departures from the intellectual property rights system in India, particularly the patents law, which must be explicitly recognised. Exclusions from patentability would be confined simply to animals and animal varieties and plant and plant varieties. It would no longer be possible to limit patentability to processes alone which would statutorily extend to products. The burden of proof would be reversed. Importation would be deemed as the equivalent of working a patent. Compulsory licensing would be possible only under a very restrictive set of conditions, while automatic licences of right would disappear. The period of protection for patents would be extended to twenty years. It need hardly be stressed that the extent of these changes would necessitate amendments across-the-board in the Patents Act.

The implications of this proposed regime, for the absorption, diffusion and adaptation of technologies, let alone innovation, in the developing countries, are far-reaching. Much needed technologies may no longer be available at affordable costs. The emergence of domestic technological capacities may be pre-empted. Transfer of technology may slow down. The incidence of restrictive business practices by transnational corporations may increase. The prices of some patented products may rise beyond the reach of the majority of people. These are just some of the important implications and consequences, which suggest that the emerging international system for the protection of intellectual property rights is bound to be inequitable and inimical from the perspective of the developing countries.

The proposed régime for trade in agriculture, outlined in the Dunkel Text, should also be a cause for concern to us in India. This is so for three reasons.

First, the stipulations about *market access*, which will obviously impose binding constraints on trade policy, are worrisome. For one, market access can be restricted only for balance of payments considerations and not for protection to domestic agriculture; what is more, such restrictions on imports must be price-based alone, so that quantitative limits on, or canalisation of, imports, whether cereals or edible oils, would no longer be possible. For another, we would have to provide a minimum commitment on market access, which would be determined by our actual imports of particular agricultural products, say wheat, during a specified period in the 1980s. In the sphere of export promotion also it would no longer be possible to reimburse losses on, or canalise exports from, the agricultural sector, as we have done with sugar and wheat from time to time in the past.

Second, the limits on *domestic support* for agriculture, that can be provided by the government, will clearly circumscribe our freedom. While there is provision for a food security system, our public stock of foodgrains would be deemed as too large and our procurement system would become the subject of GATT discipline. There would be an absolute limit of 10 per cent of the value of production, for each crop, beyond which domestic support would not be permissible.

Third, it is clearly specified that *subsidies* on

All that
GAIL'S
achieved
is really
a lot of Gas !

30,00,000,000 cubic meters of it. And still counting.

Its over 1800 Kms of HBJ pipeline laid over 5100 hectares of land, 56 Kms of forests, 22 major and 69 minor rivers, 281 canals, unending stretches of slush, roads and railway lines. It is in fact one of the longest in the world.

Never before has 4,50,000 tonnes of equipment and pipes been moved to distant locations so fast. And a project of this magnitude completed within 19 months of its inception. Complete with satellite communications links between every major pumping station.

By optimal utilization of natural gas, GAIL is adding a lot more to our lives. It is replacing conventional fuels. It is also supplementing the country's LPG availability by about 4,00,000 tonnes per annum to keep the home/kitchen fires burning. As well as planning systematically the nation's future gas utilization — now.

THERE'S A LOT MORE TO GAIL THAN JUST GAS.

Narcotic Aggression and Operation Counter-Attack

V.R. KRISHNA IYER

The drug abuse is no longer considered a 'victimless' crime; it is a crime that imposes a staggering burden on the people and the nations of the world. It is a burden no society can afford to carry.

The illicit production, distribution and consumption of drugs have intimidated and corrupted public servants, and have even destabilised governments. The erratic ebb and flow and sheer volume of 'drug money' have affected the money supply and exchange markets.

Religion is the opium of the people, wrote Marx. But today, opium is the religion of the people; and, like God, is omnipresent, omnipotent and omniscient. Alas, opium makes you slowly ill and eventually kills, makes you a new criminal to rob and buy the stuff, tempts you to smuggle at risk to become rich quick, makes you invisible trafficker of psychotropic stuff and operator of a parallel international illicit currency and sub rosa evangelist of mafia culture. Drug business makes you, if not killed betimes, the possessor of pleasure, power and empire. What noxious menace is this most pervasive vice that benumbs the soul of student, teacher, doctor, politician, artiste and professional, and corrupts innocent millions of youth and promising intellectuals everywhere!

Illicit money-laundering on an international scale is another felonious facility offered by drug trafficking. Terrorists thrive through drug trafficking; so too the underworld of crime and violence. This global scenario, in its sombre macabre, devouring delinquency, is dominated by drug abuse and narcotic trade. These secret operations are now so ubiquitous that you and I, our children and brethren are all unsuspecting victims through processes so subtle, techniques so seductive and prospects so alluring that the world community is now confronted by a cosmic enemy—this insidious narcotic and psychotropic drug problem. Our planetary patriotism or commitment to human survival compel us, wherever we are, whatever be our other differences, to line up for the campaign against homo narcoticus and the all-powerful drug imperialism. No single country, ruler, party or power can conquer the pathological fascination for psychotropic substances under various disguises; and so, a worldwide movement—militant, compassionate, multi-pronged and soulfully committed to the salvation of our generation from the dreadful addiction to drug—is the desperate desideratum.

India, *all Indians*, one-sixth of humanity, must organise the holy battle, harnessing every resource, governmental and NGO, to redeem our tryst with mankind's drug-free destiny. The proletariat and the proprietariat, the agriculturist and the industrial community, the lawyer and the doctor, the academia and the intellectual, the spearheads of all spiritual and religious denominations, why, the slum-dwellers and the rootless rural nomads must all form a pan-Indian United Front to fight this evil empire at all traffic points, in the fields and in the streets, in the hills where poppies cannabis grow and wherever the menace of marijuana shows up.

We are constitutionally bound to this massive undertaking. Whatever your party, to be humanist takes priority over politics. The war against narcotics is a world war and anti-drug justice is a critical dimension of social justice. We must be on the side of the Allies and against the producers, traffickers, terrorist smugglers and criminals of sex and violence and corrupters of the cream of youth and talent.

◆

THE Indian Constitution mandates the state, in Article 47, to protect public health and to endeavour to prohibit the consumption of drugs which are injurious to health. Pursuant thereto, the Narcotics and Psychotropic Substances Act, 1985 has been passed. Moreover, India is a party to international instruments calculated to wipe out drug abuse. The Government of India has ratified the 1988 UN Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances. It has further signed a US-India bilateral agreement on anti-narcotic cooperation. India is also a party to the 1961 United Nations Single Convention on Narcotic Drugs, the 1972 UN Protocol amending the Single Convention, and the 1971 UN Convention on Psychotropic Substances.

Law is what law does, and according to the

International Narcotic Control Strategy Report (March 1991), published by the United States Bureau, the status of enforcement in India is poor. Unlicenced cultivation in the Himalayas and the Western Ghats, among other areas, is good agricultural business still. The Government of India destroyed only 24 hectares of illicitly grown opium in 1990 compared to 99 hectares in 1989. In Kerala *ganja* cultivation in Idukki is prosperous business, and the crop destruction has not been effective enough. The present Kerala Minister, Viswanathan, is reportedly enthusiastic in 'Operation *ganja* destruction'. However, there are vested interests, political and others, which frustrate the Viswanathan agenda. The will and might of the whole government, with full-blooded participation by a crusading public, can be the only locomotive which will wipe out *ganja* from our hill regions.

'Operation *ganja* extermination' reportedly makes headway in the Kerala forestlands, fertile and irrigated but diverted for these contra-legal but super-profitable crops. It is informative to know the facts:

> Some nine lakh *ganja* plants on 1300 hectares of forest land in Idukki and Palakkad districts were destroyed during the 80-day long operation from October 11 to January 1. Based on the price of a kilogram of *ganja* in the local market which is around Rs 1500, the destroyed plants are worth around Rs 120 crores. But in terms of the price in Tamil Nadu markets which ranges between Rs 3000 and Rs 5000 a kilogram it could be worth Rs 250 crores to Rs 300 crores.
>
> Some one lakh plants were destroyed in 350 hectares of land in Ponnamala, Kalkadu, Chunipara areas; 1.8 lakh plants in 200 hectares in Ashokavanam, Kailasam and Mayadi areas; 20,000 plants in 200 hectares in Thottikadu and Padunakodi areas, another 20,000 plants in four hectares in Kozhikanam and Vallakadavu areas; one lakh plants in 100 hectares in the Shoolappara area; and two lakh plants in 100 hectares of land in the Kanjappara, Manakodi and Thottikadu areas. One lakh plants were destroyed in the Mangala Devi temple area on the Kerala-Tamil Nadu border. (*The Hindu*, January 6, 1992)

Even so, the macro-scale of cultivation and the miniscule elimination of the noxious crops argues for a more intensive nationwide campaign associating social action groups, journalists, mobile courts and medical-cum-habilitative cadres.

◆

EVEN heroin seizures show a lagging trend. From 2.2 metric tonnes in 1990 which is less than 1989 and opium seizures of 2.1 metric tonnes down from last year, a slackening of the pace is seen. Of course, there is a Cabinet-level Working Group on Narcotics, headed by the Home Minister, but funds are flimsy and performance a failure. Two or three Ministries (Home, Welfare and Finance) are too many cooks indeed!

The staff for narcotic control is inadequate, the funds insufficient, the Narcotic Control Bureau's monitoring ineffective and the drug trafficking network growing. The courts are overburdened with dockets; and so, unless special narcotics courts are started, no progress will occur in control. States ask for Central funds to set up new courts, and funds from the Centre are not forthcoming. So, arrestees are few and they are on bail because of long delays in trial or languish in jail for years.

The truth is that legal vigour is wanting in every sphere, be it in customs, or mail, prosecution or de-addiction and rehabilitation. Stockpiles are escalating, the drug business is booming, addicts are rapidly rising; crime, with a role for narcotics, is galloping and courts for conviction or centres for correction are meagre. We do not have even reliable statistics to formulate programmes of action; and anti-narcotic enforcement is making headway steadily *backwards*. Statutes sleep; officers drowse and the police need to be policed. Action is theatrical and symbolic; the recruits to narcotic numbers are leaping and the country's moral resistance is surrendering to the psychotropic mafia. 'The petty done, the undone vast' is the tragic tale of defeat writ large.

The drug trade makes India a transit camp and within the country drug abuse is establishing its disastrous empire with none to challenge its formidable hold on the unwary youth and stress-torn adults. *The drug world is one* and we can win only if the international community will mobilise its total resources for resistance and strengthen its commitment and cooperation in launching a global attack on this near-invincible invasion.

Governments cannot achieve success through officialdom alone; laws cannot eradicate the evil through courts only; the hydra-headed narcotic monster may surreptitiously slip into every home, and *once in*, is difficult to drive out. So new strategies are needed; people's awareness and mobilisation are a must; NGOs must multiply and the treacherous trade tracked down. More, many more curative centres, control officers, specialised courts and habilitation facilities must be organised. The nation will perish if society is apathetic. The National Convention held in Cochin did focus on the terrible problem and brought it into the open for public discussion. Everyone with concern must participate, even religious and spiritual leaders, if we are to overpower the drug terror. The National Convention with the Ministers' rhetoric and officers' oral strategies are ineffectual. The people must awake; the youth must arise. An energetic coalition against narcotics must take power.

A Concluding Note

Even intellectuals like Aldous Huxley have experimented with drugs which alter states of consciousness. Chemical persuasion easily proves addictive and eventually ends fatally. The attraction for *soma* juice comes from Vedic times. However blissful to begin with, such chemical potions have lethal consequences. The classical tranquilliser is opium. But opium is a dangerous drug and its last stage is always a tragedy, causing illness, crime, domestic unhappiness, moral degradation and avoidable accidents. Cocaine is a very powerful and a very dangerous drug. Aldous Huxley states:

> Those who make use of it must pay for their ecstasies, their sense of unlimited physical and mental power, by spells of agonising depression, by such horrible physical symptoms as the sensation of being infested by myriads of crawling insects, and by paranoid delusions that may lead to crimes of violence. Another stimulant of more recent vintage is amphetamine, better known under its trade name of Benzedrine. Amphetamine works very effectively but works if abused at the expense of mental and physical health.

Hashish, *bhang*, and marijuana are popular addictions. Cannabis is also harmful. LSD, it is said, transports people into the other world sometimes never to return. These health-corrosive stimulants make the consumer a prisoner. Depression deepens into despair, in turn into terrible mania. Unfortunately, modern life is so stressful that people seek drugs to make life tolerable.

Tranquillising, hallucinating and mental conditioning are helpful to dictators who can manipulate populations into subservience through the extensive pushing of drugs; and there are many in the pharmacopoeia of versatile narcotics. Through poisoning, the mind is rubberised and enslaved so that the creativity of the nation itself dies a natural death.

In short, the campaign against narcotics is also a battle for moral values and mental freedom; the war against drug abuse is a crusade for human dignity and integrity of personality. Democracy for a doped people is an illusion and so, extirpation of drug abuse is a struggle for human rights.

Do or Die

De Quincey, who was an addict but a literary favourite of the generation of students in the thirties, praised the pleasures of opium: "Thou hast the keys of Paradise,/Oh, just, subtle, and mighty opium!" This is the fatal fascination of the younger generation which seeks to make trips to the unholy heaven from whose bourn few travellers return. Everlasting farewells! and again, and yet again, every lasting farewell may be the lot of most drug addicts. ■

AN APPEAL

C. Achyutha Menon Foundation

Dear friend,

C. Achyutha Menon is no more; a matchless statesman, a humanist of impeccable integrity, a champion of the poor and the downtrodden, a writer of repute, he will be remembered for all time.

We purpose that a suitable memorial be instituted to cherish the message of his multi-splendoured life.

We request you to actively associate with the endeavour in this behalf and donate liberally to the fund being raised by the C. Achyutha Menon Foundation in furtherance of the above objective.

22-11-1991 Yours sincerely,

K. Karunakaran, E.M.S. Namboodiripad, G. Ramachandran, A.K. Antony, E.K. Nayanar, V.R. Krishna Iyer, Indrajit Gupta, P.P. Thankachan, Benedict Mar Gregoriose, Dr K.N. Pai, Dr K.N. Raj, Laurie Baker, P.K. Vasudevan Nair, Jyoti Basu, Mulk Raj Anand, Aruna Asaf Ali, C. Rajeswara Rao, P.N. Haksar, Thakazhi Sivasankara Pillai, Dr M.S. Swaminathan, Prof M.G.K. Menon, G. Parthasarathi, I.K. Gujral, Nikhil Chakravartty, K.R. Narayanan, A.K. Damodaran, K.P. Unnikrishnan, Chitta Basu, P.M. Sayeed, N.E. Balaram, Dr Poulose Mar Gregoriose, Poulose Mar Poulose, V.K. Madhavan Kutty, Dr I.S. Gulati, Dr Sukumar Azhikode, Dr M.S. Valiyathan, Dr P. Basak, Vaikom Muhamad Basheer, Vijaya Kumar (Hind Samachar), *Ali Sardar Jafri, Malcolm Adisheshaiya, Dr C.T. Kurien, Khushwant Singh, Asghar Ali Engineer, S.G. Sardesai, Satyapal Dang, Mohit Sen, Shasi Bhushan, Ghulam Rabbani Taban, R.L. Bhatia, Prof K.N. Panikkar, Adoor Gopalakrishnan.*

THIRD WORLD

Dossier on World Bank/IMF Policies

The Third World Network, a grouping of organisations and individuals involved in Third World issues, has been monitoring the impact of World Bank/IMF structural adjustment programmes in Latin America, Africa and Asia. The Third World Network has now prepared a dossier on the social and ecological impact of these policies in India covering diverse aspects:

1. A Guide to the IMF and World Bank
2. The Genesis of India's Balance of Payments Crisis
3. Structural Adjustment and the New Economic Policy
4. The Erosion of India's Democracy and Sovereignty
5. Impact on Employment, Food Entitlement and Health
6. Impact on Agriculture and Environment
7. Alternative Views on Liberalisation
8. Structural Adjustment Programme and the Third World.

The dossier is an indispensable aid to citizens, movements, policy-makers, NGOs concerned about the rapid pace at which major economic decisions are being made without democratic participation.

Please book your orders in advance.

The copies will be placed on March 9 at

M/s People Tree,
8, Regal Building, Parliament Street
New Delhi-110 001

Policy Changes: For Whom and Why?

D.P. BHATIA

During the fifties and the sixties, it was felt that in the Indian villages a poor farmer or a landless labourer is often in the grips of the village *sahukaar* (moneylender). Once he borrows, it becomes difficult for him to get rid of the yoke of the *sahukaar*. Now it appears that India as a whole is in the grip of the international *sahukaar*. This inference is drawn from the terms being dictated for lending the money, which have no direct relevance to improving India's foreign exchange reserves. The policy prescriptions are irrational and unrelated to the economic sickness of India. These constitute a kind of ideological invasion.

When the present government took over, India was facing a problem of forex crunch. How this problem arose—due to the ill-performance of the external sector or excessive external borrowing—is an issue secondary to the question as to how the disease is to be cured. Of the two alternatives, to borrow or to tighten the belt, the present government went for the former. It appears that taking advantage of this, the moneylender started dictating terms, and these vary from decontrol and privatisation of the economy to reduction in the fiscal deficit and freeing the entry of the MNCs. The conditionalities also amount to slashing down of the wage cost and reducing the bargaining power of the labour class. In order of priority the question needing our immediate attention is whether the prescription provided will help in curing the specific economic disease.

II

LET us take the question of privatisation.

The past performance of large units in the private sector, public sector units and small units reveal that most of the export requirements are met either by the public sector units or by the small units. The large private units have not shown sufficient interest in raising India's exports. During the eighties, the percentage share of the large private units in India's total exports declined from 60-65 to 40-45. Thus, based on past performance, it appears that with increasing privatisation the export drive will fail to receive the desired momentum. There are further reasons to believe this.

Under market conditions the private sector will go by the profitability criterion. The simple economic law teaches that profitability is positively related to relative price changes. Given this, with almost creeping price rise, if not stagnant or declining in the international market, and the fast-rising domestic prices are likely to divert sales from exports to the domestic market. Further, as controls are withdrawn, the trader will be free to sell wherever he likes, the domestic or the international market. He will prefer the domestic market over exports.

Another prescription relates to reducing the fiscal deficit. The fiscal deficit comprises of budgetary deficit and market borrowing: the former is regarded as responsible for increasing the money supply and consequently price rise, and the latter leads to diversion of resources, perhaps from more productive to lesser/unproductive uses. Therefore, it is understandable that the fiscal deficit needs to be kept under control. However, the course suggested by the IMF and adopted for achieving this objective—which is indiscriminately raising the prices of basic goods, capital goods, essential consumer goods, etc.—is difficult to digest. This course is more damaging than helping the economy. There exist alternatives and these could have been explored.

First, there is ample scope for cementing the leakage of direct taxes. The self-employed class, specially those in the services sector, like trading, professionals, pay very little tax on their income. In case the self-employed in the service sector are made to pay their income tax in full the revenue generated will wipe out a good percentage of the current deficit.

Then, the maximum income-tax rate was lowered in 1984-85 and 1985-86 expecting that people will pay their income tax honestly. Unfortunately, this has failed to work. The income tax revenue has not shown any response to the lowering of the rates. If that is the outcome then why to continue with this trend? Not only because different sections of the society have benefited unequally from the past progress, justice requires proportional sacrifice at this hour of crisis and therefore there is a scope for raising the tax rate at the higher income slabs. The present drive of equal sacrifice in the form of higher prices, is totally devoid of the principle of social justice.

Similarly, there is a substantial leakage of indirect taxes, and this also needs cementing. Ironically, an honest tax payer keeps on paying the tax and one who invades from time to time gets a change to convert black into white income. In less than a decade's time, it is the fourth time that a chance has been given for declaring the black income. This demoralises an honest tax payer.

In short, in order to bring down the fiscal deficit, it would have been better to rely upon raising the revenue for which ample scope exists rather than reducing expenditures and raising the prices. Cutting on government expenditures adversely affects demand which in turn suppresses production leading to unemployment, and so on. One needs to remember that the great depression of the early thirties which gave birth to J.M. Keynes' General Theory was caused by demand recession.

The present course of price management has led to a steep price rise of the essential consumer goods. This in turn has already adversely affected the demand for manufactured goods, specially automobiles and electricals, and it will be legitimate to think of a recession. If timely steps are not taken which, however, mean reversing the recent policy changes, the socio-economic conditions may take an ugly turn.

III

THE question of efficiency which is being emphasised needs a careful consideration. Here only two of its aspects are considered.

In the first instance, one fails to understand how far it will be useful if labour efficiency is raised by rendering a significant percentage of employees as surplus and adding to the unemployed force. An issue that could have been debated before such drastic policy changes is whether, given the present level of unemployment/under-employment in India, it is possible to mobilise sufficient quantity of capital and achieve full employment or a stage close to full employment at a capital-labour ratio which results in an efficiency level which is near about what is found in the industrialised economies. If that is not possible, then what are we heading towards?

Another dimension relates to the relative price formation. Over a period the prices of the public sector products increased at a much lower rate than those of the private sector. In case these prices were allowed to be determined by the market forces, the profitability in the public sector would have been much higher and even more than that in the private sector. One should, however, also be aware of the price attached in determining the prices of basic and essential goods by the market forces. India would have experienced a galloping inflation because rising population and investments for development would have kept demand far ahead of supply.

IV

BEFORE concluding it is necessary to analyse the growth and price aspects of the IMF prescription. In the past decade India's GDP grew annually at five to six per cent, industrial production at about eight per cent and prices rose at eight per cent. The performance for the past few months ending December 1991 reveals a negative industrial growth. The GDP in 1990-91 may rise by less than three per cent, the WPI at 13-14 per cent and the consumer price index at 16-17 per cent. Further expectations are that in 1992-93 the GDP may rise by three to four per cent. Thus the policy changes will scale-down India's past achievement at least over the next couple of years.

It is also feared that with the policies being pursued, India may soon face a shortage of real domestic saving. Already small savings have started fettering. In India, about 60-70 per cent of savings are generated by the household sector. With the present trend of rising prices of essential consumer goods, the real income of this sector will decline leading to a fall in savings. Thus the present price trend is expected to adversely affect the household savings and consequently domestic saving which will further compel India to seek aid. The Finance Minister has already revealed that "India will require IMF and World Bank aid till 1993-94". Perhaps it will be unwise to predict beyond that.

V

IN case, as is implied in the foregoing analysis, the

Evolving Strategies for Tribal Development

NITA MATHUR

In recent years the main meeting ground of planners, administrators and social scientists has been the subject of development. The air around conference rooms remains laden with words like 'development', 'upliftment', 'progress', 'welfare', 'growth', 'modernisation' and 'social change'. The enthusiasts belonging to diverse academic, social and political streams actively engage themselves in discussions that involve raising eye-brows, thumping tables and hurling criticism at each other. Groups separated in the realm of ideas converge, however, on themes advocating upliftment of certain sections of society at a micro-level and that of the nation at large. They agree that development is crucial to nation-building and nation strengthening. In this crucible of ideological unity divergent viewpoints melt away.

India has been idealised as a country of rapid economic expansion and sustained economic growth, as one in which material and technological depressions have been ironed out thus preparing the ground for a stable and self-reliant economy. The imbalanced and lopsided situation that confronts those engaged in development activities is a product of the colonial past in which the resources of the country were depleted to suit the vested interests of the rulers. This deepened intrinsic cleavages in the power structure and control over the means of production, distribution and consumption within a group and between socio-cultural groups in the wider context. Development in India warrants wearing strands at different educational, perceptual, technological and economic levels to constitute the mainstream in which "the notion of segregation is not held, and a group is united with the other transcending individual, cultural and ideational differences." (Srivastava, 1989; pp. 16-17)

The government envisages speeding up the pace of tribal development so as to bring them at par with the non-tribal groups. Bridging the gulf of levels of development calls for innovating methods for increasing the tribals' income, making them self-reliant and encouraging them to participate in new productive processes and developmental tasks. This may be achieved by eliminating the exploitative practices on the tribals and fostering processes of socio-economic development, rendering justice and infusing strength and courage among them. An average tribal working as a labourer must be saved from the clutches of economic and social exploitation and from such policies as land alienation, marketing, and excise and forest policies which have been found to strike roots as developmental plans are introduced in regions of high tribal density (*Guidelines for Tribal Sub-Plan,* 1978).

The scope of development programmes is often restricted to the economic aspect of life. The Indian Government approaches the target of economic development and poverty amelioration through the technique of planning that ensures the optimisation of limited resources. The areas enlisted by the government (*The Planning Process,* 1975; pp. 56-57) as most appropriate for drawing up local plans are the following:

(i) agriculture, including minor irrigation, soil conservation, village forests, animal husbandry, dairying, etc.;
(ii) development of cooperatives;
(iii) village industries;
(iv) elementary education, specially provision of school buildings for local communities;
(v) rural water supply and the programme of minimum rural amenities, including construction of approach roads linking each village to the nearest road or rail head; and
(vi) work programmes for the fuller utilisation of manpower resources in rural areas.

The government assiduously prepares plans, appraises progress and restructures its policies. Developmental plans, policies and strategies are intended to touch upon the daily life of the masses, and in particular those sections of society that have hitherto remained neglected and have undergone or are undergoing economic turmoil and hardship resulting in their alienation from the national mainstream. Among others, the government schedules certain castes and tribes as proposed beneficiaries or target groups of welfare programmes. Funds are allocated, schemes are launched and other incentives like reservvation in jobs are

The author belongs to the Department of Anthropology, University of Delhi.

extended. The government machinery is geared to particularly benefit the Scheduled Tribes apparently distanced from the national centre due to socio-economic, cultural and cognitive reasons.

◆

A large number of tribal development programmes are intended to generate income and employment opportunities. Operationalisation of these plans and policies involves granting loans at low interest, providing productive assets and input to families, training youth for self-employment, creating durable community assets and educating the tribals so that they are integrated with their contemporaries in other parts of the country. A group of appointed officers enter a tribal area with a rigid format of tables. Their task entails collecting statistics and completing lists indicating the number of beneficiaries, loans sanctioned and so on. They sift out emic accounts bearing on involution of the social fabric in the high sounding schemes. The ethnocentric disposition of officers distances the tribal folk who sometimes develop mixed attitudes to ambivalence and hostility toward them (Chaudhury, 1990a). To the lobby of anthropologists this appears as alienating and dispassionate in character.

There is a hiatus between government agencies actively involved in formulating and implementing plans on the one end, and the tribals as the proposed beneficiary group on the other. Policy-makers remain ignorant of the social milieu in which a tribe is rooted and which profoundly influences the understanding of the external world, experiences, value system and conceptualisation of its members. It is imperative to examine the cultural paraphernalia before laying out plans and programmes for the tribals. Inclusion of relevant anthropological data will serve to resolve the crises that arise out of apparent rigidity in the social structure and non-economic constraints that limit technological advance.

The Anthropological perspective on development places emphasis upon acquisition of knowledge about the cultural setting of a tribe as a pre-requisite of planning. Highlighting the interplay of culture with development plans, Dube (1988) makes the following propositions:

1. The ubiquity of culture is coupled with its local and regional variations.
2. All development programmes should take cognisance of cultural diversity.
3. In case this diversity is not attended to or when programmes are devised with experiences drawn from other cultures, or when models of development are detached from the cultural reality of a society, there is a breakdown of every effort that tries to ameliorate the society-naturistic and revivalistic movements occur; the developments are seen with animosity.
4. Culture is dynamic, but does not imply that it is easily transformed. Even when changes occur rather rapidly the local culture is able to hold itself. It is in the context of culture that people find the meaning of life and existence. Thus, what is it that people look for when the development plan does not suit them? They look for their culture which gives them sustenance and existence.
5. Hence, there must be a plurality of the development programmes—we cannot think in terms of a common programme for all. But we have to think in terms of different programmes for different contexts, each paying allegiance to the local cultural contexts. It is in the multiplicity of the development programmes that we see the real meaning of anthropological work. Such a plurality of development programmes is important in the Indian situation because, as we said earlier, of its diversity and plurality. Although much of the experimentation of development was done in the Third World countries, all this failed primarily because the socio-cultural factors were ignored in them. (Chaudhury, 1990b; pp. 13-15)

The policies should be planned, keeping in sight the socio-cultural milieu of the tribals for whom they are intended. There is no global tribal culture; hence the monolothic, unitary schemes of development for the entire tribal population of the country have met with only partial success. The impetus to accept and incorporate a development programme is not solely dependent upon its scale, scope and advertisement but more importantly on its degree of integration with the culture of the people it is supposed to benefit. According to Roy Burman (1968), the value system trickles in the community response to developmental programmes and is found to play a critical role in determining the broad strategy of the programme (that is, if it is given due consideration). Further, specific items of a programme are highly influenced by the corpus of related beliefs and practices, and finally, a combination of strategy and tactics produce the mid-range influence which is crucial to planning. In essence, social and cultural traditions infiltrate the processes and patterns of development.

◆

A development plan which is ill-aligned with cultural practices and beliefs is most likely to be rejected as demonstrated by Chaudhury (1990b). Critical assessment of planned development among the Kondhs of Orissa by the trained anthropologist revealed that the Kondhs were supplied cattle as a part of the government programme. The people obtained a rich quantity of milk which did not fetch the market within the tribal group primarily because the Kondhs do not consume milk as part of their cultural tradition.

The only alternative was to direct the supply of milk toward exchange with other tribal groups. The difficulty in this operation is that milk is a perishable commodity and the Kondh must be educated about preservatives that will enhance its shelflife, for, after all, it may take time to transport milk from the area of production to that of distribution and exchange that is just enough to spoil it. At this juncture Chaudhury raises a pertinent question: Should the tribals who do not consume milk be given milk producing cattle? If introduction of pastoralism was essential, then the material provision should have been accompanied with technical knowledge regarding maintenance of cattle, preservation of milk in addition to a battery of incentives to initiate and sustain the change. Chaudhury opines that in the absence of an immediately accessible market and proper encouragement there is a strong possibility that the change is resisted.

By the same token, Roy Burman (1968) cites a case from the Rabha tribe to whom the government alloted commodious houses. The tribals refused to take possession of the houses because of a belief that their ancestral spirits would resent the new construction and it was not feasible to abandon them for this. The settlement was used to house cattle and poultry birds. The housing programme did not line with the cultural tradition and failed miserably.

In another case, the Tota community (occupying the village, Totopara, situated at the border of West Bengal and Bhutan) practicing orange cultivation was faced with a serious problem that threatened their survival. The orange grooves dried up yielding a meagre harvest. The Agriculture Department sought to uplift the stage by experimenting with varieties of chemicals and fertilisers applied to different trees. The experimental details indicating the names of specific growth-inducing substances were recorded on yellow tin plates attached to the trees. One day Roy Burman found that the plates had been removed by the people. Interrogation disclosed that the action was prompted by instruction from Ispha (their deity) who expressed that the trees were turning yellow because of the colour of tin plates. It was a case of sympathetic magic. Roy Burman (1968) immediately turned the logic parallel by suggesting the replacement of yellow tin plates with green ones, for trees may turn green due to the magical effect of green plates. This was readily agreed to and the people's cooperation with the Agriculture Department renewed.

It is important to promote an ideology in which development and change are seen as part of socio-cultural tradition rather than as antagonistic to it. In the words of Joshi and Srivastava (1989; p. 109):

> If changes in material appurtenances and ideological infrastructure are to be successfully initiated, it is imperative that continuity is maintained with the traditional aspects of society. And, thus, religion, rather than being declared as obnoxious, needs to be re-interpreted to suit the secular premises of social living. What is being reinforced is not religion *per se*, but the sanctioning mechanisms that underlie the whole corpus of myths, beliefs and practices.

Development, to most people, has come to mean digression from all that is traditional—technology, customs and vocations. The tribals, much like the backward castes, are encouraged to aspire for absorption and employment in the public sector.

In a similar context, Das and Kagal (1990; p. 2) maintain, "what such creative communities need is not a few token seats in dingy, central offices to work as peons, clerks and even IAS officers, but opportunities to develop their crafts, institutions in which their pedagogic practices would provide models for teaching and policies that would not destroy them in the name of modernisation". They should not be mercilessly dragged out of their natal socio-cultural setting to be transplanted in an environment for assimilation in which they strain to adapt. Development will be effective if they are provided benefits that profilerate on their cultural substratium and for which they are not compelled to seek new ground.

◆

EVEN after more than four decades of concerted efforts and systematic planning, the tribal people are not one with the mainstream of the Indian population; we are still engaged in drawing up new plans for their education and development. The process is not complete and the fulfilment of the goal appears afar. These trends are symptomatic of the fundamental errors in the process of formulation, implementation and evaluation of plans that arise out of gross neglection of tribal cultures *per se*. An aspect of tribal culture, often neglected and uncared for, relates to their thought process that tremendously influences their understanding, expectations, aspirations and behaviour. This as a vital component of culture deserves larger attention than has been sanctioned for it. The following pages are devoted to integrating the tribal perception and cognition with their development.

Each people have a unique social heritage, distinctive way of life, ideals, values and behaviour. More importantly, tribal societies differ in their systems of perceiving the environment, classifying it and thinking about it. This involves probing the explicit dimension of performance and behaviour in order to arrive at the psychological processes in which they are lodged and from where they germinate. Planners should take tribal cognition (defined as, "those processes by which man acquires, transforms, and uses information about the world", Cole and Scribner, 1974; p. 2) into consideration if educational and vocational training delivered as part of plan implementation is to be made intelligible to them.

Olson (1970) maintains that various forms of activity require different perceptual information, and that the children elaborate their perceptual world (make new and different discriminations) as they master new activities. For example, creeping around a room or walking across a field, require information based primarily on topological cues, whereas building a wooden crate requires information based on geometrical features. (Cole and Scribner, 1974; p. 95) The cognitive world of a tribal population contains identifiable, culturally meaningful stimuli which may be appropriately used; for example, a tribe which recognises form and colour as the means for classifying may contain a rich potential for successful botanists and not navigators. In this situation it would be less rewarding or even futile to initiate the people into the field of geography or oceanography.

Cole, Gay, Glick and Sharp (1971) and Cole (1978) described a case from the Kpelle tribe of Africa. The tribal children failed to understand school mathematics. It was felt that analyses of their indigenous mathematical knowledge might provide clues to learning difficulties. They inaugurated the inquiry with a battery of pragmatic questions: What kinds of things do tribal people court measure? What kind of geometrical knowledge is exhibited in such activities as building a house? How does mathematics enter into everyday activities like rice farming, going to the market, dividing food among members of a family? The team of researches discovered that the students could not distinguish between a triangle and circle due to acute perceptual problems. They were, however, adept at measuring rice (a task in which they engaged often) and had highly differentiated vocabulary for commonplace, mundane activity.

In this circumstantial condition it is cardinal to guage the problem, isolate basal causes and forward remedial proceedings. It would be advantageous to emphasise those subjects that interest and are better understood than the others. Further, it has been found that native informants fail to recognise the contents of photographs, even when the pictures are taken in the informant's locale and even if the pictures are of the informant or members of his family (Cole and Scribner, 1974; p. 64).

Various cues that we take for granted require some degree of experience in and exposure to culture that encourages response to those particular cues or subaudition. Thus, in a tribal school when the students are taught the alphabets, for example, the teach says "A for Apple" and shows the picture of an apple; there are reasons to doubt that the students do not recognise the picture at all even though they may have munched the fruit only a few minutes before the class. Understanding will be enhanced if education is imparted through ethnic procedures—incorporating rice counting methods in this case. After the preliminary training the scope and horizon of the traditional methods and subject knowledge should be expanded and brought at par with the universal ones. We should avoid imposing an external classificatory system on a group since it is not easily included in organising and experiencing the sensory environment.

◆

THE human mind is not dichotomised into the 'tribal' and the 'non-tribal'. It is culture that bills certain capacities and potentialities here and activates certain others there to chisel what appear to be diversified mental structures. Stages in the cognitive development of the tribals should be identified. This may lead to significant conclusions; for example, an eight year old tribal child may be similar in mental age and cognitive capacity (for Western education) to a six year old non-tribal child or even vice versa. This implies that similarity in chronological age is an unreliable index of mental capacities. It would be severe injustice to overlook such vital differences and pass judgements on their intelligence.

The application of intelligence tests developed in urban contexts to the tribal people placed in different cultural contexts leads to fallacious results. The tribal people score low. The figures are interpreted as manifesting their poor intelligence and implicitly reinforce ethnocentric ideas that place them at an inferior position relative to the non-tribals.

Inadequate performance at a task does by no means necessarily uncover incapacity; rather, it demands a thorough search of exact obstacles and lower or eliminate them through well-planned strategies. It is important to understand what learning experiences influence a person's acquisition of a particular cognitive strategy, or his decision that it is appropriate in a particular situation. This reformulated question is crucial for the psychologists' understanding of thoughts and cognition; it cannot be answered adequately without careful consideration of the culture in which a person lives and the environment in which his previous learning experiences occurred." (Miller, 1971; p. viii) These aspects of educational psychology have long remained ignored though perhaps herein lie the antecedents of tribal lag that retard their inclusion in the central fold.

Training and orientation programmes extended to the tribals should not be divorced from their culture and conceptual processes. According to Doob (1961) and Cole, Gay, Glick and Sharp (1971) traditionally oriented people adhere to the belief in "one correct way" of accomplishing a task and less inclined to see alternative solutions to problems much in contrast to acculturated people who are relatively less susceptible to dogmatism and exhibit remarkable proficiency in abstract thinking and describing their feelings and reaction to environment.

The Angami Naga tribal religion (called Nanyu) revolves around the concepts of spirits, hell (*terchocha*), and heaven (*tegei*) and sin (*kephuma*). The followers of this religion, however, fail to explain these abstract constructions. The harvest of responses gathered after sessions of in-depth interviews barely consisted of simple statements that diagnosed *terchocha* and *tegei* as division parallel to desirable and undesirable respectively. (Mathur, 1990) If this be true of other tribal societies then it is evident that tasks requiring abstract thinking and expressing shall be performed poorly. It should be borne in mind that tribal policies do not make demands for abstract thinking and that if this be inevitable, the tribals should be so oriented and trained, prior to assigning tasks that call for this capacity.

◆

IT has been found that in most tribal societies learning is by observation. This carries implications for discharge of technical knowledge with regard to introduced machinery, instruments, implements and contrivances. Cole and Scribner (1974; p. 177) advance two hypotheses in this context:

> **First, we might expect to find that people who have a lot of practice in learning by observation will be good at it. They will learn quickly if given the chance to learn by observing. Second, these same people ought to experience special difficulties if they are asked to teach or learn something when the teachers and students are not engaged in a common, ongoing activity.**

The speculations were substantiated in intensive fieldwork among the Angani Naga tribe (see Majumdar, 1986; Mathur, 1986).

Cultures differ in the exploitation of sense modalities. While one culture, for instance, utilises visual capacity, the other stresses dance and rhythm. Tribal children and adults of the two groups employ different sense modalities to acquire and process information about their environment. Thus, while one trains its members in visual sensitivity and literacy the other trains its members in proprioceptivity. The physical and technological environment in which a people are nourished upon which they subsist coerces a definitive array of sense modalities, perceptual and cognitive patterns. The cognation between ecology, economy and cognition has inspired research that seeks to unveil the linkages.

Reviewing a large number of such researches Palsson (1988) furrows through the model clustering hunters, gatherers and fishermen as nomadic food gatherers. He maintained that aquatic hunter-gatherers differ from terrestrial food gatherers. Marine hunting-gathering imposes cognitive demands significantly different from terrestrial resources. Fishermen not only improvise cognitive maps to locate fishing spots and reach there; they must also generate descriptive models of an environment about which information may be obtained from indirect observation. Such cognitive and technological aspects provide grounds for variation in administrative approaches. Cognitively divergent groups should not be accommodated under a single cover. Cognitive divergence percolates in ethno-psychology, cultural goals, beliefs and practices. The development programmes should be in their tune if they are to be appreciated by the people.

The question—"how do tribals think and learn?"—cannot be dropped as redundant and subaltern.

Their cultural context and thought processes are momentous to their logic, attitudes and behaviour that make for dissension or assimilation of plans and policies. Tribal thinking may be derived from their language, everyday situations, rites, rituals and games. There are, however, other standardised psychological methods and techniques as the free association (in which the informant is supplied a series of words and required to respond to each word with the first word that comes to mind), the similarity-distribution technique (in which the informant is verbally provided a set of items one at time and asked to make a sentence employing each word) and the free-recall experimental procedures (see Coler, Gay, Glick and Sharp, 1971 for details for these and some other methods).

Administrators should take cognisance of tribal aspirations, and their understanding of and expectations from development programmes. The programmes should be experimented with in order to determine their repercussions on the social framework which is expected to shelter them. They should be launched at a small scale or trial adapted to the psychocultural environment prior to absolute implementation.

Cultures are to be understood as systems—constituted of several entwined parts such that change in one produces that in the others. A development programme that deals with the method of production, for example, will set ripples in the entire social organisation. In a practical example, the government imposed prohibition of locally prepared rice beer by several tribal groups. Angani Nagas (prohibited to consume rice beer by the Church) do not brew it in their houses but purchase it from non-Christians. Preparing rice beer has emerged as a profitable vocation. It casts alteration in configuration of the economy (Mathur, 1990), emotional experience and expression of the people and social relations.

Social scientists have long pleaded for inclusion of tribal culture in development programmes. Tribal development should be endogenous and from within the system rather imposed from the exterior. Tribal development should maintain congruity with tribal culture and psychology or else it shall remain only far-fetched. This carries implications for taking tribal cognition and perception into cognisance. Development should maintain continuity with socio-cultural and perceptual nexus in which the tribals find themselves placed and from which they cannot be disentangled completely.

The history of tribal development is marked by periods of intense rejection and those of relative quiescence, consolidation and refinement. When the programmes and strategies devised by the government fall short of achieving stipulated targets it becomes imperative to discover the reasons that will adequately explain the condition of incomplete success. It is absolutely essential to discard disconnected reworkings of disparate themes from out of the past. The ground is set for inter-disciplinary meet to work out innovative strategies for tribal development. ■

Hindutva: Militancy and Semitism

PRADEEP KUMAR

Many an attempt has been made in the last 150 years to impart some degree of militancy to Hinduism. The latter has for a long time been identified, rightly or wrongly, with tolerance of dissent, doctrinal openness and ideological heterogeneity. Even if the Hindus have been orthoprax, the great and the little traditions of their *dharma*. have left considerable scope for philosophical dissent. The great tradition has actually accommodated a large number of heterodox sects, animistic and totemic cults and religions without much effort.

However, an inevitable outcome has been the relative incohesiveness in the doctrinal orthodoxy. Polytheism and anthropomorphism coupled with an emphasis on ideological diversity, have tended to make some votaries of *Hindutva* a little bit worried about the "weak", "feminine" and organisationally "loose" character of the Hindu society.

The latter part of the nineteenth century and the first half of the twentieth century witnessed a large number of attempts to mould the Hindu society on Semitic lines. Semitism in this context came to be identified with monotheism, the concept of a chosen people, and belief in a revealed book. It therefore implied a degree of intolerance towards the "infidels" and some degree of endeavours towards bringing others into the fold of the revealed religion.

However, for the votaries of *Hindutva*, to Semitise their religion was bound to be a difficult task in the absence of any such concepts in the Hindu view of *dharma*. *Dharma*, like its predecessor *rta*, connoted the cosmic law, which was reflected in all animate beings and even inanimate things. Thus animals, plants, water, fire and earth—all had their respective *dharma*. Such a concept of *dharma* was obviously far from being anywhere near the modern day "religion" which actually is a mistranslation of a purely indigenous phenomenon.

Paradoxically, all those who eulogised Hinduism for the virtues of doctrinal heterodoxy, tolerance and dissent, ended up putting up a challenge before the votaries of the Semitic Hinduism. The challenge became still more pronounced and provocative when in the post-independence days the Marxists and the *a la* Marxists made a frontal attack on Hindu "fundamentalism" while tolerating and even condoning minority communalism on the plea that it was "protective" and "defensive" in nature. The re-emergence of Hindu militancy and organisational efforts in the 1980s should be seen in this light. This is, in a way, the culmination of a process which began nearly one and a half centuries ago as a reaction to the perceived danger from Christianity and Islam. Dayanand, Bankim, Aurbindo, Tilak, Savarkar, Golwalkar and Advani and Joshi should be seen in a continuum, even though the calibre and credentials of these votaries may vary a great deal.

The author is a Reader, Department of Political Science, Panjab University, Chandigarh.

◆

THE VHP's current emphasis on the Hindu identity, *Garv se kaho ham Hindu hein* (take pride in calling yourself a Hindu), is a direct outcome of the feeling among the votaries of *Hindutva* that secularism (read pseudo-secularism) has been to the disadvantage of the Hindus who constitute a majority in the country. The exhortations by the Nehruvians and the "progressives" for a more tolerant Hindu ethos *vis-a-vis* the minorities (read the Muslims), has also strengthened the suspicion that the secularists among the Indian intellectuals are all hell bent upon decimating Hindu pride and culture. Such pronouncements by the Leftists as, the Hindu God Ram and his Ayodhya (not merely the temple) are only a mythological belief, the Kushana and not the Gupta period are the "golden" period of Indian history, and most members of the Hindu divine pantheon are merely ahistorical figures, have also watered the roots of the *Hindutva* ideology in the north. What is, however, really important is not the authenticity of this ideology, but the fact that many have actually shared these views, and consequently covertly, or overtly, provided the infrastructural support to the *Hindutva* wave.

The most significant task before the *Hindutva* leaders is to make the Hindu community (or nation as they prefer to call), a more cohesive and closely knit one, which can take upon itself the militancy spirit easily. The real dilemma of course is that the unorthodox nature of the Hindu *dharma* actually does not allow them to succeed in these attempts. All efforts to elevate the *Gita* to the status of the supreme revealed book of the Hindus during the national movement actually failed, and a plethora of Hindu gods and goddesses bounced back with a vengeance. However, since on the proselytising front no such tradition existed, *Shuddhi,* that is, reconversion of Muslims and Christians in to the Hindu religion, was taken up by the Hindu *sangathans*. Even the concept of *punya bhu* (sacred land) as distinct from *pitri bhu* (fatherland), was popularised by Savarkar. This was somewhat akin to the Semitic version of the holy land or the chosen land. Even though most such efforts inducted "energism" into the Hindu society, their impact at the most was temporary and peripheral. However, the pre-independence votaries of *Hindutva* had an advantage that their ideology came to be identified with anti-imperialism because of the situational compulsions, and consequently earned a lot of respectability. Moreover, most Muslim nations of the world that today boldly proclaim their Islamic credentials, had either not been born or had not existed in the present form. This also made the *Hindutva* leaders of yester years go deeper into the philosophy and history of the Hindu *dharma* and "discover" legitimacy for their ideology. Contrary to this, Islamic fundamentalism and more particularly the division of the subcontinent on the basis of religion, ending up in the creation of the Mislim state of Pakistan, have really made the job of the *Hindutva* protagonists very simple and legitimate in the eyes of their followers, won over in the last decade or so.

However, while there may be many takers of the militant *Hindutva* ideology today, the attempts at Semitisation of the Hindu religion by sifting out the "Ahmadias" from among the faithful Hindus, have very little chances of success in view of the evolved nature of their religion. And the *Hindu rashtra* of their conception, even if achieved, will not be able to survive in the absence of the coherently knit ideology of a Semitic religion. This is because historically the unity among the Hindus has been demanded only by way of a cultural response to the out side challenge, and has never been an outcome of a real need for a spiritual resurgence. If the militancy of the *Shuddhi* and *Sangathan* was a response to the *Tanzim* and the *Tabligh,* the present-day *Hindutva* is a reaction to the "pseudo-secularim" of the Indian state. ■

Detention of Social Activists Decried

The following is the statement issued by Latika Lahiri, President, Peoples' Rights Organisation (PRO), protesting against the preventive detention under the NSA of young social activists, Irfan Engineer and Vir Singh Patel, in Baroda Central Jail.

The Peoples' Rights Organisation (PRO), a human rights body, is extremely concerned to learn that young social activists, Irfan Engineer and Vir Singh Patel, have recently been arrested by the Government of Gujarat under the National Security Act (NSA) and are presently lodged under preventive detention in the Baroda Central Jail.

The Peoples' Rights Organisation (PRO) strongly protests the unlawful, arbitrary and unprovoked detentions of Irfan Engineer and Vir Singh Patel. The only reason for their preventive detention seems to be that they were peacefully agitating for the rights of the Dang tribals of Gujarat who are being subjected to grave social oppression and intolerable economic exploitation.

The Peoples' Rights Organisation (PRO) has learnt from reliable sources that the Government of Gujarat has let loose great repression against the Dang tribals and news is coming of their women being raped and their men tortured. Even the former Commissioner for Scheduled Castes and Scheduled Tribes, B.D. Sharma, was recently manhandled by the Gujarat State Reserve Police when he went to inquire into the condition of the Dang tribals.

The PRO demands that the Government of Gujarat withdraw all the false charges against Irfan Engineer and Vir Singh Patel, and immediately and unconditionally release them from preventive detention under the NSA. The PRO also demands that the Government of Gujarat must forthwith stop the terrible repression unleashed on the Dang tribals of Gujarat and meet their legitimate and genuine demands immediately. We also believe that an independent Commission of Inquiry should be instituted soon to probe into all the grave charges of atrocities alleged to have been committed against the Dang tribals of Gujarat.

In keeping with its thinking as outlined above, the Peoples' Rights Organisation (PRO) has sent a telegram to Chimanbhai Patel, Chief Minister of Gujarat, strongly protesting against the arbitrary detention of Irfan Engineer and Vir Singh Patel, demanding their immediate release and asking him to stop the repression of the Dang tribals. ■

Peace by Piece in Yugoslavia

ANURADHA MITRA CHENOY

The right to self-determination; supra-nationalism; minority rights; conflict resolution; the fate of fledgling democracies; the interpretation of history and perception of internal security—these are all part of the amalgam which is at the base of the break-up of Yugoslavia.

The futility of nationalism in its chauvinist, irridentist and revanchist forms is most obvious in strife-torn Yugoslavia in its critical moment. What is worse is that even the establishment of independent republics, out of the erstwhile Yugoslavia, may not lead to a lasting peace or stability. This scenario, moreover, is tragic not only for the people caught in the crossfire, but it would also destabilise the entire region of South-East Europe. In the reshuffling of boundaries, the issue of the external boundaries of other countries would also be raised. Besides this, varied lessons will be drawn by the kind of response the beseiged minorities have received from the international community.

The fact that Yugoslavia is an ethnic patchwork not dissimilar to the Soviet Union, or most Third World states, least of all India, brings the problem closer home. The ethnic groups have not been altogether cordial through history. The worst discord historically has been between the Serbs (who were a majority in the region) and the Croats, though the Slovenes, Macedonians, Albanians and others also have differences. During World War II, however, Serbo-Croat rivalry further accentuated, when a Croatian regime (the Ustashe) aspired for independent statehood. They, therefore, established a puppet regime under Nazi supervision from 1941-1944. About 700,000 Serbs were killed during this period, a fact not forgiven by the Serbs (the Chetniks).

This bitterness, however, was blocked by the communist dictatorship after the War. Tito (a Croat) blocked out the development of democratic consciousness but also jammed inter-ethnic nationalism by using techniques of repressive tolerence and an ideology which focused on inter-class contradictions rather than inter-ethnic antagonism.

The author is an Associate Professor, School of International Studies, Jawaharlal Nehru University, New Delhi.

The collapse of the communist regime with the withdrawal of its backers (especially the Soviet Union), led to the establishment of 'a free-for-all' democracy without the sanctity of well tried or established institutions, norms or codes. The compelling need for a federal set up and plural institutions was recompensed by a collective rotating presidency, with competing popularist leaders, seeking to satisfy their constituencies which were based largely on ethnic regions.

The onset of the 1990 elections then, did not require much ingeniousness on the part of the contending leaders, to develop their support base, political demands, mobilising strategy and tactics on ethnic lines. Most active on this front was the Serb leader, Milosevic, who drew freely from past historical experience and envisaged a Serb-dominated Yugoslavia, and Franjo Tudjman, leader of the Croats, who expressed intentions of an independent Croatia. Slovenia likewise proclaimed its decision to secede.

The Serb minority in Croatian regions panicked and started revolting. Similarly, Croats in Serb areas and Croats at large feared Serb repression. These fears were reinforced by military intervention and fighting by both sides. Escalation of these events were obvious since the leadership refused to yield, or take steps to reassure factions. Moreover, the Serb-dominated Yugoslav army (70 per cent of the officers are Serbs) under Milosevic, ransacked Croat areas village by village ostensibly to save the Serbs and protect the Union but with the motive of changing the fluid borders, as hopes of a united Yugoslavia gave way to the establishment of separate nation-states.

◆

WHILE 14 calls for cease fire lay shattered and civil war continued, the response from the international community was one of "looking with disapproval". The UN imposed an arms embargo and threatened an oil embargo. The initiative was left to the European Community which was divided on the issue. The EC representative, Lord Carrington, sponsored a peace conference which advocated that Yugoslavia be an association of sovereign republics with common currency, internal borders be altered only by mutual agreement, that disputed regions where ethnic minorities live be demilitarised and put under international supervision, and that Kosovo and Vojvodina under Serb control, should revert to their earlier status as autonomous republics.

The official position of the Serbs, as expressed by V. Jovanovic, the Minister of External Affairs of the Republic of Serbia (*Review of International Affairs*, Vol. XLII, December 1991) was one which continued to envision a united Yugoslavia based on a federal pattern. The Minister defended the Yugoslav army for carrying out the tasks of trying to maintain a united Yugoslavia assigned it by the Constitution and the President.

This view revealed Serb aggression and use of force which only heightened fears of the minority community. Further, barbaric acts by the Serb controlled federal army were exposed to the international community during the seige of various Croat towns like Vukovar, Dubrovnik, Carlovac and others, where civilian casualties were the predominant feature. These areas were subject to the onslaught of multiple-launch rockets; incineration of property; bombing and every other possible horror.

The Croats have continuously viewed the Yugoslav army action as aggression, and asked for the independence and reconstruction of Croatia be included in the inter-national agenda. They further protested against the Serb tactic of changing the borders by force, aided by the political structures of Serbia. (Dr. Z. Separovic, Minister of Foreign Affairs, Croatia, interview, *International Affairs*, Vol. XLII, December, 1991)

The Croat position has been championed primarily by Germany (supported by Austria and Hungary), who insisted on the recognition of Croatia and Slovenia. The EC which was prone to a position of neutrality, and together with the UN tried to reach some kind of agreement, was sidelined. The marginalisation of the EC was not just because of Germany's pressure but also due to the futility of trying to bring together communities irreconciliably torn apart. The recognition of Croatia and Slovenia by the EC thus followed on January 15. (Bulgaria and the Baltics have also given them recognition.) It is likely that the USA and the rest of the international community would follow suit, except China which supports the Serbs' position.

Independence of Slovenia and Croatia will be followed by demands for independence by the Albanians in Kosovo and from the Macedonians in Bosnia-Herzegovina. (The Albanians and Hungarians identify with these two groups respectively.) History has shown time and again that conservative nationalism has its own logic, and tragic consequences.

◆

AS far as the regimes of the Yugoslav republics go, as Milovan Djilas (*New Statesman and Society*, 13 September, 1991) has said, there are no essential differences between them, though the Serb regime is Communist-oriented and Croats Right-dominated, and democratically elected. In all the regimes the parliaments are ineffectual, the Opposition weak, information is controlled and there is a lack of democratic consciousness or method.

Since the Serbs demand that the Serb population in Croatia be independent of Croatia, the ethnic dispute would continue, leading to more exile and possible diaspora of population. Nationalism however, is not the only problem of erstwhile Yugoslavia. The shattered economy and battered civilians would take years to normalise. The leadership of the Republics, however, find it more convenient to pay attention to the ethnic aspect at the cost of the others.

The European Community which has set up negotiating channels for solving problems in Europe like the Conference on Security and Cooperation in Europe (CSCE) need to initiate a long-term dialogue and method of conflict resolution to sort out the problem of nationalism and national self-determination.

World over it has been established that there are no peaceful procedures available for settling the right to self-determination. Obviously every such right cannot be satisfied. Nor is every minority a viable nation-state. But at the same time, the old-world norm of non-interference in the ultimate right by a state to suppress its citizens within its territory is no longer adequate. If democracy and human rights are the passwords to our current civilisation, then mechanisms to ensure this must be on the agenda.

The case of Yugoslavia is not far from home. If communities (especially minorities) within a state structure feel threatened, and their rights and autonomy are not protected, these fears get translated into territorial claims (or secession). This often leads to a reaction of supra-nationalism and further oppression and deepening of crises, which is easy for leaders who lack any other base to manipulate. The result is then like the tragedy of Yugoslavia, and earlier tragedies elsewhere. ■

Awards, Prizes and Trivialisation of Virtue

AVIJIT PATHAK

No society can survive without remembering its virtues, its bright spots, its positive stories of courage and dignity. But this process of remembering, it should be realised, does not remain spontaneous all the time. Because spontaneous remembering is almost like living a life nearer to all that is remembered: virtue, courage and dignity. As society begins to degenerate and its everyday life world gets increasingly separated from the realm of beauty and aesthetics, the process of remembering we are talking about ceases to be spontaneous, it gets institutionalised and institutionalised through a complex network of prizes, awards and honours.

In other words, all that is beautiful ought to be awarded, given prizes. Because there is no other way society can recognise its forgotten virtues, its thickness can see only what is gorgeous, even beauty without prizes, ornaments and labels goes beyond its mental horizon. Not surprisingly then, the more the prizes and the awards, the more it reveals society's degeneration, its remoteness from beauty and aesthetics.

How does one react when one is told that the nation has honoured Netaji and Azad? Perhaps one would argue that it is certainly a positive gesture because, even though late, the nation has finally decided not to forget its two great sons. Even when there is an element of truth in this kind of argument, what is, however, not difficult to see is that Netaji or Azad as *Bharat Ratna* makes us wonder. Because beneath it one sees an absurd and ugly attempt: an attempt to possess the infinite through the finite; it is like reducing all differences between the sacred and the profane.

An honour that equates the mundane politics of many of our contemporary Machiavellians with the epic story of Netaji or Azad makes us laugh. This laughter is tragic as well as comic. Who, however, realises? The absurd game continues. And there seems no reason to get surprised if we are told that *Bharat Ratna* has also been awarded to all those who created the Vedas and the Upanishads, to Guatam Buddha, to Ashok, Akbar, Raja Rammohan Roy....

What ought to be seen in the continual recurrence of this absurd drama is, as we have already said, the split that has taken place between the past and the present, between life as it exists and what it ought to be. Life's instrumental rationality—earn more and buy a washing machine; corruption is what prevails and everything else is madness—does not want to remember that once upon a time there was a Gandhi or a Tagore, a Vivekananda or a Bhagat Singh. History is read and forgotten. History can be remembered only through melodrama, through noise. Unless you shout and regard a Gandhi or a Tagore as *Bharat Ratna*, how can you remember them? Because with modernisation and more modernisation we see only packages, attractive packages, instant success and glory. Man understands success!

As a result, two things happen. First, success stories are shortcuts, easy ways out. For example, to see Gandhi only as *Bharat Ratna* (a possibility that can no longer be denied), as an attractive package is to forget all that made a timid Mohandas into a charismatic Gandhi—his continual suffering, his prayer, his painful, yet penetrating, journey towards the inner world. And secondly, prizes, awards and honours can always be kept in showcases. Man is clever enough to know that prizes do not produce things, prizes are not for the real world. In other words, the moment beauty is awarded and given a prize, it loses its aliveness. It becomes a stone, a statue, a museum piece. The fact is that Netaji or Azad as *Bharat Ratna* has already been reified. Because in a ugly world beauty can find itself only in a museum!

Another thing needs to be observed. Beneath the institutionalisation of prizes lies another manifestation of the prevailing corruption: It is like appropriating the past through the rationale of the present. Or it is like looking at beauty through the rationale of power and arrogance. What is this rationale? It goes without saying that the rationale is the rationale of a modern state.

In our times, the state has

The author is an Assistant Professor, Centre for the Study of Social Systems, School of Social Sciences, Jawaharlal Nehru University, New Delhi.

become, if not the only, perhaps the most dominant 'judge'. It judges and evaluates virtue, courage, dignity and even dissent. To exist is to get certified by the state! And hence there is no longer any beauty that can retain its solitude, radiate in silence, exist in its own right. So how can Gautam Buddha exist without begin certified by the state, its chosen experts and judges? This is the madness of power; it is hardly aware of its limits; its irony is that it seeks to appropriate even what, because of its very nature, refuses appropriation.

This is not to suggest that the prizes, awards and honours are altogether meaningless. Even if greatness needs no award, its special identification does help not so great people to offer their respect and gratitude. A proposition of this kind sounds reasonable. Yet, what seems difficult to deny is that what we are seeing before our eyes is not that humbleness, that authenticity which we need to surrender ourselves before the vastness of the great and the noble and then alter the rhythm of our life world. Instead, what we see is a drama, an absurd drama in which we recall God only to curcify Him. ■

NAYYAR: Dunkel Text

(Continued from page 9)

inputs for the agricultural sector, whether on fertilisers, irrigation, power or credit, can only be made available for low-income farmers. Thus, the present regimes of explicit or implicit subsidies, which do not differentiate between farmers by size of holding, would be open to question. The practice of public utilities charging concessional prices from the agricultural sector, followed by several State Governments in India, would no longer be tenable.

IV. WHAT NEXT?

THE draft Final Act in the Dunkel Text is characterised by a take-it-or-leave-it syndrome that is implicit in its composite structure and discernible between the lines. It cannot and should not be accepted as *fait accompli*. As a sovereign nation state, which is one of the original contracting parties in the GATT, we must endeavour to reopen the negotiations on a *few* matters that are of strategic concern to us. The perception that we are in a small minority, or even alone, at the present juncture, should not lead us to abandon the negotiations and sign on the dotted line. It is this 'isolation paradox' which has, perhaps, coaxed many reluctant developing countries into a posture of acceptance. The pursuit of national interest is worthwhile so long as there is any room for manouevre, however limited it may be. At this stage, in terms of strategy and tactics, I would suggest three alternative approaches in a descending order of preference.

As a first option, we should insist on a formal separation of the agreements on trade in goods, trade in services and trade-related intellectual property rights, which appear as separate annexes in the Dunkel Text. We should seek a deletion of the linkages between the different agreements through integrated dispute settlement mechanisms which allow for retaliation across sectors. This would be consistent with our stance so far on the issue of lodgement and the problem of cross-retaliation. At the same time, we should retain the freedom to choose between agreements that are acceptable and those that are not.

The next option, if the agreements cannot be separated, is to consider acceptance of the Dunkel Text, but on a strict understanding of 'best endeavour', so that legislative changes would be made if and only if approved by Parliament which must remain sovereign. Pending that, the extant rights under the GATT must remain unimpaired. This stand should not sound unrealistic because the United States also may agree only to a 'best-endeavour' approach when it comes to the removal of Super 301 from their statute book, once the new dispute settlement procedures are in place.

In conclusion, it would not be out of place to mention an option that may be a last resort. It has always been my judgement that, from the perspective of the developing countries, multilateralism is superior to bilateralism or plurilateralism. The reason is simple: In a world of unequal partners, a multilateral trading system should provide some protection to the weak whereas bilateral trade relations would favour the strong. Yet, the asymmetries and the inequalities implicit in the Dunkel Text leave this basic proposition open to question; and our faith in miltilateralism may turn out to be naive if such multilateralism is used to legitimise inequtiy. The interests of the industrialised countries are the focus of attention, while the interests of the developing countries are the object of neglect. The benefits for us are negligible. The costs may be substantial. The time has perhaps come for the government to evaluate with utmost care the cost and benefits of an unequal international trading system, which bestows few rights and imposes many obligations on the developing countries. It is not obvious that we would be worse-off without it. ■

Nadine Gordimer

M.C. BHATTACHARYA

Nadine Gordimer, winner of the 1991 Nobel Prize for Literature, is a White English-speaking South African writer who has written novels and short stories about the tensions of life under apartheid.

"Gordimer writes with intense immediacy about the extremely complicated personal and social relationships in her environment," the Swedish Academy said in its award citation.

"At the same time, as she feels a political involvement—and takes action on that basis—she does not permit this to encroach on her writings. Nevertheless her literary works, in giving profound insights into the historical process, help to shape this process," it said. The South African Nobel Peace Prize winner, Archbishop Desmond Tutu, and other anti-apartheid leaders and writers have applauded the bestowing of the Nobel Literature Prize on Gordimer.

Tutu said: "She is a wonderful artist who has been able to capture the suffering of the people under apartheid." Gordimer herself was quoted as saying in New York that the award will now expose South African writers to the world. Nadine Gordimer—whose father was a Lithuanian born Jewish watch-maker and whose mother was an emigré from England—was born in spring in the Transvaal on November 20, 1923.

Disgusted since childhood with the White society, she was rebellious and retained a mediocre record in school. But from the age of nine she was a precocious writer. She started selling stores to various periodicals in 1939.

As the years rolled by she became widely known at home and abroad as a committed political writer. Her books tend to concentrate mainly on the human suffering wrought by apartheid, showing the way in which government legislation affects individual lifes.

In 1948, she moved to Johannesburg where she has continued to live.

Uyas Krige, a South African writer, introduced Gordimer to a New York literary agent in 1950. She then began contributing fiction and non-fiction to periodicals in the United States. From 1969 to 1971, she held several short-term academic assignments in the United States, and in 1975 she was a Visiting Professor at Barnard College.

Authors of fictional works which have Africa as their locale can be divided into those of European descent and those of African descent. Among those of European descent are persons whose lives have been spent largely in Africa while others are mere birds of passage. The English writers are clustered in the Union of South Africa which has now produced a considerable body of modern fiction of international repute.

In South Africa, creative writing in English by Blacks and Coloureds has been impeded by racial oppression and censorship. The novelist Peter Abrahams and poet Dennis Brutus found conditions so repressive that they left South Africa for their own safety.

In 1950, the emergence of magazines designed for non-White readers led to a spurt of short story writing which practically ceased when the harsh Publication and Entertainment Act of 1963, the first of many such censorship laws, severely limited popular and political publications alike.

Gordimer's works revolt against her country's apartheid system of racial separation. Although she criticises, often sharply, the White government's racial policies, that government no longer bans any of her writings.

Literary Works

Gordimer has written more than two hundred short stories. *Something Out There* is her ninth book of short stories, the others being *Face to Face* (1949), *The Soft Voice of Serpent* (1952), *Six Feet of the Country* (1956), *Friday's Footprint* (1960), *Not for Publication* (1965), *Livingstone's Companions* (1971), *Selected Stories* (1976) and *A Soldier's Embrace* (1980). In 1984, *Something Out There* was well received by critics largely because of the title novella—a story about differing reactions among the White persons in the area of Johannesburg, to the destructive activities of a mysterious dark-coloured anthropoid. As the story progresses, the anthropoid becomes a symbol of a different kind of fear.

Many of Gordimer's stories are about the effect on personal character of the expectations of family and society. Her major works include idyllic virtues of country life, family ties and insight into the anger and agony of the segregated community. Gordimer's fictions fascinate Indian leaders largely because of her themes which are very much analogous to our social environment where exist middle class guilt and suppression of the poverty-stricken devoid of political consciousness.

Gordimer's novels, which were banned by South Africa's White minority government, include *The Living Days* (1953), *A World of Strangers* (1958), *Occasion of Loving* (1963), *The Late Bourgeois World* (1966), *A Guest of Honour* (1970), *Burger's Daughter* (1979) and *July's People* (1981). Her latest book *My Son's Story* won her the South African Central News Agency Award recently. The book deals with the injustices of political rights for the majority. Most of her novels depict the fact that political movement is the harbinger of social change. Her novels offer artistic insight into her country's problems. ■

BHATIA: Policy Changes

(Continued from page 16)

prescription is different from the disease, one may ask who manoeuvred it and why? Let, us diagnose this.

Currently in the industrialised countries the labour cost of production is exorbitantly high and demand either stagnation or a creeping rise. With this, calculations by the industrialists in these countries are that even with some additional transportation cost, production will be cheaper in India than in their own countries because of a substantially difference in labour cost. India also provides a substantial market because of its vast population and development programmes. Additionally, India enjoys a locational advantage in the continent. Consequently, a percentage of production could be sold either in India itself or in the neighbouring countries. In view of this, the main objective of the MNCs entering India appears to be to make use of the very cheap labour and get a market. Similarly, the objective of the Indian business class is to raise their share in the national cake by reducing the share of the working class. To achieve these objectives conditions are being created for a further reduction in the labour cost and also for lowering the bargaining power of the working class. The labour cost is being reduced by raising the cost of living index and freezing the wage rate, whereas the bargaining power will be reduced by creating surplus manpower. The policy of 'right to exit' and retrenchment will directly hit the working class.

Here it may also be pointed out that the World Bank and the IMF have been preaching for a market economy not only in goods and services, but in the factor market also. In the market economy the real wage rate is determined by the demand-supply conditions. When the market economy is fully adopted in Indian conditions, where labour supply is substantially higher than demand, the real wage rate has to come down by 30-40 per cent of the present level. Further, because it is unskilled labour which happens to be far in excess supply with a very low bargaining power because of their unorganised character and poverty-stricken conditions, this class is likely to be hit the hardest.

Already, due to the new industrial and trade policies, persons employed in many departments/offices of the government have been rendered surplus to be absorbed elsewhere or asked to seek voluntary retirement. In line with this is the decision taken at the recent National Development Council meeting to cut down about 10 per cent posts at the top and to retrench 1000 persons in three offices: the Chief Controller of Imports and Exports, the Cement Controllers' Office and the DGTD. In the private sector units like Escorts, Hindustan Motors, General Motors, etc. too retrenchment has started.

VI

IN conclusion, one finds that the IMF prescription is unsuitable for the socio-economic conditions in India. The side-effects of the prescription may result in the economy being paralysed. On the other hand, it appears that in order to serve the narrow interests, the macro-economic variables, such as prices, are being manipulated so as to lower the per person real earning of the working class. The policies being manoeuvred will create excess supply of labour and consequently reduce the workers' bargaining power in a substantial way.

These new policies are in direct conflict with our earlier policy of growth with equitable distribution. There is also a danger of neo-colonisation by the MNCs for the economic exploitation of India. ■

Two Cheers for Free Flow of Information

S.S. GILL

"The United States has long regarded," said President Reagan, "the principle of free flow of information as a cornerstone of any democratic political order". Being the prime mover behind the Information Revolution, the American stake in the "free flow of information" is quite understandable. Also, this commitment to a noble democratic ideal is a many splendoured thing.

In 1983 the UN General Assembly adopted a non-binding declaration of "principles governing the use by states of artificial earth satellites for international television broadcasting". The right of *prior consent* by the host country embodied in this resolution was supported by 108 nations. But true to its loyalty to free flow of information, the US opposed it tooth and nail. Again, about the same time, when the WHO drafted for national adoption a resolution to restrict aggressive forms of marketing and advertising for baby foods, America happened to be the only country to vote against it, thus reiterating strongly its adherence to the free flow of information!

Or, take the controversy surrounding the Western insistence on protection of intellectual property rights. On the face of it, this sounds a most reasonable and democratic proposition. After all, what could be fairer than safeguarding the information about industrial processes so as to enable the inventors and manufacturers to enjoy the fruits of their labour? But it is nobody's concern that the infinite diversity of germ plasm created through trial and experimentation over thousands of years by the farmers and breeders of the Third World has been systematically plundered by the agro-business transnational corporations (TNCs) without acknowledgement of their debt for this booty. The information about this unique genetic pool, though gleaned without paying a penny to its owners, is being sold back to the Third World after some clever manipulation under the garb of exclusive patents and copyrights.

The author is a former Secretary, Union Ministry of Information and Broadcasting.

◆

THE most notable instance of this "principled" stand was perhaps the vigorous opposition by the US and other industrialised countries to the UNESCO's resolution on the New World Information and Communication Order. This resolution, based on the MacBride Commission Report, was a modest attempt to "correct the inequalities in the flow of information to and from developing countries and between those countries". As nearly 80 per cent of the world newsflow emanated from the Western news agencies and 90 per cent of the radio frequencies spectrum had been cornered by the developed countries, the UNESCO felt that this sort of extreme imbalance needed some corrective. There was a howl of protest from the First World delegates against this 'sinister design' to throttle the free flow of information and promotion of state intervention in the sacred precincts of democracy.

The fact of the matter is that the new information technology has radically changed the very character of information. The highly sophisticated, computerised methods for its generation, processing, transmission, storage, retrieval and dissemination have turned it into a high-priced commodity. Of course some categories of information always carried a price tag. Medicinal formulations, industrial or chemical processes, copyrighted products were all proprietory items of commerical value. But today information has become the basic element in production, distribution, administration, work and leisure. All this information is of a specialised nature; it requires expensive equipment and trained personnel for its manipulation and thus it is accessible only to those who can pay for it.

Two simultaneous results of the Information Revolution are of particular relevance to the Third World. On the one hand, we seem to be inundated by a deluge of information. Computers, optic fibres, lasers, satellites, etc. are the channels through which this information gushes forth. They are all creatures of high technology. And technology is always the handmaid of the culture which produces it. Created by advanced industrialised countries, this technology is a faithful servant of its masters. The computer programmes and data bases that we in India use were created in America, and designed to serve their work culture and habits of mind. By borrowing them wholesale we begin to view our work environment through alien glasses. Further, we not only tend to imitate foreign management practices, but also emulate role-models which have no roots in our milieu.

At a more innocuous level, let us look at a popular blessing of information technology. Bored stiff by the bland fare dished out by Doordarshan, television viewers are having their fill of entertaining programmes beamed from commercial satellites. First it was CNN, then Star TV, then BBC and now Pakistan TV. Many more such ventures are in the offing, including a regular Hindi channel. The more influential section of our society which watches these programmes, not only derives pleasure from this diversion, but also imbibes the social mores and political perceptions of the host country.

But this is only a small segment of the information colonialism to which technological advance exposes us. The second fall-out of the information revolution is much more fearsome. There are two main agencies which finance and control the communication technology. First, the military establishments, looking for ever more sophisticated weaponry. The leading player in this arena is the Pentagon. But for its massive subsidies to the American multinationals it would have been impossible to mount the sort of Research and Development effort that led to major breakthroughs in this field. Secondly, the multinationals themselves were quick to perceive the great commercial potential of the information technology and went all out to exploit its civilian uses.

◆

AS a result of these developments, the information revolution is completely dominated by the military-industrial complex which has absolutely no motivation to promote free flow of information. Military affairs are traditionally cloaked in secrecy, and multinationals are not known to freely share the fruits of their research with others. On the contrary, the communication multinationals and purveyors of information have a strong vested interest in creating information monopolies.

Another offshoot of this phenomenon is that as between the nation-state and the multinational corporations, the balance is tilting in favour of the latter. When these corporations do contracting jobs for the government in developing the most sophisticated weapon-systems, a lot of classified information from various official agencies has to be passed on to them. The highly specialised databases that they develop as a result thereof, far exceed in their range and complexity anything that the government has at its disposal. Here is a case where the original generator and owner of public information becomes dependent on private agencies for its efficient use. And the public is never given any access to it.

There were times when universities and research centres were public forums of free enquiry. Not so now. Scientific research has become highly expensive, and the universities, etc. depend heavily on liberal grants from the industrial giants. These grants are now given in such a slanted manner that research serves the best interests of the donors, and its results do not become public property. The case of Mobiloil's donation to the American Writers' Congress and its subsequent withdrawal on learning about its radical credentials illustrates the nature of intentions behind such generosity. The growing dependence of educational and cultural institutions on funding by the TNCs promotes the cult of self-censorship, and discourse becomes predictably conformist.

All these donors claim to be great champions of free flow of information. An executive of the largest computer firm once stated: "IBM does business in over 120 countries. We are, therefore, very dependent on free flow of information." All transnational financial institutions are strong advocates of this doctrine, as the trans-border flow of data along the international electronic highways is the life-line of their transactions.

The net outcome of these trends is that information is being withdrawn from its social context and turned into a commodity for sale. "It seems," says Jeremy Seabrook, "that more and more things are being taken away from people, and sold back to them in the form of commodities and services.... We surrender more and more of our substance, and wait for it to reappear in the marketplace, where we believe in its value because of the price tag it bears." Consequently, public information necessary for a well-informed citizenry may become increasingly scarce, thus eroding the very basis of democracy.

◆

IN a very real sense, information is power. And power is the domain of politics. In the international political arena, it is only the leaders of information technology who dominate the world. Their lofty pronouncements notwithstanding, they use the power of information only to extend and tighten their hegemonic control, either directly or through their transnational corporations. And for the people, they have to keep alive the illusion of free flow of information which, as President Reagan asserted, is the "cornerstone of any democracy". But in actual fact, said H. Schiller, "people in the US may be among the globe's least knowledgeable in comprehending the sentiments and changes of recent decades in the international arena". But that bothers not the grubby masses for whom "a supermarket is a democratic citadel, the place where democracy is practiced daily by the shoppers in their numerous decisions and choices".

And when it comes to a crunch, these gatekeepers of information know only too well as to how to divert or choke its flow. When the UNESCO became really serious about free flow of information in the Third World countries, the US and the UK stopped their contributions to it, walked out of the forum, and did not rest till its intrepid Director General, M' Bow, was hounded out of office. Nearer home, when the NAMEDIA conference was held in Delhi in 1983, the *New York Times* did not write a word about it, though it was a major media event attended by a galaxy of Third World celebrities.■

EABRA: Survey & Budget

(Continued from page 5)

business world. So long as India demands gold, eligible persons are available for bringing gold legally into India and generally would not have resources to import five kilograms of gold, and that too every six months, the smugglers have only to start operating openly and legally as gold-importers and dealers. They will have to buy foreign exchange against rupees or their black wealth stashed away in tax havens. Not only shall the *hawalas* continue, they will thrive—legally of course! One can see then how thin is the line dividing legality from illegality. The immediate losers will, of course, be the customs staff. The fall in the dowry tag attached to overly eligible bachelors working with the customs may shortly provide a measure of the change.

Such unproductive uses of external resources may, of course, stabilise after a while. But the gold bonds scheme would succeed only to a minor extent for converting this unproductive gold into a productive use as visualised by our neo-mercantilists. With exemption from scrutiny of the source of gold, the black sector may well use it as a regular window for the laundering of black incomes and wealth. Would not the underworld also be able to avail of this scheme?

The impact of these gold schemes on the open market availability of foreign exchange for financing imports and the differential between the official and market price of foreign exchange (a mechanism to render official devaluation redundant by making 60 per cent exchange resources subject to market forces, except by pointing out the large and growing difference between the official and market price of the rupee) will have to be watched carefully to see the impact on the real, productive sectors of the economy.

How this model will tell on the health and survival of the public sector is a crucial question for the future of social development in India. Denigrated, starved of investible funds, further reduced by the lowering of SLR as the Survey admits in so many words (p. 20 end of para 3), partially privatised "in order to raise non-inflationary finance for development" (p. 14), with increased multifaceted competition, the public sector enterprises have been given onerous financial responsibilities. Having provided Rs 1049 crores by way of profits and dividends in 1991-92 (RE) the Budget for 1992-93 now demands Rs 2622 crores from them. The internal and extra-budgetary sources of those enterprises financed 56 per cent of the Central Plan outlay during the preceding year. This demand has been now hiked to about Rs 30,000 crores, for financing over 61 per cent of the Central Plan against Rs 18,501 crores of budgetary support to it.

While the public enterprises are being dethroned from their leading role, their fiscal contribution is being steadily increased. The privatisers may better take note of this for its implications. The Budget support to the public enterprises has been lowered sizeably. The total capital outlays too have been cut with a view to contain the deficit. Dividends will have to be paid to the private equity holders. And despite their much-maligned inefficiency, the PSUs are expected to provide more investible resources! It may be noted that budgeting is a tricky exercise, particularly when it is prepared under the commitment of containing the deficit to a stipulated figure. One wonders how realistic these expectations from the PSUs are, let alone the question of ideological propriety of a regime clipping the wings of the PSUs for externally-inspired (if not imposed) ideological considerations, or on the basis of negative arguments based on the supposed fiasco of 'socialism'. Not learning from the experience of the Eastern bloc which failed to make use of the market mechanism, we seem to be swinging to the other extreme: denying to ourselves the proven potential of planning and the public sector.

For reasons of space, we are not taking up the questions flowing from the pattern of public spending and the new biases it operationalises, like increasing the allocation for civil aviation while reducing that for employment schemes, let alone the question of making it a large enough first charge for operationalising the right to participate in economic activities and markets.

The basic fallacy in the entire Budget and associated policy package is the announced and reinforced policy preference of according primacy to economic growth, irrespective of its agents, leaders, pattern, its attainability and substainability, sharing of its costs and benefits and the ecological and cultural dimensions. This is a classic example of stubborn conservatism in the face of irrefutable logic and historical and contemporary evidence and when so much water has been carried to the sea of social knowledge by all the mighty rivers of various schools of thought. ■

HIREMATH: India's Nuclear Policy

(Continued from page 6)

and investments.

And now the Foreign Secretary, "Mani" Dixit, will be in Washington this week. His visit was described in a report from the US capital as being in response to a State Department invitation to discuss nuclear non-proliferation. The Ministry of External Affairs has promptly clarified that the visit would really be for a comprehensive discussion on a wide range of bilateral issues. This is as it should be. But America's current preoccupation with nuclear matters in South Asia, especially after Shahryar Khan's recent confession about Pakistan's nuclear capability, cannot be ignored.

An interesting new development will be the "coincidental" visit to New Delhi, around the same time as Dixit's sojourn in Washington, of a formidable team of scholars from the University of Illinois to participate in a seminar on "Global Disarmament and Arms Control". These academics are members of the university's programme for Arms Control, Disarmament and International Security (ACDIS). It would be relevant to recall that the Co-Director of ACDIS is Professor Stephen Phillip Cohen, an erstwhile member of the State Department's Policy Planning Staff who, according to a *New York Times* despatch from Washington, has recently suggested "that a permanent seat for India on the UN Security Council should be linked with greater cooperation on nuclear controls".

◆

AS interactions and even coordinated policy formulation between academe and the State Department are a hallowed tradition in the United States, it would indeed be useful if the Indian participants in the forthcoming seminar are able to carry conviction by putting across our nuclear policy in a well-reasoned and convincing manner, and not merely engage in trading polemics. The Indian nuclear policy was again admirably summed up by President Venkataraman in opening of the current Budget session of Parliament when he said: "We believe that given the global reach of nuclear weapons, we need to follow a global approach with regard to the nuclear disarmament issue. Partial or piecemeal measures, such as limited Nuclear Weapons Free Zones, therefore, seem to be of little validity and could even detract us from our ultimate goal."

The nuclear debate is likely to continue without end, until nuclear weapons have been ended altogether. But that seems to be a wholly unlikely and unrealistic prospect. From time to time, gentle persuasion of target countries is likely to yield place to coercion by the advocates of nuclear non-proliferation, as in the aftermath of Desert Storm. Similar action could even be expected from states that claim to be non-nuclear, if only to prevent their real or perceived adversaries from stealing a stealthy march over them on the road to nuclear weaponry. This, in fact, is what happened in the case of Israel's attack on Iraq's reactor at Osirak, and Iraq's bombing of Iran's nuclear plant under construction at Bushaira!

But the nuclear genie is already on the prowl and even if all existing nuclear weapons can theoretically be eliminated, there is no way in which nuclear technology can be disinvented, or prevented from being sold surreptitiously to the highest bidder, or even stolen and smuggled across international borders. There is ample evidence to believe that such things have happened in the past.

During the long years when the NATO and the Warsaw Pact confronted each other with their countervailing nuclear arsenals, it was conventional wisdom for both sides to feel that these weapons were instrumental in preventing the outbreak of armed hostilities between times. In an outspoken address to the Soviet General Staff in Moscow during November 1990, when the Cold War had already started receding, Michael Quinlan, the British Permanent Under Secretary for Defence, described nuclear weapons as "the keystone of an arch of freedom from war". With the dawn of today's multipolar world, there may be many such arches and many more keystones to be set in place. ■

Perish the Troika

SOM BENEGAL

(Meeting of the Congress of Deputies. No one is quite sure who the deputies are and of which Congress. From the fact that this is in Moscow, not in Minsk in Byelrus, or Kiev in the Ukraine, or Tashkent in Uzbekistan, etc. etc., we know it is still in the Russian part of the once-great USSR and once-feared Soviet Union. The fact that the meeting is in the White House (not Washington D.C. but the Kremlin) tells us at once that it is Yoris Beltsin's show. This is made even more plain when the CNN, the BBC and other TV cameras catch Gikhail Morbachev in the sixteenth chair of the thirtieth row of the Great Hall.)

(Enter Beltsin, shaking his hands held up in the manner of victorious boxers)

Beltsin: Comrade deputies—I beg your pardon, habits die hard! Ladies and gentlemen, I apologise for calling you Comrades. It is just a verbal hangover. After *perestroika* and *glasnost* we are restructured as ladies and gentlemen. *(Cheers from the audience)* We are now in tune with world custom, especially the Western world whom we should have emulated but did not in all these years. *(Groans and cries of "Don't remind us")* Why, Comrades, I mean ladies and gentlemen? Thanks to that misguided intellectual called Marx. *(Pauses pregnantly)* Can we call him intellectual anymore? *(Burst of laughter, in which Beltsin modestly joins)* Or that Marxist activist called Lenin? What a misguided idealist he was! Can we call him an idealist when he had no understanding of ideal or ideology except what he learnt from *Das Kapital,* read while on a secret train from Berlin to Finlandia station in Moscow. He tried, ladies and gentlemen, to make capital out of it! *(More raucous laughter, cheers, cries of "give us more, Beltsin")* Wait, Comrades, I mean, ladies and gentlemen, I have not finished yet. How can we forget that great buffoon Stalin who fought endless challenges to the Soviet state? With his talk of the Great Patriotic War? Khrushchev has told us all. But for him we might long ago have saved ourselves from the dreamless nightmare of Communism, or, as we used to say, transitional Socialism, or Socialist realism! *(Laughter, rising to a crescendo. All stand up and cry "Heil Beltsin!")* No, no, no. Nazi greetings may sound nice but they are not nice, right now.

Comrades, I mean ladies and gentlemen, I come to bury Marx—and here I must add Engels—*(giggles from the audience)*, Lenin, Stalin, Malenkov, Khrushchev, Brezhnev, and all the other comedians who followed, not to praise them. But I will praise Morbachev, who modestly sits somewhere in this audience—I do not know where, such is his modesty. I will praise him before burying him. *(Cries of "hurry up, he needs us, we don't need him")*

Patience, friends, Russians *(here there is some murmur of dissent especially from the Ukrainians, Georgians and Tadjiks)*—countrymen of the Commonwealth. Let us recall what he has done. Not what Churchill in the twenties, Hitler in the forties and even Americans in the eighties with all their might and armaments. Without a single shot being fired, he has brought down the Soviet Union like a house of cards. Quite rightly, he has earned his name as the Man of the Century, Nobel Prize Winner and Limca Book of Records. *(There is no clapping, no cheer rising to an ovation, no one stands up)* I think you have got my point.

But Comrades—ladies and gentlemen—as Morbachev loved me, I weep for him; as he was fortunate in leading us, I rejoice; as he was valiant in his *perestroika* and *glasnost,* I honour him; but as he made mistakes, I have finished him. *(Cheers, and cries of "Yori, you're the one!")* But wait, Morbachev is an honourable man (so are the rest, Ligachev, and Shevardnadze, all honourable men). The quality of mercy is not strained. It droppeth as the gentle rain from heaven. And it droppeth upon Morbachev in the form of 10,000 roubles a month, a *dacha,* two cars and twenty guards. *(Groans of "What about us!")*

(Here Beltsin smiles) Don't worry. At one time the Americans used to say in horror, "The Russians Are Coming, the Russians Are Coming!". Now we can say in sheer joy, "The Americans Are Coming, the Americans Are Coming!"

We have perished the *troika* of Morbachev, Ligachev and Shevardnadze. We can now raise a glass to Yankee *glasnost.*

(Cheers, rhythmic clapping, rising to an ovation; all stand up and sing "America the Beautiful") ■

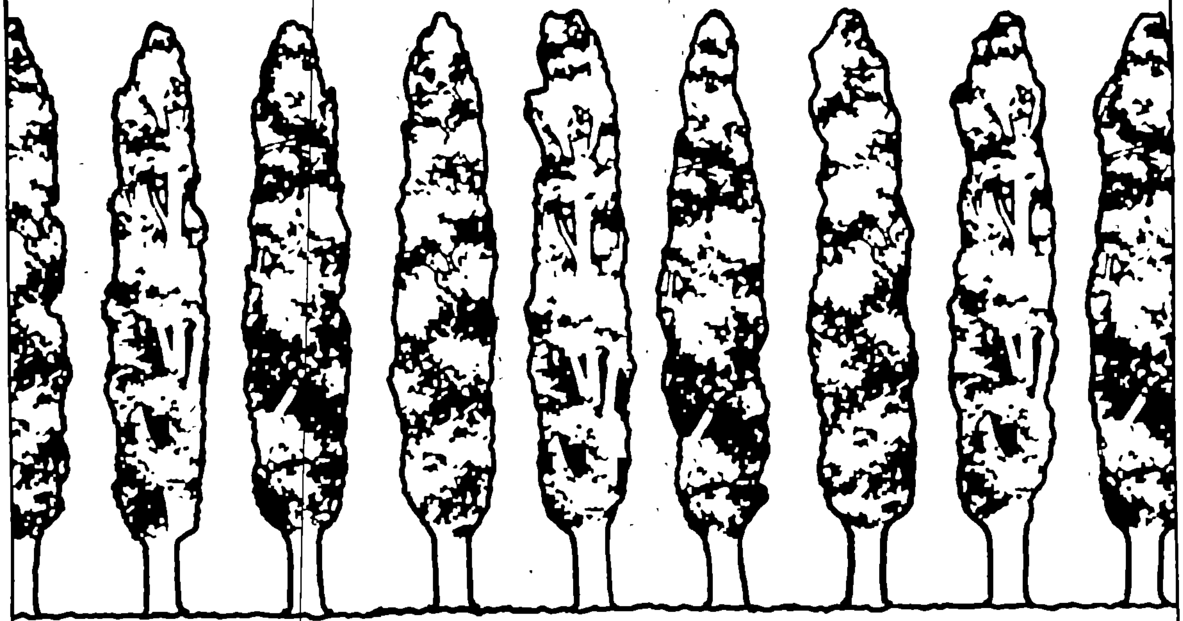
SAIL HAS MORE THAN A MILLION PLANTS



ONLY NINE OF THEM PRODUCE STEEL !

Even that may not be enough!

SAIL continues to play an even more crucial role in the restoration and preservation of the environment.

By employing the latest technology.

By developing specialised expertise in environmental management.

By conducting a $ 3.3 million environmental study to identify and locate critical areas requiring corrective action.

By 2000 AD, SAIL is scheduled to implement 850 environmental preservation measures in and around its plants and mines.

Today SAIL renews its pledge to give back to Nature what it takes to build a better tomorrow.

STEEL AUTHORITY OF INDIA LIMITED
Steelmakers to the nation.

Call for Nuclear Debate ● Anatomy of Union Budget

Mainstream

VOL XXX NO 21 SATURDAY MARCH 14, 1992 Rs 5

POLITICAL NOTEBOOK

The Question of Sovereignty

Is the litmus test really over? The Narasimha Rao Government has, for the first time since its installation last June, convincingly won the confidence vote on the floor of the Lok Sabha The President's Address has been adopted by both the Houses of Parliament.

In any parliamentary democracy it is the Opposition's prerogative—and obligation—to challenge the government in power on vital issues and vote against it whenever it deems necessary. That has been the practice throughout independent India. However, when the minority Congress-I Government headed by P.V Narasimha Rao took office the Opposition parties allowed it to be formed and permitted it to function without opting for division in the Lower House of Parliament precisely because none was prepared to face a third election within the brief span of eighteen months. There was considerable strength in the argument that the country with a badly battered economy could not afford the luxury of once again going to the poll, an enormously expensive exercise.

This time the situation was indeed different An articulate section of the Opposition—the National Front-Left combine—was convinced that the Narasimha Rao Government had adopted steps that amounted to bartering away the country's sovereignty. The pre-Budget developments, which resulted in the Union Finance Minister being forced to table in Parliament his correspondence with the World Bank and the Fund-Bank conditionalities, were sufficient proof of the role the foreign financial institutions had played in influencing policy-decisions including the framing of the Budget proposals. Both the Prime Minister and the Finance Minister had to concede the main burden of the NF-Left charge: the government had accepted the conditionalities of the World Bank. Their assertion that they did not accede to any condition militating against national interest is a matter of opinion. Nevertheless, without debating on the government's contention it is more than transparent that the NF-Left members were not raising trivial issues in opposing the government, regardless of the position of the BJP which, on more than one occasion on the floor of both the Houses, revealed its over-eagerness to save the Narasimha Rao Ministry.

The Prime Minister's claim that he had consulted the Opposition parties in June was limited to the need of getting the IMF loan and not the acceptance of the World Bank conditionalities which his Finance Minister did behind the back of all parties in November

Hence the key issue was one of conditionalities imposed by the World Bank in particular, as raised by the NF-Left In effect the government was on the defensive on account of the firm NF-Left stand on the point. Eventually in the face of mounting pressure the Prime Minister declared that any advice to scrap the public distribution system and do way with the food subsidy would be rejected. This is the net gain of the NF-Left campaign: the government has been bound to such an assurance. This is not of minor importance.

However, while the government gets upset over the charge that the nation's sovereignty has been placed in jeopardy, how can it explain the South Block's strange behaviour with regard to Cuba? What was its attitude towards the Cuban Foreign Minister when he came to India recently? And what about the non-implementation of the promise regarding adequate supply of rice to Cuba? Were these not dictated by the consideration that Washington should not be annoyed? Are they not related to the invisible conditionalities of the World Bank? The nation awaits a categoric response from Narasimha Rao. Because any obstacle to independent decision-making is a sign of infringement of a nation's sovereignty.

March 11 S C.

COMMENTARY

Let Parliament Debate Nuclear Issue

N.C.

While the national scene is dominated to an extraordinary degree by the political fall-out of the new economic policy initiated by the Finance Minister, it is surprising that an issue of grave implications for the nation's security and sovereignty has not yet been taken up in Parliament nor initiated for widespread national debate. This is the question of the nuclear non-proliferation.

For the past several years this has become an obsession with the US policy-makers—keeping up a relentless campaign insisting on India signing the nuclear non-proliferation treaty (NPT) This pressure has mounted ten-fold with the end of the Cold War and the consequent collapse of the Soviet Union Although Washington disclaimed the idea of *Pax Americana*, in actual practice it has been trying to establish its military hegemony over the rest of the world. The Gulf war was meant to be the curtain-raiser for such hegemony, and sine then Washington has been pursuing with single-minded fixation to assert its military authority, as could be seen in the alerting of the US navy to intercept a North Korean ship carrying Scud missiles for Iran and Syria—which amounts to declaring that nobody, particularly in the Third World, would have the right to any sophisticated military weapons except with the permission and control of the USA.

The latest to proclaim this American hegemony is a Pentagon policy document, scheduled to be released later this month, which lays down the law for the rest of the world Behind sophisticated verbiage, the warning is sharp and clear—that America's mission will be to convince "potential competitors that they need not aspire to a greater role or pursue a more aggressive posture to protect their legitimate interests" With regard to other advanced industrial nations the USA will "discourage them from challenging our leadership or seeking to overturn the established political and economic order" So, there must be no proliferation of nuclear weapons in North Korea, Iraq and the former Soviet republics.

In this blueprint for world hegemony, the Pentagon paper makes a pointed reference to India: "We should discourage Indian hegemonic aspirations over the other states in South Asia and on the Indian Ocean." For this, it says that the USA "may be faced with the question of whether to take military steps to prevent the development or use of weapons of mass destruction." In contrast, the approach to Pakistan is distinctly benign, despite the fact that Pakistan has officially disclosed its preparedness to make the nuclear bomb: "With regard to Pakistan a constructive US-Pakistan military relationship will be an important element in our strategy to promote stable security conditions in Southwest Asia and Central Asia. We should therefore endeavour to build our military relationship given an acceptable resolution of our nuclear concerns."

It is reported that the US Deputy Secretary of State, Lawrence Eagleburger, has clarified to Foreign Secretary Dixit that the Pentagon document should not be taken note of as a serious input into the US policy. It is possible that the Pentagon, after the collapse of the Soviet Union, is in search of an enemy to justify its huge 200 billion dollar budget and therefore conjures up new targets for itself. At the same time, one can hardly underplay the Pentagon paper since it is known to have been prepared in conjunction with the National Security Council and in consultation with President Bush and/or his senior advisers If such a document had come from any other country, we would have naturally called it a blackmail. But nowadays we seem to fight shy of calling an American spade a spade.

In this background, what has been our stand on the nuclear question? When our Prime Minister met President Bush in New York during the special summit session of the UN Security Council on January

The Price of 'Globalisation'

UPENDRA BAXI

No high practitioner of hermeneutics, deconstruction or new criticism has ever read a budget as a text. But Dr Manmohan Singh's Budget speech warrants such an unusual endeavour, especially as it articulates a new vision of Indian development. The text is as important for what it says and what it does not say; silence as a form of speech is more insidious.

The text is characterised by a remarkable pugnaciousness. It ends with Lincoln's call, "Let the assassin be informed" and Ramprasad Bismil's punch-line: "*dekhna hai jor kitna bazuay katil mein hai.*" What do these dominant figures of assassin and *katil* signify? The no-changers are personifications of assassins; the pro-changers are the heroic figures ready to sacrifice themselves at the altar of change. More subtly, critics become assassins of a new order; criticism becomes a bloodied genre; discussions and debate become a mortal combat, a trial of strength between the forces of good and evil; a new demonology stands inaugurated.

Unbeknown to the author, the rhetoric of the Budget speech, subjected to symptomatic reading, suggests anticipation of violence in forms of counter-speech. And the message is clear: the critic-*katils* will need to be subjugated (to invoke Marx's favourite phrase) first by the force of phrases and if necessary, next by force without phrases.

The text sanitises the endemic violence against the Indian impoverished, who appear as theatrical pauses and not as Indian citizens bloodied and bruised by macro and mega economic practices of planning. The 1700 backward districts for whom half of the Rs 1000-crore National Renewal Fund is proposed populate the text bereft of even a reference to starvation deaths in Kalahandi. One must be grateful for small mercies to Bhopal victims who are spared of taxation on the meagre compensation they may eventually receive, but this redemption from obscenity is not accompanied by any earmarking of resources to implement even the most apologetic suggestions made by the Supreme Court for the eight-year-long relief and rehabilitation effort, as if the *parens patriae* role of the Union Government ends with its felicitation of Union Carbide's frugal charity!

The author is the Vice-Chancellar, University of Delhi.

The recent collective suicides of Andhra Pradesh weavers appear, by indirection, in the bloodless rhetorical pledge to "work out a scheme to upgrade the technology of the handicrafts" which employ millions. While the commitment to poverty alleviation programmes is dutifully articulated, there is not even a passing mention of the reasoned recommendations of India's first-ever National Commission on Rural Labour. The National Renewal Fund outlay of Rs 1000 crores stands dwarfed by the allocation of Rs 17,000 crores to defence and the fertiliser subsidy of Rs 5000 crores. The 'renewal' does not include allocation of resources to redeem the plight of Indian prisons, custodial institutions such as juvenile homes, women's remand homes, psychiatric health-care institutions, the physically disabled, victims of faulty farm equipments, persons displaced by massive public projects, bonded labourers, prostitutes and beggars. All these presumably fall within the hegemony of reduction of fiscal deficit.

◆

THREE powerful persuasive rhetorical strategies animate the text. First, the critics who say that India's sovereignty is threatened are told: "We must not remain captives of a permanent fear of the East India Company as if nothing has changed for the last 300 years!" Second, the strategy of proselytisation, in myriad ways, of "opening" India to world economy through liberalisation of laws, policy and administration for foreign investment. Third, the text pulsates with strategic evasion: "The House can rest assured that we have enough policy instruments at our disposal to ensure that foreign equity enterprises function in accordance with our national priorities."

The last strategic evasion is a superb rhetorical device. Even as a whole range of policy instruments (controls, quotas, licences, regulation, exchange, control, duties, tariffs, restriction on foreign ownership, dominant governmental control over public section equity) are dismantled with lightening strokes, the House is assured that we have "enough policy instruments" to discipline foreign investors to meet "our national priorities". The embalming ambiguities of the phrase evoke instant endorsement. But these priorities are no longer the old constitutional priorities but new ones. The new national priorities are to avoid marginalisation of India and not lag behind "globalisation".

Those contesting these priorities are made to feel prisoners of a shabby past. Modern multinationals are no colonial buccaneers; international financial institutions do not constitute the Company Bahadur; and globalisation has made sovereignty an obsolete shibboleth to a point that even distinguished economists speak not of diminution of sovereignty but of "externalisation of policy-making"! How do you answer the charge that any criticism of liberalisation arises from the seventeenth century neuroses? Dr Manmohan Singh clearly sets the terms of discourse; either you are anachronistic or you are Utopian. In either case, you have not much to contribute to a reasoned discourse on liberalisation. The "assassin" is anaemic; the *katil* overestimates her strength. Thus it is that the power of the text reinforces the text of power.

And there is the Kennedy prose: "We shall pay any price, bear any burden, make any sacrifice to realise these dreams." The "dreams" are those of the founding fathers of our republic. But these dreams speak of free and compulsory education for the young under the age of fourteen; distribution of the wealth of the community to foster "common good" and avoid "common detriment"; prevention of destitution of the old and the young; right to work; care for the disabled; legal aid to the poor; welfare of Scheduled Castes, Tribes and depressed classes; worker participation in management; respect for environment; abolition of untouchability, bonded labour, child labour, and trafficking in human beings.

These constitutional dreams become nightmares for those who have to globalise India. The Budget text must convert nightmares into new dreams and represent them as "the dreams of the founding fathers". In fact, the power of the text lies in its summons to us all to become the "founding fathers" of a new republic.

The arch post-modernist, Jean Francois Lyotard, prescribes: destroy all narrative monopolies. The text of the Budget destroys the narrative monopoly of the Constitution only to inscribe in its place that of globalisation. But its seductive power makes us feel that the constitutional metanarrative legitimises globalisation. The presentation of radical discontinuity in Indian politics as the unfoldment of original vision achieves a miracle for the Indian middle-class consciousness. Even the witless post-modernist must applaud this monumental achievement, while the Indian impoverished, yet once again, get reconstituted to "pay any price, bear any burden, make any sacrifice" to realise the "dreams of the founding fathers of our republic". The endless variety of their misery and monotony does not deserve any redemptive text like the Budget. ■

Alienation from Gandhian Ethos

MADHU DANDAVATE

For the first time in the last several years a stormy debate preceded the presentation of the Budget for 1992-93 on the issue of alleged interference by the World Bank and the IMF in budget formulation by India's Finance Minister. Leaving aside the procedural issues involved and the formal connotation of 'budget secrecy', defined by parliamentary scriptures and judging from the content of the Budget and the tenor of the World Bank-IMF conditionalities, it is obvious that there is a clear and direct correspondence between the two, no matter whatever be the learned view of legal pundits and experts of parliamentary procedures.

In this connection it is interesting to remember the encounter that Hugh Dalton, the Chancellor of the Exchequer of the United Kingdom, had with the budget secrecy. Before presenting his budget to the House of Commons on November 12, 1947 he casualy told his journalist friend, who was smoking a cigarette, that he could smoke with ease that day, but it would not be possible for him to do so the next day. Taking a clue from this remark the press correspondent flashed the news in the evening daily, *Star,* that duty on tobacco is expected to go up in the budget. It turned out to be correct and Hugh Dalton resigned from his ministerial office. This happens where norms of public life are based not merely on written rules and their mechanical application but on unwritten conventions.

The Finance Minister while formulating his Budget for 1992-93 had a restricted degree of freedom because of the structural adjustments he had already introduced in the economy earlier and the conditionalities the World Bank had prescribed as a basis for Structural Adjustment Loan (SAL) for India.

The Finance Minister's approach was again inhibited by the World Bank-IMF cross-conditionality which meant that no loan would be available to India from the IMF unless it complied with the conditionalities prescribed by the World Bank, and similarly no credit facilities would be available to India from the World Bank unless the IMF's conditions were adhered to. This 'take it or leave it' attitude of the World Bank and the IMF deterred the Finance Minister from taking independent initiatives and using options. He had to conform to the broad policy programmes offered by the multilateral financial institutions.

The author was the Finance Minister of India in the National Front Government (1989-90).

◆

THE Finance Minister's Budget strategy gives primacy to tiding over the balance of payments crisis and augmenting the foreign exchange reserves. However, in his anxiety and enthusiasm, he has placed sole reliance on borrowings from the World Bank and the IMF. Little has he realised that heavy borrowings from these institutions may relieve the BoP crisis temporarily but meeting the liabilities of these long-term loans would create a worse crisis in the long run. In this context it is worthwhile to remember that by March 31, 1991, India's aggregate external debt was Rs 1,30,700 crores—almost 25 per cent of the country's GDP. The projection of interest payments on external and internal borrowings in the 1992-93 Budget is Rs 32,000 crores as against Rs 27,450 crores in the 1991-92 Budget. This is a burden partly on the foreign exchange reserves and partly on indigenous rupee resources.

When double-digit inflation has been reached, the most pressing problem of India's economy is to bring down the rate of inflation. One of the factors that contributes to inflation is rise in non-Plan expenditure which is mostly non-productive. This expenditure is continually on the increase. In the 1992-93 Budget its projection is Rs 84,475 crores against Rs 79,697 crores in the 1991-92 Budget. The main components of the non-Plan expenditure are defence expenditure, subsidies and servicing of internal and external loans. Since the expenditure on defence, subsidies and servicing of external debts and internal borrowings had gone up the non-Plan expenditure had increased. This exerted an inflationary pressure on the economy.

To reduce the expenditure on interest payments on internal and external borrowings, it is necessary to invoke Article 292 of the Constitution which gives enabling power to Parliament to put suitable ceiling on all borrowings. If this is done the emphasis of the government would shift from reckless borrowing to indigenous resource mobilisation through higher taxation on the rich, firm steps to unearth black money and augmenting of exports. Though there is a growing consensus on invoking Article 292 of the Constitution for putting a ceiling on borrowings, the Finance Minister has refused to make any commitment on this issue.

Decline in production and impairment of growth in industrial and agricultural fields contribute greatly to inflation. In the Budget the Plan size for 1992-93 has been Rs 48,407 crores. In nominal terms this is higher by Rs 5438 crores than the 1991-92 outlay of Rs 42,969 crores. However, in real terms, accounting for double-digit inflation, the Plan investment has been reduced.

In 1992-93, capital expenditure will increase only by 0.2 per cent while revenue expenditure will go up by seven per cent. In 1991-92 there was a seven per cent cut in the Plan expenditure and 20 per cent increase after making the necessary adjustment for inflation. Thus if we take two years together there is no appreciable increase in the Plan spending. In reality, there would be a modest decline. All these factors lead to the unavoidable conclusion that the growth rate would be slowed down and there would be increase in the rate of inflation.

From fresh excise duty about Rs 2000 crores will be raised mostly across the board and this too will contribute to cost-push inflation.

With a gap of 24 million tonnes between the indigenous production of crude oil and petroleum products and their consumption demand, more than 20 million tonnes are to be imported from the Gulf countries. After the recent devaluation of the rupee by more than 20 per cent, as an integral part of structural adjustments, the import bill of crude oil and petroleum products went up considerably and ultimately that will result in increase in freight rates and further rise in inflation.

Under these circumstances there is an imperative need to have as much shift from conventional to non-conventional forms of energy like solar energy and biogas. Besides, in the transport sector of Railways phasing out steam traction followed by reduction of diesel traction and its replacement by electric traction is very necessary. This would conserve fuel and reduce pollution. The Budget ought to have taken a long-term view and provided more allocations for offshore and onshore oil exploration so as to reduce our oil imports and conserve our foreign exchange reserves. However, the sole reliance seems to be on borrowings from the World Bank and the IMF. Ever since we experienced the first oil shock, reorientation of energy policy was called for. But unfortunately this task has remained undone.

◆

THE Finance Minister has taken credit for reducing the overall budgetary deficit from Rs 7719 crores to Rs 5389 crores. However, this decline is illusory. The low budgetary deficit has been obtained by combining the increased revenue deficit of Rs 13,882 crores with the capital surplus of Rs 8493 crores for 1992-93 mopped up through high borrowings. Reducing the overall budgetary deficit by stepping up external and internal borrowings might be a good mathematical exercise but it is not a correct index of good financial performance.

In the 1992-93 Budget the Central Plan outlay for rural development has been scaled down to Rs 2610 crores from Rs 2702 crores in 1991-92. Similarly, the Central Plan outlay for irrigation and flood control has been brought down from Rs 267 crores in 1991-92 to Rs 231 crores in 1992-93. These reductions will be counter-productive from the point of view of agricultural production and will adversely affect the inflationary situation besides aggravating the problem of rural unemployment.

The policy regarding multinationals is also going to be harmful to rural development whose base is the small-scale industry. The budgetary policies give no evidence of the Finance Minister's awareness of the need to prevent uneven and destructive competition between the decentralised small-scale sector on one hand and on the other multinationals which are equipped with advanced technology and abundance of capital. In the event of such a competition the small-scale sector would be destroyed and the problem of unemployment would be aggravated. In the midst of the euphoria for elitist growth the interests of decentralised industries are ignored to a great extent in the Finance Minister's budgetary perspective. That will destroy the very basis of the employment-oriented Eighth Plan to the detriment of the rural sector.

Despite all denials by the Finance Minister, the development model envisaged in the 1992-93 Budget is the one prescribed for the developing countries by the World Bank and the IMF. Wherever this model has been worked out under the glorified slogans of globalisation and liberalisation, it has inevitably resulted in greater indebtedness, elitist growth without distributive justice, economic disparities and social tensions, erosion of real incomes of rural masses and assurance of protected markets for the developed countries through imports and capital-intensive industrialisation and partial or total removal of non-tariff barriers.

Despite the Finance Minister's rhetoric of tribute to Gandhiji in his Budget speech the pattern of development pursued by him amounts to total alienation from the ethos which Gandhiji created during the freedom struggle. Restoration of that ethos consistent with the demands of the modern age is the need of the hour. ■

Super-Rich spared Burden of Adjustment

DEEPAK NAYYAR

The presentation of the Union Budget has been received in the media by an applause that borders on euphoria. This is not surprising. The benefits would accrue to those who are vocal or articulate: the rich and the influential. The costs would be borne by those who are silent or not heard: the poor and the underprivileged.

It is important to redress the balance and situate the Budget in a wider socio-economic perspective.

◆

HOW is the burden of adjustment distributed between different classes in, or segments of, society? The caricature answer that appears to emerge from the Budget is: make life comfortable for the rich and leave the poor to take care of themselves.

The structural reform in the system of direct taxes abounds in concessions for the rich. The changes in the realm of indirect taxes are likely to be both inflationary and regressive, which can only hurt the poor.

The emphasis on, and the pattern of, expenditure adjustment is such that it would make the poor more vulnerable to, rather than protect them from, the burdens of macro-economic adjustment.

In the sphere of income tax, the exemption limit has been raised and tax rates have been lowered. Thus the present slender base for direct taxes would be narrowed further. What is more, the average rate of tax (income tax as a proportion of gross income), already low, may decline further.

In a country of 850 million people, where the middle class is estimated to number at least 50 million, if not 100 million, the number of income tax assessees is in the range of six million.

Given these magnitudes, it is not surprising that, as a multiple of per capita income, the exemption limit for income tax in India is among the highest when compared with other countries, including those in the developing world.

The author, till recently the Chief Economic Advisor to the Union Finance Ministry, is a Professor at the, Jawaharlal Nehru University, New Delhi.

This exemption limit of Rs 22,000 (more than four times our per capita income) has been raised to Rs 28,000 (more than five times our per capita income). Consequently, about one million persons would simply drop out of the tax net.

The across-the-board reduction in income tax rates, other things being equal, would reduce the average rates of tax. Consider, for example, a person with a gross total income of Rs 1,35,000.

Under the erstwhile regime, a standard deduction of Rs 12,000, under Section 16, a maximum possible deduction of Rs 13,000 under Section 80L and a deduction of Rs 10,000 under Section 80 CCA or 80 CCB, taken together, would reduce taxable income to Rs 1,00,000. The present tax liability of such a person, inclusive of surcharge, would be Rs 30,912 and the average rate of tax works out at 23 per cent.

Under the new system, this person would lose the benefit of deductions under Section 80L, 80 CCA and 80 CCB, but would be eligible for a tax rebate on savings of Rs 10,000 (in 80 CCA or 80 CCB schemes) under Section 88. The tax liability of such a person, inclusive of surcharge, would now be Rs 29,792 so that the average rate of tax would be lower at 22 per cent.

In the sphere of wealth tax, all financial assets have been exempted from tax, the exemption limit for taxable wealth has been trebled from Rs 5 lakh to Rs 15 lakh, and the tax rate has been halved from two per cent to one per cent.

The number of wealth tax assessees, at present, is in the range of 0.6 million, of which only 0.1 million have an assessable wealth of more than Rs 10 lakh. Even this miniscule number would now be reduced by a large proportion.

The super-rich, obviously, deserve to be spared the burdens of adjustment!

If the objective is to create incentives for the accumulation of wealth, a view now in fashion, surely the principle of equity between generations calls for the simultaneous introduction of an estate duty or an inheritance tax as in Japan or Europe. There is no mention of it whatsoever.

The Budget estimates for income revenue in the next financial year, which imply additional resource mobilisation despite massive concessions, must be based, at least in part, on the Laffer proposition that lower tax rates lead to higher revenue yields.

◆

THERE is little, if any, evidence in support of this proposition for India. It can materialise if and only if it is associated with improved tax compliance and better tax enforcement. The signals sent out in the Budget are just the opposite.

The provision for tax deducted at source, in respect of interest on term deposits with commercial banks and commission payments, has been withdrawn. This is an important method of enforcing tax compliance and taxing undeclared incomes, adopted in most countries, and it has been abandoned without reason.

Similarly, there is yet another amnesty, associated with the Gold Bond, for the benefit of persons with undeclared incomes and undeclared assets. Apart from no questions asked about source, such bonds will be exempt from income tax, wealth tax and gift tax.

In sum, the changes in the system of direct taxes do not simply undermine the equity principle. They are also not conducive to tax compliance on the part of those who have the capacity to pay but also the ability to evade.

In the sphere of indirect taxes, the Union Budget has reduced customs duties across the board, which would mean more than Rs 2700 crores in gross revenue foregone and a net loss of about Rs 2000 crores.

This is sought to be compensated, in part, by massive resource mobilisation through excise duties. In terms of gross revenue yield, the new levies add up to more than Rs 2500 crores (Rs 2210 crores net of concessions).

This is large when compared with similar efforts in the past and with the estimate of revenue from excise duties at existing rates of taxation (Rs 30,000 crores).

Such additional resource mobilisation is bound to accentuate inflation. The most serious cause for concern in this context is that the special excise duty has been raised from 10 per cent to 15 per cent of the basic excise duty (with an estimated revenue gain of Rs 1025 crores) for the whole range of commodities but for specified exceptions.

Interestingly enough, some consumer durables rank at par with a few essential commodities in being exempted from the higher levy! This will, almost certainly, accentuate inflationary pressures and expectations, as the retail trade would mark up prices by more than the amount of the special excise duty without necessarily observing the sanctity of exemptions.

The substantial reduction in customs duties on capital goods and manufactured intermediates may not reduce costs of production, hence prices of final goods, for two reasons.

First, prices are rigid in downward movements. Second, the partial convertibility of the rupee may lead to a market premium on the official exchange rate which could mop up the tariff reduction.

So much for revenue. What about expenditure?

The Budget appears to have chosen a soft option in fiscal adjustment insofar as it squeezes government expenditure in the social sectors. In the revised estimates for the current financial year, for instance, expenditure overruns elsewhere have been offset by a cut of Rs 1345 crores in the Budget support for the Central Plan outlay. Of this, as much as Rs 750 crores is at the expense of the approved allocation for rural development and the social sectors.

The story is the same for the Budget estimates of 1992-93. The Central Plan outlay for rural development and the social sectors, taken together, is Rs 7738 crores as compared with Rs 7659 crores this year. Given the rate of inflation, this implies a significant decline in real terms.

There is also a discernible decline in this provision for social sectors as a proportion of macro-economic aggregates, whether Central Plan outlay, total Central Government expenditure, or the projected GDP in the next financial year. This pattern of expenditure adjustment can only add to, rather than minimise, the burden on the poor.

◆

IT is clear that the substantial fiscal adjustment implicit in the Budget should have come from a more appropriate mix of expenditure cuts and revenue-raising, instead of relying excessively on the former.

In a period when we are imposing a substantial burden on the poor through expenditure adjustment, the equity principle demands that the rich in particular, and the non-poor in general, share in this burden through their contribution to direct taxes.

For this, it was absolutely essential to broaden the base for direct taxes so that a larger number of people are brought into the tax net and to deepen the structure of direct taxation by increasing the average rates of tax.

The Union Budget for 1992-93 appears to have done just the opposite. ■

No Escape from Fund-Bank Supervision

SWAMINATHAN S. ANKLESARIA AIYAR

The row in Parliament over conditions attached to the World Bank and IMF loans makes sensible people rub their eyes in disbelief. Messrs Chandra Shekhar, V.P. Singh and Co. were among the guilty men who made India bankrupt through reckless mismanagement. Yet these gentlemen now have the gall to point accusing fingers at Dr Manmohan Singh, the man who has the unenviable job of repairing the damage they have caused. The world must be laughing at the spectacle.

No doubt it is a terrible thing that India has to submit its fiscal, trade, industrial and other economic policies to the World Bank and the IMF for approval in order to get badly needed loans. It is another matter that these policies are generally sensible ones that have been recommended by eminent Indian economists for decades, and should have been adopted long ago. No matter how good or necessary the new policies may be, it is nevertheless humiliating to be in thrall to the World Bank and the IMF in this fashion. The long, detailed list of conditions India has accepted shows that India is being treated like an irresponsible schoolboy that cannot be trusted to behave sensibly and must be supervised closely. Unfortunately a series of Indian leaders have behaved like irresponsible schoolboys and made the country bust.

The three dishonourable schoolboys are our three previous Prime Ministers—Rajiv Gandhi, V.P. Singh and Chandra Shekhar, who constantly put politicking above economic management despite warning signals aplenty. Rajiv Gandhi started the borrowing spree, internally and externally, that led to the government constantly living beyond its means. Under him deficit financing touched new records. Then came V.P. Singh, who was so busy with Mandal, Mandir and Meham that he ignored money supply, and deficit financing balooned still further. The Left parties were partners in crime with him in the farm loan waiver and its expansion, which set the exchequer on course for bankruptcy.

◆

WHEN V.P. Singh fell there was an urgent need for a fresh election to bring in a government that could tackle the economic crisis. But Rajiv Gandhi preferred to put this off, and instead found a partner in Chandra Shekhar. This gentleman, who had for decades declared that it was a matter of principle to oppose the Gandhi family, and who was willing to join hands even with V.P. Singh (whom he hated) in order to topple Rajiv, emerged as the biggest opportunist of all. Not only did he join hands with Rajiv to come to power, he continued the overspending bonanza while running an administration that soon acquired a reputation for venality and corruption. He negotiated two loans with the IMF (despite claiming to hate it). When ousted, he was in the process of negotiating an upper tranche loan from the IMF, which would have necessitated a Structural Adjustment Loan from the World Bank too, with all its conditions. Had he remained in power a little longer, he would have swallowed all the Bank-IMF conditions in order to stay in power. If he is bleated about dishonourable conditions today, it is a cry for his vanished power, not principles.

He says the country should not have discussed its budget and trade policies with the World Bank and the IMF. Unfortunately, Chandrashekhar has contributed to the mess that makes such action necessary. India is now unable to service its foreign debt. To do so, it needs around three billion dollars a year for three years till its exports pick up, and no foreign bankers are willing to make loans of this magnitude. If India defaults on its debt, it will be cut off from all international credit. That will mean a huge fall in all imports including oil, edible oil, fertilisers and grain. It will mean inflation of up to 100 per cent, a breakdown of all road transport and food riots. It is to avoid default that Dr Manmohan Singh has been forced to go to the IMF and the World Bank. Judging by their rhetoric, Chandra Shekhar, V.P. Singh and Co. would probably prefer India to go bust. Having been irresponsible in power, they are now irresponsible in opposition.

◆

WHEN countries go to the IMF and the World Bank for policy loans after having proved themselves incompetent, they have to submit themselves to detailed supervision. Since countries like India go bust because they have lousy budgetary and trade

Fatalistic Dependence on Foreign Crutches

BALRAJ MEHTA

The Union Finance Minister, Dr Manmohan Singh, has delineated in his speech presenting the Union Budget for 1992-93 a three-year-phased programme for the structural adjustment of the Indian economy. He has woven into his presentation a series of myths which do not relate even remotely to Indian reality.

He has claimed great success in bringing the fiscal deficit of the government down to 6.5 per cent of the GDP and has proposed to bring it further down to 5.0 per cent of the GDP in the coming year. But dressing up the budgetary sums by passing off market borrowings from the government to public sector undertakings and selling of the equity of these undertakings plus extraction of larger surpluses from them for raising revenue for current consumption of the government do not add up to the restoration of even the budgetary balance, let alone the macro-economic balance in the economy.

The fact is that the revenue deficit of the Union Government grew in the current year by over Rs 3000 crores compared to the budget estimates and there has been an increase in the net RBI credit to the Union Government of over Rs 1000 crores. This too happened when drastic cuts were made in capital expenditure on the development of infrastructure and mass welfare. The resources raised ostensibly for development purposes continued to be merrily diverted to meet non-development expenditure of the government which is reflected in a lower overall budgetary deficit in the current year by as much as Rs 10,000 crores compared to the yawning revenue deficit.

It is not at all surprising that with cost push factors, among them the upward revision of administered prices and the baneful influence of the high revenue deficit, inflationary pressures could not be brought under control. So far as the balance of payments problem is concerned, without exports rising and piling up of more foreign debt including high-cost deposits of non-resident Indians, a good part by way of the inflow of hot money in response to the special amnesty scheme, the build-up of the exchange reserves has not eased the balance of payments crunch even if it may have deferred imminent default in international payments. But for severe import compression, the position would still have been critical.

It is, therefore, with much apprehension that the move in the next year's budget to liberalise imports and disguise devaluation of the rupee by way of its partial convertibility with 60 per cent of the exchange earnings in the trade account depreciating (which is estimated to be not less than 15 per cent compared to the official exchange rate of the rupee), must be closely and critically watched. Will there be soon a slide-back to a precarious balance of payments position? This issue must not be facilely skirted in the fond hope that generous IMF and World Bank credits and direct foreign investment would flow in to buttress India's balance of payments position.

◆

IT is the growing and fatalistically accepted, even applauded, dependence on foreign crutches which has pushed India into a situation where it has to let foreign creditors dictate their terms. Dr Manmohan Singh admitted as much when he said in his Budget speech that the "extent of conditionality (imposed by the lenders) depends on the amount and type of assistance sought". What has been revealed about conditionalities under the loan arrangements already made and more being negotiated is that they are not confined to the capacity to repay criterion but have spilled over into the determination and enforcement of the entire gamut of economic policies of the government as well as even strategic and political arrangements which palpably undermine India's sovereignty.

It is in this background that the so-called medium-term objective to place the economy back on the path of high and sustainable growth for which the budget for the coming year is supposed to be designed needs to be viewed. There is no sign yet on the horizon that the Indian economy is poised for returning to the path of high growth. On the contrary, it is stuck in the mire of stagflation. The deceleration in the growth of the GDP to as low as 2.5 per cent as against the assumption of 4.0 per cent growth, with inflation rate of 9 per cent in the current year's budget has turned out to be illusory.

Dr. Krishan Lal Sondhi pleads for a new economic regime, an Informative Society, where primacy will be given to very rapid establishment of Informative Corridor, In his book.

Beyond Mass Communication
- A New Strategy for Planning and Development

According to him India is well poised to become an Informative Society.

Advocating the concept of "re-centralization", he has a vision for "global village ..... true Gandhian village of the future".

— A challenging and thought provoking book.

More disconcerting is the fact that while the industrial sector has recorded a negative growth rate and agriculture has suffered a setback, the services sector has forged ahead with a growth rate of more than 5.0 per cent.

The idea that slashing of customs duty in spite of the large loss of revenue—as much as Rs 2500 crores—will bring in inputs for stepping up industrial production and open the door for the entry of foreign capital, goods and services will boost investment is facile and misplaced. The trade-off between cuts in customs duty and increase, almost across the board, in excise duties, together with adjustments in direct taxes entailing further loss of revenue collections, in particular from the thin top-high income, wealthy segment in a society of mass poverty, is misconceived. The upshot will be that while inflationary pressure will remain strong and impulses for healthy growth within the economy remain arrested, foreign capital will come in a highly selective manner, directly or under collaboration arrangements with Indian comprador business interests, to establish its strategic hegemony in the Indian economy. It will enjoy a competitive edge in the Indian market to maximise returns from enlarged investment and trading opportunities.

Was Dr Manmohan Singh being just facetious when he promised a "pattern of production which is labour-intensive and generates large employment opportunities" as the longer-term objective to be realised in the third and final phase of the operation of the structural adjustment programme? This is pulling the wool over the eyes of the desperate and growing numbers of the unemployed and under-employed in the country when reliance is being placed entirely on the injection of capital and labour-saving latest technology from abroad, in the name of modernisation and international competitiveness of India's production, trade and services sectors. The so-called "exit" policy is a euphemism for the closure of production units and retrenchment of workers as the starting point in that direction. The so-called market-friendly production pattern is explicitly designed to subserve effective demand in the domestic market as well as generate surpluses for export in order to earn foreign exchange for liberalised imports to satisfy the same demand. All this has no relevance for the mass of the poor and deprived and is of interest for the top crust of hardly 20 per cent of the population with purchasing power enough to provide a market for the pattern of production which is being evolved. The Budget for 1992-93 seeks to move in this direction in a desperate hurry. ■

Import of Economic Policies Liberalised

D.P. BHATIA

The economic policies, forced or adopted in India by the present government, reveal a clear acceptance of the capitalist system and globalisation of the Indian economy. From the 1992-93 Budget, it further appears that with the pace we are heading towards globalisation, we will soon enjoy not only the luxuries of foreign goods and culture but of imported policies and thinking. Then we need not trouble ourselves with thinking about our future or the type of society we want to have. It will be decided by the computer imported or indigeneously manufactured with imported chips.

It is a matter of pride that some persons have already started talking about dropping the constitutional amendment made to incorporate the term "socialistic pattern of society" in the Preamble of our Constitution by the late Indira Gandhi. Given this trend, the future of our society can be easily visualised. In view of these developments, the 1992-93 Budget proposals have to be viewed from the angle of some fundamental issues instead of meticulously calculating the rate of inflation, etc.

II

THE experience of the past eight months has made the Finance Minister wise enough and consequently he has tailored the Budget which is lesser prone to criticism specially from those who have the effective voice. The potential critics include those belonging to the business class. Therefore, sufficient provision has been made to please them. Inflation indexing of capital gains and equating the private sector's mutual funds with the public sector are some of the safety nets. The jubilation of the share market within hours of the Budget presentation reveals the enthusiastic reception to the 1992-93 Budget from the capitalist class.

However, the attempt made to pacify the service class by raising the income tax limit by about Rs 6000 may prove to be a futile attempt. Resentment over this step has already been expressed by many. This rise is certainly very meagre when considered in the light of the price rise last year and what is expected this year. The Finance Minister has also withdrawn the facilities for savings under 80L, 80CC(A), etc. Consequently, the net gain to the lower salary class will be negligible and some others may have to pay a higher tax. It would have been a more judicious step if, as in the case of indexing capital gains, the salary received would also have carried inflation indexing for the purpose of income tax limit. On the other hand, the withdrawal of these saving facilities are expected to have an adverse affect on savings in the economy.

The 1992-93 Budget, nevertheless, substantially by benefits the Indian importers or, if viewed from the other side, the foreign exporters. The maximum customs duty which was slashed to 250 per cent just a few months back has been further reduced to 110 per cent in the 1992-93 Budget. Thus, there is a reduction of 140 percentage points in less than two years. The duty on capital goods, has been reduced to 50 per cent. Besides slashing duties, imports, except of a few sensitive items, have been liberalised. Now of the total earnings, either by exports of goods and services or factor income, only 40 per cent is to be surrendered at the official rate, and the remaining 60 per cent may be used or sold at the market rate. Whatever may be the arguments, a decline in the value of the rupee in terms of other currencies has to be defined as devaluation and this is what the partial convertibility has done to the rupee through the backdoor. The exim script carried a premium of about 25-30 per cent and the market rate will adjust to this.

III

LIBERALISING imports and making the rupee partially convertible fulfill the binding conditionalities of the Fund-Bank. For getting the loan these conditionalities—whether contained in the FM's letter or the agreement with the Fund-Bank—had to be fulfilled. The Left-Front and National Front are perhaps betraying an over-reaction in charging the Finance Minister with the leakage of the budget secrets or the Chellia Committee report to the Fund-Bank. No person at that high level will commit this mistake. At the same time one cannot keep one's eyes closed from the economic intelligence being done in India. Foreign powers, if they are interested in manipulating some policy recommendations of a committee or elsewhere or to know about the policies, will put their own person there. Thus one can only say that conditions have been created or allowed to develop in a way in which it has become easier for these forces to keep surveillance and manipulate the economic policies in India.

With the liberalisation on the external sector in the 1992-93 Budget the inflow of foreign goods will rise. Imports of capital goods rise very likely to be of outdated technology, if India is fortunate not to get scrap material. In this case India's own technological development will suffer. Still the inflow of consumer goods will substantially increase. The Finance Minister admitted that at present the industrialised countries are undergoing recession. Therefore, India provides a good market for their goods. This, however, will have an adverse impact on India's own industries, specially for those which fail to withstand foreign competition. In fact, in globalisation only the competitive units will survive. Therefore, with the closure of units in the domestic sector, substantial unemployment is not ruled out. Here one may recall Mahatma Gandhi's *swadeshi* movement in 1931. During his visit to London, Gandhi was asked by Lord Irwin to give up his boycott of foreign goods for three months. To this he replied:

> I could not give it up three minutes. You have three million unemployed, but we have nearly three hundred million unemployed for half the year. Your average unemployment dole is 70 shillings. Our average income is 7 shillings and six pence a month.

The only difference between 1931 and 1991 is that at that time we were under British rule and we are now under the Fund-Bank tutelage. Therefore, we need a strong *swadeshi* movement again.

IV

THE efficiency criteria which has been made the basis for retrenching the staff and closing down the units, appears to have been forgotten while preparing the Budget for 1992-93. No tax incentive or any other encouragement is provided in the Budget for achieving efficiency or running a unit at full capacity.

The 1992-93 Budget has also missed both the problems of stagnation in the current year and rising unemployment.

A cut is likely to adversely affect the demand of the domestic private sector. In the Budget no provision is made for the additional DA payment. If another 20 per cent is shifted from buying goods for DA payment, the demand from industries will be adversely affected.

Further, under some given conditions, a budgetary deficit of five per cent of the GDP means that if the GDP at constant prices rises by five per cent the price rise, will be zero. In case one expects a five per cent price rise the growth in the GDP will be nil and any further rise of prices will amount to a negative growth in the GDP. To some extent shortage in effective demand may be met either by black money coming into the economy which perhaps the government expects or due to a rise in the velocity of money circulation. In view of this, during 1992-93 the GDP growth rate will be below three per cent.

Whereas the FM has repeatedly stated that the prices will be controlled by controlling the fiscal deficit, he is evasive about withdrawing subsidies and not increasing the controlled prices. It is expected that the controlled prices, as in 1991-1992, may be raised. In this respect one looks back at the Railway Budget, fares for both the lower class and upper class have been increased by 15-20 per cent. (The Railway Minister cleverly avoided stating the percentage rise in the lower class fair which for the ordinary Second Class is worked out at more than 30 per cent at the lowest point and about 10 per cent at the highest point.) Then effective rise in freight is worked out at about 10 per cent.

About the withdrawal of fertiliser subsidies nothing is clear and if withdrawn it will lead to price rise for the agricultural commodities In the Ministry of Education, an exercise is being done to withdraw the subsidies on NCERT books. Prices of LPG and some other products during the year are likely to rise. Thus the controlled prices when charged on the market pricing basis, are likely to go up. In fact the WPI having shown a small decline, has already started looking up.

V

NEXT to unemployment, it is price rise in wage goods which most severely effects the poor class. But the misfortune of the poor is that he is blind, deaf and dumb. He is blind because due to his illiteracy and poverty he cannot see the changes taking place around him. His only god is his bread. He is dumb because either he does not speak or whatever he speaks, the foreign-returned elitist does not hear his voice. This foreign returned elitist, on the other hand, has an electronic media and also influences the other media for beating his own drum at the maximum volume. The elitist not only influences but manipulates the policies to suit his requirements.

To conclude, it has been correctly observed that at the time of garnering the benefits, the elitist class benefits the most, whereas at the time of sacrifice, it is the common man who is made to sacrifice the maximum. ■

Retrograde, Anti-National

N. BHATTACHARYYA

For the first time in the parliamentary history of our country all the Opposition parties expressed serious apprehensions that the Central Budget for 1992-93 had the prior approval of our creditors—the IMF and the World Bank. This does not perturb the Leader of the Lower House in the world's largest democracy. In any other democracy the person responsible for such a gross misconduct is not allowed to remain in the Cabinet. But not so here. Nevertheless, the undeniable fact is that he has created doubts in the minds of the ordinary people about his bonafides!

In the early seventies, Indira Gandhi promised *'Garibi Hatao'* but worked wholeheartedly for the rich. Her son Rajiv Gandhi campaigned for consumerism and brought in screw driver technology to develop consumer durables. The result is an ever-increasing foreign debt because of which our creditor countries through their pet organisations are dictating our internal and external economic policies. The multilateral financial institutions are now closely monitoring the entire range of these policies. At the same time, the Budget for 1992-93 is a continuation of the policies framed in the previous Budget presented by Prof Manmohan Singh in July 1991. That Budget too was the product of intense consultations with the Fund-Bank.

The Finance Minister promised the IMF that Budget deficit would be 6.5 per cent of the GDP and now he claims to have achieved it. For the foreign exchange earners he made arrangements for its dual pricing and allowed them to earn profit on foreign exchange earning. Devaluation has now been turned into a perpetual phenomenon. For the big cultivators the government will increase the fertiliser subsidy from Rs 4800 crores in 1991-92 to Rs 7000 crores in 1992-93. But when subsidy on foodgrains is to be provided, the Centre refuses to increase it beyond Rs 2750 crores in 1992-93 as against Rs 2850 crores in 1991-92. The prices of foodgrains in the public distribution system have increased tremendously, so much so that they are beyond the reach of the common man. And yet the quality of goods supplied in these shops are unfit for human consumption even in the metropolitan towns, One can thus well imagine their quality in the distant villages. It is surprising that the World Bank has no multinational organisation to replace our public sector organisation—the Food Corporation of India.

To implement the decision of the IMF and the World Bank both the private sector and the government are preparing a foolproof plan of massive retrenchment in the organised sector. Some compensation may be paid out of the so-called National Renewal Fund. But what is amazing is the total absence of anxiety among the policy-makers in Delhi to contain inflation. If deficit spending was the cause of inflation, why did the government fail to reduce rate of inflation from 20 per cent for the common man to the promised nine per cent in the last Budget? In the USA, Germany and Japan the rate of inflation is between three to five per cent. The largest section of our workers lives in the villages. The concept of minimum wage of Rs 20 per day was recently agreed upon at a meeting presided over by the Prime Minister; but this becomes meaningless against the phenomenal rise in inflation. The Finance Minister forgets that in 1989-90 the actual expenditure on rural development was Rs 2637 crores and after adjusting with the growing inflation he provides in next year's Budget only Rs 2610 crores for this purpose. But look at his generosity while computing capital gain tax. The cost of property will be decided after adjustment with the inflation rate and thus the taxable liability will be minimum.

The Congress-I has no option but to follow the directive of the multinationals. They (the US multis) cannot sell their products in their own country. Bush went to Japan to beg a share of the Japanese market, he returned empty handed. They have friends like P.V Narashimha Rao who wants to sell the Indian people to these international exploiters. The import duty will be gradually withdrawn and those multinationals will dump India with these outdated technology. The country will be losing around Rs 2023 crores in customs duty and in future this loss will be more. This does not mean

The author teaches Economics at Motilal Nehru College, University of Delhi.

that India will be importing machines for heavy and basic industries so that the country becomes economically sound and self-reliant. Rather, machines are to be imported for providing cold drinks, potato chips and various products where the initial investment is very low; but the Indian elite is mad after them. The Indian businessmen supporting the policies of liberalisation are now afraid that these multinationals will convert them into conventional commission agents as they had been during the British days. The BJP and the RSS feel that the government should withdraw from economic matters and concentrate only on law and order. Now they are worried that at the rate the NRIs and multinationals are purchasing shares in well-known Indian undertakings the days of the Tatas and Birlas are coming to an end: That is why the *Swadeshi Jagaran Abhiyan* by the stalwarts of the BJP and the RSS!

Adhocism is the other name of our fiscal policy. The government has opened the floodgates for the MNCs and the private sector is fully exploiting a market of 840 million people. The scope of speculative income is increasing everyday. The crowd in the stock exchanges is expanding. But the Finance Minister refuses to collect taxes from this growing rich community in India. The rich people are getting richer everyday but they will pay less by way of income tax and expenditure tax. One is surprised that instead of abolishing the provisions of the wealth tax and the capital gain tax, the government is unwilling to collect any tax because they are paid by the rich. So when there is acute scarcity of resources with the Centre and the States and the rich can afford to pay the amount stipulated, the share of direct taxes to total tax revenue is still less than 20 per cent.

On the other hand, the share of indirect taxes to total tax revenue has increased to more than 80 per cent and in this Budget an additional revenue of Rs 2516 crores is proposed to be collected from excise duty. The World Bank sympathisers in our Finance Ministry forecast last year a nine per cent rate of inflation; but the actual inflation is 20 per cent. With additional doses of indirect taxes, increase in railway freight, decontrol of steel and enhancement of the prices of coal and transport cost, the prices will zoom further but our pundits in the Finance Ministry promise only a six per cent increase in prices next year. Such is the degree of disinformation campaign, because our people are illiterate and simple.

◆

THE government has allowed the private sector to offer any amount of interest on debenture and company deposits. Now both the Private and Public Sector Mutual Funds will compete to attract savings in the economy. Conventional saving schemes run by the government are least attractive and the State Governments are suffering for paucity of funds as they used to get a share of this national savings as loan. In this Budget the government claims to have transferred Rs 1064 crores to the States as their share of additional tax, and the Centre will keep only Rs 188 crores. But even the Provident Fund interest is much below the market rate of interest and thus there is erosion in the value of the only source of savings of millions of salary and wage earners. Our government is eager to rehabilitate the foreign moneybags; it has no time to think of its own people. They are being asked to wait for another three years!

Last year our Finance Minister threatened the accumulators of black money with dire consequences unless they came out with full disclosures. He announced two schemes to offer opportunity to convert black money into white money. In the first scheme, to deposit money with the National Housing Bank, the government collected only Rs 106 crores. Under the other scheme, The Remittances in Foreign Exchange (Immunities) Scheme, 1991, the government collected by February 10, 1992, $766 million. This clearly proves that our politician-businessman-bureaucracy nexus is more powerful than any state authority. In this Budget our learned Professor and World Bank trained team have nothing to offer as follow-up action for this miserable failure to unearth black money. His proposal to collect around Rs 1400 per annum from ordinary retailers will give the dishonest tax officials a new opportunity to harass honest small retailers.

The gap through which the so-called structural reform measures were thrust upon India by the agents of the developed countries was provided by our deteriorating BoP situation. Dramatic devaluation in two instalments in July 1991 and import compression measures were taken to increase Indian exports and improve the BoP position. Due to import compression measures imports in dollar terms during the first six months (April-September 1991) declined by 17.5 per cent and exports also declined by six per cent. Now all sorts of imports will flood the Indian economy as we have around Rs 11,000 crores of foreign exchange. But who will purchase the Indian goods? At least not the developed countries as they are passing through massive recession and unemployment. They have already imposed various measures to curtail imports from the developing countries and the Dunkel Report will cause disaster for the economies of the developing countries. Since Chandra Shekhar was made the

Prime Minister by Congress-I, the World Bank was pumping in huge loans and during the period January 1991 and January 1992 the total drawing from the IMF was of 3 billion or Rs 6500 crores. In this way India's total external debt is more than 70 billions which is around 25 per cent of our exports for the service of external debts. The present government is not at all interested in taking India out of such calculate exploitation by the developed countries.

It is by now well-known to all that instead of the developed countries bringing in capital for the development of the developing countries the process is in the reverse direction. The Indian Government has a soft corner for the NRI investments. The recently launched India Development Bonds were offered at one per cent higher interest rate than the internatioanl LIBOR rate. These NRIs are again allowed to bring in gold at a concessional rate and sell it to resident Indians. Though such pampering is done to the NRIs, when the country was indistress they all withdrew their deposit and tried to destroy the country. Why should they not be treated as foreigners for tax purposes?

It is true that the Indian business community never had such an attractive Budget. They are happy due to the partial convertibility of the rupee, import of gold and gold bond scheme, reduction of Statutory Liquidity Ratio (SLR), removal of the government control pricing of capital issues, simplification and reduction of personal income tax, indexation of cost for purposes of long-term capital gains tax, extension of tax exemption because of the golden handshake with the private sector, avoidance of double taxation for the partnership firms, removal of wealth tax on productive assets, abolition of excise licensing, exemption of mutual funds from income tax, reduction of duties on capital goods as well as maximum rate of customs tariff and withdrawal of tax deduction at source on bank deposits.

This happiness of the Indian and foreign business houses is expected to usher in a 'second industrial and agricultural revolution'. And in this second industrial revolution there will be massive retrenchment even in the government offices. A microscopic population of 10 to 15 per cent of the population will enjoy the fruits of development while the dreams of millions of freedomfighters to bring economic independence will be shattered. This happened long back in Latin America and Africa and after 40 years of independence this government has displayed a boldness to chart the same course. This kind of recklessness of the state is nothing but bringing back dictatorship through the back door. Like all dictators, this government too is shedding crocodile tears to remove 'want and exploitation' from this country by handing over its economc management to the outsiders who have only one interest, that is, to suck the vitality and energy of this vast landmass of huge potential of untapped resources.

The agenda before the nation is to oppose with determination such anti-national policies of the Centre. Accumulation of wealth in the hands of a few is highly dangerous for any democratic country. Public sector organisations worked as a buffer against the exploitation of the unorganised poor. Now the policies to gradually liquidate such units must be stopped. The Left and Opposition parties have a responsibility to educate the people, because the media is on the side of the multinationals. Narasimha Rao claims that he is a wise man and he expected not to preside over a government which will be virtually controlled by the international moneylenders by the end of this century. The writing on the wall is quite unambiguous and one can ignore it at one's period. ■

SWAMINATHAN: Fund-Bank Supervision

(Continued from page 9)

policies, these are necessarily areas where many conditions will be imposed. The country faces a Hobson's choice. It can suffer the humiliation and distress of default. Alternatively, it can suffer humiliation of a policy loan. Almost all countries choose the latter because it offers the hope of revival and prosperity after a difficult period of adjustment.

India faces the same dilemma. One alternative is to listen to the wreckers of the economy, and so ensure that the wreckage is complete. The other alternative is to go for policy-based loans from the IMF and the World Bank, using the services of people like Dr Manmohan Singh to ensure that the policies are turned to the national interest to the maximum extent possible. The second alternative is clearly preferable. Instead of beating our breasts about Bank-Fund conditions, we need to resolve that we will never again mismanage our affairs so badly that we have to go abroad with a begging bowl in this manner.

The synthetic moral outrage of the wreckers is astonishing. We have an ancient feudal tradition in India, where important people make a mess, and then the *bhangi* who comes to clean up the mess is kicked and reviled. This is what is happening today, and it makes us a laughing stock in the world. We need instead to revile those who brought us to such a sorry pass—Rajiv Gandhi, V.P. Singh and Chandra Shekhar. ■

MARCHING AHEAD FOR PROSPERITY TO FARMERS THROUGH COOPERATION

The National Cooperative Marketing Federation of India Ltd (NAFED) is the apex organisation of Marketing Cooperatives comprising 29 State Federations and nearly 6000 Primary Societies in India.

NAFED undertakes marketing of primary and processed agricultural commodities such as oilseeds, cotton, pulses, tribal produce, fresh and processed fruits and vegetables, onion, potato, poultry and agricultural inputs etc in India and abroad, with its network of four Regional Offices and 32 branches located in the Country

NAFED is the Nodal Agency designated by the Government of India for undertaking price support operations in 16 commodities and also market intervention operations in some commodities

Apart from a whole lot of other activities NAFED also

●

OPERATES FRUITS AND VEGETABLES PROCESSING FACTORIES AT DELHI, VELLORE AND JABLI. ALSO RUNS COLD STORAGE, GODOWNS, AND OIL PROCESSING UNITS IN THE COUNTRY.

●

UNDERTAKES MANUFACTURING AND DISTRIBUTION OF AGRICULTURAL INPUTS SUCH AS TRACTORS, AGRICULTURAL IMPLEMENTS, BIOFERTILIZERS ETC;

DELTA D

Of Egypt, India and Central Asia

AMRIK SINGH

Reading books is somewhat unfashionable nowadays, I suppose. Fiddling with electronic gadgets is what is fashionable. But being a member of that generation which in some cases has not even learnt to handle electronic gadgets, reading of books is what comes naturally to most of us. In any case one is not too sure that this neglect of the written word represents a basic shift of attitudes or is a passing phase.

Whatever it be, looking back over the year 1991, when I review what I read, three books stand out. Two of them represented my discovery of Neguib Mehfooz, the Egyptian novelist, who was awarded the Nobel Prize in 1988. I stumbled upon one of his novel *Palace Walk* and was deeply impressed by his insight into human nature and his skill in depicting it. The only other book of his that I have been able to lay hands on so far is *The Beginning and the End.*

Reading Mehfooz has been a stimulating experience. The man knows how to tell a story and has an extraordinary sense of the rhythm of events. He also knows how to control the pace of narration, how to complicate the plot and how to unravel it at the right moment and with the right degree of impact. In terms of craft, he should rank with some of the masters in the world of fiction.

Reading him was an exhilarating experience. I had a somewhat similar experience with D.H. Lawrence decades ago. I read his *The Rainbow* and *Woman in Love* at one go. The world of complex and contradictory emotions that he unveiled for me was fascinating. Since I read Lawrence, no one else had impressed me so deeply as Mehfooz has done. So many other people I read during the last few decades made good reading and one was impressed with their talent and performance but they did not give me a peep into a new world. Much earlier I had read Dostoevsky and other masters and it should not be necessary to recall the impact of those great minds.

What moved me in particular about Mehfooz was that he was writing about a kind of society which was not dissimilar from ours. In Egyptian society, men and women live in two different worlds and there is very little mixing of the sexes. What he was writing about had such an uncanny similarity with our own situation that I felt that here was a man who was speaking to my inner core. There is so much more that I can write about Mefooz but then I would like to read more of him before I choose to analyse the range and quality of his literary achievement.

The author, a distinguished educationist, is a former Vice-Chancellor of the Punjabi University and the author of several books on education. He is also the long-time Editor of the Indian Book Chronicle.

◆

ANOTHER book that I have read recently has impressed me for another reason. This is a biography of Genghis Khan by Michel Hoang. The book was originally written in French in 1988 and was translated into English in 1990. This 323-page book makes impressive reading. Years ago I had read a biography of Genghis Khan by someone else. It left me with the feelings that here was an extraordinary person and one should know more about him.

Even before I read that biography of Genghis Khan, I had read something about the history of Russia. What had baffled and fascinated me about the emergence of that country was the manner in which the nomads from Central Asia had swooped into the vast wilderness of that country time and again and how it was after centuries of repeated incursions that Ivan the Terrible was able to stop them.

The entire history of that period in Russia or of any other country was a succession of one battle after another. Today it appears that all that people were doing in those days was to fight one another. (Of course this is not true but this is how it comes across.) Some did it more successfully than others and established their supremacy. A few years later, somebody else came up and disrupted the temporarily stable rule that had been set up in consequence of his predecessor's victory. Some of the Russian films that I had seen had reinforced this feeling strongly.

Even in our own country, except for a few transient periods, all that one reads about is how one tribal leader collected a band of followers, attacked someone else who controlled a particular territory, either got defeated or drove him out and occupied the territory himself and so on and so forth. In other words, history, as one reads it is country after country, was nothing but a series of battles and fights and ruthless killing and rape and plunder.

When one thinks of all that, it seems reasonable to say that though killing in the last two World Wars had been colossal, since the emergence of nuclear terror, things are beginning to change. Local wars have been there and some of them have been quite destructive. But with the amounts of destruction that modern technology is capable of inflicting upon mankind, mutual slaughter and destruction are likely to come down in scale. This may be looking too far ahead but one cannot get away from some such thoughts.

◆

TO come back to Genghis Khan, however, there was also another reason why I felt fascinated by this man. In a sense one is fascinated by the exploits of all great conquerers, whether it be Alexander or Julius Caesar or Napoleon or anyone else. But there was something unique about Genghis Khan and that is what excited me.

Even before his emergence in the thirteenth century AD, indeed a thousand years earlier, Attila, the Hun, who had also come from those very parts of Central Asia had dealt a fatal blow to the Roman empire. It was decaying in any case. What he had done was to give it the final blow. After that the Roman empire never recovered and soon thereafter disintegrated.

That was not the end of the impact of those who came from Central Asia. They continued to disrupt settled civilisations all around them. Europe at that time was almost barbaric but the same could not be said of China or of the Middle East or Iran or of India. People from this region penetrated into these different parts of the world and turned things upside down. In order to deal with the nomads from the north, the Chinese had built the Great Wall some 2000 years ago. To some extent they did protect themselves against unexpected raids but not in all cases and certainly not when there was a regular invasion as by Genghis Khan.

There must have been something unique about the Mongols and people of that region because, amongst other things, it is also said that the Aryans who came into India also came from that part of the world. There are people who dispute this theory and perhaps the truth would never be known. But of this there is no doubt that Central Asia which was the home of nomads has been sending out wave after wave of invaders to different parts of the world, and with all kinds of unexpected consequences. Extending from the Pacific shore through Manchuria into the heart of Europe and as deep down South as Iran, Afghanistan and India, the Mongols penetrated far and wide. The remarkable nineteenth century discovery that Sanskrit, Persian and several of the European languages were descended from the same source spurred the imagination of scholars. How all this happened is not known. But the impact of this discovery over the centuries has been unmistakeable.

There are all kinds of questions that arise. How is it that these nomads were able to invade and occupy large parts of Asia and Europe and seize and control vast stretches of territory which has few parallels in history? In the course of his victorious career, for instance, Genghis Khan went as far as 8000 kms from his home territory. The only means of transport available then was the horse. The Mongols were superb horsemen without question and so much of their effectiveness depended upon how they reared and managed the horses and other animals.

That their social structure was tribal in character and they seldom had a settled home does not have to be underlined. They lived a nomadic existence and moved from area to area, sometimes in search of food and sometimes because they had never known what is called a settled kind of existence. In history a kind of antagonism has always existed between nomads and the sedentary people; and it is invariably those who settle down that contribute to the emergence and growth of civilisations. Nowhere is this contradiction better typified than in the case of those who inhabited Central Asia. That Mongolia today is nowhere in the world reckoning and has virtually receded into obscurity adds yet another ironic twist to the situation. All these things had fascinated me and when I stumbled upon this book I read it with an unusual degree of interest.

This is not the place to go into the details of what Genghis Khan did and how he conquered vast stretches of territory and practised a strategy of systematic intimidation and terror. Wherever he conquered, whether it was Samarkand or Bokhara or even Beijing, the first thing that he did was to slaughter people systematically and ruthlessly. All civil life was disrupted after that. If it was a country which had evolved a system of local irrigation and its prosperity depended upon that, the Mongols invariably destroyed that system. As to loot and plunder, there was no end. At one point in his book, Hoang describes Genghis Khan's strategy of pre-emptive terror as no different from that which led to the dropping of atomic bombs on Japanese cities

◆

SEVERAL theories have been advanced in regard to what led the Mongols to venture into other countries. One of them is interesting and is derived from the study of the climate of Central Asia thousands of years ago. The Australian National University, Canberra has in hand a project for preparing a climatic atlas of the whole of Asia for the last 10,000 years. The project has been in progress for about two decades. When completed, it is likely to throw light on some of these complex issues.

According to one theory, there was a prolonged drought in Mongolia quite some time before the beginning of the Christian era. It is that which led to the migration of people to Europe and to Iran and India. In India they are known as the Aryans. Elsewhere they are known by other names. It is all so puzzling and fascinating.

Another theory is that about a thousand years ago, because of the change of climate, there was an unusual growth of steppe vegetation. This led to enormous multiplication of cattle and enabled the Mongols to have thousands upon thousands of horses and in consequence an extraordinarily efficient cavalry. Unlike most other nations, the Mongols relied exclusively upon cavalry attacks. They had hardly anything like an infantry regiment. After all, they were operating most of the time at a distance of several thousand kilometres away from their home. All that would not have been possible but for the exceptionally efficient animal power that they had at their disposal.

Is it possible to understand Indian history without knowing something about what was happening thousands of miles to the north of India? One look at the map of Asia and it becomes clear that those living in Central Asia could not go up North. It was cold there and the only option available to them was to move South. More or less invariably they poured into China, into Asiatic Russia, into Iran, Afghanistan and into India. There was no question of going beyond India because at the end of the sub-continent there was the barrier of the sea.

All movements of population were therefore uni-directional. People came into India and seldom went out. A few of them did; to what is called Greater India, for instance. People of Indian origin have gone to countries like Indonesia, Thailand, Cambodia and so on. There have been hardly any cases where Indians have crossed the northern passes and gone into countries up North. It is said about the European gypsies that they originally hail from India and went to Europe after the advent of Islam into the sub-continent. Some of their social customs as also the language that they speak is close to some of the Indian languages but little more is known beyond that. In any case, the point that is sought to be made is that the traffic has been into India and seldom in the opposite direction. Evidently, the geographic situation of India played a decisive role.

A very substantial number of other people living in the north of India and even in areas like Gujarat, Maharashtra are supposed to be descendants of people who came from Central Asia at one stage or another. We have had Greeks, Huns, Scythians, Bacterians, Iranians, Afghans and so many others coming to India and settling down here. Would it be too much to say that, as a melting pot, India is not only unique, in terms of scale and complexity, it is perhaps the biggest in size as well as the capacity to absorb.

While books of Indian history do make references to some of these things, and there are many more details that can be referred to, the fact remains that they do not take enough notice of the ethnography of the Indian population. One can read any number of books of history and remain unaware of what went into the making of a large number of people in India. Should that be so? This biography of Genghis Khan made me feel that one needs to know a lot more about Central Asia in order to be able to understand contemporary India. ■

Autonomy for the Planning Commission

J.D. SETHI

The Planning Commission's autonomy has become a great imperative for planning today as is the need for revamping its structure and functions. If these changes are not introduced, the Planning Commission would face two contradictory pressures. The first would be for its dismantling and giving up planning itself. The other would be in the direction of the so-called routine step-up, of continued expansion and legitimisation of wastefulness of the government expenditure in the name of reaching commanding heights. We already have two sets of ideologues lined up behind these contradictory propositions.

Besides, the inertia in the government and the pressures from the bureaucracy and the elephantine structure of the Commission itself may resist any move towards autonomy because such an autonomy will break the inner bureaucracy nexus. As such the Commission cannot but certainly erode, if not sabotage, the government's new economic policy in managing the macro balances. A drastic change is thus overdue.

Demanding autonomy for the Planning Commission today may seem ironic when viewed in the historical context. When the Planning Commission was constituted in 1950, the then Finance Minister resigned in protest because the Commission, in his view, would not only have excessive autonomy but would be a kind of body parallel to the Cabinet. It would make extra-constitutional intrusion in government functioning, he felt.

The high profile of the Commission during the Nehru phase created excessive national confidence. But the Commission lost its credibility after Nehru's death not only because its autonomy was violated explicitly but also because its models of development failed as was revealed by the poverty and inequality statistics. The revelation came very early in 1960 but Nehru proved too insensitive and arrogant to allow modification or reformulation of the strategy of development. Shastri had no idea what to do with the Commission. Between Indira and Rajiv, the Commission was reduced to a bureaucratic arm of the government.

It is not often realised that Nehru's policy of creating the public sector was not entirely based on economic considerations. Being a Fabian socialist he was afraid of the power of business and that is why he did not mind clamping on the country an inefficient public sector and crippling regulations on the private sector. If economic rationality was an important criterion for planning, then the public sector had to fulfil the condition that it performed only as a business proposition and not as a political venture. It had to produce surpluses. Social and other considerations could not be loaded on it while performing. They could have come later. But political interference and corruption swamped it and the Commission went on pouring resources into unproductive schemes. This cannot go on any more and for this the Commission needs freedom from governmental anarchy and arrogance.

The Administrative Reforms Commission went into the operation of the Commission but it produced nothing worthwhile that had a bearing on its efficiency, accountability and autonomy. Some valuable procedural changes were suggested. Those were later accepted by the government in principle but never implemented. Since those recommendations were accepted by the government in principle, somebody owes an explanation to the nation as to why they were not implemented.

Two men who made the loudest noises about institutional autonomy did not care too much for it when it came to the Planning Commission. Both openly worked for Indira Gandhi who did maximum to destroy every institution. Ashok Mehta and C. Subramaniam, both distinguished and knowledgeable politicians who guided the Commission in difficult times, added their own distortions through utter subservience to Indira Gandhi.

Few people outside it even know what the real functions of the Planning Commission are and how they were arrived at or how the differences between the government and the Commission are sorted out. Whatever rationality remained was thrown to the winds by Rajiv Gandhi. A member of the Planning Commission said in 1986: "The whole struggle within the Planning Commission has

The author, a noted economist, is a former Member of the Planning Commission.

been in recent months, and probably over a year and a half, to make this Plan something effective, something in which the credibility of planning might be re-established. Actually we are not living in an era of planning as we once did in this country in the fifties and the early sixties."

Because of two factors—one fiscal and the other administrative—readjustments in allocations took place and neither radical rhetoric nor economic rationality could influence them. During the eighties the revenue surplus of both the Central and the State Governments turned into revenue deficit and capital resources had to be diverted to meet these deficits. This was in addition to what was considered as feasible or non-inflationary deficit financing. The Planning Commission never pulled up the governments for their letting the Plan financing go haywire and thus wrecking the fiscal system by exceeding too much the limits of deficits agreed upon at the beginning of each Five Year Plan and for the sectoral failure to generate their own resources. Not once did the Commission refuse to finance the failed public sector undertakings. Consequently, the public sector investment which varied from 50 to 60 per cent went on merrily. Whereas the Plan investment in the public sector was kept higher than that provided for the private sector, in actual practice the public sector investments always fell short of what was planned, and thus led to larger and larger budgetary support.

On the question of resource mobilisation by private and public sectors, the Commission totally surrendered to the government's pressures. The resources belonged to the common pool and their allocation was a different kind of function from that of mobilisation. It was a great mistake on the part of the Commission to believe that just because the government had a fiscal monopoly, its resource mobilisation really determined the optimum size of the project identification of the entrepreneurs, no matter to which sector they belonged and their coming together to produce a kind of enterprise, which optimised the use of all the available resources.

Although many planning policies were wrongly conceived, they might have succeeded if the political and bureaucratic vested interests were stopped from undermining economic decisions. Now there is no chance of returning to what was conceived in the beginning. No sector can be made to acquire commanding heights. Indeed, the idea of commanding heights has turned out to be a perverse backdoor manipulation to enable the predominance of politics over economics. That does not mean that the public sector should be dismantled. It means that the size of the public sector should not be politically determined. For that the Commission needs full autonomy. Commanding heights cannot substitute functional autonomy.

The tie-up between the Planning Commission bureaucracy and that of the rest of the government lay at the root of economic mismanagement and excessive regulations. No liberalisation policy can succeed so long as this conspiracy is not broken. The political elite has failed to realise that all its attempts to liberalise and deregulate are producing limited results because of the obstructions and negative attitude of the bureaucracy. The Planning Commission is left with no policy-frame, no priority, no objective; except the semblance of all these.

A structure which was created for imposing and running controls and regulations has no other job to do. Therefore, it must either sabotage or be sabotaged and drastically trimmed. The government should either dismantle the unnecessary part of the bureaucracy—emphasis on dismantling and not reforming—or face failure. The slogan should be minimum government and maximum plan, whether private or public, market or non-market. In fact, the public sector cannot expand nor function effectively unless the redundant part of each Ministry is dismantled in order to improve efficiency. This will automatically reduce the burden on the Commission and draft made on it, paving the way for its autonomy. All this may be too easily said than done but then one must realise that India has no soft options.

Without giving constitutional status to the Commission, there would be neither autonomy nor reform. By virtue of its being a constitutional body, the Commission could become truly accountable to Parliament. Only experts should be its permanent members.

Indira Gandhi reduced the National Development Council, the national political overseer, into a rubber-stamping body. It created the illusion that the States were involved in topmost decision-making. This body should be abolished and its functions be looked after by the Inter-State Council, particularly in view of the fact that no Central Minister, other than the Ministers of Finance and Planning, have ever shown any interest in the deliberations of the NDC. Once the Commission becomes statutory, it does not need another formal statutory body like the NDC. Structurally, a constitutional body can be accountable to Parliament.

In view of the new economic policies of liberalisation, privatisation and relaxation of external controls as well as the extreme shortage of funds, it is necessary that the role of the Planning Commission be reformulated. Instead of overloading it with too many objectives and in view of the shortage of resources which starve almost every sector, the functions of the Commission should be reduced in order to let it optimise its activities.

The Planning Commission cannot be allowed to continue the way it has tried to manage the development strategy for the last four decades, as it has become a dangerous instrument for the government's wastefulness and planned anarchy. Besides, it has become an instrument with a mindset of no-change and status quo. That is why it has failed to resolve a single major issue of controversy about the strategy of development. If the Planning Commission is given autonomy and everything else remains the same, even this exercise would not be futile, it will become free from governmental pressures. Therefore, the first requirement is to define its new role and function in the context of the past experience, changed situation, new challenges and new economic policies of the Rao-Manmohan team.

Pranab Mukherjee has talked about the shift from the current approach towards indicative planning but he has not spelled out this shift at all and thus created confusion or cynicism. It is amazing that the Deputy Chairman of the Planning Commission should talk in terms of slogans.

Besides the fact that no one in the Planning Commission has seriously analysed the French system of indicative planning and its relevance for us, opting for it as a quickfix substitute for the current planning would mean the end of planning itself. Even indicative planning cannot do without same scheme of rolling plan built into it. Let us first introduce the latter and by experience arrive at a relevant kind of planning.

There are several options before the government to change the character and functions of the Planning Commission so that when made autonomous, it can do its job effectively. We cannot discuss all of them in this article. But for the success of the new policy, it should be expected that the Central Ministries will have limited power and authority. As a result, power will be devolved, either to the States or to the private sector, the major activity of these Central Ministries in respect of hardware developments would be confined to infrastructure and these functions given to the respective Ministries which can do the job individually or jointly. The Planning Commission can concern itself only with monitoring and ensuring macro balances in respect of the areas demarcated for the Central Ministries.

It has become a great imperative to find out countervailing strategy to moderate the negative and partial aspects of the new economic policies. After all, the new economic policies have little or nothing for the 700 million people, even if it succeeds. If they fail, the damage would be incalculable. Therefore, to make the new policies a success and at minimum cost to the people, the Planning Commission should concentrate on creating countervailing strategies which can only be in the field of employment, anti-poverty programmes and social development, once the planning of hardwares has been taken away from it.

The Planning Commission anyway does not possess the expertise to go into the projects in detail although there is a project evaluation division. Ultimately, the Commission sets up working groups whose recommendations it often violates.

The relation between the Planning Commission and the States will have also to be rearranged. There can be no genuine autonomy for the Central Planning Commission if such autonomy is not ensured for the State Planning Boards which so far have been the most useless outgrowth. As a part of restructuring of the planning mechanism in India, the State Planning Boards should be strengthened and given the same authority as is given to the Planning Commission. Indeed, the Planning Commission should interact only with the State Planning Boards as an exercise between two equals which are autonomous.

The only step taken so far to moderate the influence of the new economic policies is the enlargement of the public distribution system to which the Prime Minister has shown a strong commitment. However necessary its role in helping the poor, the PDS is not income or employment generating. Without the masses getting income and employment, the economic crisis will deepen and the society get more divided alongside rampant violence. Therefore, the Planning Commission should be asked to put all its energies and resources in employment generation and social development and ensuring balances within the infrastructure. The problem of fiscal balances should be left to the Ministry of Finance.

These issues cannot be decided *a priori* and should be given considerable thought before any decision is taken. What is important is that the Planning Commission is not loaded with too many functions and priorities or else it will collapse under its own weight and remain subservient to the fancies of the bureaucrats and politicians. The Planning Commission's autonomy has become a necessary condition for having any rational, planned economic development in the coming decades. ■

"Unidentified" Naxalites

G.S. BHARGAVA

Revisiting some of the northern areas of Telengana in Andhra Pradesh I have found that there is a perceptible change in the mood of the people in the last four years. They look cowed down. Our Telugu trait of standing up to what is perceived as injustice is overladen by sullenness and a tendency to suspect strangers. It needed a lot of coaxing to make people talk and, that too with reservations. In short, there is a widespread feeling of being helpless pawns in a ding-dong battle of death between the Naxalites and the police.

This is an apparent upshot of degeneration of the Naxalite movement into sporadic acts of group terrorism on the one hand, and the police strategy of indiscriminate retaliation in kind of the other. The people are caught in the nutcracker. A somewhat trivial incident illustrates the situation. My host, a reporter in Warangal, and I were going in a borrowed car to a village in the north of the district, where I wanted to get the feel of an "encounter" in the last week of December.

Seeing a police vehicle coming in the opposite direction, the driver stopped the car by the roadside and we got down. They may like to find out who we are and where we are going, the colleague explained. But the police jeep speeded past drowning us in a cloud of dust and not caring to find out about it. There is no known face among them; apparently, they are not the local police, may be the BSF or the Indo-Tibetan Border Force, my friend remarked as we resumed our journey.

"What would have happened if we had not stopped," I voiced my curiosity. They could fire at us, the driver replied. Later, I asked the district Superintendent of Police whether there were any instances of vehicle-bound Naxalites attacking the police necessitating the precaution we had taken. He confirmed that there were no such instances and that the Naxalite technique was to move about on foot and stage stealthy attacks. Vehemently denying that the police were prone to fire at moving vehicles, he began to rationalise. "The roads are narrow, you see. It is safe for one of the vehicles to stop."

Finding me unconvinced, he tried a different, perhaps more truthful, tack: "The BSF are new to the area. They do not know how the Naxalites operate and so there can be accidents."

I wonder how the BSF has gone into action without even being aware of the methods of operation of the "enemy". At the same time, the police officer was insistent that there were no BSF personnel deployed in the area. The conclusion is thus obvious that the people are scared of speeding police vehicles, whoever be their occupants and avoid crossing their path.

◆

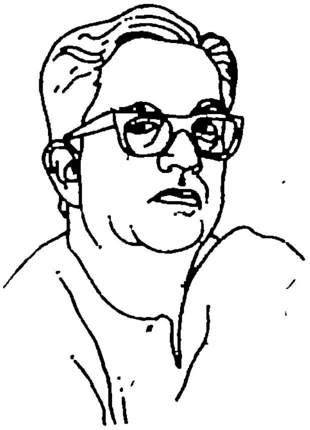
THERE was an "encounter" last December in Mukdumpuram village of Warangal in which four "unidentified" Naxalites were killed and their bodies hastily cremated after a formal inquest and post-mortem. I was keen to find out what really happened. According to the police version, a BSF contigent which miraculously escaped from an ambush—the jeep stopped a few yards ahead of the booby trap—engaged the fleeing Naxalites and killed four of them. But the mother of one of the victims—they were all in their twenties—would not be restrained by her prudent husband to tell us that there was no encounter and the young men were killed in cold blood.

She claimed that her son and three others were arrested in the village a week earlier, taken to a relatively distant place and then reported killed in an "encounter". A functionary of the civil liberaties committee, confirming the mother's version, mentioned the names of the victims and said an eyewitness to the crime had been whisked away by the police.

Why were the bodies cremated without being handed over to their relatives? The reply of the

AN APPEAL

C. Achyutha Menon Foundation



Dear friend,

C. Achyutha Menon is no more; a matchless statesman, a humanist of impeccable integrity, a champion of the poor and the downtrodden, a writer of repute, he will be remembered for all time.

We propose that a suitable memorial be instituted to cherish the message of his multi-splendoured life.

We request you to actively associate with the endeavour in this behalf and donate liberally to the fund being raised by the C. Achyutha Menon Foundation in furtherance of the above objective.

22-11-1991 Yours sincerely,

K. Karunakaran, E.M.S. Namboodiripad, G. Ramachandran, A.K. Antony, E.K. Nayanar, V.R. Krishna Iyer, Indrajit Gupta, P.P. Thankachan, Benedict Mar Gregoriose, Dr K.N. Pai, Dr K.N. Raj, Laurie Baker, P.K. Vasudevan Nair, Jyoti Basu, Mulk Raj Anand, Aruna Asaf Ali, C. Rajeswara Rao, P.N. Haksar, Thakazhi Sivasankara Pillai, Dr M.S. Swaminathan, Prof M.G.K. Menon, G. Parthasarathi, I.K. Gujral, Nikhil Chakravartty, K.R. Narayanan, A.K. Damodaran, K.P. Unnikrishnan, Chitta Basu, P.M. Sayeed, N.E. Balaram, Dr Poulose Mar Gregoriose, Poulose Mar Poulose, V.K. Madhavan Kutty, Dr I.S. Gulati, Dr Sukumar Azhikode, Dr M.S. Valiyathan, Dr P. Basak, Vaikom Muhamad Basheer, Vijaya Kumar (Hind Samachar), *Ali Sardar Jafri, Malcolm Adisheshaiya, Dr C.T. Kurien, Khushwant Singh, Asghar Ali Engineer, S.G Sardesai, Satyapal Dang, Mohit Sen, Shashi Bhushan, Ghulam Rabbani Taban, R.L. Bhatia, Prof K.N. Panikkar, Adoor Gopalakrishnan.*

All donations, in cheques/drafts to:

Secretary

C. Achyutha Menon Foundation

Thycaud, Thiruvananthapuram-695 014

Station House Officer of the concerned police station—nearly twenty miles away—was that as there were no claimants for the bodies they had been disposed of. Could we see the post-mortem and inquest reports? The file had been sent to Warangal for onward transmission to Hyderabad. He also disputed the identification of the victims by the civil rights functionary and insisted that they were "unidentified". How could they be called Naxalites if they were unidentified? "We know they are Naxalites; otherwise why should they try to blow up a police jeep?"

What happened to the missing youths? The Naxalites might have kidnapped them or they might have joined them without the knowledge of their parents.

In another "encounter"—also in December—in Urukonda village of the same distict two students of Warangal were killed. They were known activists of the pro-Naxalite Radical Students' Union and had been arrested earlier. In their case, luckily, the bodies were returned to their relatives because they were not "unidentified".

According to the civil liberties committee sources, they were taken into custody in Warangal town itself, kept in detention for over ten days and then shot on the outskirts of a remote village. There were no marks of an exchange of fire at the site of the alleged encounter and the young men were supporters and propagators of the Naxalite theories and not activists in the field. The police do not seem to acknowledge the distincion. It is the rule for underground organisations that activists in the field should not expose themselves. It is also unlikely that persons usefully engaged in overt activities will wield firearms and confront the police.

In this context, it seems that the bulk of the victims of the "encounters" are such marginal men and women. Very few hard-core militants have been killed. A plausible theory going the rounds is that unable to lay their hands on the ring leaders the police are waging a war of attrition by eliminating the more accessible urban supporters and others manning the Naxalite front organisations. The idea perhaps is that if the sources of fresh recruits dry up the Naxalite-operators in the jungle will be contained. In effect, however, the police violence is winning public sympathy for the Naxalites even as their support base in the tribal areas and among the poor peasantry is dwindling on account of their cult of the gun. ■

Occupational Health Issues of Women in Bidi Industry

NITYA RAO

Thirty year old Kamlesh lay on a hospital bed, coughing constantly and spitting blood. She was in a critical condition, with doctors having already given her up. She died a few days later.

Kamlesh was a bidi worker, involved in rolling bidis from the age of eight. Her parents were poor and barely managed to survive by rolling bidis. She was married at the age of twenty and had two little children. Her husband, unemployed and himself a wastrel, threw her out of the house as she could bring no dowry.

She rolled bidis day and night to feed herself and her children. The constant exposure to the tobacco dust, added to her general weakness and exhaustion, led to her contracting tuberculosis (TB) a few years ago. She ignored it. She couldn't afford the privilege of treatment and the rest it necessitated. She wasted away and today is no more. This story is commonplace in Jabalpur, Central India, where we worked, and many more Kamlesh's exist even today.

In the single State of Madhya Pradesh, there are an estimated six to ten lakh bidi workers, 80 per cent of them women. By and large, women roll bidis in their own homes, which are *kuccha,* small, poorly lit and with little ventilation. They cook in the same space; children play near them, handling the tobacco and tendu leaf; and the younger ones sleep beside them, all of them inhaling the tobacco dust almost continuously.

The environment in their homes and surroundings, as in other urban slums, is one of dirt and filth, with an additional smattering of tendu leaf cuttings, which attract goats, pigs, flies, etc. Both women and children are thus prone to common ailments like fever and diarrhoea. Their resistance is weakened. The constant exposure to tobacco makes them fall easy victims to bronchial and other chest diseases.

Sevati Bai lives in the slum conditions described above. Her husband does not earn much. She had four children to bring up and so rolls at least 2000 bidis everyday. Her five year old son was constantly sick. Finally when all the tests were done, TB was diagnosed and the treatment started.

The children's health problems are usually attended to, but the woman neglects herself. Her health problems are never highlighted, she works and suffers in the confines of her home, unheard and unattended, until it is often too late. Apart from the general proneness to illnesses, which is also caused by malnutrition and poverty, several occupation-specific health problems are widespread amongst bidi workers, specially TB and other chest diseases.

In addition, a survey of health conditions of women bidi workers conducted in Jabalpur, showed that almost all the women bidi workers questioned, complained of backache and joint pains. The women sit cross-legged or with legs outstretched and keep the raw material on their laps or on the floor beside them. Since most of them roll bidis for at least eight-nine hours a day, posture-related problems are a common features. Having rolled bidis all her life, now at the age of 55, Mumtaz Begum can hardly use her joints. She cannot bend; if she is sitting, she cannot stand without support. Ergonomically, the use of a table and chair, or atleast a small table for keeping the raw materials has been suggested for better posture. This has, however, only been implemented by the Dinesh Bidi Cooperative in Kerala.

Being largely a home-based industry, organised through the "contractor system", who is responsible for any action—the government, manufacturers, contractors, or the women themselves? Infact, a majority of bidi workers are "invisible", not recognised as "workers" involved in a productive activity in society, even in their own homes!

Sixty per cent of the women surveyed reported giddiness and headaches. The main reason appeared to be the exposure to tobacco dust. Thirtysix per cent had eye problems like watering, burning and poor vision. An eye camp was organised, and it was found that of 130 women bindi workers examined, twentyfive per cent genuinely had poor vision. They were advised the use of spectacles. Julekhabi used to constantly complain of headaches. Once she started using her spectacles, in spite of the ridicule she had to face from all her neighbours and relatives, she started feeling much better.

Teja Bai, who was found to have trachoma like many others, was given eye drops and advised to wash her eyes with clean, cold water frequently.

She again is one of those who rolls at least 2000 bidis a day. The problems are genuine but, by and large, unnoticed and unattended.

◆

THE use of protective masks to eliminate inhalation of tobacco dust has been debated, but so far no suitable design has emerged. A local doctor suggested the use of gauze material, as this would be able to filter out tobacco particles, which would otherwise remain trappped on the mask. However, the women didn't feel comfortable with this, in fact not even with the edge of their sari over their nose and mouth, and preferred to breathe freely.

Fifty to seventy per cent of the women reported gynaecological and related problems including early periods, heavy bleeding during menstruation, urinary problems, leucorrhea and general weakness. Poor nutritional status and repeated pregnancies seem to be the major contributory factors, as fifty per cent of the respondents had a family size of five to seven members, but a monthly family income only between Rs 400 to Rs 800.

Workers do seek symptomatic treatment when their condition becomes unbearable, from both government and private sources. The Ministry of Labour, under the aegis of the Bidi Workers' Welfare Fund, has a special dispensary for bidi workers. They usually give the workers some vitamins and painkillers for their general condition. The long-term solution, however, lies elsewhere.

Over the years, the bidi industry has developed into a highly exploitative one; in fact, thriving on sweated labour. Apart from being paid wages far lower than the Minimum Wages declared by the State Government, the bidi workers are not given sufficient quantities of tobacco and tendu leaf and have to make up for the deficit in production from their own pockets or by purchasing additional raw materials from the contractor. They also have to buy their own thread. In addition, ten per cent of the bidis are rejected arbitrarily by the contractor as being sub-standard and the workers are not paid for it. The same "rejected" bidis are, however, supplied to the manufacturer by the contractor alongwith the good bidis.

The net result is that the workers receive barely half the wage due to them and hence have to work doubly hard to earn enough to run their households, since they are paid on a piece-rate basis. Children from the age of eight to 10 years are involved in this activity, as what they contribute would also add to the household income. Girls are often withdrawn from school after the primary level. Others like 14 year old Tasleem or 17 year old Saroj, who insist on continuing with their education, are made to roll bidis after school hours to cover at least their own educational expenses.

Following the Kerala model of cooperativisation, women bidi workers of Jabalpur, fed up with their plight, organised a cooperative, with the help of SEWA (Self Employed Womens' Association). They decided to function in a centralised workshed, health issues being a major actor in this decision. Apart from being airy and well-ventilated, the women have a limited working day of nine hours. Most of the members have consequently given up rolling bidis at home. Their own homes are thus cleaner, though the neighbourhood is still buzzing with bidi rolling activity, and their children are saved from the constant contact with tobacco.

Apart from this physical improvement in the home and working environment, their symptomatic and chronic problems are constantly monitored and treated by the mobile clinic of the government's special dispensary for bidi workers, which visits the cooperative's premises once or twice a week.

Alongwith providing economic security and independence to the women workers, a determined effort has been made by the cooperative to guide them on preventive medicine, immunization (which service is regularly provided), hygiene, environmental sanitation, better nutrition and balanced diet. Gynaecological problems have been attended to by specialists, who have managed to convince several women and their husbands, especially amongst the Muslim members, to adopt some family planning method. Specialised camps for the detection of TB and eye problems have been held, and suitable follow-up action taken. Reimbursement of the cost of TB drugs, spectacles, maternity benefits, etc. have been secured from the Bidi Welfare Fund.

Working class women normally accord themselves the last place in the family. Their health problems are never highlighted, and they themselves prefer not to spend money on their own health, unless it is absolutely essential. Secondly, women's health problems are normally assumed to be restricted to gynaecological disorders. They, however, also include occupation-specific and general complaints.

The cooperative has provided the women a status and recognition as "workers", both in their families and society. This recognition as major earning members in their families, has made them realise the importance of maintaining their own health in order to continue to generate income for the family. This improved self-image has given them the confidence to highlight their health issues and accord some priority to the improvement in their health status. ■

Central Asia: New Political Implications

SYED ALI MUJTABA

The erstwhile Soviet Union, relegated now to the pages of history, has opened a new 'Great Game' not to be played by the Czar or the Raj, but by the regional actors ready to gain influence in the power vacuum of Central Asia.

Leaving Azerbaijan, which is culturally tied but divided by the Caspian Sea, the five states form a compact geographical entity. Uzbekistan and Kazakhstan dominate the geographical landscape, while Turkmenia, Tajikistan and Kirghizia are smaller in comparison. Given the Slavic composition of the emerging Commonwealth devoid of common currency, the armed forces alienate the Central Asian republics which seek to realise their socio-religious identity outside the sphere of Russian domination. The two leading actors vying for influence amongst the 50 million inhabitants of Central Asia are Iran and Turkey. Pakistan has also appeared on the scene but is playing a side role.

The spectore of the Iranian revolution of 1979 followed by the Soviet intervention in Afghanistan and the West-engineered Iraqi attack on Iran, looms large on the psyche of the Western media. It is not comprehended that except for the Shiaite Azerbaijan or the Persian-speaking Tajiks, the predominantly Sunni and Turkish Central Asia have nothing in common with Iran. Even in the days of the Mughals, the Safvids and the Ottomans never saw eye to eye with each other. The proximity to Azerbaijan is not of great significance as Iran nurtures more Azeris in its territory than Azerbaijan. The opening of ethnic cleavages will be detrimental to the territorial integrity of Iran but due to its oil wealth and high degree of industrialisation, Azerbaijan will be sought-after. The low level of strategic importance of Central Asia will allow Iran to manoeuvre its northern borders without significantly jeopardising its recently improved relations with the West. It is true that the moderate Islamic Renaissance Party (IRP) is making spectacular headway and religious fervour is getting surcharged, but the Communist-conditioned mind will find it difficult to go the Iranian way.

Turkey, not wishing to see the growth of Iran's influence in the region with which it has its historical ties, has sought to build its own influence. It was quick to recognise and render aid packages to these republics. It backed Azerbaijan's adoption of the Latin alphabet as opposed to the present Cyrillic script in Arabic. The possibilities of the Central Asian republics with their multi-ethnic character becoming a part of the Turkish world due to its secular politics, closeness to the EEC, a Western-oriented approach of development is more probable.

The task which cannot be accomplished by Iran, fence-sitter Pakistan is bidding to seize as its opportunity. It has established ties with Uzbekistan by engineering aid package of 30 million US dollars in credit. With Tashkent Islamabad is discussing economic cooperation and establishing direct air and telephone linkages. Pakistan is also supporting the request of Uzbekistan's President, Islam Karimov, for entry into the Organisation of Islamic Conferences and other international organisations. In an effort to attract foreign investment, Pakistan has been touting itself as a good take-off point to gain entry into the markets of Central Asia. The recent wheeling and dealing with France is a case in point. Since its strategic relevance to the United States has dimmed, Pakistan is set to gravitate towards Central Asia. The Soviet search for warm waters might have been unsuccessful, but Central Asians are expecting to succeed as the Peshawar-backed rebels are tipped to gain a foothold in Kabul. Interestingly, leaders of the Central Asian states are worried on this count; they do not relish the idea of a fundamentalist regime in Afghanistan. Nonetheless, there is a rapid change occurring in the character as well as composition of the republics in Central Asia.

◆

THERE is a growing trend within the Central Asian republics to work out modalities for regional

The author is a Research Scholar on South Asia, School of International Studies, Jawaharlal Nehru University, New Delhi.

cooperation and defence arrangements which in turn trigger off concern in countries like China and the United States. China is apprehensive of a religious fervour gaining ground in its already volatile Xinjiang province and its spin-off in Tibet: China's Xinjiang province has a 50 per cent Muslim population who may find commonalities with the new Central Asian republics. Since the Chinese Vice-President Wang Zhen's visit to the region at the time of the failed coup in the Soviet Union in 1991, there have been minor demonstrations in the Kashgar region, immediately north of India. Likewise, attainment of self-rule may serve to rekindle autonomous moves in Tibet.

The United States has expressed its concern over Khazhakstan joining the club of nuclear powers. The Secretary of State James Baker's visit was to assuage the potential fear of nuclear proliferation amongst the republics of Central Asia. Kazakhstan is the fourth nuclear armed republic of the former Soviet Union and its leader, Nursultan Nazarbayev, is still unclear about retaining its nuclear weapons. If he does, Kazakhstan will become the first Muslim nuclear armed state in the world. In case of the dissolution of the Slavic Commonwealth or the CS not working in the interest of the Central Asian republics, Nazarbayev has discussed the possibility of a Union of Islamic Soviet. This would have a far-reaching consequence in the emerging new world order.

Calling bookworms everywhere!

Here is good news about the best in books!

The Book Review is India's only national review of books, covering the world of contemporary books on a wide canvas. Now 15 years old, **The Book Review** is today a household name among the book lovers of India, even in the farthest corners.

The Book Review is published bi-monthly and includes in its overview not only English language work, published in India and abroad, but also books from the many Indian languages. Reviews written by eminent writers and scholars cover a wide variety ranging through politics, history, literature, sociology, development studies, economics and the arts to women's studies, international relations management, environment, fiction and children's books.

Write today for your copy to:

◆

IT is increasingly difficult for the multi-ethnic Central Asia to resist the pressure of increased autonomy to its ethnic minorities or in any way prevent the impact of these minorities on regional politics. Ethnically, Central Asia is a patchwork of four republics speaking the Turkic language, except the Tajiks. The bone-of-contention between Armenia and Azerbaijan over Nagorno-Karabakh is an ethnic irritant. There are border disputes between Uzbekistan and Turkmenia, Tajikstan and Uzbekistan. The Uzbeks have attacked the Meshktian Turks; the Tajiks and the Kirghiz have fought battle over land and water rights. Last year, the battle between the Kirghiz and the Uzbeks in the Fergana Valley left more than two hundred people dead. The fear in all the republics is of a possible domination by a greater Uzbekistan or a nuclear Kazakhstan.

It is evident that ethnic nationalism is taking precedence over other denominators of conformity which may have regional overtones. The greatest impact is going to be felt on Afghanistan which is to witness cracks in its social fabric. Pakistan's spiralling ethnic nationalism articulated by the *jiye Sindh* will have overwhelming bearings on the Baluch and Pakhtoon movements. In India, Punjab and Kashmir are seething cauldrons; while in the north-east, and other parts, sub-nationalism is gradually on the rise.

Central Asia, with such volatile ingredients, is limping on its feet. The power vacuum thus created, attracts regional actors to play an anchor role. But the conspicuous growth of the Right-wing forces of Hindu communalism at home blocks the path of cementing the historical ties with which India is linked to Central Asia. It is only a secular and Centrist India which can encash the far-fetching dividends of the developments in Central Asia. A more tolerant domestic policy will act as a bulwark in gaining the confidence of these republics. India has the resources and the expertise to make its impact but how well it can manoeuvre itself is left to the department of diplomacy which has a testing time ahead. ■

Between Dictatorship and Basic Democracy

ALEXANDER BUZGALIN

The following is the text of an article by Prof Alexander Buzgalin, Organising Secretary of the Party of Labour and a former leader of the now outlawed CPSU's Marxist Platform. It presents a clear perspective of the reform-minded socialists in today's Russia and brings out the similarity of their ideas with Indian socialists. Buzgalin's ideas here are a further enrichment of the views articulated by Boris Kagarlitsky, also of the Party of Labour, in his interview to Mainstream's *Sumit Chakravartty in Moscow (carried in* Mainstream, *January 4, 1992).* —Editor

“Sufficient unto the day is the evil thereof...” A professor's salary is enough to buy sausage only as a delicacy, so what then can be said for a worker or a student? Milk is simply non-existent. And all this has continued for more than a year. It is almost impossible, though imperative, to ponder about this life calmly and analytically. Too dangerous are today's hysterics. Too strained is the country. A spark is enough to trigger a revolt. Not a revolution, but a brawl, a slaughter...

Let me start perhaps with a significant fact mentioned by Ken Livingstone in an interview during his visit to Moscow on an invitation from the Party of Labour. Livingstone, a British MP, is the latest Chairman of the Greater London Council, one of the most prominent Labour Left-wingers, and so on, and so forth... He asked: why does your government take its cue from the extreme Right-wing liberals of the Jeffrey Sachs variety? This adviser has already helped Bolivia carry out reforms triggering a 40 per cent production slump, then he achieved nearly the same in Poland, now he has come to you. Why? Isn't the current crisis enough for you? In London, people like Jeffrey Sachs have long since been forbidden to enter 10 Downing Street The era of Right-wing domination (note: by Right-wingers they mean not Communists, but the advocates of Thatcherism or Reaganomics) is drawing to a close...

Step by step, the wise West has been coming to the conclusion that Right-wing liberalism, which triumphed “once and for all” in the 1980s, cannot resolve these problems. It is no longer reasonable, it seems, to go back to the ideas of social-democracy, which did not prove very productive in the 1970s. A new road is needed. A radical solution is now being sought by the movement of the New Left in the West, which has inherited the achievements, but is simultaneously overcoming the mistakes of both orthodox communism and social democracy. The New Left are still small in numbers, but they will probably go the way of other such movements which have already acquired a mass scale and strong influence. For example, the Greens, women, youth, supporters of territorial and production self-management, consumers, and many others.

I am not going to predict an early victory for these forces, yet it is possible to foretell almost certainly that the ruling quarters will borrow (not by virtue of their altruism, but out of survival instincts) much from this New Left's arsenal, adapting it to the tasks of prolonging the life of the old “civilised” society.

Why should we care about their problems? Perhaps it is their present-day problems that can show us our future and save us from having to rehash the ABC's civilisation.

◆

WE are faced with a dilemma: either we survive, moreover, in a dignified way, like people, like individuals, and not like swine—in which case our society must make the leap into the twentyfirst century or else the country takes the path mapped out by Jeffrey Sachs and the Yeltsin-Gaidar tandem which means a deepening of the recession, that is, an inhuman life for the majority of the country's population today, and transition into the category of the poor (and increasingly lagging behind developed nations) Third World nations tomorrow.

And now is the time to pose the pivotal question: how can we secure a strategic breakthrough into the twentyfirst century in our country, devastated as it is by the socio-economic crisis?

Many people in our country long to exercise their talents, but not at the expense of others. There are potentially quite a number of such people in our country, but they have been and continue to be oppressed by the systems which ruled and continue to rule the roost. Previously, they were simply turned into slaves, leaving precious little for the display of initiative; today their initiative is being driven into the channel of small business which in our conditions takes the form of a "shop", equally dependent on the inequities of government clerks and racketeers. Opportunities to set up collective enterprises and vigorous and effective activities by mass public organisations have remained extremely narrow. And most importantly, people have been so tightly squeezed today by the vices of the crisis, and by the need to procure food and clothing, that en masse they don't care about "social creativity".

Will this start a vicious circle? By no means. Indeed, the majority of working people in our country have kept and will continue to keep aloof from independent historical creativity, preferring to pin hopes on the wisdom of the President or steering clear of any social or political issues. They follow the primitive scheme of hired workers: you pay—I work. Who pays and what for, who gets the profit, and how much of it this is none of my business as long as I get decent wages.

Indeed, all this is quite true. But the crisis is mounting and the majority will soon understand beyond a shadow of doubt that they have nobody to hope for except themselves and their comrades: that nobody is going to pay them "decent" wages. The real scheme is to turn them into Europe's cheapest labour source, for only then will business people (domestic as well as foreign) begin investing something in production, not just in brokerage, that is, speculation and profiteering. In this context, the majority of hired labourers would become objectively interested in the implementation of a socio-economic and political programme, being an alternative to the liberal ideas of "shock therapy".

◆

NOW we can discuss the maximum and minimum programmes the Party of Labour has presented to the political scene. The initiative in forming this party was put forward a few months ago not only by political leaders (from the Socialist Party, the Confederation of Anarcho-Syndicalists, the democratic Marxist-opposition in the CPSU, etc.), but also by the leaders of several trade unions and local Soviets.

First of all, politics (first—because inherent in the point at hand is democracy, an absolutely indispensable condition of any of our party's actions; deliberations on 'enlightened totalitarianism' are not for us). Basic democracy is more than just a traditional set of the principles of parliamentarianism, multi-partisanship and pluralism. It is first and foremost a true government of, by and for the people. This, however, only emerges when democracy grows up from below instead of being foisted from above; when every deputy with an imperative mandate represents a group of people really brought together by common interests: a self-management committee, an association of consumers, trade unions, and the like (incidentally, this principle was the cornerstone of the system of Soviets which sprang up on grassroots initiative but quickly degenerated).

If a political regime is focused on including organised and active hired workers in the solution of the problems of their own lives, it will also be possible to tackle economic problems. Strategically this, I repeat, amounts to support in a mixed economy for an effective public sector possessing strong incentives for increasing the efficiency of production, produced by the worker's position as the master, not the hireling.

Specifically: a demand from the country's Council of Work Collectives that enterprises be transferred to work collectives, not the "director corps" and the ministerial bureaucracy which are rushing to set up "holdings" and "concerns". Will the collectives waste everything, while monopoly and chaos continue holding sway over the economy? Yes, they will—if there is only collective ownership and the market. If, however, these are complemented with a democratically regulated market to bring out strong strategic programmes (as in South Korea or Japan at the time of their "economic miracle"), a policy of employment and personnel retaining controlled by trade unions (as in Sweden for example), and price controls by unions of consumers, producers, etc. under the auspices of local authorities (as in Austria)—there will be different results. This will be a democratic mixed economy, in which the socialist and the civilised bourgeois trends will compete with each other economically.

But this is in the long term. As things stand now, we are in a situation of conflagration and far from having too much. But even in such conditions there are two options. The first—to pin our hopes on a Russian Pinochet. This road is not for us. This road is for those who will tomorrow, realising their inability to extricate the country from crisis, get rid of Yeltsin's powerful figure and put in a "patriot" with democratic slogans and iron fists in the presidential-dictatorial chair.

The second variant—the above-mentioned struggle for transition to basic political democracy and a mixed economy with generous safety nets. On this basis it would become possible to push through rigid deflationary measures and production-stimulating measures—primarily science-intensive technologies within the framework of the former military-industrial complex (one example—the use of our carrier rockets for the commercial launchings of Western satellites could bring our country several billion dollars in net profit). As a matter of fact, the Party of Labour has drafted an anti-crisis programme with the participation of many foreign experts (in the framework of the Economy and Democracy International Symposium). Anyone who so wishes to, may familiarise himself with it, but only privately so far. The powers that be and the press are not going to have it published.

And to close, I do not at all want to wind up my deliberations with promises like those made by new-fangled politicians: you help us come to power and I shall do everything for you as if by magic. Quite the contrary—my colleagues and I are telling you: unite and take the solution of problems bearing on your survival into your own hands. Otherwise the crisis will deepen, meaning that the threat of either civil war or dictatorship will mount. Both of them are monstrous... ■

South African Whites Still Hate Blacks

HARI SHARAN CHHABRA

Due credit must be given to President F.W. de Klerk of South Africa for removing the pillars of apartheid like the Group Areas Act, the Separate Amenities Act, the Land Acts and the Population Registration Act from the statute book. But it would do well to understand that the removal of apartheid laws has been only on paper. Two years after the release of Nelson Mandela, the socio-economic lot of the Black majority in South Africa has not improved even a little bit. The Whites are still in total control of all power—political, economic and social. Even if the Blacks start sharing power with the Whites in the next two years, the Black population will remain poor and economically exploited.

Moreover, apartheid mentality and psychological barriers created by the abominable system still continue to stalk the country. The fact of the matter is that there is a whole history of hatred between the Blacks and the Whites and nothing would disturb the peace of the Whites more than to have any social contact with the Blacks. It is not only true of the psyche of the extremist Right-wing Whites but also of the so-called liberal Whites. There are, of course, a few exceptions. A very small number of Whites have their hearts at the right place and they are the ones who are forcing the hands of the de Klerk regime to speed up the process of building a new South Africa—non-racial and democratic. They are the ones who see the writing on the wall and who realise that the future of the White minority would be safe, only if there is a just and equitable order for the majority population.

The repeal of Group Areas Act would allow the Blacks to stay in any locality they would like. But for one thing, the Blacks have no money to rent or buy property in exclusive and expensive White areas; and secondly, no White is willing to have a Black "nigger" as his neighbour. If any White dares to favour a Black in this regard, he faces the threat of a social boycott from the entire White community.

Here is a shocking report send to *The Times*, London by Ray Kennedy from Johannesburg on February 2:

> Angry Whites built roadblocks and dug ditches in a green belt area outside Johannesburg at the weekend to stop nearly 1000 Black squatter families being moved within sight and sound of their doorsteps. Some had clubs, pick-axe handles and baseball bats. Most were White householders who fear their tranquil lifestyle is about to be destroyed.

The story is that the Transvaal provincial administration decided to uproot 750 squatter families from a site at Zevenfontein, north-west of Johannesburg, which has no sanitation, running water and other facilities and move them to an area where these can be provided. This was to be an 80-acre site, a dormitory town near Johannesburg, where most of the squatters work. But this Black dormitory town is very close to the White residential area, Bloubosrand, a part of green belt zone, whose wealthy residents live on individual plots of an acre or more. They are objecting to have the Blacks as their neighbours even though they would be only across the road.

The irony is that a few prosperous Indian and Coloured (mixed race) families have moved into Bloubosrand after the Group Areas Act was replealed, but the While residents of the area cannot bear the sight of the Blacks. It sounds ridiculous when these Whites say that having allowed Indians and Coloureds in their residential area, they are not racists. The fact that the Whites prefer lighter-skinned Indians and Coloureds to Blacks makes them exposed to the charge of being totally racist.

The attitude of the White residents of Bloubosrand was strongly criticised by *City Press*, the Black Johannesburg newspaper. In a sarcastic editorial, headlined "Lily-white Liberals Show True Colours", it said:

> As Blacks, we know how lily-white northern Johannesburg operates. They are very liberal. Suddenly Zevenfontein came upon their cosy lives. In one swoop that which for years was hidden within them came out—the real White liberal attitude to Blacks. And we know there are many Zevenfonteins in our country.

◆

CAPE Town is also showing its racial colours. An outbreak of "Kaffir killing" has fuelled racial tensions and alarmed Blacks living near conservative White communities. In three incidents in the new year, 12 people have been killed and 23 injured by White men using pistols or automatic rifles. Most of the victims were Blacks shot at random in streets and shopping centres.

In a bizarre case, with no political motive, Cornelius de Vaal, a 24-year old White, flew into a rage when his girlfriend ended their relationship. "I begged her to come back to me, but she said I must go." With no sign of remorse he said: "This is why I zapped so many Kaffirs." The targeting of innocent Blacks has raised fears of a race war in Cape Town.

The Separate Amenities Act is also gone. But discrimination against the Blacks continues in many ways. Take the question of hundreds of swimming pools in exclusively White residential areas. No Black man or woman is allowed to use these swimming pools. Perhaps the Whites fear that the water will turn black! Schools run by the Whites so far are another field where discrimination exists. These schools are expensive and Blacks cannot afford them but what is more important is the fact that parents' associations controlled by Whites run these schools and they decide who can be admitted. Blacks, even if they are children of millionaries or highly educated parents, are generally kept out. Even a few racially-integrated schools are the victims of bomb attacks by extremist Whites. The only conclusion one can draw from all this is that the Whites still consider the Africans inferior in all respects.

The Land Acts of 1913 and 1936, two most unpopular measures in South Africa, which reserved 87 per cent of the land for the 15 per cent Whites, were removed from the statute book. But it was stipulated by the government that henceforth Blacks will be allowed to buy land from white "owners". It sounds totally absurd and raises two important questions. Do Africans have the money to buy land? Were the Africans paid when the Whites grabbed their land? Since the answer to these questions is in the nagative, it is not a land reform measure at all. Whites are mighty pleased that status quo on the land question will remain and the Africans will continue to remain landless—just the tillers of their land.

Since the Whites are unwilling to give any higher social status to the Blacks and since it is difficult for the two to coexist, de Klerk is finding it hard to go ahead with the plans of building a democratic and non-racial South Africa. He is finding the attitude of Whites most non-cooperative, opposed as they are to give equality of opportunities to the Blacks.

The racial situation in South Africa is pathologically so bad that the Whites are asking for the division of the country, much against the wishes of the African majority. They want a Black South Africa and a White South Africa of five million population. Even the influential Conservative Party is supporting this demand. Buoyed by a recent by-election victory in Orange Free State, the party's leadership has claimed that it would win an (all White) election if one was held now. The extreme Right-wing neo-Nazi paramilitary organisation in South Africa, the AWB, is "to prepare for war" in order to attain its goal of a separate and sovereign "Boer State".

With the meeting of minds of the Whites and the Blacks an impossible job and racial barriers still intact, the future of South Africa is steeped in uncertainty. Zimbabwe and Namibia have to some extent overcome racial barriers, but in South Africa it is not an easy task. It is well to remember that no White "master" will like to serve under a Black "nigger". ■

N.C.: For Nuclear Debate

(Continued from page 2)

31. he reiterated India's long-standing position that the NPT being discriminatory in favour of the nuclear weapon powers, India would not be able to sign it. President Bush is reported to have pressed for India agreeing to the proposal for a five-power conference to include the US, Russia, China, India and Pakistan, to ensure non-proliferation of nuclear weapons in South Asia. This was originally proposed last year by the Pakistan Prime Minister, but since then it is now being officially promoted by the US Administration. On this question, Prime Minister Narasimha Rao agreed to have talks with the USA. In pursuance of that assurance, Foreign Secrtary Dixit has gone to Washington to discuss this urgent matter alongwith other issues of bilateral interest and concern. Meanwhile, the Pakistan Foreign Secretary, Shahriyar Khan, publicly stated in Washington last month that his country had reached the capability to produce a nuclear bomb

There are press reports about the brief that Foreign Secretary Dixit has carried to Washington. It appears that he would press for including within the orbit of such a project not only South Asia but Southern Asia which would take into account not only India and Pakistan, but other threshold nuclear powers, such as Iran, Iraq and possibly Israel together with the Central Asian republics like Kazakhstan which have nuclear weapon installations on their soil. Secondly, India would not like the proposed conference to confine to imposing non-proliferation on only India and Pakistan, while the other three powers (the USA, Russia and China) would stand as guardians offering umbrella support to the two South Asian countries Instead, India wants all the powers to undertake equal responsibility for ensuring non-proliferation, so that there could be some guarantee for Indian security from the other three powers as well. The other details of the Dixit mission are yet to be disclosed. What is significant is that the very weekend that Dixit has arrived in Washington, the Pentagon policy paper has hit the headlines If this new approach to the idea of a five-power meet is to be taken up, one wonders why we should go only to Washington. Why can't we talk direct to two of our neighbours—Pakistan and China? Since the Pakistan Prime Minister was the first to make this proposal, why go all the way to Washington to respond to it? And with the renewal of contacts with China, this idea could have been taken up with the Chinese too. China is a nuclear power at our doorstep and we have to be assured by it of no nuclear strike from there. So, why not talk direct to Beijing?

Meanwhile, there has been widespread astonishment at the interview that Prime Minister Rao gave to the Indian fortnightly, *Onlooker*, about the same time as his New York visit in which he is quoted as having said: "We are firm in our resolve not to manufacture nuclear weapons." There is little room for the government to dismiss this as having wrongly quoted the Prime Minister, since this was broadcast by the government-owned All India Radio.

The Prime Minister's observation has provoked the distinguished scientist, Dr Raja Ramanna, the acknowledged architect of India's first nuclear explosion at Pokhran eighteen years ago, to raise the issue in the Rajya Sabha last week. He felt that Narasimha Rao's statement was "strange" as having gone contrary to the position of all former Prime Ministers from Indira Gandhi to Rajiv Gandhi, to V.P. Singh and Chandra Shekhar, since the clear stand of the Government of India so long had been that India would keep its option open in the event of Pakistan going in for the manufacture of a nuclear weapon. In the context of Pakistan having now officially disclosed its preparedness to make the nuclear bomb, Prime Minister Rao's "resolve not to manufacture nuclear weapons" has come as a total surprise. Not only Dr Raja Ramanna but also the former Finance Minister, Yashwant Sinha, has raised the issue in Parliament, and many others are likely to follow suit.

What is extraordinary is that such an important subject pertaining to the nation's security should be confined to diplomatic exxchanges and occasional *obiter dicta* in the press. In the past, the nuclear issue was repeatedly discussed in Parliament, right from the time of Jawaharlal Nehru The question whether India should sign the NPT or not was discussed threadbare in Parliament and all opinions clearly expressed, and the motion against signing it was carried by an overwhelming majority. This tradition has so long been kept up by the successive governments.

At a time when the present government is under tremendous pressure particularly from the US Administration on this subject, it is incumbent on its part to discuss the matter without any ambiguity in Parliament. It is no secret that there is a strong body of opinion in the country which favours India making nuclear weapons. This view is held by a large segment of public opinion, both civilian and military. This has been reinforced by Pakistan's open assertion of its preparedness for making the bomb after years of good-conduct certificates on this score given to it by successive US Presidents.

The Parliament, therefore, can no longer be denied the right to discuss this urgent issue of utmost concern, and the government must not fight shy of spelling out its considered view on it.

An open democratic society cannot do otherwise.■

POLITICAL NOTEBOOK

Return to Murky Past ?

Are we back to the days when the ruling party wallowed in the murky game of encouraging defections in other parties with money power? Despite the existence of the Anti-Defection Act the law is being sought to be circumvented by the powers that be. Of late splits in several organisations—the Telugu Desam Party, the Shiv Sena and the Janata Dal—bring into focus the alleged Congress-I hand behind such developments. Even if internal problems of those parties are at the source of their current predicament, the charge against the Congress-I of having manipulated the splits by devious means cashing in on dissensions within their ranks cannot be brushed aside.

The affairs of the TDP have been mismanaged for long by its supremo, the redoubtable N.T. Rama Rao. There is much strength in the allegation of his detractors that he had been running the party as his fiefdom and the benign patronage he extended to his family members violated all norms of democratic organisation. The authoritarian streak in the TDP leader aggravated the situation as it militated against established conventions. The discontent was bound to result in some form of explosion. That it has happened in this manner betraying in the process the rank opportunism of the split-away faction does not absolve the TDP leadership and NTR in particular of the responsibility he must bear for having brought the party to such a pass.

At the same time it is difficult to reject off-hand the Opposition accusation that the Congress-I was the motive force behind the crisis the TDP is facing today. The party had issued a whip to all members of its parliamentary group to vote for the Opposition amendments to the President's Address. Six Lok Sabha members belonging to the TDP (who were later expelled from the party) remained absent from the House at the time of the crucial voting. This was the first trial of strength for the minority government of Narasimha Rao. The six TDP MPs' behaviour at this trial of strength strongly indicates connivance on the part of the Congress-I. This is not mere speculation. The Congress-I had earlier played a pivotal role in splitting the Shiv Sena in Maharashtra and roped in the noted Sena leader, Chhagan Bhujbal, who was later given a berth in the State Cabinet as a reward for his services to the Congress-I. Charges of intense horse-trading on the occasion could barely be countered effectively by the ruling party stalwarts. Similar charges have been levelled this time as well, and the Congress-I is finding it difficult to ward them off with routine denials.

The Congress-I's role in such exercises does not enhance the stature of its President, the first democratically elected chief of the organisation after a substantial length of time. It appears as if we are returning to the early eighties when the Congress-I, through remote control from the Centre, had ousted the elected government of N.T. Rama Rao with a

pack of defectors in Andhra Pradesh. The people of that State had then given a befitting rebuff to such machinations behind their back. Unfortunately, the Congress-I seems to have learnt nothing from the humiliation it had to suffer at that time.

Narasimha Rao claims to be of a different breed of politicians standing apart from the polyester-khadi Congressmen dominating the ruling party today. But the activities of his party managers are ample evidence that the present dispensation is no different from the past Congress-I administrations since the early seventies. The developments in the TDP, like those in the Shiva Sena in Maharashtra, have been externalised by the Congress-I. This simple truth must be faced squarely by the party President and Prime Minister. Unless he promptly makes amends it would be difficult to prevent his image from getting besmirched.

The TDP also needs to draw necessary lessons from this episode. It is the method and style of functioning of the party leader which must come under thorough scrutiny. If the party wants to genuinely transform itself it cannot escape stringent self-introspection. The same applies to the leadership of the Janata Dal as well.

Some of the Congress-I stalwarts like Arjun Singh, the Union Human Resources Development Minister, have lately been speaking of a realignment of forces and consolidation of the Centrist and Left-of Centre forces in order to counter the regressive philosophy of the Right-wing *Hindutva* protagonists. But is it possible to bring about such a realignment when unwritten understandings with the BJP on a host of issues including the new economic policy are becoming crucial in the party's "pragmatic" development? Moreover, the return to the murky game of engineering splits in Centrist parties can hardly be conducive for such a realignment. What is thus necessary is for the Congress-I leadership to engage in an overall self-analysis of its activities and behaviour on the one hand, and its strategy, policy and priorities on the other. And this must be undertaken at the earliest.

March 17 S.C.

"Democratised" Congress

YOGESH PURI

P. V Narasimha Rao's unanimous election as the Congress President was the culmination of the party's entire election process in the last few months. The fact of the organisational elections being held after little over two decades may usher in a new phase of organisational democratisation. The essentially apolitical-bureaucratic party structure which characterised Indira-Rajiv regimes has now acquired the powerful potential to articulate a participatory organisational culture.

The last twenty odd years of the post-Nehru period had robbed the oldest and the biggest political party in modern India of its vibrant pluralism. The latter had intimately informed its ideological and organisational processes before independence and in the Nehru era, after independence. The Congress in the Nehru era possessed a nearly perfect combination of an extraordinary charismatic leadership at the apex and boss-cum-mini-charismatic leadership at the State level. The intermediate leadership with all its irrepressible and irresistible factional proclivities, however, provided a vital link between the Congress and the masses.

Mrs Indira Gandhi's leadership, though powerful and charismatic, particularly after the 1969 historic split, not only disregarded party norms but also created conditions in which inner-party democracy, collective functioning and dignified space for Pradesh party leadership were woefully weakened, if not definitely destroyed.

The author belongs to the Department of Political Science, Kirorimal College, University of Delhi.

Rajiv's stewardship symbolised the legacy of a debilitating democratic decline in the party organisation. The post-Nehru period of the Congress was, therefore, outstanding in augmenting authoritarian-oligarchical party practices and populist politics.

There is, of course, a discernible difference in the leadership scenario of the Congress in the past and the one emerging now. Until the end of the Rajiv era, the Congress pitiably depended on the Nehru-Gandhi family. But the party is increasingly learning to rely on a leadership pattern thrown up by the democratically institutionalised initiatives and the open ongoing organisational processes. It is true that fierce factionalism has stalled the completion of the electoral exercise in Tamil Nadu, Pondicherry and West Bengal. In Bihar, Rajasthan, Uttar Pradesh, Haryana and Karnataka, where the elections were completed, the filling of the office of the PCC chiefs has been left to the party President—reminiscent of the age-old Congress culture.

But the fact of the Congress going through the democratic motion of a regular election in accordance with the rules and norms laid down by the party's

(Continued on page 35)

Dealing with United States

NIKHIL CHAKRAVARTTY

A strange situation of apparently contradictory facets mark the present phase of India's relationship with the United States of America.

Of late, there is a surfeit of talks about "shared values" ranging from commitment to democracy, individual liberty and the rule of law. To this has been added in recent months, the government's new economic policy which plays up private enterprise and underplays public sector—at least that's how it has been taken in the USA. And the government, in the President's Address to Parliament, has publicly acknowledged that the US Administration has been "supportive" of our endeavour to fight back the economic crisis—presumably in the IMF and the World Bank.

This tilt towards the USA has been pronounced after the collapse of the Soviet Union and the superficial understanding that the world has become unipolar, that is, instead of two superpowers, we would now be under the thumb of one and only one superpower. With the wisdom that discretion is the better part of valour, there has appeared a conspicuous urge to cultivate the USA and to be on the right side of Washington. This was heightened by the American display of military power in the Gulf war.

Our government's response to certain US diplomatic moves betrayed a very superficial understanding of the basics of the US policy. For quite sometime, there was a sense of elation that Washington now acknowledges India as a "significant regional power", playing a leading role in South Asia. This was followed by the US officials volunteering to recognise Kashmir as being part of India and to give up its previous insistence on plebiscite to settle the Kashmir dispute. On the formal plane, this was of course a shift in the US position which, on the face f it, undermines the Pakistani claim on Kashmir.

What is noteworthy is that in the very same eriod there has been a concerted campaign about he violation of human rights in Kashmir by the ndian security forces. In other words, a case was eing built up with plenty of sophistication about ndia being unacceptable to the entire Kashmiri pulation in the Valley—and this might help to built up an alibi for UN mediation, maybe through the personal diplomacy of the UN Secretary-General, or a special envoy nominated by him, as was done in the case of Afghanistan. This view can of course be contested since it is reported that the US establishment now does not charge India of having been guilty of violation of human rights either in Punjab or in Kashmir. Could this possibly be a genuinely sincere assessment, or is it a tactical move, since it is known that the big powers cynically exploit the human rights question for purposes of political expediency? It is possible that the sop itself is a sort of quid pro quo extracted from India. Is this in return for the diplomatic recognition of Israel accorded by New Delhi, or for inveigling India to go in for nuclear non-proliferation even if it could not be persuaded to sign the NPT?

The nuclear issue has become an obsession on the part of Washington. There is no serious urge for nuclear disarmament on the part of the USA. In such circumstances, this insistence on nuclear non-proliferation being imposed on the rest of the world amounts to Washington making a bid for using nuclear monopoly to establish its world hegemony. Unmistakably, the US approach to the nuclear question has a distinct touch of the White Man's superiority—no worry if the nuclear weapons are in the possession of Russia, but it becomes a matter of worry if Kazakhstan retains the nuclear installation. There is all the worry in the world if India and Pakistan have the bomb, or for that matter, Iran and Iraq, but no disquiet at all over Israel's nuclear programme.

With regard to Pakistan's nuclear weapons preparedness, the US Administration uses it as a leverage for pressure on India to sign at least a bilateral non-proliferation declaration. It is important to note that the Pakistan Foreign Secretary's disclosure of Pakistan's nuclear weapon capability came during his Washington visit, and this is being neatly suffixed by the stand that an Indian initiative for non-proliferation can help to persuade Pakistan also to abjure the nuclear weapon. The point to note, however, is that with all the threat of penalising Pakistan for making the nuclear bomb, the US

Administration itself has sanctioned the sale of conventional military weaponry to Pakistan.

What is also rather extraordinary is that the Indian Government is telling the US Government to persuade two of our neighbours, China and Pakistan, to agree to nuclear non-proliferation. This is a job which New Delhi ought to take up on its own.

◆

IN this background, one has to weigh the pros and cons of the emerging Indo-US cooperation in the field of defence. What is being held back from the public of this country is the full picture of this cooperation and its implications. There are many strange features of this cooperation which have rapidly grown in the last one year, particularly after the visit of our Army Chief, General Rodrigues, to the Pentagon. Could it be that this Pentagon *yatra*, gave him ideas which he recently aired landing himself in hot waters in Parliament? It is amazing that the now famous Kicklighter proposals were agreed to without any political debate in Parliament or any consultation with leaders of other parties despite the fact that the ruling party itself does not command a majority in Parliament. What exactly is the role of the newly set up Indo-US Army Steering Committee? It is said that this military cooperation would help the Indian side in getting familiar with the nature and operation of the hi-tech weapons used by the US in the Gulf war.

Now we find that a joint Indo-US naval exercise will soon take place in the Indian Ocean. Oddly enough, our Prime Minister during his visit to Mauritius last week, formally supported the island republic's claim on the archipelago that includes Diego Garcia, now the biggest US military base in the Indian Ocean, which will certainly be involved in the proposed joint Indo-US naval exercise. Incidentally, it may be recalled that the Indian navy did not have any such joint naval exercise with the Soviet navy despite the fact that the Soviet cooperation towards the building up of the Indian navy is of no mean order.

The leaked Pentagon document, we are now told, does not represent the official view of the US Administration; though the White House seems to have had a hand in its preparation. But it certainly provides an insight into the Pentagon's thinking. This document comes out sharp and clear on the need to break India's "hegemonistic aspirations" over South Asia, and at the same time manifests a cosy understanding towards Pakistan whose nuclear bomb does not seem to come in the way of the US having plans to use its mlitary strength for the promotion of American objectives in South-West Asia and Central Asia. For the Indian military leadership, the potential adversary has throughout been Pakistan, and from the sixties, China too. Now with all the excitement of having joint military exercises with the USA, our armed forces will be disclosing data on our military capability, the weapons system and the tactical approach with a power which regards Pakistan as a close ally. Would this not jeopardise confidentiality of our defence preparedness vis-a-vis one of our potential adversaries? It is also known that the US Administration is insisting on prying into our * missile technology programme: certainly a matter of utmost concern for our national security.

The members of Parliament were agitated over the US Trade Representative, Carla Hills' brusque and offensive remarks, threatening to impose sanctions if India did not agree to the American terms on the issue of trade and intellectual property. The Indian plea that since these issues now having been taken up at the GATT, it would be preferable to take them up at the multilateral forum than being dealt with bilaterally, was unacceptable to Carla Hills who seems to want India to bow right now to Washington if it was to escape the clutches of Super 301. Here is an amazing case of a great power demanding open-door for trade and investment in another country, and threatening that very country to submit to its onerous terms and scrap all protective regulations to safeguard indigenous enterprise. So much for "the shared values" and the US' "supportive" role to help us overcome our economic difficulties.

Our members of Parliament have been agitated over what our Foreign Secretary said or was made to listen during his Washington visit last week. It is no use blaming the Foreign Secretary. The fault lies with our government not yet having a clear view of how to deal with the USA. Nobody is asking that our government should take an angry, hostile and bellicose posture towards the USA. What is urgently wanted is a full comprehension of the implications of the multi-dimensional nature of the relationship between the two countries that has now been emerging. What is needed is clear thinking of how to uphold our independence of judgement while dealing with a great power which seems today to be dizzy with its own importance as the overlord.

A friendly but firm, unbending stand on the part of this country can go a long way towards helpin the USA to take a chastened, realistic view particularly towards the Third World. New Delhi ca hardly afford to minimise its important responsibility not only to guard this country's national interest but help Washington to realise its own responsibility towards the world at large.

(March 14)

Invoking Bhagat Singh and Inviting Imperialists

ASHOK MITRA

Is not the show of anger organised by the Opposition parties, both inside Parliament and outside, somewhat beside the point? They have gone to great lengths to establish a specific nexus between the commitments made in the Finance Minister, Manmohan Singh's memorandum to the International Monetary Fund last August and in his subsequent letter to the World Bank President in November and certain decisions now up for implementation through the Budget.

Nitpickings of this nature are indeed fatuous. For the sake of maintaining nominal parliamentary propriety, the Finance Minister and the rest of the government would keep denying that the contents of the Budget were discussed *a priori* with the Fund-Bank representatives; the Finance Minister might even be formally right in claiming that the text of the Budget speech had not been shown to the minions of the Fund and the Bank before it was read out by him in the Lok Sabha.

None of this, however, contradicts what has been accepted as basic reality in the marketplace as well as in hearths and homes: each and every aspect of the Budget has been discussed threadbare, at the stage of both its conception and its incubation, with the Fund and the Bank, and matters over which difficulties arose were sorted out by exchange of communications between downtown Washington and the North Block. It was in essence a multi-stage operation. A number of measures the international financial institutions insisted that India must pursue and put into shape through the Budget were vetted by dummy committees set up under the auspices of the Government of India; the recommendations these committees made were in closest conformity to advice rendered, and sometimes, even drafted to the minutest detail, by the Fund-Bank staff.

Several such recommendations have been incorporated in the Budget, the government is under pledge, as per the Finance Minister's deeds of surrender forwarded to the Fund Managing Director and the Bank President, to implement a few other decisions as well in the course of the year through assorted monetary, fiscal, legal and administrative measures. Were they sharp-witted enough, members of Parliament belonging to the Opposition could have turned the table on the Finance Minister the moment he bragged that the fiscal deficit in the current year was being contained to within 6.5 per cent of the gross domestic product. Whether the actual deficit would turn out to be as low as this, or some fudging of accounts is involved, is a tale which will be revealed only subsequently. But it has been a widely known fact for the past several months that the Fund-Bank had been insisting that the deficit must not, come hell or high water, exceed this proportion of the GDP, and the Finance Minister jolly well had to conform to the directive from Washington DC.

The author, a distinguished economist, is the former Finance Minister, West Bengal.

The Opposition has failed to avail of the opportunity to make the government cower for cover.

◆

CONSIDER some of the nuggets the Budget speech contains. In the opening paragraph itself, there is a reference to the grave economic crisis the Finance Minister and his government had 'inherited' even as they entered office. An inheritance is an external bequest, for which one does not, and need not, have to own up any responsibility. This was hardly the case with the exchange crisis which confronted P.V. Narasimha Rao's government.

The exchange crisis and the nation being on the verge of defaulting on its external debt-servicing obligations were not phenomena which could, by any stretch, be attributed to outside malefactors. It was the Congress party and its high-flying regime, crossing over to the philosophy of unbridled capitalism, which created the crisis and ensured that, in the five years between 1984 and 1989, the country's total foreign debt soared from less than $15 billion to as much as $70 billion. There is little purpose in hiding the point that the regime, bitten by the bug of globalisation and consumerism, pushed the country into a permanent, irretrievable external debt trap. Given the structure of our production and income distribution, we did not possess the capability to service such a huge debt; this was possible only by incurring, continuously and indefinitely, further and further loans.

The present Finance Minister's exclusive claim to glory is that he has succeeded in persuading his colleagues, including his Prime Minister, to agree that the only way out of the dilemma is to convert this country of close to 900 million people into a docile banana republic of the Latin American species, and thereby escape the ignominy of defaulting on debt servicing. At the time the Finance Minister took over last year, the country's aggregate foreign balances had been run down to as low as the equivalent of Rs 1500 crores. Because of the dexterous servility he has displayed, he has since received substantial additinal lines of credit from the Fund, the World Bank, the Asian Development Bank and one or two other international financial institutions. What he has done is in strict accordance with the classical pattern followed by all countries caught in the mire of an external debt trap: you borrow more in order to meet your past obligations, and thereby sink even deeper into debt.

The hoopla in the media reflects either the level of illiteracy of our so-called literati—or perhaps their genuine desire to surrender the prerogative of indpendent decision-making if in the bargain they could ensure enough short-term goodies for their own narrow set. As a consequence of the government's—and the Finance Minister's—exertions, we are now amongst the Third World's leading debtors, coming immediately behind Mexico and Brazil.

There are some concomitants attached to occupying such an exalted position: not only do one's economic policies become subject to the dictates of foreigners, one's foreign policy too is made to turn a full circle. Leave aside other aspects, we are now on the point of accepting Israel's Mossad as the principal adviser on how to contain insurrectionary activities.

The gloating headlines in the newspapers are artfully contrived; they make it difficult to separate the wheat of concrete achievements of the government from the chaff of public relations exercises. On the supposedly "positive" side, the Finance Minister can lay claim to having raised eight to ten thousand crores of additional medium and long-term credits from overseas and to having enticed the entry of a couple of thousand crores of hot money, mostly belonging to smugglers and others who have been promised that no legal discrimination is to be made between them and otherwise slightly more honourable citizens.

Ten thousand crores of extra foreign exchange are certainly not to be scoffed at by such a spiritually-minded nation as ours, but let us tot up the negative side of the balance too: two devaluations, and subsequent further depreciations of the rupee, which have offered no boost to exports but have further strengthened the forces of inflation rendering exports even more difficult; the scuttling of economic planning, the Planning Commission now exists only in name; a severe cutback in rural employment programmes and anti-poverty projects; a Fund-Bank directed fiscal and monetary policy which places premium on credit squeeze and high interest rates, thus further invigorating the trends of industrial recession; the purposive draining of public savings and state-assisted diversion of savings to private mutual funds so that resources are freely available for stock exchange speculations; and similar other indulgences on the part of the nation's affluent; the aggravated squeeze on public expenditure which threatens the jobs of millions as well as erodes the basic social services, including public distribution and education.

◆

SCAN the nation's newspapers, these are minor footnotes to be ignored: the country is globalised, income and corporate tax rates are lowered, imports on air-conditioned restaurants are off, corporate shares have reached dizzy heights, there is promise of both full liberalisation of imports and partial convertibility of the rupee, so that the Naipaulian craze for *phoren* could be fully satiated. All impediments on big monopoly houses and foreign investors are off; small enterprises will go to the wall; local scientists and technologists are likely to be left with no opportunity to devote their talent to serve the nation's cause; the knee-jerk approach to the Dunkel proposals and the glee with which collaboration agreements are being signed with foreign parties would see to that.

The crucial facts pertaining to the economy are meanwhile to be pushed under the carpet. Per capita output of farm produce has dipped in the past decade. And irony of ironies, only public sector industrial units, including power-producing units, have maintained the modicum of a respectable

(Continued on page 15)

Unashamedly for the Haves

H.K. PARANJAPE

Within the paradigm that the present Congress-I Government has accepted for the socio-economic restructuring of the country, Dr Manmohan Singh's Budget cannot be much faulted. True, there is a bit of window-dressing to show that the deficit financing has been limited to the limit agreed to between the government and the IMF; by postponing the decision on fertiliser subsidy and making only a small provision for it in the Budget, the actual impact has been covered up; and the insistence that all additional DA accruing during the year will be absorbed within the sanctioned amounts, decisions about expenditure distribution between staff and actual functioning have been merely wished away. But basically the Budget fulfils the requirements of an economy which is to be rapidly transformed into an efficient capitalist one, operating as a limb of the world capitalist economy, in junior and subservient partnership with the rich capitalist world.

The Opposition NF-Left groups are pursuing a chimera when attempting to catch Dr Manmohan Singh in the trap of having revealed budget proposals to the IMF-World Bank twins. Dr Singh is too experienced a civil servant to fall in any such traps. The really important point is that the paradigm for the future of the Indian ecconomy which Dr Singh has been able to sell to the Congress-I is no different from that advocated for long by the twin institutions; and which had been repudiated—at least in theory if not increasingly in practice—not only by Pandit Nehru but even by Smt Indira Gandhi. The Second Plan framework, the Industrial Policy of 1956 and the emphasis on a socialist pattern were all a part of a basically different approach for building up a politically democratic, economically strong and self-reliant and socially egalitarian India which had been at its very threshold pposed by the then President of the World Bank. ut the Congress Government under Pandit Nehru lt strong enough in 1954-55 to tell this dignitary hat, while aid was welcome, India would pursue her own chosen path without dictation from the aid-offering rich of the world. That is why there was a kind of national consensus on the Second Plan approach; and, whatever the deviations in actual practice—and these were galore beginning from 1958-59 itself—the Congress party and their governments kept up the facade of following that basic approach right till the Seventh Plan. It is only in 1991 that the legacy was openly repudiated, even though the ground for this was being prepared right from 1980-81, if not 1973.

◆

PRIME Minister P.V. Narasimha Rao is being too ingenious in claiming that "the economic reforms being carried out today are a logical consequence of the path adopted in the 1950". Yes, it is a logical continuation of the "slide" which began even in the midst of the Second Plan when Pandit Nehru and his party could not display necessary courage to stand up to the logical consequences of austerity and discipline which followed from their brave adopting of the path chalked out in the Plan document. And since then it has been a race between the populist rhetoric necessary to garner votes and the practical compulsions due to *realpolitic*, economic—and therefore political—power being increasingly concentrated in the hands of a small stratum of political operators, bureaucrats, industrialists, traders, large landholders and the vocal professional classes. It is this conflict which finally led to increasing corruption, support to the parallel economy financial irresponsibility and the tendency—especially in the name of moving towards the twentyfirst century—to undertake loan based imports for the benefit of the well-to-do strata. The bitter results of such stupidity brought the country to the verge of bankruptcy by 1989.

As in any national crisis, the situation could have been met in either of the following two ways. The leadership of the country could have adopted a path of mobilising the whole people, call upon them to cooperate in saving the sovereignty and socio-economic progress of the country by pursuing

he author, a noted economist, is the Editor of the ell-known periodical, Janata.

austerity, hard work, productivity and discipline, and assured outside creditors of slow but steady repayment. But this would have meant giving up the privileges, soft life and ostentation based on exploitation of the masses to which the small privileged ruling class in India has become accustomed. They, therefore, chose the other and easier path of bowing to the dictates of the rich of the world given through their representatives—the Washington twins—in the hope that this way they would be able to share in the loot that they will garner in a capitalist India and an increasingly capitalist world. Dr Manmohan Singh spoke about rousing the tiger instincts of the entrepreneurs in India. The Indian tigers are quite willing to share in the feast that the capitalist tigers of the world are enjoying by becoming their junior partners, and the ruling classes in India at long last saw the light—that their real interest lay in pursuing the path shown by the IMF-World Bank twins and not the mirage of socialism (which in any case no one was really pursuing). And they were now confident after the experience of forty years that the poor in India can be made to politically support their own exploitation, only some ingenuity has to be shown in obtaining their support. It is merely a question of which facade can sell better *Garibi Hatao,* Ram Janmabhoomi, or Mandal Commission (not land reforms, only service reservations)! Real egalitarianism can be then postponed till doomsday.

After all, V.P. Singh as the Finance Minister in Rajiv Gandhi's government had participated in pursuing this path, his NF Government—even with a socialist Finance Minister—as well as the Chandra Shekhar Government, appeared to be ready to adopt the path indicated by the IMF-WB twins, and—whatever the resolutions passed in Delhi by their Central Committees—the Left Front parties have shown in West Bengal little difference—except in the early land reforms—in the economic policy as compared to the Congress-I governments. In fact, Dr Manmohan Singh was clever enough to point out that it was Jyoti Basu who had suggested that taxes on motor cars should not be raised. He is obviously worried about the unemployment it would cause to a few hundred in West Bengal, and forgets about the overall impact of such softness towards consumerism on the overall economic path! And the BJP's real priorities were well indicated by L.K. Advani whose first reaction after hearing the Budget speech was that the raising of the income tax exemption limit to Rs 28,000 was too inadequate! That shows the real stratum of people he cares about—"the emerging middle class"—not those who are unemployed, those 50 per cent who are still below the poverty line. It is heartening that the RSS has at last got over its Ram syndrome and begun to speak about safeguarding *swadeshi.* But their poor economic understanding is shown by their thinking that the Tatas, Birlas and such other industrial magnates still represent *swadeshi.* They overlook that these people are now eager to become the junior partners of multinationals to exploit the masses of India. There is a long gap—of time and of perspective—between Jamshedji Tata or Visheswarayya and Ratan Tata or Aditya Birla.

◆

THE Congress-I (and almost the whole ruling elite) is basically taking the top decile of our people as their real constituency. The Budget—and the New Economic Policy—is aimed at their becoming prosperous. And, in that light, it is a good Budget. It reduces the scope for corruption, provides less incentive for tax evasion (though it is doubtful whether that will help) and provides a good new outlet for those holding black money to whiten it through partial convertibility and gold import. It is no use criticising it for not making enough provision for the common people's requirements such as elementary education, primary health, pollution control or for more employment. Elite requirements are being met through larger grants for Navodaya Vidyalayas and New Delhi institutions like the AIIMS. After all, the new paradigm assumes that—as Minoo Masani has demanded for so long—money should be left to fructify in the pockets of the people—that is, the real 'people', the rich and the well-to-do—and then slowly, reluctantly, it will percolate down to keep the riff-raff alive so that they should not revolt. The new ruling class well remembers that a graded caste system, including untouchability, and a social system of permanent low status for women, have been tolerated in this country for centuries by those affected; so why should they worry about the unemployment, social degradation and poverty which will continue to affect a large majority? Have they not been able to win elections over the last forty years? Wh cannot they continue to do so, especially now tha a new form of circuses to delude the masses i available in the form of electronic media?

True, this approach will mean the return colonialism—not under a foreign flag, but und

IT CAN'T HAPPEN TO ME !

This feeling of complacency exists in all of us. Other people's houses catch fire. Other people's houses get robbed. Other people's T.V. sets breakdown. Other people's gas cylinders explode. Other people have disabling accidents. Let's face it. It can happen to you. Which is why you should be prepared for any eventuality. With the Householder's Insurance Policy, you, your house, and the contents of your house are protected. A fire or the explosion of a gas cylinder. Burglary. Breakdown of your T.V. set or any other appliance. Accidents. Loss of baggage during travel. Damage to pedal cycle or plate glass. It is all covered.

Please fill up the Proposal- cum- Policy Form carefully .Properly value your precious household items and furnish the list. It is advisable to preserve the bills for jewellery,electronic gadgets and other high value items.
When you make a claim, please inform the insurance company immediately,and fill up and submit the claim form along with all relevant documents such as the Police Report, Fire Brigade Report, Medical Certificate, Legal Notices etc.
In the case of Burglary or related perils, file a complaint with the Police immediately. And if anyone is injured, immediately arrange for medical treatment.

YOGESH PURI: "Democratised" Congress

(Continued from page 2)

statutes, is a positive trend, worthy of appreciation and emulation, more so, by other Centrist political formations, such as, the Janata Dal. To expect and hope for a faction-free electoral process is to betray lack of understanding of the rationale of factions and their role in the Congress. It is only when factionalism in the Congress reached a stage of intolerable indiscipline that the former proved to be dysfunctional. Otherwise Congress factionalism, within the permissible organisational and democratic limits, not only created intra-party pluralism but also developed diverse vote-banks for the party and strengthened its heterogeneous support bases facilitating consensual decision-making.

The organisational elections, despite factional infighting, but because of factional diversity may help the Congress to nurture and develop inner-party democracy and collective functioning. But it must also be noted that due to the emergence and institutionalisation of the choking coterie culture and the continuation of the 'supreme leader' syndrome, the factions in the post-Nehru Congress were broadly structured on personality-power considerations. The incidence of tendencies, non-aligned partisans, idea and policy groups has declined, if not decisively decimated. These organisational elections may, hopefully, prepare the ground for the re-emergence of intra-party policy pluralism.

◆

THE democratic advance of the Congress, implicit in the holding of the organisational elections, cannot, however, obliterate the fact that these elections in and by themselves will not be sufficient to re-establish the rapport of the Congress with the masses, ruptured particularly in the North Indian States. The moot question is the declining and dwindling heterogeneous social bases of the Congress. The social base of the party, especially in Uttar Pradesh and Bihar, has become vividly vulnerable. The Congress has immensely suffered at the hands of the Janata Dal in Bihar, at the hands of both the BJP and the Janata Dal and its splintered groups in Uttar Pradesh, and at the hands of the BJP in Gujarat and Rajasthan (though it is showing signs of reasonable recovery in Madhya Pradesh). It has conceded substantially to the Janata Dal its stable Muslim support base and has alienated almost all sections of the OBCs. It has, likewise, considerably lost, to the advantage of the BJP, its upper caste Hindu votes. The Congress has not been able to halt the *Hindutva* assault, in spite of playing a soft-Hindu card. This card was helpful to the Congress in the 1984 elections but ruefully recoiled on it in the subsequent elections of 1989 and 1991.

Moreover, there has emerged in the post-1989 period an increasing indistinguishability between the rank-and-file of the Congress and the BJP. The BJP's religio-cultural strident sentiments on the Ram Janmabhoomi-Babri Masjid issue, its political stand on the abolition of Article 370, its decrying of 'minorityism' and disdainful denouncement of 'pseudo-secularism', its attributing these negative categories and concepts generally to the Congress, and, above all, its ardent articulation of not only homogenised but also hegemonised Hindu nationalism have further brought the mass members of both the parties closer to each other. This is, however, more true of their upper caste cadres and sympathisers. The upper caste grassroots and middle levels of these two parties were also ideologically united by their strong antipathy for the Mandal recommendations. This was upper caste social solidarity, at its unprecedented best, in the post-independence era. This indistinguishability may, therefore, further erode the Congress' social base amongst the upper castes.

The erosion of the Muslim and the OBC support can be attributed to the Congress concept of secularism being endemically bereft of any meaningful social content. The Congress collapse in Bihar should not be dismissed as casteist catastrophe epitomised by the Forwards-Backwards divide. This is an oversimplification. The issue of social justice has been hanging fire since the dawn of independence. As a matter of fact no rational relationship has been established between economic development and social equality. The Congress has palpably practised the politics of evasion to the legitimate power aspirations of the socially deprived Backwards. Recovering and regaining the support of the OBCs and the Muslims is, therefore, a formidable challenge to the Congress. The almost irremovable identification of the Congress with 'soft Hinduism' has, similarly, compromised the secular standing of the party. This has led to a massive disenchantment of the Muslims.

The new economic policies based largely on the IMF-World Bank development strategy, techno-managerial policy perspectives and neo-colonial modernisation models have enormously endeared the Congress to the powerful sections of the rich, the liberal non-socialist and the conservative anti-socialist opinion of the old and the new middle classes. The decline of communism and the demise of the USSR have also lent legitimacy to the relegation of "democratic socialist" commitment of the Congress to the background. But the Congress may not be able to carry conviction with the poorer sections in the rural and urban segments. Dr Manmohan Singh's Budget is bound to produce greater economic hardships for the people. The political impact of the new economic policies, notwithstanding the possible inauguration of the democratic chapter of the Congress as a consequence of the organisational elections, may thus lead to greater social shrinkage of the party.

A socially insensitive economic policy in the name of "structural adjustments", ambivalence on the issue of social justice and frequent flirtation with soft Hinduism (read soft communalism) have, thus, reduced the Congress to an instrument which no longer can effectively serve the masses marginalised by continuous deprivation, neglect and poverty ■

find it difficult to take out a living. As against this, the backward communities who were earlier doomed to do menial jobs and participate in small activities such as milching, washing clothes, etc. are now ruling the roost in various States. Bihar is even headed by members of the so-called "backward communities". As such with the breakdown in the traditional occupational structure of the various castes, no generalisation of deprivation of any caste can be made. Therefore, although the reservation policy for the SC and ST candidates of upto 22.5 per cent is acceptable even today if used with caution for a limited period of time, a 60 per cent reservation cannot be justified under any circumstances no mater to which class or cluster of people it is meant for.

Faulty Manpower Planning

Another angle to the increased reservations is the non-availability of suitable candidates despite relaxed selection criteria to fill up the number of vacancies. Assuming the government has identified a hundred vacancies of which it decides that 60 have to be filled up by the various categories of people as postulated, in case only 30 qualify from the reserved category, will the government carry forward the vacancies as it has started doing since 1989 by putting a stop to dereservation as was the practice earlier? In that case 30 valuable jobs will remain unfilled which will go on mounting with every year if people from the reserved category do not qualify to meet the minimum requirements. More so, the government's manpower planning will be at stake and it will not have the manpower when it needs it most.

Zeroing In

The crux of the matter is that the government is merely befooling the public with its proposed policy on reservation. With only 10 per cent of the jobs provided by the organised sector and only seven per cent provided by the public sector, the government will be doing gross injustice to the interest of general classes and exploiting the ignorance of the average so-called backward citizens for the sake of votes. 90 per cent of the jobs are in agriculture and the unorganised sector which have to be modernised by various inputs to create more employment as spelt out earlier. Moreover, with barely 50 per cent of the population being literate, reservation in government jobs will have no meaning for the masses as they would not even meet the most minimal academic standards.

If we zero down further on the current figures of unemployment, especially of the educated unemployed, the situation is bound to worsen and cannot sustain reservations of this magnitude no matter what the criteria.

Deciding on a policy of increased reservation waiver of agriculture loans are not political compulsions or means to social justice as pleaded by the government but indulgence in political gimmicry for vote-banks at the cost of the nation. Political compulsions are the vicious problems of unemployment, illiteracy, poverty, inflation, etc. to tackle which the government lacks the requisite political will.

The Economic Solution

With changes in the industrial policy and with industrial licencing done away with, the government hopes to work towards a favourable balance of payment by boosting exports. But with all the hard decisions the government has taken, it is highly unlikely that exports will be boosted to the desired level due to the high cost of production of our goods as a result of which they do not have a competitive advantage in the international market. It is ironical that India with low labour costs still has a high cost of production. The main reason for this is the magnitude of indirect taxes on commodities heavy on this saturated sector because these very same political compulsions leave out the agricultural sector from the purview of taxes. As a result, all the taxation is borne by the manufacturing industry leading to increasing cost. Added to this is the vicious low consumption per capita in India despite its vast population reserve which, in turn, ensures low employment level in manufacturing and service industries. Unless domestic consumption is boosted up, there cannot be greater employment generation. Domestic consumption can be boosted only if the disposable income is increased through reduced costs and increased real income levels. With increase in domestic consumption, there would be greater income employment generation and greater economic growth.

The government has to, therefore, immediately widen its tax base also to generate greater income by taxing rich agriculturists who do not pay taxes till now and at the same time, take measures to make small agricultural holdings more economically profitable and generate employment in this sector. Here it must enlist the support of the organised private sector by encouraging their entry in these areas. The government has failed miserably in generating employment and it should, therefore, give tax concessions and other benefits to the private sector for generating greater employment which will persuade them into going in for more employment generating technology.

The World Bank projections for the future are that India's population is likely to cross the billion mark by the turn of the century at which time half of the world's illiterates would be living in India. The labour force, as projected in 'Manorama' 1991, is to grow by 3.7 crores during the Eighth Plan (that is, 1990-95) and by another four crores between 1995-2000. Employment will have to grow at a rate of more than four per cent per annum to reach the goal of near full employment by 1995 and by over three per cent, if this goal is to be accomplished by the turn of the century.

Even these figures are underestimates, if we don't take stock of the current industrial policy and the displacement of labour due to closing down of sick units and measures on work rationalisation. The government has to be crystal clear about what its political compulsions really are and spell out its priorities with the welfare of the nation as its only objective and start tackling the multipronged issues on the economic front. It will require more hard decisions to be taken after thorough analysis and an even stronger will to make these decisions work. Once the government launches seriously into tackling these issues, more help will be forthcoming from other sources also. The measures should be time-bound and determined like the headcount for the Census which was done in record time and with perfection. It is better to start even now than never! ■

ever good the seeming intentions of the government may be to bring about social justice through equality of opportunity, it must realise that reservations would only perculate to the educationally and financially well-off sections of the reserved categories who exercise all the political muscle of the backward classes. It is this miniscule sub-section which is most vociferous in its demand for caste-based reservations without any economic or social criteria attached to it. Further, it will become a heriditary and a irreversible right passed on from one generation to the other among the fortunate few of the reserved classes.

Ensured reservation patronage for the fortunate few and competitive advantage will cut into their will to work hard for merit and reach even higher levels. Further, it is in their self-interest not to make any attempts at educating their other brethren and at the same time keep demanding for more reservations in all walks of life. Instead it would be advisable to provide incentives and structural support to the educated among the backwards for opening schools in rural areas and assigning them the task of educating the other illiterates from the community to aid social transformation.

Achievement Chasm

A rough analysis of the recent public sector employments made on competitive basis with the existing percentage of reservation in officer cadre jobs revealed that only those candidates who had a high level of achievement could succeed in getting employment. It also pointed out to the wide chasm in the academic achievement levels of those selected from the reserved and unreserved category, with anyone who was fairly educated having an almost sure chance of getting the employment from the reserved quota.

The apprehensions are that with increased reservation the people who will actually qualify for these jobs will get further narrowed down to only the top rankers of the general category leading to a higher level of frustration and consequent rise in social ills unless a wider employment base is created. As it is, the academic pressure on students and the level of close competition is extremely killing. This can be seen in the high cut of levels for admission to even undergraduate courses.

Under these circumstances, the fate of even the above average is also sealed. With increase in frustration on account of unemployment, the social evils are bound to increase in the form of corruption, black money, kidnappings, terrorism and mental derangements and in trying to further materialistic ends no matter what the means are. With increased reservations the people of general categories who will actually qualify will get further narrowed down to only the top rankers and result in dangerous social consequences.

Economic Criteria—The Pandora's Box

Basing reservations on an economic criteria to promote social justice is another pandora's box. With just a negligible minority consisting of mainly the salaried class being assessed for their income correctly the remaining go scot free. The government has so far not been able to assess the incomes of professionals, traders, and other self-employed people, tribals, etc. and have excluded the agricultural sector from the purview of income tax. With rampant corruption, even some of the government employees have other sources of income which the existing tax structure can neither assess nor unearth. With concealment of income to such a massive scale, it would require no effort to prove that one is in economic necessity of a job. Fake income certificates are easily obtainable as also the status of the citizen as being socially deprived. How will the government, therefore, ensure that it is the poorest who would benefit from reservations?

Another difficulty of evolving an economic criteria is the almost galloping rate of inflation. With the inflation rate at 15 per cent per annum no yardstick of measuring income can be used. Even a fixed salary income of Rs 5000 a month today barely helps to keep one's head above water. Can it then be concluded that the progeny of a person with a salaried income of Rs 500 a month does not require a job to nurture a family and look after his dependent parents? The increased achievement chasm as discussed earlier will reduce greatly his chances of getting a reasonable job. His reliance on government and private sector jobs is greater as he has no family occupation normally to fall back on.

The Justification

Reservation in jobs as mooted by the Constitution was to provide reasonable representation in the government of all the communities and also as a means of providing equality of opportunity which is a fundamental right under the Constitution. B.R. Ambedkar, while defending a limited degree of reservation for a limited period, very appropriately put forth his argument. His contention was that if reservation of say 70 per cent for the government posts was made to a class of communities and if 30 per cent was open for general competition, the purpose of the equality of opportunity will not be served. In the same way, if protection in the form of certain limited representation is not given to societies which were socially treated as *pariahs* for centuries, they would not be able to rise above the morass and will continue to be subservient as before. Moreover, reservation was never meant as an instrument of eradicating poverty but only as a protective measure for a limited period so that these communities could, through reservation, educate themselves and finally compete on an equal basis with the others.

It is, therefore, paradoxical that to eradicate the caste system we are relying more and more on caste-divide policies. The consciousness of one's caste was slowly dying, but this has been activated again. There is a great clamour among various castes for inclusion among the category of the OBCs which is to benefit from the increased reservations.

The traditional occupation of the various castes are no more in sway. For instance, the Brahmins were traditionally the fountainheads of knowledge. Those of them who are still continuing their traditional occupation as pujaris are very poor and have to look to other sources of employment to make two ends meet. Similarly, the Kshtriyas who were the kings and the land-owning warrior class are in all walks of life may of whom again level of employment been more complimentary the public outcry against reservations would have been minimal. As such the decision to augment reservation with the government's ambit of control only on seven per cent of the working population is to sideline the main issues facing the country of unemployment, poverty, corruption, underemployment, urbanisation, etc.

The increase in unemployment and frustration is mostly rampant with the educated unemployed, that is, matriculates and above who are the plum contestants for the seven per cent public sector jobs. The pressure on these jobs are high as they provide a decent standard of living, inflation adjusted remuneration, complete job security and responsibility and accountability that suits the pace of the individual himself. They are highly sought after jobs. No matter whether it is an entry into the topmost rung, that is, the Civil Services or at the Class IV level.

The total number of job-seekers on the live registers of the employment exchanges stood at 3.01, 3.28 and 3.42 crores as at December 1988, December 1989 and August 1990 respectively, that is, a sharp increase of 14 lakhs in eight months. The total number of educated job-seekers among these was 1.75 crores in December, 1988 and 1.91 crores in December 1989, that is, an increase of 16.24 lakhs or 9.3 per cent increase in one year. The educated unemployed comprised of 58 per cent of the total registered unemployed in December 1988 with a break-up of one crore matriculates, 45 lakhs undergraduates, graduates and above numbering 29 lakhs. The registration with the employment exchanges gives only a partial picture as it is confined to urban areas. It does not give the magnitude of unemployment in rural areas or the plight of the higher bracket of the educated unemployed who contest for Civil Services, etc. which do not go through the employment exchanges for its selection.

The Growing Malaise

Correlating statistics of the urban population with the figure of unemployment given above, it can be concluded that 16 per cent of the urban population in 1990 was unemployed. The urban population as per 1991 Census is 21.7 crores residing in 4689 cities and towns and accounts for 25.5 per cent of the total population of India which is provisionally placed at 84.4 crores. The urban population growth has increased from 11 per cent in 1901 to 26 per cent in 1991 which is due to mass exodus from rural areas on account of the unemployment and disguised unemployed levels.

Likely Solutions

Strengthening the rural sector will prevent rapid urbanisation and other associated problems. By purposeful investment aimed at optimising the returns from agriculture and also creating supplementary income to take care of underemployment and uncertainty through poultry farming, investment in rural infrastructure in the form of irrigation, roads, technical training centres, marketing cooperators and polytechniques, more income and employment can be generated in this sector. This would be a more practical and viable proposition than announcing mass waiver of outstanding agricultural loans which not only eat into government revenue but also cuts into the will to pay and destroys the income and employment generating potential of this sector.

Who Will Benefit?

As per the 1981 Census 76.4 per cent and 87 per cent respectively of SC & ST population was employed in agriculture either as cultivators or agricultural workers. As such reservations in government jobs is not going to benefit the majority of the backward communities due to their dependance on agriculture. Taking the level of literacy in the country, they will not even fulfil the minimum educational qualifications required in government jobs even with relaxation in criteria.

Although the literacy level taken of population over seven years of age has gone up to 52.1 per cent in 1991 against 43.6 per cent prevailing in 1981, the sheer number of illiterates have also shown an increase from 30.2 in 1981 to 32.4 crores in 1991 or an increase of 2.2 crores in 10 years. The definition of literacy itself is a misnomer as any person who can read or write with understanding in any language is considered as a literate.

The government efforts have concentrated on providing free education almost upto the secondary level coupled with other promoting measures such as mid-day meal schemes to spread literacy. But although these schemes have increased the absolute number of students, it has not succeeded in achieving full attendance or in eliminating the high drop-out rate and poor attendance after enrolment. The SC & ST drop-out rate in Classes I to V was as high as 50.8 and 66 per cent respectively as reported by the Committee for review of National Policy on Education in 1990. Another glaring statistic of the Committee was that in 1986 48.6 per cent of the rural areas did not even have a primary school which meant that 19.7 per cent of the total population had no access to even a school.

Need for Employment-oriented Education

These problems can be sorted out if education is made compulsory as it infringes upon no fundamental right and the education package demonstrates its direct relevance to meet the felt needs of the community it is meant for and thereby ensure their willing participation. The package should consist of basic elementary education with emphasis on scientific and rational thinking and practice which they can integrate with their traditional occupations. It should also teach them certain vocational trades which can become a source of supplementary income.

Investment in infrastructure and employment will help in achieving these objectives with more schools, open schools which employ the locals as teachers, trainers, *anganwadi* and *balwadi* workers who can reach out to the rural masses and persuade them to attend schools. Education will therefore become a more meaningful exercise to them and ensure participation.

Vested Interest

With such rampant illiteracy in the country, how-

Reservation: Cure or Malaise?

SUMANGLA KUMAR

The minority V.P. Singh Government's resolve to implement the Mandal Commission Report of the 1980s in a bid to keep up its electoral promises stirred a hornet's nest. There was a spontaneous, apolitical middle class uprising pioneered by students and glorified by the public.

The agitation took a tragic and unhealthy turn. It triggered off a spate of self-immolations by students which spread to schools like forest fire. But the political coarseness and stubborn resolve of the V.P. Singh Government to go ahead with its 49.9 per cent reservation formula against the existing 22.5 per cent was not dampened. The agitation, however, was partially instrumental in bringing down his government. Other political parties played the typical cat-on-the-fence role but at the same time promised to look into its implications. In the wake of political instability the issue was referred to the supreme Court and the matter was thus temporarily shelved.

The Lok Sabha elections in 1991 brought the Congress Government to power with a minority status at the Centre. It held an all-party meeting to arrive at the consensus on the issue. The meeting was conspicuous by the absence of the National Front headed by V.P. Singh—thereby demonstrating the shallowness of its motives.

The Consensus Formula

The Congress Government encashed on the vote-bank which the V.P. Singh Government had tried to create for itself by announcing the new consensus formula on September 23. It went one step ahead from the reservation mooted by the Mandal Commission itself by raising the overall reservations from the existing 22.5 per cent and the V.P. Singh package of 49.5 per cent to 60 per cent. By adding an undefined economic criteria to the reservation of 27 per cent advised by the Mandal Commission to a category termed as socially and educationally backward classes (SBC), the government felt that the issue was settled. To appease the forward community it came out with 10 per cent reservation for the poor among the upper castes. The political functionaries did not even consider the legal obligation under Articles 15(4) and 16(4) of the Constitution and as applied earlier by the Supreme Court in the case of Balaji versus State of Kerala (AIR-1963) to keep reservations below 50 per cent. The matter now awaits the final verdict of the Supreme Court.

Callous Approach

It is, however, strange and sad that even a consensus of political opinion was only meant to minimise political opposition but never came to the brass tacks of the situation. The consensus never questioned the current relevance of the Mandal analysis of the late seventies based on the caste data of 1931 and the report which was published and kept in cold storage since 1980. The government also generates tremendous statistical data on various socio-economic indicators in the country and the first report of the 1991 Census has been published which it totally disregarded.

It is hard to believe that the government is not aware that decisions taken for the world's largest democracy should be based on a systematic analysis of statistics and socio-economic indicators. It is easy to concede though that politicians hold the country to ransom by sidelining the tackling of the main issues which is the very purpose of their existence in a democratic country.

Apathetic Employment Situation

Recently an advertisement announcing 80 vacancies of moderate status in the public sector attracted 40,000 applications. With open competition and no reservations the selection ratio would be 1:500, that is, one out of every five hundred will be selected. With 60 per cent reservation, only 32 seats will be filled up through open competition which could well mean a selection ratio of 1:1000 and above. This indicates the pressure of employment on white collar jobs and the critical position of the educated unemployed.

As per official statistics, 50 lakh people were unemployed in 1951, which went upto one crore in 1961, 2.5 crores in 1981 and 3.5 crores as per latest estimates with an average employment growth rate of per cent per annum against a population growth rate of 2.13 per cent as per the latest census.

On the basis of the 1981 Census, the Centre for Monitoring Indian Economy (CMIE) has derived that only 10 per cent of the economy is under the organised sector comprising of services, mining and manufacture and a little part of agriculture. The remaining 90 per cent is in the unorganised sector comprising of agriculture, household industry, trade, professional services, etc. and is in private hands. In the organised sector the public sector accounts for 71 per cent of employment, that is, the public sector merely takes care of seven per cent of the total working population—to a part of which the reservation policy will apply.

Whither Social Justice?

With such disparaging figures of unemployment in the country the reservation policy of 60 per cent, no matter to which class of people it is meant for, cannot be justified under any cannon of social justice. Had the total respondents.

- "Difficulty in understanding the language, dialogues of foreign serials" was the problem of 18 per cent of the total respondents.
- "Some, foreign serials contain obscene/derogatory remarks/scenes which affect the impressionable minds" (23 per cent).
- Another serious objection against foreign serials was that "they are always glorifying Western society and their culture which will adversely affect our children and our youth" (42 per cent).

Music Programmes

MTV, the music TV channel of STAR TV, shows Western music programmes round the clock every day. About 84 per cent of the total respondents had a highly positive opinion about the entertainment potential of MTV programmes. Some 26 per cent found these programmes "highly entertaining" and another 48.34 per cent mentioned that MTV programmes were "entertaining". Only nine per cent explicitly mentioned that MTV programmes were "not so interesting".

On probing into the socio-cultural impact of Western music programmes of MTV, a substantial percentage (60 per cent) of respondents felt that there would be some effect of this kind on our youth. They feared that:

- our younger generation will adopt the Western life style;
- our children will be more inclined to Westernisation, their glamour and emphasis on sex; and
- it will hamper their studies.

Sports Programmes

STAR TV, for attracting larger audience, has an independent channel for sports called PRIME SPORTS, which shows important sports events from all over the world round the clock everyday. Some 62 per cent of the total respondents had been watching PRIME SPORTS programmes with varied frequency of viewing. Some positive reactions mentioned by the respondents were:

- "Coverage of sports events of STAR TV is technically superb".
- "All kinds of sports events the world over are shown in PRIME SPORTS".
- "Latest sports events anywhere in the world are shown live".

Effect on Children

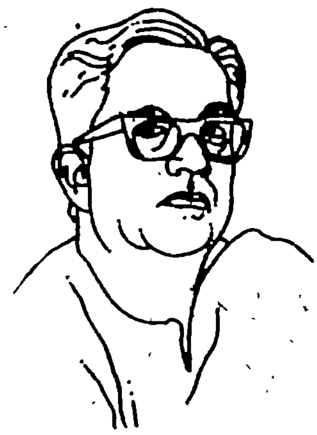
The study also revealed that a substantial proportion of respondents were worried about negative effects of Cable TV on children. Prominent fears in their minds were:

- "Children will be adversely affected" (56.66 per cent).
- "Children's sports activities will be curtailed" (62 00 per cent).
- "Children's reading and other creative activities will be adversely affected" (51.33 per cent).
- "Children will be sleeping late in the night" (46.00 per cent).

The findings of the IIMC study are interesting and call for attention of the professionals in the field of communication. However, as the study was confined to Delhi only, it would be appropriate to obtain a similar kind of feed-back from a cross-section of Cable TV viewers from different parts of the country. ■

AN APPEAL

C. Achyutha Menon Foundation



Dear friend,

C. Achyutha Menon is no more; a matchless statesman, a humanist of impeccable integrity, a champion of the poor and the downtrodden, a writer of repute, he will be remembered for all time.

We propose that a suitable memorial be instituted to cherish the message of his multi-splendoured life.

We request you to actively associate with the endeavour in this behalf and donate liberally to the fund being raised by the C. Achyutha Menon Foundation in furtherance of the above objective.

22-11-1991 Yours sincerely,

K. Karunakaran, E.M.S. Namboodiripad, G. Ramachandran, A.K. Antony, E.K. Nayanar, V.R. Krishna Iyer, Indrajit Gupta, P.P. Thankachan, Benedict Mar Gregoriose, Dr K.N. Pai, Dr K.N. Raj, Laurie Baker, P.K. Vasudevan Nair, Jyoti Basu, Mulk Raj Anand, Aruna Asaf Ali, C. Rajeswara Rao, P.N. Haksar, Thakazhi Sivasankara Pillai, Dr M.S. Swaminathan, Prof M.G.K. Menon, G. Parthasarathi, I.K. Gujral, Nikhil Chakravartty, K.R. Narayanan, A.K. Damodaran, K.P. Unnikrishnan, Chitta Basu, P.M. Sayeed, N.E. Balaram, Dr Poulose Mar Gregoriose, Poulose Mar Poulose, V.K. Madhavan Kutty, Dr I.S. Gulati, Dr Sukumar Azhikode, Dr M.S. Valiyathan, Dr P. Basak, Vaikom Muhamad Basheer, Vijaya Kumar (Hind Samachar), *Ali Sardar Jafri, Malcolm Adisheshaiya, Dr C.T. Kurien, Khushwant Singh, Asghar Ali Engineer, S.G. Sardesai, Satyapal Dang, Mohit Sen, Shashi Bhushan, Ghulam Rabbani Taban, R.L. Bhatia, Prof K.N. Panikkar, Adoor Gopalakrishnan.*

All donations, in cheques/drafts to:

Public Response to Cable TV

R. DYAL

The concept of Cable TV and availability of foreign TV channels via satellite in India are a recent phenomena. Coverage of the Gulf War by CNN showed the potential of "dish antenna" for receiving foreign broadcasts. With the starting of STAR TV (Satellite Television Asian Region) by the Hongkong-based, consortium of companies, the number of households getting hooked to Cable TV, increased tremendously. According to a recent estimate, Cable networks grew from 100 in 1985 to 11,500 in 1991 in the country. Another estimate for Delhi indicates that Cable TV is growing at the rate of 250 connections per day and nearly 45,000 households in the Rs 1500 p.m. plus income got hooked to Cable TV in the last six months.

From October 14, 1991, STAR TV added another channel namely the 'BBC World Service Television'. The BBC (WST) beams live coverage of major news events, spot-reporting and interviews with personalities involved in events. As such BBC could be expected to pose a serious challenge to Doordarshan.

For ascertaining the public perception of and reactions to multi-channel cable television, a study was conducted by the Indian Institute of Mass Communication in Delhi in January 1992. In all 300 respondents selected on random basis from the households hooked to Cable TV receiving foreign telecasts, were interviewed.

Viewership of Programmes

Cable TV facility means access to a large variety of programmes—both foreign as well as Indian. Foreign programmes received through satellite used by STAR TV include entertainment channel (STAR PLUS), sports channel (PRIME SPORTS), music channel (MTV) and, of course, the BBC World Service channel.

In addition to foreign programmes, Cable TV operators also provide the facility of 'VCR Channel' on which they keep showing films (both Indian and foreign) as well as other film-based programmes.

The author is a Research Officer in the Indian Institute of Mass Communication, New Delhi.

The study conducted by IIMC reveals that the viewership of foreign programmes beamed by STAR TV, which include BBC World Service Television also, is substantially large. Anywhere between 55 to 79 per cent of the total respondents have been watching these programmes. Around three-fourth of total respondents have been watching BBC World Service, and serial/feature films shown on STAR PLUS channel. Viewership of sports programmes shown on PRIME SPORTS account for 62 per cent of the respondents. MTV, the musical programmes channel of STAR TV, and perhaps the most popular channel amongst the younger age group, also has substantially large viewership (55 per cent).

BBC World Service accounted for the highest percentage of the total respondents who were watching these programmes "regularly" (22 per cent). Serials and feature films of STAR PLUS channel and musical programmes of MTV also accounted for a significant percentage of regular viewers—14 per cent and 13 per cent respectively.

Viewership of programmes shown on VCR Channel by the Cable TV operators was also very high. Some 88 per cent had been watching Hindi films. The viewership of English films was the second prominent category of programmes with 77 per cent viewership. On the VCR Channel, Chitrahaar (70.99 per cent) based on film songs; devotional programmes (56.65 per cent) and children's films, cartoon films (52.65 per cent) also accounted for significant viewership. Hindi films had maximum (23.33 per cent) regular viewers followed by Chitrahaar (17 per cent) and English films (15.66 per cent). Evidently, entertainment programmes of VCR channel are extremely popular.

News

The concept of satellite broadcasts through Cable TV system started with the coverage of Gulf war in the early 1991 by CNN. In October 1991, STAR TV started showing BBC World Service for 24 hours a day which ultimately led to a tremendous drop in the viewership of CNN. BBC World Service devotes about six hours (out of 24 hours of its service) to news and other related aspects in its 18 bulletins. In BBC World News, a special section is devoted to the Asian region also. The opinion about BBC News Service is both positive as well as negative. Some 58.33 per cent were of the opinion that "BBC News Service has a wide, indepth and balanced coverage". On the other hand, the drawbacks in BBC News Service mentioned by the viewers were:

— "Only the sensational items/issues pertaining to India are covered by BBC" (20 per cent).

— "BBC service has little relevance to Indian viewers" (18.33 per cent).

Serials

Serials are one of the most popular formats for a medium like TV. Popularity of several Doordarshan serials is a pointer towards this. With the advent of Cable TV, access to foreign serials (mainly in English) beamed by STAR TV's entertainment channel STAR PLUS is another challenge for Doordarshan.

While comparing the foreign serials with those of Doordarshan, a very high percentage (80.33 per cent) of respondents agreed to the view that "STAR TV serials are more imaginative and creative in treatment".

— "Foreign serials contain pure humour and thus provide maximum entertainment" (67.66 per cent).

Some 55 per cent found STAR TV serials better as "some of them were based on classics/popular literature".

— "Foreign serials are not relevant to our culture, history, religion and society while most of our Doordarshan's serials are" was the opinion of some 35 per cent of regarded as the best writing on his book. This started a long association between the two, culminating in her being asked to co-edit his collected papers after his death, a project unfortunately left unfinished when Krishna died.

Her international experience began, however, with a post-doctoral fellowship to the MIT in the other Cambridge. A chance encounter with Professor Joan Robinson led to an invitation to Cambridge (UK), as a Fellow of Clare Hall and a position in the Department of Applied Economics there. These were difficult times for her personally, but because of her intellectual prowess and by sheer hard work she earned the respect of all so that her association with Cambridge remained a permanent one, both academic and social. She was one of the most persistent fighters for the Cambridge (UK) view in the intense debate on capital theory that raged between the two Cambridges throughout the sixties and was the centrepiece of economic theorising of those days. However, even during her Cambridge stay she did not ignore Indian issues—publishing her much acclaimed monograph, *Production Conditions in Indian Agriculture*. And her annual visits to Cambridge were occasions when Indian research students there had the opportunity not only to catch up on Indian debates from a most willing teacher but also to be brought into homely contact with their own Cambridge teachers at a level which she alone could make possible.

She returned to India in 1971, first to the Delhi School of Economics and then moving to JNU where she was entrusted with setting up the Centre for Economic Studies and Planning. This Centre which she led intellectually for two decades was to become another consuming passion of her life, competing perhaps unfairly with her only daughter for her affection and tender loving care. What this Centre is now is almost entirely a product of the extraordinary standards of teaching, research, and commitment to students that she set by personal example. This was also perhaps the most productive period of her life, surpassing even her accomplishments abroad, and during which she found time for music again. Her research was prolific, with three books published in 1989-91 alone and one still in press even at a time when her health was failing, and her teaching was legendary.

But most important of all, she was a true feminist in the best sense of the word: her grace under pressure, her empathy to all and particularly to women students, and her totally unassuming and unselfish character despite being one of the giants in her chosen field. She led by the example of her generosity and sheer humaneness, never by advertisement or shallow cleverness. ■

PARANJAPE: Budget for the Haves

(Continued from page 8)

the MNCs. But did this consideration deter our Princes from siding with the East India Company, as long as their personal wealth and privileges were guaranteed? So why should the prospect of economic colounialism deter our ruling circles—politicians, bureaucrats, journalists, academics, industrialists or professionals—as long as they think their passion for *phoren* type living and a power perch can be satisfied? The love that our ruling circles have for the NRIs—and the Communists are no exception—is revealing in this context. For it is the kith and kin of the ruling strata who are already basking in the glory of second-class citizenship (the Green Card) in the land of affluence.

It is only the true socialists who can think correctly about what is really wrong with this Budget. Not this detail or that, but the whole paradigm for India's socio-economic future which the Manmohan Budget represents is wrong if we are to build up a truly egalitarian, independent, democratic India which will sit with honour in the comity of nations. We need not be confused because of what happened in Eastern Europe and the USSR; or what is happening in China. For our inspiration—or resources—did not come from there. Our inspiration has come from Ranade and Dadabhai Naorojee, Tilak and Phule, Gandhi and Lohia. Our roots have been firmly planted in the soil of India; and it is to the poor, downtrodden and presently exploited masses that the socialist movement has been devoted. If we have strayed from our path recently, we can correct our mistake, and again become the champions of the cause of the real proletariat of India.

Dr Manmohan Singh threw a poetic challenge at the end of his Budget speech:

> *Sarfaroshi ki tamanna ab hamare dil mein hai,*
> *Dekhana hai zor kitna baque kaatil mein hai!*
> (We have the zeal of valour in our hearts. Let us now see how powerful are the arms of the killers.)

He has posed this challenge on behalf of the 'haves' of the country who are now unashamedly pursuing their sectional interest, not caring what effect this may have on the living of the common people. He has forgotten that it was not many decades ago that the unarmed and poor people of this great land were made to rise and successfully obtain *swaraj* by a humble 'half-naked' *faqir* and the 'killing' was done without arms. Why is he so sure that a real heir to the Mahatma may not again arise in this land of ours so that the unfinished task of obtaining full *swaraj* for the common people will be completed, whatever the wishes of those who are ready to become the tools of the new imperialists? ■

tremendous changes in the world system. The Cold War affiliations which divided India and Pakistan on a "permanent" footing have now been rendered meaningless. Neither India nor Pakistan can depend on rival superpower support to underwrite their territorial security or integrity. Both—as also other SAARC states—need external help and assistance and loans from bodies like the IMF and World Bank to meet their balance of payments and debt crisis.

Alongside, we must also note the growing political awakening of the masses in South Asia. On one side, this awakening will lead to larger political liberalisation, disarmament, and greater pressure on governments to provide food, shelter, and health services to an overwhelming majority of the world's poor. On the other hand, rising political consciousness is bound to throw up regional and ethnic issues in the pluralist societies of South Asia. Since such issues easily give rise to violence and involve more than one government or party, any attempt to resolve them must also be made on a regional basis. We have passed the stage of infancy to strengthen the SAARC on the basis of collective deliberations at all levels and covering all subjects. That includes, of course, politics. ■

Krishna Bhardwaj

JAYATI GHOSH and ABHIJIT SEN

Professor Krishna Bharadwaj, the founder-chairperson of the Centre for Economic Studies at Jawaharlal Nehru University, passed away on March 8 at the age of 56. Her untimely demise is an irreparable loss for not just the economics profession and the entire academic community in India, but also for all those who value a humane approach to life and for whom teaching and scholarship are matters not just of excellence but above all of humility.

Professor Bharadwaj was one of the most eminent Indian economists of her generation and she was recognised internationally as one of the foremost authorities in the field of Classical Political Economy. Her work was remarkable not only for its depth of scholarship but also for its diversity and scope, encompassing all aspects of the subject from grand theory to particular problems of economic development. And, at a time when the social sciences are becoming compartmentalised into narrow specialisations, she was one of those rare economists who attempted to develop an entire unified approach to economic issues and drew particular attention to the extra-economic factors which provide the link between economics and broader social reality. Her life-long enquiry into the methods of the classical masters—Smith, Ricardo and Marx—was not the labour of a historian of economic thought alone, for she firmly believed that their approach to the subject had important methodological lessons for contemporary analysis which had been lost with the rise of the now dominant neo-classical approach

In this, as in many other facets of her life, she fought the mainstream and did so with total humility and complete dedication to excellence even in the face of adversity. Born in 1935, the youngest child of a school teacher in Karwar, her first accomplishments were in music. She won the first prize at the prestigious music festival of the Belgaum Art Circle when she was only 14, and, even more remarkably, went on to win this prize four years in a row. Her talents were noted by such great musicians as Gangubai Hangal and there was disappointment and anger when she decided not to continue in classical music, partly because of her health and partly out of family circumstances. That she then entered economics, a profession with which there was no family connection and which at the time was a male bastion, and obtained the first class first position in her MA from Bombay University were simply the beginnings of what was to be a life of lonely furrows where each adversity was met with an even greater drive towards hard work and the pursuit of excellence.

◆

UNLIKE many of her contemporaries, Krishna Bharadwaj chose to complete her doctorate in Bombay spurning offers of fellowships from the West, and subsequently joined the economics faculty there. Her Ph.D. thesis, in 1960, was on transport economics, but her break into international recognition, also in the same year and at the age of only 25, was in a totally different aspect of the subject. Her review for the *Economic Weekly* of the Cambridge (UK) economist, Piero Sraffa's path-breaking book, *The Production of Commodities by Means of Commodities*, was a landmark. This was not only remarkable for the clarity of its understanding of Sraffa's important but much misunderstood work and the insight it showed into its profound implications, but also one which Sraffa himself among most South Asian governments. New Delhi viewed it as a mischievous move on the part of smaller nations to embarrass it; Islamabad greeted it as a "Chanakyan design" hatched by New Delhi, while Colombo remained apparently vague.

When, however, the idea turned into reality—and the SAARC took an organisational shape—every effort was made to make it *politically neutral,* but active in *"non-political"* matters such as economic, cultural, scientific and other fields. This was childish. Can any issue—even the abstract ones—be devoid of politics? One wonders. In their first phase, Africans were not unaware of the grave issues that divided them, but they asserted a collective political will over such divisions. The South Asians, on the other hand, have become captives of their own fears and self-doubt.

Yet, perhaps, considering the fractious and violent developments in South Asia, such a phase in the history of regional cooperation was unavoidable. As the two older democracies, India and Sri Lanka, faced unprecedented ethnic and communal violence. In 1987, the Indian military intervened in the Tamil-Sinhala conflict which, though justified by a written agreement between the heads of two governments, resulted in greater bloodshed and alienated both Tamil and Sinhala sentiments against India. Around the same time, India-Pakistan relations plunged into the lowest depths, while continuing violence and terrorist onslaught in Punjab and Kashmir, with allegedly cross-border ramification, discouraged the normalisation of Indo-Pakistan relations.

Also in 1989, India and Nepal clashed over differing interpretations of the earlier treaties on trade and transit. The trends in Indo-Bangladesh relations did not encourage settlement of several issues such as the transfer of the Tin Bigha enclave and the control of water resources.

It is easy to see India as a common factor in all these disputes—and part of the blame must assuredly be owned by New Delhi for unnecessarily needling its neighbours. But, it is also necessary to see that except India, none of the South Asian countries shares a common border nor has close ethno-demographic ties with the citizens of another country. In India's case, these two factors have inevitably given rise to misunderstanding. Secondly, the very size and central location of India in the subcontinent can cause acute psychological insecurity among the smaller neighbours. This insecurity does not grow any the less when some quarters in India talk aggressively—and quite foolishly—about their country's "hegemonic" ambitions.

What is apparent in all this is the fact of interdependence of the South Asian countries in almost every aspect including the fate of democracy and economic well-being of their own peoples. It is true that such interdependence can—and does—give rise to irritations especially when interdependence may look like over-dependence on the part of smaller nations on larger neighbours. Sometime, this may lead to over-emphasis on extra-regional links of a particular country; and sometimes an equally strong stress on the common cultural traits of the South Asian countries. Both attitudes are arbitrary and shortsighted.

Unfortunately, none of us has attempted to understand the *common* as well as the *unique* aspects of the nation-states in the region. We, in India, are fond of drawing attention to the centrality of Indian culture—an attitude that overlooks the influence of other cultures and traditions on the region. Hinduism in Nepal today is different from its original version in the Indo-Gangetic plains. Similarly, the Bengali language as spoken and written in Bangladesh may not be distinguishable from the one prevalent in West Bengal, but the cultures of the two Bengalis across the borders are perhaps as different as those of the Americans from Englishmen. Similarly, Buddhism in Sri Lanka may have originally migrated from India, but it has derived inspiration from a wide variety of other sources as well. In South Asia, cultural diversities as much as their common roots make each nation-state unique in relation to one another.

◆

ALL this leads me to suggest that a forum which seeks to build closer ties among neighbours must also engage itself in disseminating information—through textbooks, research, films, and telecommunication—to forge cross-country bonds which are less bureaucratic, but far more durable. I, for one, would like to know the unexplained pathos in the folk songs of Bangladesh. Who are the newcomers in Bengali stage and literature in Bangladesh? What exactly is the state of research in economic planning and financial institutions in Nepal? What contributions has the Urdu language made to elite formation in Pakistan? Or, just how do the educational institutions and universities function in all these countries?

In other words, a whole universe needs to be explored. And this task gains urgency in view of

SAARC and Regional Cooperation

ANIRUDHA GUPTA

The South Asian Association for Regional Cooperation (SAARC) should be discussed as a regional organisation not in isolation but as a link in the chain of a fast-changing world. We cannot visualise—let alone programme—future directions of the SAARC without taking into account the sea-changes that have come about in the character and composition of other regional organisations.

With the collapse of the Eastern bloc and the spread of centrifugal forces in the Soviet Union the hawkish dimensions of West European security too may have diminished. The Group of 12 now looks eastward for larger markets and investments; and, to the extent this succeeds, the economic and political consolidation of the EC would get entangled with unpredictable developments in areas beyond its immediate domain. Would such involvements interrupt or encourage the formation of a supranational state in Europe—economically more influential and politically perhaps no less so than the USA? Would such a formation affect the poorer nations of the world? In particular, what impact would developments in both East and West Europe have on the region of South Asia? Perhaps on all this—and other aspects as well—we can learn from scholars belonging to others Areas and Disciplines.

As one who studied Africa, I have something to say on the Organisation of African Unity. What has always filled me with wonder is the single-minded devotion the Africans had shown in the formation of this continental organisation much before most of them became independent. In May 1963, when the OAU was founded, barely 30 nations had attained independence; today their number has gone up to 52—and all are sovereign and equal members of the OAU. What is much more surprising is that until very recently, the Africans had little knowledge about one another: the Francophone and Commonwealth countries inherited different traditions, cultures and languages, while the great Sahara intervened between the Arab-speaking north and the Bantu-speaking south.

The author is Chairperson, Centre for West Asian and African Studies, School of International Studies, Jawaharlal Nehru University, New Delhi.

One can easily find faults with the OAU—and criticise its acts of ommission and commission. But despite uneven sizes, weak administration and artificial borders, African countries have demonstrated that they could exert collective pressure on the world community in their struggle against racial and colonial domination. Though unstable and divided among themselves on many issues, Africans have seldom taken their disputes to the outside world; nor have they allowed the OAU to become a preserve of any single group.

In short, though poor and in many ways dependent on external forces, the Africans have shown a collective political will that has rarely been matched by other Third World regions. We, in South Asia, swear endlessly by our commitment to expand the areas of regional cooperation, but we rush on the slightest provocation to ventilate our grievances against one another in the external fora. We rule out discussion of bilateral disputes at the SAARC on the belief that such an exercise would disrupt regional cooperation. Yet, we do not consider the disruption we cause by raising such issues in other places—and outside South Asia!

◆

LIKE the OAU, the SAARC too should think of setting up a committee of arbitration, conciliation and mediation and bar no member-state from bringing its dispute with another before the committee. It is neither our—nor certainly the OAU's case—that by such a device all disputes or differences would vanish, but it would certainly prove more effective than the current practice of one member insisting that all bilateral issues be settled bilaterally and another calling for extra-regional involvement in such issues. Both attitudes have harmed the SAARC's potentials as a regional body.

When the idea of South Asian regional cooperation was first mooted, it aroused a great deal of suspicion

I thought this was just a human weakness, that it was only because people had just come out of a difficult war. I thought it would not last forever. But, alas! I wanted to get away as far back as in 1945, but Tito then told me: "The leadership still needs you." The reason for the long delay in my leaving was the 1948 conflict with Stalin. It seemed at that time that my giving up the struggle would be equivalent to betrayal.

What do I think of Stalin? In short, I think Stalin was an ideal Communist figure. Some of his qualities were stronger than Lenin's—a feeling for power, for instance. It has long been known that power corrupts, and absolute power corrupts absolutely. That is why Tito ended in the same way as Stalin, Mao, Rakosi, Zhivkov, Honecker and Ceaucescu. The same fate awaits all dictators and autocrats no matter however smartly—or, on the contrary, however simply—they may dress themselves to hide their identity. The revolutions in the countries of East Europe were directed against the monopoly of power, because all distortions emanate from this monopoly.

◆

THREE years ago Milovan Djilas had said:

"The essence of Yugoslavia is in Serbo-Croatian relations. Yugoslavia will be what these relations will be. If nationalism becomes the dominant factor in these relations, the country will inevitably disintegrate."

I ask him about what he had said at that time. What was it—a prediction?

Djilas thinks that this was clear to all for a long time. "But the fact that Yugoslavia should not today have the inner strength to resolve her problems is something which to an extent is humiliating for the country."

Does your copy of Mainstream reach late or sometimes not at all?

The postal service is not in our hands but we would like to see **Mainstream** *in your hands.*

YOU CAN HELP US BY:

- Typing your name and address clearly so that there are no errors in addressing your copy.
- Quoting your subscription number in your complaint letter to Manager *Mainstream*, F-24 Bhagat Singh Market, New Delhi-110001. Perhaps your subscription has expired.
- Writing for a replacement copy within six weeks of the date of the issue which has been misplaced.

Q. If you had to relive your life, would you live it exactly as you have?

A. If you have in view 1954, I would do what I did then, only perhaps more boldly and with less vacillation....

Q. What do you think of people who with a kind of relish grind their own Communist past in the dust?

A. Yes, I was in the Party, I was a member, but now see the filth...

Q. What do you think of this uncontrolled rush to a universal, collective repentance?

A. I have no faith in such people. This is time-serving of the purest water. Such people use all opportunity to grab new power... And take the flirtation of the newly-turned monks with religion, their march to the churches along with the people. Is this also cleansing of souls? The Church cannot save society, the state, from disintegration. It was always dependent on the Czar, the King, the Supreme Leader.

Q. What in your view is the worst human characteristic?

A. The absence of ideas and ideals.

A. And the best?

A. The ability to stand up to one's convictions.

Q. Destiny gave you the opportunity to meet dozens of extraordinary people. Who amongst them has left the most indelible impression on you?

A. I shall name three persons, but without going into explanations. Okay? For me the three are, Stalin, Churchill and Tito. I shall add one thing—I agree with what Plekhanov once said: History itself creates the personalities it needs. Whatever one may say of Tito now (and my relations with him were of a special kind), he is a personality whom it is impossible to throw out of Yugoslav history.

Q. Do you still believe as before in a socialist future?

A. I believe in a democratic society, where there will be greater social justice, the future of socialism and socialness, but not in a definite form of statehood.

We take leave of each other. My last question was: "You are a writer, a publicist, a journalist. What question would you put to yourself?"

"I would ask myself: What was the sense of your life?"

He thought for a moment, fell silent, and then completed his thought: "And I would not have found an answer. Because the only sense of life—is in life itself." ■

(Pravda, February 21, 1992)

Absolute Power Corrupts Absolutely: Djilas

YEVGENY FADEYEV

Milovan Djilas, who from being a Polit-Bureau member of the Yugoslav Communist Party became 'Yugoslav dissident No. 1', is the author of such books as The New Class *and* Conversations with Stalin. *He was recently interviewed in Belgrade by* Pravda's *Special Correspondent, Yevgeny Fadeyev. The interview has been translated from Russian by Ravi M. Bakaya.*

—Editor

When I told Milovan Djilas that *Pravda* recently published an article in which his name too had appeared, he said: "The last time *Pravda* published an article by me was in 1948, fortyfour years ago. In Yugoslavia itself I was not printed for 35 years. It's terrible to think of it!"

Q. But now you are in great demand. You've been rehabilitated...

A. There is something irrational, something grotesque in this process of rehabilitation. What does it mean to "forgive" a person in the nineties, who had been condemned in the thirties, forties of fifties? The most important thing is that I have been rehabilitated as a writer. After all, I am at heart a literary writer whom fate had drawn into politics.

Milovan Djilas. Close comrade-in arms of Tito. Party Card No. 4. Became a member of the Communist Party in 1932 when he was 22 years old. At the age of 27, while still underground, he became a member of the Central Committee. At 29 he was a member of the seven-member Polit-Bureau of that time. One of the organisers of the anti-fascist uprising in Yugoslavia, he became a People's Hero. Djilas then became a member of the first government of the new republic.

At the beginning of 1954 Djilas, as an ideologue of the Party, published a series of articles in the newspaper *Borba* in which he strongly criticised the bureaucratisation of the Communist Party of Yugoslavia and sharply posed the question of the Party giving up its leading role in society. As a result he was dismissed from all posts and expelled from the Party. Then he was imprisoned, spending a total of nine years in jail—or rather twelve, as he had been jailed earlier for revolutionary activity by the King.

Djilas became world famous after the publication in 1957 in the West of his book, *The New Class*. The book was printed in an edition of three million copies in thirty languages. A second best-seller, published after five years, was his *Conversations with Stalin*.

Today Milovan Djilas is 81. He lives with his wife Stefania in the very heart of Belgrade, a few steps away from the Parliament. He is tall, slim and with a shock of grey hair on his head.

Q. You were called 'Dissident No. 1' and a heretic, an orthodox Marxist and an orthodox anti-Communist...

A. And also a revisionist, Trotskyite, an anarcho-liberal and even a fallen angel.

The smile on his face makes him look astonishingly young.

Q. And hence my question: Which of the 'titles' is closest to the truth?

A. I was a believing Communist, with my emotionality which I never tried to hide and which others always felt. To me communism embodied genuine freedom and an inspiring ideology...I am not an anti-Communist, though sometimes I say in a joke that this is even worse than being a Communist. Where do I belong? I belong to the consistent critics of communism. And let me add emphatically that criticism of the founders of communism does not mean under-rating their tremendous political significance. I hear today people say that Lenin is a shallow political figure—the source of all our misfortunes. This is said by people who have malice more than anything else. I don't know of any political figure of the twentieth century greater than Lenin, notwithstanding the fact that I disagree with a number of his ideas. I don't even see anyone who can be compared with Lenin.

Power never carried any meaning with me and communism for me was not a career. After the War ended, the victors began to divide amongst themselves villas, automobiles, orders, titles and privileges, strictly in accordance with their ranks.

keep the organisation going but it also assumed the shape of sheer dacoity. Even now, for instance, in the name of preventing the sale of liquor in the tribal areas, the Naxalites are selective in attacking liquor shops. Contractors who paid them money could carry on their business while the others paid with their lives and depots.

N.T. Rama Rao, as the Chief Minister, first tried to woo the Naxalites as "brothers" promising to promote their cause if they eschewed violence. But within two years he was forced to come down on them with a heavy hand. The Naxalites were then better armed than the police with their muzzle-loading rifles. The Centre was not only cool to NTR's pleas for modern equipment to the State police but also, it is alleged, allowed the Naxalites to establish contacts with the LTTE in adjacent Tamil Nadu and buy automatic weapons from them.

An Appeal

Dear Friend,

Irfan Engineer has been working among Dang tribals for quite sometime. He organised them and fought for their longstanding demands forcing the Government of Gujarat to give a serious thought to the tribals' demands. However, the corrupt forest officials were waiting for an opportunity to take revenge.

On January 2, 1992 Irfan and Virsingh—a tribal—sat on indefinite fast demanding compensation for Tanbai who was killed when the tribals were agitating for their demands and the police opened fire. Also, the fast was undertaken to demand arrest of those forest officers who asked the police to fire without any reason

On January 9, 1992 the Gujarat police arrested Irfan and Virsingh under the NSA and put them in Baroda Central Jail. Undertaking indefinite fast is a perfectly legitimate democratic method. There cannot be a more peaceful protest than this and yet they have been arrested under the NSA. One fails to understand how the NSA can be applied in such cases It is gross misuse of the NSA.

May I, therefore, request you to kindly send a protest telegram to the Home Minister, S.B. Chavan, and the Chief Minister of Gujarat, Chimanbhai Patel? You may also write to Irfan Engineer, c/o Superintendent of Baroda Central Jail, Baroda, Gujarat. I will be highly obliged for this prompt action

With regards,

Yours sincerely,

Irene Cottage
2nd Floor, 4th Road,
Santacruz (East),
Bombay 400 055

Asghar Ali Engineer

PS: There is a reign of terror in the Dang area. Some women have been raped and many in the police custody severely beaten up Please condemn that too.

Dr Chenna Reddy, who had led the Congress-I to victory against the Telugu Desam in the 1989 elections and became the Chief Minister, had an unwritten accord with the Naxalites. In return for support to the Congress-I in the elections, they were to be allowed to operate freely. The justification was that it would induce the Naxalites to give up violence and take to overt political action. One of the Naxalite factions did participate in the elections but its violent activities did not cease.

It is against this background that the phenomenon of fake encounters has again become very common. But the victims in most cases are supporters of the movement and not the ringleaders who elude the police. Indiscriminate raids on villages and wholesale arrest of its male members have been reported. Civil rights activists are singled out for assaults. During a visit to the State last month, I met Dr Balagopal of the Andhra Pradesh Civil Liberties Committee. He had been prevented from making an on-the-spot enquiry into the "encounter" in Khammam district and then bashed up in the nearby coal mining town of Kothagudem. According to Balagopal, after his release from police custody, he went to Kothagudem to raise money for a memorial for a civil rights champion killed five years ago. While he was going in a three-wheeler policemen in plainclothes stopped him for interrogation. He was taken into a lane and bashed up. He was heavily bandaged when I saw him in Hyderabad about a week after the incident.

But the Chief Minister wanted us to believe that Balagopal was injured in a scruffle with another person over the division of protection money collected from traders and others in Kothagudem on behalf of the Naxalites. That is the police version.

Balagopal is a mathematician of standing who was on the staff of the Indian Institute of Science, Bangalore, for several years. He was later a member of the Regional Engineering College faculty in Warangal. He does not conceal his partiality for the Naxalites and argues that human rights advocates cannot be evenhanded in judging the police and their victims. But it is inconceivable that he is a ransom-collector for the Naxalites. ■

Poverty of Naxalite Philosophy

G.S. BHARGAVA

The paradox of the People's War Group of Naxalites in Telengana is the opportuneness of a militant peasant movement and the opportunism of its leadership. Powerful landowners had not only subverted the modest land distribution reform but also persisted with feudal practices like violating the human dignity of the landless labourers and their womenfolk and defrauding them of their wages. With most of the big landowners being Congress leaders and Ministers, the officialdom became an instrument of their exploitation of the poor. The situation was even more acute in the tribal areas with the landed elements preventing the tribals from cultivating the land nominally allotted to them by the government and forcing them to continue as wage labourers at their mercy.

The Prime Minister, P.V. Narasimha Rao, as the Chief Minister of Andhra Pradesh, had set out to implement a land ceiling law enacted in accordance with the professions of his party. But the landowning lobby, backed by his rivals in the party, thwarted the reform and ultimately forced him to resign. Indira Gandhi, who was the Prime Minister then, did not intervene although Narasimha Rao was a loyal supporter of hers.

In the circumstances, an armed struggle against the landowners seemed the only means available to the oppressed. The Communist Party which had waged such struggles in the past was now split into two warring factions—the CPI and the CPI-M—both ultimately drawn into parliamentary activities. The Naxalites initially filled the gap, adopting the Chinese tactics and mouthing Maoist slogans, particularly the one about power growing out of the barrel of the gun. The movement began to spread especially in the Warangal and Karimnagar districts acquiring a reckonable tribal support base.

Kondapalli Sitaramayya, the 74-year-old supreme leader of the Group who is now slated to step down from the top post at the instance of the majority of the Group leaders, had joined it in 1970. He had been earlier expelled from the undivided Communist Party in 1964 for non-ideological reasons and was working as a Hindi teacher at Fatima High School at Kazipet. Subsequently, acquiring a plot of land in Laksetpet in Adilabad district, he became a cultivator. It was during that period that he developed contacts with two local landlords, Narasimha Rao and Sitambara Rao, both Congress leaders. That marked his fray into Congress factional politics.

Narasimha Rao had made use of Sitaramayya's muscle power to settle scores with his party rival. Sitaramayya had already started organising the landless labour and their ranks came in handy in enhancing his bargaining power. His People's War Group started its debut with physical attacks on Communist-Marxist cadres working with the peasantry. The strategy was to eliminate opposition to the Group in organising peasant struggles. The then Chief Minister of the State, Vengal Rao, was pleased at the prospect of elimination of the CPM influence from the villages and connived at the Naxalite activities. As in Calcutta during Siddhartha Shankar Ray's Chief Ministership, mutual killing of each other's ranks by the Naxalites and the Marxists was the order of the day then. But the Marxists, not being terrorists, lost the battle and the field was left free for the Naxalites.

The practice of eliminating Naxalites in fake encounters was also borrowed by Vengal Rao from West Bengal. Scores of Naxalites were killed during the Emergency of 1975-77, with no fear of a public outcry. Although public outrage at the indiscriminate killings earned the Naxalites the sympathy of the local people, it also led to the brutalisation of the cadres. "Kill or be killed" was the only choice. The concept of armed struggle for social justice has in the process degenerated into acceptance of terrorism. Landowners, timber merchants, *tendu* leaf contractors and others who did not pay protection money to the Naxalites were killed. Ransom-taking was rationalised as the means to buy arms and

ask how *Hindutva* would have coped with *Akhand Bharat* containing 30 crores of Muslims? That is why we began by expressing serious anxiety about improper use of words.

It would be erroneous to assume that the mind-set which is labelled by the word 'fundamentalism' is invariably connected with religion. Any rigid dogma can degeneratee into a fundamentalist mind-set crushing liberty and democracy. Fundamentalism can equally express itself in racist terms. The apartheid system in South Africa, in this view of the matter, must be regarded as an expression of the fundamentalist mind-set of White racists there. Hitler's Nazism was also fundamentalist, as it combined racist dogmas with retreat from reason and rationality. In pre-War Japan, Japanese fundamentalism was based on enforcing the Bushido Code; dissidents were persecuted for the crime of advocating 'dangerous thoughts'. The Stalinist persecution equally belongs to the fundamentalist species.

Our own social, political, economic, cultural and moral order is gripped with crisis. The centuries-old tradition, reinforced by a variety of oral traditions, helps our people in maintaining some sort of faith in their future. But this must not be overestimated. Fear and uncertainty is seeping through millions upon millions of people. Our political leadership faces a great challenge to replace fear with hope and this can only be done by combining together the moral, spiritual, rational and scientific universe with which the names of Mahatma Gandhi and Jawaharlal Nehru are associated.

At this stage one must consider the meaning of the word 'Secularism'. Both fundamentalism and secularism are interacting attitudes of mind in human societies bounded by specificities of their own respective cultures and civilisations. They are not independent variables. In the English language, the word 'secular' means "concerned with the affairs of this world, not spiritual or sacred" and 'secularism' means: "the belief that morality or education should not be based on religion".

Both the words secular and secularism arose as a result of the operation of a universal process which has been in operation in all societies from the dawn of human consciousness. In this connection we would like to draw the attention of our readers to the same column in the September 1991 issue of *Man & Development* entitled, "Men, Events and Processes". By this process, the human mind is able to discern what constitutes the affairs of this world, as distinct from spiritual or sacred. Naturally, the outward expression of the operation of this process of secularisation of the human mind takes

Fundamentalism and Secularism

P.N. HAKSAR

In the charmed world of Alice in Wonderland, words can be made to mean anything. Regrettably, outside that Wonderland, words have to be used with utmost care. The context in which a word arises must be understood if we are to avoid unnecessary sorrow and suffering. Ever since human beings began expressing themselves through words and then language, a measure of sacredness has been attached to a 'word'. According to our own tradition, in the beginning there was 'Word' and that word was *Om*. Great care was taken in articulating the vibrant resonance of *Om*. Similar sanctity attaches to a Muezzin's call: *"Allah-O-Akbar"*. In the Christian system of faith and belief, the second person in the Trinity is 'Word'. When a person makes a statement or promises to do something "upon my word", sanctity attaches to that statement.

We have said enough to make the simple point that 'words' have to be used with utmost care. In order to do so, we must understand the context in which each word arose and the shades of meaning which it acquires through the passage of time. All this might sound somewhat pedantic, but the Information Revolution, which is shaking the world, makes it necessary to point out the dangers involved in our failure to be meticulous, even fussy, about the use of words. In these notes, we are particularly concerned about two words, namely, 'Fundamentalism' and 'Secularism'.

Many dignitaries visiting our shores in recent months, more especially from the United States and the United Kingdom, have warned us about the rise of 'Islamic Fundamentalism'. It is, perhaps, their hope that India's social and political climate might be receptive to their warnings. That hope is not without some basis. That is why it is necessary to examine critically the genesis of the word 'fundamentalism'. How did this word arise in the English language? The *Oxford Reference Dictionary* explains it thus:

> Strict maintenance of traditional orthodox religious beliefs, a religious movement which developed among various Protestant bodies in the USA after the First World War, based on strict adherence to certain tenets (e.g. the literal inerrancy of Scripture) held to be fundamental to the Christian faith.

The *Encyclopaedia of Social Sciences* elaborates the origins of fundamentalism as follows:

> Fundamentalism is the name of an aggressive conservative movement in the Protestant churches of the United States which flourished during the decade after the World War. It manifested itself chiefly in the Baptist, Disciple and Presbyterian churches but received considerable support from other ecclesiastical groups. It was characterised not only by its conservatism with regard to traditional popular Christian beliefs but also by its aggressive efforts to impose its creed upon the churches and upon the public and denominational schools of the country. Its conservative supernaturalism was expressed in the "five points of fundamentalism", which included the doctrines of the inerrancy of the Bible, the Virgin Birth of Jesus, the supernatural atonement, the physical resurrection of Jesus and the authenticity of the Gospel miracles. The first of these points was interpreted by fundamentalism to apply particularly to the Biblical account of the creation of man in opposition to the theory of evolution, which became the central question of the fundamentalist controversy.
>
> The movement was directed against liberal elements within the churches and against purely scientific or secular interests in American civilisation.

It may be noted that fundamentalism as it arose in the USA allied itself to political conservatism against liberal elements within the churches and against purely scientific or secular interests. Enormous pressure was exerted on teachers and schools of a large number of States to purge the textbooks of all references to Evolution and substitute it with Creation. It may be of interest to note that

> in the social sources from which it drew its strength fundamentalism was closely related to the conflict between rural and urban cultures in America. the fundamentalist attitude reflected the distrust of reason and the emphasis upon emotion, the doubt of human ability to solve ultimate problems and the reliance on divine agency which are characteristic not only of much traditional Christianity but also of those groups which have received the least profit from a rationalised culture and of pioneer or isolated rural societies which remain most conscious of dependence for their livelihood on those processes of nature which are least subject to human control. The rationalism and self-reliance of the opposing groups, on the other hand, had been fostered not only by science and education, but also by industrialised culture with its rational and artificial methods of production and its immediate urban environment, all largely subject to human control. (*Encyclopaedia of Social Sciences*, p. 527)

Record Rs 260 crores foreign exchange turnover by ITC

1990-91 Highlights	
Gross Income	Rs 2316.38 crores
Net Income	Rs 1014.46 crores
Net Profit	Rs 77.52 crores
Foreign Exchange Turnover	**Rs 260.00 crores**

In the unaudited financial results for 1990-91, ITC has registered significant growth on all fronts—with a record 58% increase in foreign exchange turnover being the high point. For ITC, the Rs 260 crores turnover in foreign exchange is the outcome of an increased thrust in the international business arena.

Working closely with domestic producers to attain world standards, ITC is carrying the 'Made in India' mark with pride across the globe. Among its diverse trade ambassadors are quality tobaccos, oilseeds, tea, coffee, spices, marine foods, home furnishings, leather goods and garments. Additional foreign exchange is earned by its Welcomgroup hotels in India and through the Bukhara chain of restaurants abroad.

Turning potential markets into advantages with strategically-located foreign offices, ITC is well set to further consolidate its position as the 'Indian International'.

adjustment with a human face".

Fatal as it is, this flaw would have been less glaring had Dr Singh sought to appear even-handed in distributing the burden of adjustment and instituted austerity measures of a serious nature. Just the contrary, he has in fact evoked and appealed to the meanest instincts and basest motives such as greed and possessiveness, instead of conveying the message that the rich too (leave alone the rich rather than the poor) have to tighten their belts.

Even worse, he has actually programmed an expansion of the bureaucracy which in neo-liberalism's rhetoric figures so prominently as an evil. Thus he has assumed an increase in the strength of Central Government employees during 1992-93 by as much as 47,000. Although he has not explicitly provided for Rs 3000 crores in the dearness allowance payable to Central employees, there is no reason to believe that a wage freeze is on the cards and that the government has made up its mind to take on the well-organised and articulate sections of the bureaucracy.

Dr Singh could have announced a freeze on all further employment in the Central Government and a plan to replace retiring employees through new recruitment, and thus set an example for the States to follow. This would have substantially reduced the Centre's non-Plan expenditure. But he has failed to do that.

Equally importantly, he has missed an opportunity to launch a large-scale employment generation programme that is calculated to absorb the additional four to ten million expected to be added to the number of unemployed over the next two to three years thanks to structural adjustment. Such a programme would have been the best way of building the infrastructure the country so desperately lacks and whose absence forms the biggest obstacle to the large-scale entry of foreign capital into this economy.

By persisting with his neo-liberal, elitist and myopically Latin American orientation, Dr Singh has only pushed the country deeper into the mire. The Union Budget for 1992-93 may well come to represent the point of no return for the Indian economy. ■

ASHOK MITRA: Invoking Bhagat Singh

(Continued from page 6)

rate of growth in recent years, otherwise the index of industrial output is comprehensively down. The service sector is, however, booming. The rich and the affluent *a la* the banana republics never had it so good. And don't you know, gold can now be freely brought in: stagflation affects only the nation's majority, but do they matter?

The pressure is now likely to develop to make the rupee fully convertible and let go of all import restrictions. The Rs 10,000 crores of extra foreign exchange borrowed over the past nine months might then disappear overnight. But the Finance Minister conceivably would not mind being out with a begging bowl once more.

As a self-respecting nation, we cannot afford to default on our external debt servicing; we must therefore borrow further in order to meet our obligations to foreigners. Our self-respect is, however, of a very selective kind: it is not hurt if the nation's major economic decisions are abdicated to foreigners. With no economic planning, we have not the foggiest notion about which direction we are heading. All we know is that the poor and the middle classes are going to face hard times. That, in any case, is the role assigned to them by destiny—they should therefore lump it.

Two additional comments are still worth making. Suppose we defaulted on our debt servicing, would the heavens have collapsed over us? Brazil, for example, defaulted during the last decade, faring no worse as a consequence. They simply had to get the bulk of their money back; so the Fund, the Bank and the private American bankers made special arrangements to keep Brazil afloat and even scaled down some of its outstanding debts. Even if we, because of religious reasons, abjured the path of self-reliance, could we not at least have emulated some of these Latin Americans, which would have entailed a lesser order of abrogation of our sovereignty?

Finally, one wishes that the Finance Minister, in his quieter moments, would seek some forgiveness for the ultimate sacrilege he committed in his Budget speech. He quoted Sardar Bhagat Singh to justify what he was doing. Bhagat Singh sacrificed his life in order that the imperialists could be evicted from his country; the entire thrust of the present Finance Minister's acts is to invite the imperialists and colonialists back. If the effrontery would have no surcease, there should at least be some leftover decency. Or is it already too late for even that? ■

(Courtesy: *The Telegraph*)

year. At the same time, there is a likelihood of contraband capital of the Dawood Ibrahim type intruding into the taking over legitimate business in the country.

However, an even more negative feature of the partial convertibility of the rupee—an euphemism for its further and totally uncalled-for devaluation—is that it will reduce the profitability of exports. If the "free" rate is manipulated so that it is not allowed to exceed the official rate by more than 15 per cent, the exporter's margin will drop in relation to the earlier gain on the sale of the Exim scrip.

At the same time, the use of the "free" rate in calculating import duties will mean that the greater the import intensity of exports, the lower the margin and hence the poorer the incentive to export. This will favour primary commodities exports, which involve virtually no import content, and discriminate against high value-added manufacturers.

There is every danger that the move will encourage a colonial pattern of trade. If one of Dr Singh's principal tasks was to boost exports in a decisive and substantial way, he has evidently failed to do so. The country will in all likelihood experience a slower growth in exports which can only keep the economy in a permanent balance of payments crisis.

The Budget has lowered customs duties on a whole range of products, most importantly capital goods, while raising excise duties across the board. The measure represents a serious menace to a number of capital goods and basic industries including such diverse sectors as metal working, machinery manufacture, electrical engineering and heavy chemicals. It will impose unfair and unequal competition upon them in a traumatic fashion. Some of them could collapse under that pressure.

This protection-in-reverse is reminiscent of similar economic measures taken at the behest of the IMF and the World Bank in Mexico, Brazil and Peru, which resulted in wiping out whole industries which had a great deal of indigenous technical strength. An obsession with getting prices and tariffs "right", by aligning them with "international" or "global" trends, can produce disaster. The Budget shows no signs that this lesson has been learnt at all.

Here, the BHEL is likely to be a test case of sorts. The company—one of the most successful examples anywhere of technological strength and competitiveness in a core industry—is already on the edge of a precipice. Nothing would please Western power generating equipment manufacturers more than the destruction of the BHEL and the elimination of a challenge from a Third World country.

◆

IF the Budget is unbalanced in its treatment of trade and tariffs, it is no less badly flawed in the way it deals with key domestic parameters. It has squeezed the public sector, failed to widen the tax base, cut badly needed spending in social sectors, and actually raised the weight of the bureaucracy in the government.

The squeeze on the public sector, in the form of a drastic Rs 1000 crores cut in budgetary support and the imposition of schemes to borrow from the market, is likely to hit even the healthiest and perfectly efficient units badly. It comes on top of a 37.5 per cent drop in the profits of the PSUs. The effect of Dr Singh's measures will be to lock the public sector into a trap of indebtedness, rapid drop in profits, low investment in technology and general decline. This could pave the way in a matter of a few years for the wholesale liquidation of the public sector.

Dr Singh has no hidden his bias for the affluent to whom he has chosen to pay out something of the order of Rs 1500 crores through reduced taxes. These put India into the category of the lowest taxed among the world's poorest countries. Worse, Dr Singh has taken out about a million people from the tax bracket. Even countries of Western Europe with no pretensions to social democracy or the welfare state and not even Reagan's America could have countenanced the reduction of the income tax base to less than one per cent of the population. Dr Singh has accomplished this in one stroke. Nothing could be more regressive than the reinforcement of a horrendously iniquitous tax system where the rich and the upper middle class pay an increasingly lower proportion of the tax revenue—now down to 10.3 per cent..

Dr Singh has added to the burden on the poor by wide-ranging cuts in spending on health, literacy, education, drinking water supply, family welfare, social security, labour welfare and employment generation schemes. These cuts are as high as 20, 50, even 80 per cent in such important areas as malaria control, land reform, elementary education, drinking water supply, wasteland development and "Operation Blackboard". In doing this, he has shown utter contempt for the idea of "structural

Point of No Return

PRAFUL BIDWAI

When confronted with disturbing evidence of rising tax evasion by business everywhere and of rampant corruption, as in Punjab under the Kairon regime of rapid growth in the late 1950s and early 1960s, Jawaharlal Nehru would say, rather lamely, that the parallel economy has at least the merit of keeping black money within the country: so long as it generated growth, the fruits of the latter could be redistributed under public control.

Manmohan Singh has now broken down the walls which confined black money to the domestic economy. True, the walls became increasingly porous and weak over the past four decades. But by making the rupee partially convertible on the current account—undoubtedly the most far-reaching, if not the most widely expected, measure in the Union Budget—Dr Singh has dealt them a body-blow.

India has been traumatically globalised in a bizarre way: barriers to capital's entry into and out of the country have been greatly lowered. Specifically, in situations of domestic crisis, money can move out precisely when it is most needed here. The LERMS (liberalised exchange rate management system), then, could turn out to be as ungainly as it sounds.

Less than a week after the introduction of the "free market" in convertible currency, this may appear to be unduly pessimistic. Has not the *havala* rate dropped? And is the "free" rupee not stabilising around Rs 29 to the US dollar? But consider the following. The decline in the *havala* rate is probably a function of the lowering of the feverishly high expectations of currency speculators and those eager to invest in housing bonds. The high "free" rate reflects the oversupply of the dollar over the past few weeks. The volume traded (only $25 million a day in the Bombay market as against the normal $300-$400 million a day) is only a small fraction of the normal magnitude and too low to permit the simple conclusion that the present trend represents anything more than a passing phenomenon.

It is still too early to say how the so-called free market will be regulated and on what basis. Whatever happens to it, after the present phase of oversupply it can only work to the extent it is *not* free, or so uncoordinated and anarchic as to defeat its purpose. If the RBI sets the "free" rate too low, the *havala* market is certain to boom. In that situation there will be at least three rates, the official, the "free" and the *havala*, in increasing order of magnitude. As things stand, the growth potential in the Indian economy—and indeed in the more speculative high-profit sectors such as real estate—is too low, the real premium on hard currency too high, and general liquidity far too great for the *havala* rate not to rise to well above 15 per cent or more over the official parity value.

If the "free" rate is jacked up "realistically" to take account of the real premium on hard currency, its effect would be to subsume the contraband trade by assimilating it in content. (Indeed some Carribbean and Sub-Saharan African economies had four, seven, even 11, different rates for the dollar in the 1980s.) The temptation here would be to rectify this situation by returning to a more stable three-rate scenario, which is wholly consistent with the flight of capital through the under-invoicing of exports and other mechanisms which businessmen have elevated into an art.

◆

GOLD imports will boost the *havala* rate. Trade in gold and speculation in currency go together. The channels are common and expectations similar. A simple calculation shows that the present differential between the world and domestic prices of gold can sustain a high *havala* rate of the order of Rs 35 to 38 per dollar—through the spiriting away of money abroad, purchase of gold with convertible currency, and then its sale in the domestic market.

There is no reason to believe that gold imports will significantly reduce smuggling. The volumes expected to be legally imported—about 33 tonnes in 1992-93 according to the Budget—are only a fraction of the 200-300 tonnes of gold that is estimated to be smuggled into the country each

Similarly, the budgetary provision for government hospitals has been cut, but tax benefits have been given for treatment in elite private hospitals and nursing homes. "Fend for yourself" seems to be the message to the poor, be it with regard to employment, education or health. The government has been taxing the middle class for far too long in order to help you. And now, it seems the government has lost its political will and the middle class its compassion for the poor.

◆

THE Budget will certainly sharpen the economic cleavage between the middle class and the poor. This is likely to have its fallout on politics too. In the past 25 years we have seen that there has been political stability whenever the middle class forged an alliance with the poor. Each time the alliance snapped or became weak, instability prevailed. It must, however, be admitted that over the past few years the country's social composition has been changing with the consolidation and proliferation of the middle class. The fact that about 100,000 people came to listen to Nani Palkhivala's discourse on the Budget in Bombay shows the extent of middle class proliferation. Such a huge crowd must be the envy of any political leader.

The politics of many advanced countries have their moorings in the middle class. For instance, the poor do not figure in the political calculations of the US Republican Party or the British Conservative Party. These parties have lost power only when the middle class has been disenchanted by them.

If the present Budget is repeated a few more times it will certainly render the Congress party the Republican or Conservative equivalent in India. But since its inception more than 100 years ago the Congress has tried to reconcile the interests of the middle class and the poor. Perhaps the party leadership now feels that it can no longer carry the burden of the poor; it has therefore decided to go with the middle class.

But it is not time yet for middle class based politics to become viable in India. The Budget, with its emphasis on the share market, caters to the needs of only a narrow section of the middle class. The share markets are all concentrated in the big cities. A lawyer in a mofussil court may not easily bite Manmohan Singh's bait to speculate at the share market. The picture emerging from the 1991 Census clearly indicates that the expansion of the business and industry-oriented middle class has slowed down considerably in the nineties. There has only been an insignificant shift in the labour force from agriculture to non-farming sectors since 1990 and the rate of decennial growth of urbanisation has decelerated from 46.14 per cent in the eighties to 36.19 per cent in the nineties.

The social composition of the population also suggests that what is "good politcs" and "good economics" for Bombay may not necessarily be true for most parts of the country. The political economy should be aimed at reconciling the interests of Bombay with those of the less fortunate parts of the country. A political economy that sharpens the divide between the business-oriented middle class and the rest of the population cannot bring stability to the country.

Moreover, this kind of an economy cannot sustain middle class dreams for long. Even the American dream is crumbling because the US economic regime did not promote a productive ethos. What happens when the Indian middle class dream is shattered?

It is, however, to the Congress' credit that by tilting to the Right with regard to its support-base, it has dislodged the BJP from the social and political space it had begun to occupy. The pull of the share market is proving to be stronger than the pull of the Mandir, at least for the time being. ■

Appropriating BJP Base

KEWAL VERMA

It is not certain whether Dr Manmohan Singh's Budget will help moderate inflation and revive industrial production. But he has certainly succeeded, and admirably so, in appropriating the middle-class support base of the BJP. The Mandir issue, which dominated informal discussion in offices and middle class homes last year, has been replaced by discussions on the likely impact of the Budget on the share market. The current infatuation for the market in the BJP's recently-gained middle-class support-base is reflected in the different voices of the party leaders, who often contradict one another on the implications of the Budget. Those grounded in the BJP ideology are critical of the Budget while those who are more responsive to the party's support-base are appreciative of it.

The shift in the middle-class support occurred as the market-friendly economic package began to unfold. The results of the Bombay municipal elections are a clear indication. The Budget has further induced the Hindu middle class to discard the saffron flag and once again turn to the Congress tricolour. This further shift in middle-class support would be apparent if the long-overdue elections to the Delhi Assembly and corporation were held at the earliest. There is no reason why the Congress should not sweep the elections in this BJP stronghold.

Though the economics of the Budget is hidden behind technical details, its purpose is clear; the consumption level is not to be affected. Excise duties on consumer items have not been raised nor has the government reduced the revenue expenditure that sustains its consumption level. The shareholding of existing companies has been made more attractive through changes in company taxation and wealth tax. For people with an annual income of more than one lakh rupees tax incentives for savings have been withdrawn with a view to pushing them to the share market. It is indeed a shareholder's Budget. And the gamble-shy middle class is being induced to learn to take the risks of the market. At the same time, the state's capability to intervene in the market and its command over the nation's resources are being reduced.

◆

THERE is nothing in the Budget to suggest that it will have a salutary effect on inflation. The fiscal deficit has been reduced by cutting capital expenditure while the revenue deficit level, which is relevant for inflation, remains unchanged.

The Budget scheme also does not provide for a cushion to absorb the disastrous effects of a drought on the price level. And the cut in capital expenditure is likely to aggravate industrial recession. Yet there is a boom in the share market today; the middle class has clearly been bitten by the speculation bug.

The Budget's social and political message is perhaps more important than its economic message. In a recent interview Manmohan Singh succinctly said the Budget's aim was to ensure "people become rich by staying honest". This message, which has a Thatcherite ring to it, has a special moral appeal for the middle class. But the road to affluence chalked out by Dr Manmohan Singh is one of speculation, not of hard labour and productive intelligence. Get-rich-quick will therefore become the dominant ethos of the middle class.

Only time will tell whether this will help build an internationally competitive economy. But till recently, buying of shares by individuals was not fashionable in a lately industrialised country like Japan; the bulk of the country's savings was with the secure and non-speculative post offices.

By cutting outlays on anti-poverty programmes and social sectors like education and health, the Budget encourages the middle class to believe that it has done more than its duty towards the poor. The nation's slogan of "wiping out the tears from the eyes of every poor" is now being substituted with "help those who can, to become rich". For Gandhiji, concern for the poor was a matter of commitment. But for the promoters of the reform package, it is a matter of convenience.

Thus even when the poor are being crushed by as much as a 50 per cent hike in foodgrain prices in the past two years, the budgetary shield that protects them from the onslaught of the market has been made less effective. Only 700 million man-days will be created next year under the Jawahar Rozgar Yojana against the 900 million this year and only 1.88 million rural families living below the poverty line will receive assistance against the 2.25 million this year.

departmental needs to import the essential commodities, namely, life saving drugs, crude oil, diesel, kerosene and fertilisers as authorised by the Government of India."

Very strangely, "in respect of capital account, all inflows and outflows including the government requirements will be at market rate," as per the press statement, though "the inflows and outflows under the IMF will also be under the official rate". This means even the repayment of the World Bank loans will be at the market rate of exchange.

This is inexplicable, and certainly a matter not clearly thought through. The Budget for 1992-93 provides for Rs 6802 crores as the payment of interest and repayment of "official" capital during the year. At around 25 per cent premium, this would mean an additional payment of more than Rs 1700 crores (in terms of rupees) for which no budget provision has been made.

The total of departmental needs, fertiliser imports and import of oil products is estimated to require some Rs 19,000 to Rs 20,000 crores of foreign exchange funds at the official rate.

Exports during 1990-91 were Rs 32,553 crores and assuming exports to grow at a compound rate of 20 per cent and adding some Rs 4000 crores of inward remittances, etc., we get a total of Rs 48,500 crores approximately as the total current receipts in 1992-93. At 40 per cent of this amount, the foreign exchange availability—at the official exchange rate—would be Rs 19,400 crores, just barely enough to cover the imports specified.

Thus, the Government of India would have to depend on the support of the IMF/World Bank for even the repayment of past debt obligations, for 60 per cent of all other receipts would be available for commercial imports. If debt servicing is to be met from this amount—as currently stated—there would be an inevitable increase in the free market price of foreign currency, and an import compression determined by the "market" based on the increasingly inequitous distribution of income. The viability of the programme launched on Budget day thus depends on either continued borrowing even to repay our past debts, thereby significantly increasing our medium-term indebtedness, and making economic policy subject to the dictates of the IMF/World Bank in the coming years, or a severe compression of essential imports, leading to an accentuation of industrial recession. Imports—even crucial bulk imports like non-ferrous metals—as well as all capital goods and essential raw materials and components, would have to be at significantly higher free market rates than forecast earlier. This would certainly have a cost-push effect on prices, coming on top of increases in excise duties, railway freight rates and administered prices of basic intermediates like coal and steel.

◆

IN his Budget speech while presenting the 1991-92 Budget, the Finance Minister had announced an "amnesty scheme" for tax evaded incomes, and said he was giving a "last chance" to tax evaders to come clean, adding that severe steps would be taken against tax evaders who do not come forward to declare their untaxed incomes, after the expiry of the amnesty period. This year, not a word is said about black money. In fact, the effort is to condone black money, reward criminals and smugglers, reduce tax rate, and hope for the best.

The scheme for gold import, in the above context, is an attempt to regularise the income of smugglers (who do not have to pay any income tax on gold import related incomes). Looked at from another viewpoint, this gamble is like a safety-valve for the decision to make the rupee partially convertible. Gold, which will now be imported (ostensibly by Indians returning from abroad) is likely to bring Indian gold prices nearer international prices of gold, and the free market exchange rate of the rupee could then be kept down to reasonable limits, in tune with the difference of 25 to 30 per cent between the international and Indian prices of gold. But as long as Indian gold prices remain higher than this level, inward remittances would be siphoned off to be used for import of gold ostensibly by Indians returning from Dubai.

A genuine restructuring of the economy, through a massive effort at universal education and better health services, at local area development planning in rural areas, is far from the agenda of the present government. Indeed, the entire focus is on the premature "globalisation" of the economy, in the interest of the Westernised upper crust of Indian society, a section of the people for whom the present policies are a bonanza, enabling this class to appropriate all the benefits of aid and adverse trade, at the cost of the improverishment of millions of workers, small farmers, landless labourers and small craftsmen. ■

At the Cost of Impoverishment of Millions

ARUN GHOSH

The Central Government's Budget this year has been the occasion for announcements of an unprecedented nature. The rupee has been made partially convertible in the Budget speech—and import of gold by NRIs and Indians returning from abroad has been permitted, subject to the payment of an import duty in foreign exchange. Compared to these momentous policy announcements, the details of the management of revenue and expenditure in the Central Budget have become a somewhat humdrum affair.

But let us start with the Railway Budget for 1992-93, for that sets the tone for the Central Budget. Apart from the hike in freight rates—other than on certain specified commodities—passenger fares have been increased steeply, the heaviest burden being on commuters to metropolitan areas, the increase for some distances being as much as 60 per cent. Second Class long distance passenger fares have also been increased significantly; the increase in Second Class rail fare from, say, Delhi to Baroda, or Delhi to Patna works out to some 17 per cent of extant fares.

But more importantly, there is to be a net transfer of funds from the Railways to general revenues, in lieu of budgetary support for Railway modernisation and expansion, as has been customary in the past. The budgetary support for the Railway Plan has been cut from Rs 1672 crores in 1991-92 to Rs 1200 crores in 1992-93—a reduction of Rs 472 crores. On the other hand, apart from the normal dividend by the Railways to general revenues—which increased from Rs 1039 crores in 1991-92 to Rs 1150 crores in 1992-93—there is additional provision for the payment of deferred dividend in 1992-93, to the tune of Rs 416 crores, thus making the total dividend payment by the Railways to the general revenues Rs 1566 crores. Thus, from a net transfer of Rs 633 crores, from the Budget to the Railways in 1991-92, there is going to be a reverse transfer of Rs 366 crores from the Railways to the general revenues in 1992-93.

The author, an eminent economist, is a former Member of the Planning Commission.

Equally pernicious is the cut in the amount that the Railways are to be allowed to borrow from the market—obviously keeping in mind the need to lower the 'fiscal deficit'—from Rs 1500 crores in 1991-92 to Rs 1200 crore in 1992-93. As a result, the Railways Plan outlay is going to record only a nominal increase of seven per cent (from Rs 5325 crores in 1991-92 to Rs 5700 crores in 1992-93), when the rate of inflation in the country is expected to be significantly higher. In real terms, therefore, there will be a decline in the Railways Plan outlay for modernisation and improvement of the services, despite an increase in passenger fares and freight rates.

This point has been laboured here in some detail because the same approach informs the pattern of Plan outlay, and therefore, the shape of the economy in the years to come. The focus in the 1992-93 Budget (as also in the diverse other economic policies announced with the Budget) is on rapid 'globalisation' of the Indian economy, to the neglect of the development of the infrastructure, as well as social infrastructure like universal education and health, of the development of the backward sections who have for some time been getting increasingly marginalised, leading to the emergence of social tensions all over the country.

◆

TO return to the Budget for 1992-93, the specific directions in which the economy would be moving over the coming years need to be briefly explained. First, the partial convertibility of the rupee—to the extent of 60 per cent of export as well as 'invisibles' earnings—implies in effect a partial devaluation of the rupee (without a conscious, overt devaluation). One can predict that in the immediate future, the exchange rate for the segment of transactions with the rest of the world may be settled around the present *havala* rate, that is, at around 25 per cent higher than the official exchange rate. As per a Finance Ministry press note, the balance of 40 per cent of export (and invisibles) earnings would be used to pay for "government

POLITICAL NOTEBOOK

Exit Solanki

The resignation of the External Affairs Minister, Madhavsinh Solanki from the Council of Ministers has once again brought the Bofors issue into the focus of public scrutiny.

The scandal flowing from the massive sum involved in the illegal bribery rocked the country and Parliament in the late eighties and substantially contributed to the inability of the Rajiv Gandhi dispensation to secure a clear majority in the 1989 Lok Sabha poll. The National Front Government led by V.P Singh had promised to unravel the mystery surrounding the Bofors middleman on coming to power but its failure to do so generated considerable scepticism in the minds of the public at large.

Nevertheless, it needs to be underscored that V.P Singh and his colleagues in the National Front Ministry initially did try to conduct the probe into the sordid affair with earnestness and zeal, but they were preoccupied with a host of difficulties and hamstrung due to constant barracking by the Rajiv Congress However, it must be reiterated that in his first statement on the subject in Parliament in early 1990 the then Prime Minister had conclusively brought to light the attempted cover-up by those in power when the deal was struck

The latest developments are more revealing as they point to a concerted move to scuttle the Bofors investigation by important personalities in the Union Government today. It is matter of concern and shame that the person in charge of the External Affairs Ministry has been caught red-handed and was forced to quit his post in less than 24 hours of his public confession that he had personally handed to Rene Felber, his Swiss counterpart, at Davos two months ago, a mysterious memo from a "private lawyer" whose name he could not recall! But even if the former Gujarat Chief Minister deserves to be censured, he is actually being made a scapegoat. There is not a shadow of doubt that several other prominent figures are also actors in the drama

The government's duplicity too cannot be concealed. It took a public posture of wanting to pursue the investigation, as seen from the CBI communication to the Swiss authorities on March 26, while in private everything was done to ensure that the probe fizzled out. It is not without significance that the Congress-I spokesman had demanded an end to the probe on the amazing pretext that it amounted to wastage of public money!

While the media needs to be commended for the yeomen service it has rendered in exposing the misdeeds of the powers that be in this kickbacks scandal, the government at the Centre must realise that Solanki's exit does

not close the chapter on the Bofors case. The ghost of Bofors would continue to haunt it unless it is able to exorcise it.

The allegations of the Hindujas' involvement in the deal are now acquiring concrete shape. It needs to be pointed out that Solanki is not the only Union Minister serving the Hindujas, other leading lights in the present Establishment are also playing the same game. Probity demands that they be brought to book at the earliest.

COMMENTARY

India is Not for Sale!

It was a rally with a difference. Countless people thronged the Boat Club on March 27 to take a solemn pledge to fight the government's capitulation before the multinationals. The congregation resolved to "boycott the products manufactured by the multinational companies... and use more and more *swadeshi* goods".

The massive rally was sponsored by the Azadi Bachao Andolan, a platform set up by Gandhian socialists who met recently at Sevagram to issue a clarion call for a renewed freedom struggle in the golden jubilee year of the 1942 "Quit India" movement to "liberate India from multinational colonisation". The participants came from all parts of the country—Kerala and Punjab, Bengal and Maharashtra, Tamil Nadu, Andhra Pradesh, UP, Bihar, Madhya Pradesh, Orissa and Assam.

A galaxy of eminent socialist leaders, including Rabi Ray, Kishen Patnaik, George Fernandes, brought into focus the ideals of Gandhi, Lohia and Jaya Prakash; recalled the 1942 and 1975-77 struggles; and urged for a new initiative to launch a fresh movement for national regeneration. George was at his eloquent best and warned the IMF-World Bank combine that enslavement of the government and officials should not be misconstrued as enslavement of the country whose people would resist any encroachment on national self-respect. Rabi Ray characterised the administration at the Centre as a "government of national shame" and demanded a speedy reversal of its suicidal policies.

The gathering was marred by an unseemly incident in which a section of the audience tried to denigrate a senior leader—the former Union Finance Minister in the National Front Government. George spiritedly defended the honesty, integrity and sacrificing spirit of Prof Madhu Dandavate, and decried the attempt in no uncertain terms. However, he struck a self-critical note with refreshing candour by acknowledging the failure of the National Front rule at the Centre to prevent the entry of the multinational concern—Pepsi Cola—into India despite its prior promise to the contrary. But regardless of the past he reiterated his firm resolve to steadfastly oppose and fight the multinationals' depredations in the days ahead.

The memorable rally secured poor publicity as the media betrayed a strange myopia. But its impact was felt far and wide.

It was a living testimony of the awakened consciousness of the country's patriotic forces to defend the nation's political sovereignty, economic autonomy and cultural identity threatened by the multinationals' invasion on the pretext of liberalisation of the economy.

And it proved beyond doubt that India, unlike the Latin American states, is not for sale despite the dubious moves of our Union Government in conjunction with the World Bank lobby in the Finance Ministry to woo foreign capital.

A Purposeful Visit

SUMIT CHAKRAVARTTY

The visit of the Ukrainian President, Leonid Kravchuk, to India (March 25 to 29, 1992) and his in-depth discussions with the Indian leaders including Prime Minister P.V. Narasimha Rao have opened a new chapter in bilateral relations between the two countries.

After the birth of independent Ukraine following the historic referendum there on December 1, 1991 that heralded the disintegration of the Soviet Union and the eventual evolution of the Commonwealth of Independent States, the leaders of that country in general and Kravchuk in particular have used every possible opportunity to express their intention of forging close ties with India. India does indeed occupy a special place in the hearts of the Ukrainians and there is a kind of national consensus among different sections of the Ukrainian populace cutting across political barriers to reinforce Indo-Ukrainian ties. It was not without reason that even the leaders of the nationalist 'Rukh' movement in Ukraine categorically stated that they were inspired by the values of the Indian freedom struggle led by Mahatma Gandhi and Jawaharlal Nehru. The Ukrainian authorities conveyed their keenness to develop warm relations with India to our Foreign Secretary, J.N. Dixit, who was in Kiev last January (when he was able to call on Kravchuk as well). This time in New Delhi Kravchuk gave further testimony of that desire and imparted concrete shape to it by concluding several agreements on cooperation in diverse fields.

One of the highlights of Kravchuk's visit was the signing of the Indo-Ukrainian Treaty of Friendship and Cooperation which reflects the spirit of the Indo-Soviet Treaty of Peace, Friendship and Cooperation signed in 1971 for a period of 20 years and renewed for another 20 years last year before the demise of the USSR at the fag end of 1991. It is noteworthy that Ukraine has become the first independent country emerging out of the debris of the erstwhile Soviet state to conclude such a Treaty with India.

It needs to be understood that this Treaty while reflecting the spirit of the 1971 Indo-Soviet Treaty is not a replica of that document which constituted the bedrock on which Indo-Soviet friendship was deepened and expanded in the last two decades. That is precisely because the vast changes the world has undergone in the last two years with the transition from Cold War confrontation to superpower cooperation had to be taken into account while drafting the Treaty. But what endows the Indo-Ukrainian Treaty with exceptional value is the fact that it commits each side not to do anything which could undermine the security of the other. The two states have also decided, through Article VIII of the Treaty, to be in touch with each other on the political and defence planes in order to preserve political stability in their respective regions, something that would positively contribute towards international stability as well.

In this sense this Treaty would serve the interests of both India and Ukraine whose avowed intention of being neutral in the global arena meets the objectives of India's non-aligned policy. Interestingly, a recent article by noted journalist Sergei Strokan in the widely circulated Russian weekly, *Moscow News*, had, while noting Ukraine's initiatives in building close ties with India, made the following valuable observation: "The Ukrainian draft of the bilateral treaty proposed to India, unlike the Russian draft treaty, is in the same spirit as the 20 year Indo-Soviet Treaty which worked well, and keeps in mind Indian defence interests."

The significance of that observation became all the more transparent when the Ukrainian President declared at a press conference in the Indian capital on March 27 that since Ukraine held an important position in the former Soviet Union's defence relationship with India, it would not terminate cooperation in that sphere. Rather, that would become a vital component in the wideranging interaction between the two countries with Ukraine continuing to supply defence spares to India, as it did when it was a part of the old Soviet Union. What was important was his emphasis, in this connection, on India's policy aimed at strengthening peace and security in the region and the world at large. This became more meaningful in the light of Kravchuk's repetition of the basic principles of the historic Delhi Declaration of 1986—those of a non-violent and nuclear weapons-free world—and his assertion that Ukraine would remove all nuclear weapons from its soil.

Kravchuk's two-hour talks with Narasimha Rao revealed the two countries' similarity of views on a host of issues. His high appreciation of Indian non-alignment and projection of the necessity of following a policy free of military blocs—a concept shared by the leaders of Belarus and Kazakhstan, but not Boris Yeltsin and his team of Bush-followers in Moscow's White House—coupled with his stress on inviolability of borders and territorial integrity, his strong opposition to the use of terrorism as a means to resolve disputes like the Kashmir problem (which, he felt, should be settled peacefully through bilateral negotiations as suggested by New Delhi), his full support to the efforts of India and China to settle the outstanding border question—all carried considerable weight. His favourable response to President R. Venkataraman's offer of Indian expertise in running the mixed economy Ukraine had opted for, was also noteworthy.

The agreements on cooperation in trade, economy, science and technology, as well as culture signed during the visit would go a long way towards promoting bilateral relations to a qualitatively new level. There is considerable scope for the growth of Indo-Ukrainian trade in the days ahead. Ukraine is keen to purchase from India mineral fertilisers, tea, coffee, medicines and raw materials; while India is interested in buying urea, ammonia, metal scraps and hot rolled steel products from Ukraine. It has been decided that trade would be in hard currency as well as other modes of exchange agreed upon through mutual consent.

Kravchuk's hope that the Indo-Ukrainian agreements concluded during his trip to this country would help stabilise the economic situation in Ukraine was not without meaning. The visit by the head of one of the most prominent republics of the erstwhile USSR has given fresh evidence of the abiding nature of India's multifaceted ties with different segments of the former Soviet state that continue to survive despite the current turmoil in that vast land-mass and the radical transformation of the international scenario. ■

We Shall Overcome!

NIKHIL CHAKRAVARTTY

A refreshing breeze indeed. In the midst of all the dirt and squalor, hatred and violence, tensions and clashes that pervade between the two neighbours, the spontaneous euphoria that welled up in our country the moment it was known that Pakistan had lifted the World Cup trouncing England, was heart-warming by all counts.

I am no cricket addict and I can tell you nothing about the mysteries of the game or about the respective merits of rival teams and the players. Naturally, I am overjoyed when I see Sachin Tendulkar wielding the bat as I used to when Sunil Gavaskar was in action. Kapil Dev I look forward to. In my school days, I remember watching Dilwar Hussain fighting back an English team led by Gilligan. Ranji and Duleepsinghji were legends whom I had not seen. The favourite in Calcutta was Mushtaq Ali. We used to see Bradman's face in the newspapers—there was no live radio commentary in those ancient days, and the television was beyond our imagination.

As I watched people in different parts of the vast city of Calcutta celebrating Pakistan's victory, I thought to myself why and how this came about. I have seen in the past how tension mounts and the people get divided when Indian and Pakistani teams face each other in any game. This is not confined to Srinagar, but could be seen in Surat and Moradabad, Delhi and Hyderabad. Only last year communal vandalism spoilt the pitch in a Bombay stadium to bar Pakistan playing in India. How then is this transformation today?

Surely, Imran Khan emerged as a great leader who could invoke the best out of every member of his team—like an Alexander or a Napoleon in the battlefield. And his team also played magnificently which even an unversed like me could get excited about. But does the superb performance of the Pakistani team account for the instant exultation among all sections in Calcutta, or for that matter, in most of the cities in our country?

No, there is something more to it. Imran himself said his team's victory is a victory for the entire subcontinent. He said this in so many words:

> This cup that we have brought today with us is for the entire subcontinent—for Pakistan, India and Bangladesh. I know people in India and Bangladesh have great love for us. They appreciated our performance, prayed for us That's what really matters

One may say Pakistan's victory was a victory for the continent of Asia itself. The game which our White masters of yester-years used to claim as their heavenly gift to civilisation, is now mastered by the people who are not White, and who had been kept down in subjugation by the Whites for a century and a half.

But I would go further. The meaning of this unbounded enthusiasm cannot be measured as having a mere geographical dimension: It is the upsurge of the heart of the millions upon millions of our two countries. As a young airline officer on duty at the Calcutta airport thought aloud to me: "If we had not had the partition what an invincible team we would have had which nobody could have ever dared to trounce!" Here is the sentiment of the common humanity in our two countries, pristine and transparent, that is latent all over.

◆

MY ancestral home was in Barisal, the waterlogged district of south Bangladesh. I was brought up in Calcutta, and now for the last forty years, I have been living in and working from Delhi. When I was eight years old, I went to Lahore with my grandmother—faint memory of a clean and beautiful city. I am a bit of a nomad and my wanderlust has taken me to many parts of world. In 1983, when I got a chance, I spent a fortnight in Pakistan, travelling by train, air and bus—Lahore, Karachi, Mohenjodaro, Islamabad, Peshawar, Khyber Pass, Gilgit and Hunza, Quetta and Ziarat. What was my impression of that opening into my neighbour's land? Without knowing a word of Urdu, I met them, hundreds of them, as if they were my own—I could feel the old generation is nostalgic about India and the young are curious. Incidentally, although I have never met Imran Khan, I have recently got acquainted with him through his book on the land and the people that live by the great Indus as it flows from the high Himalayas to the Arabian Sea—an unforgettable experience that takes you to the roots.

As a young reporter, I had covered the ghastly nightmare of the partition in which brother slaughtered brother in a fury of political insanity—from the Great Calcutta Killing to the heart-rending trek of refugees. And I was also a witness to the heart-lifting glimmer of hope that Gandhiji sought to bring through his crusade for communal brotherhood in Beliaghata and Bihar. He would have taken it to the heart of Pakistan as he had done in Noakhali if he had not been slain by one of his own countrymen. Fortyfive

Restore Consensus, Pull Back from the Brink

Letter to PM on New Economic Policy

SHYAM NANDAN MISHRA

The following is the text of the letter sent by the former External Affairs Minister to the Prime Minister on February 26, 1992. In view of its importance it is being reproduced in full.

—Editor

Dear Congress President and Prime Minister,

I am writing this letter after a great deal of cogitation lasting long, but now with a compulsive feeling that any further reluctance to do so would amount to sinning by silence or, at any rate, playing safe when history demands a decisive role.

What follows is the unburdening of the agony of a Congressman of old genre and perhaps, on that account, a little out of date. That he belongs to the Gandhi-Nehru tradition may be a tall and undeserving claim, but the pretension has lasted too long to be eschewed.

The period since the introduction of almost seismic change in economic policies has, indeed, been traumatic for many of us and we would be less than honest and lacking in essential courage if we did not warn in time that the Indian *perestroika* might prove even more disastrous than the Russian one and both our economy and polity may be in a state of roaring anarchy and confusion.

No doubt, you have as much claim to the old heritage of the Congress as many of our generation have but it seems your active association with the more "modernised version" of the Congress has brought about a somewhat different orientation in your perception and approach. In our case, however, disengagement from the past is not proving as easy and if the recent developments in the economic field have caused us great anguish and pain, the fault lies in our genes.

Tragically, our suppressed and unmanifest dissatisfaction and concern is being interpreted as our implicit support and endorsement little realising that our silence is imposed or involuntary. We have no forum where we can express or exchange our views. I wrote you to this effect more than four months ago and asked for your guidance in this regard but drew a blank. Those fora which have existed since the inception of the Congress have been closed or denied to us even as far-reaching decisions affecting the country's polity and economy are being taken. In fact, the decisions taken at the governmental level are so unilateral and arbitrary that they nearly border on the attitude of the French monarch who declared: "I am the State." What else can one conclude when an apex body like the AICC, which alone can give legitimacy to our policies, is sidelined and the Congress Parliamentary Party is bypassed while announcing the new policy in Parliament. Surely, your excellent memory could not have failed to recall that Pandit Jawaharlal Nehru did not take any major decision as the Prime Minister before consulting the AICC. And this body, on its part, never shirked in its duty to express its views freely and frankly, without fear or favour. Even momentous resolutions on the "Quit India" movement and the "Partition" were not passed without encountering determined opposition or eloquent neutrality.

In the present context, the dimensions and implications of the changes, in particular, enjoined upon the leadership a clear duty to organise a flood-tide of discussions at all levels of the organisation as also a national debate involving all principal elements in public life. But the total absence of these categorical imperatives has destroyed both the domestic and national consensus on economic policies and left the country and Congressmen completely dazed and bewildered. Our dismay is all the greater because you have inexplicably chosen to keep this most fateful of all issues out of the area of consensus which you are passionately pledged to seek on all major national issues.

All this notwithstanding, brash assertions are made by government spokesmen that there are no reservations on the issue inside the Congress. To say the least, to make such a claim after having slammed shut all doors of dissent and disapproval and denying all opportunities for suggesting an alternative to the policy you have adopted is nothing short of sadistic. Moreover, if as claimed, there are no differences of opinion among Congressmen even when such U-turns in our policies put the historical process in the reverse gear, surely the soul of the Congress with its high tradition of dissent and democracy is gravely sick and something needs be done urgently to revive it.

Fortunately, the official complacency in this regard does not coincide with the reaility. For the polarities of opinion could not be wider and the sense of values never so antithetical in any organisation. To wit, what we call a new bondage, a new slavery and a recolonisation, the Finance Minister (Government) calls a war of economic liberation or perhaps the widening of freedom through globalisation; while we lament the erosion of our economic sovereignty and political independence with each 'advice' from our invisible masters, there is official jubilation on loans, more loans, debts, more debts from our benevolent creditors.

The psychology of treating loans as gains is a short step to permanent debt-entrapment and, at this rate, we will soon become perpetual supplicants revelling in the wages of the new slavery as we did before Gandhi descended upon the scene. And what is even more frightening is the seminal issue whether India would remain 'Indian' economically, politically and culturally. When the mighty America is struggling to remain 'American' with food at Burger King owned by a British company, groceries bought at German-owned Supermarket, car assembled at Canada, it would be idle to think that we would be able to preserve our identity and culture in face of greater economic invasion we are wilfully inviting. We should never forget that sensitive Americans have already begun saying: "Decades ago, made in America meant something. Today it is more deceptive than helpful", and a frenzy over American-made goods has erupted with some television ads proclaiming: "We are losing our shirts in this country. We are losing our dresses too."

In addition to the policy bonanza they had got earlier, the FERA companies can acquire any immovable property and flaunt their own brand names and trade marks wiping out all traces of Indianness not only from goods of basic and daily needs but also from our person and life-style. In theory, nothing prevents the FERA companies now from acquiring as much of Delhi as they like to promote our industrial and trade interests and even our TISCO, TELCO or for that matter our giant public enterprises, Bokaro, Rourkela, BHEL, etc. You have already invited them to taste the waters of Indian market. This they will certainly do keeping us at bay from their own.

It is an irony that in order to fight this looming catastrophe, the RSS has mounted a crusade with the slogans of *swadeshi* and *swavlamban*, once the battle-cry of the Congress when it spearheaded the national movement against the British. The RSS people are discarding foreign goods and taking a vow to use only Indian goods. Maybe they would even organise a bonfire of certain products as we did under Gandhiji's leadership. What a reversal of roles and that too during our lifetime! But this is not surprising when we find that Congressmen have as good as given up *khadi*, the symbol of *swadeshi* and *swavlamban* and their modernism spurns "prohibition" on which Mahatma Gandhi could stake everything.

I have no doubt that in a moment of cool reflection you will realise that the greatest damage has been caused to the national psyche and pride. A soft state and a soft-centred leadership have underrated the people's capacity to suffer and sacrifice for national survival with self-respect and opted for a soft course undermining the inner resources and strengths of the nation.

◆

TO be sure, to meet the crisis facing the nation today we require the adoption and operation of a war economy in which the nation accepts the strictest regime of austerity and distributes burdens and sacrifices equitably so that everyone appears in battle-dress against the common enemy—the unprecedented economic crisis. We require leaders in government and organisation to tell the people as Hugh Dalton did during the Second World War as Minister: "I have two coats and I am not going to have a third one during the War." Such a spirit and concrete personal example alone can set the right tone in society and usher in the climate for fruitful national endeavour to meet the challenges of today effectively.

But, sadly, there is only a lacklustre, lackadaisical, half-hearted and a near-formal approach to the crisis with all our heart and energies set on securing loans and their utilisation through what has come to be called 'liberalisation'. There is no exemplary austerity in the government and, therefore, no cut-down in conspicuous consumption in affluent sections of society. The government vehicles run as usual showing least concern for energy conservation, Parliament proceedings are being televised as if it meant no additional expenditure, a Congress observer for organisational elections charter a plane to be in time for his duty as if aviation fuel does not matter, etc. etc. On the other hand, fuel prices are unconscionably raised hurting the citizens and raising other prices. No one gives any thought to the alternative remedy, namely quantitative restriction (of petrol) through rationing without price hike, for the government officials are not affected and the industrialists and traders can absorb any price rise through expense account.

No less seriousness of purpose and efforts is required at the organisational (Congress) level, perhaps even more, since the sanctions for hard option have to be built among the people. The present changes hyped as reforms lack popular mandate and support, are soft for the elite and hard for the people and, therefore, demanded much more educative and constructive work among the masses if you insisted on your lonely plough to go to the end of the furrow. But the way in which they have been conducted, the organisational elections have shown that the lumpens have taken over professing loyalty to you. I think a decent person like you cannot but feel appalled, even horrified, at the way the newly constituted PCCs are falling upon one another to authorise you to nominate not only the office-bearers or the members of the AICC but, what is no less amusing, nominating yourself as the next Congress President. If all this was to be on the basis of manoeuvring and manipulation, one wonders why this gigantic force of elections was enacted. Can you, honestly, do justice to the responsibilities of both Prime Ministership and Congress Presidentship and can such concentration of functions in one individual lead to the effloresence of activities all over the country, as the situation decrees? The money power exhibited in these elections makes one fear that both the ruling party and the government may be shaped to suit the interests of those whom the new economic policy wants to make the principal agents of change—the international capitalism and the comprador. With multinationals coming in the money power is bound to grow too strong for honesty to survive in politics.

We can have no complaints against the IMF and World Bank, or for that matter even the MNCs, for they do not owe us a living. Their philosophy is well known and their world mission is clear.

They want to build and promote the interests of capitalism everywhere under the aegis of Western capitalism. They will not help us on our own terms and in accordance with our priorities however urgent and imperative. So their 'conditionalities' must supersede our national priorities. They never budge an inch from this approach unless the 'party' is possessed of an uncompromising spirit of self-respect and self-reliance and can muster courage to say: "Go to hell", like China. No wonder the IMF has come to be known as Imperial Monetary Force, their "imperialism" being consummated through never-ending addiction to the drug of debt and with the willing cooperation of the ruling elite which brought about the crisis by their profligacy and corruption.

However, their plighted stand for free enterprise is patently deceptive. Their advocacy for free market forces is also unsustainable. For under their benign dispensation only big enterprises in industry and trade are free and the market forces are the captive of monopolies and oligopolies. The small producers in small-scale and cottage industry sectors as well as in agriculture have to fight a losing battle for existence. With your policy of anarchic deregulation, decontrol, liberalisation and globalisation and, in particular, with the dismantling of the MRTP Act and other apparatus of policing the misdemeanours and predatory proclivities of big enterprise. There is little hope for their survival. In fact, starvation deaths in the handloom sector have already given a preview of what is going to happen in future.

◆

SO let there be no illusion about the direction you have chosen and the route you have taken. Henceforward, the instruments of advance will be capitalism, national and international, the strategy of advance would be accentuation of inequalities, economic and social, the process of advance would be 'trickle-down', however slow and meagre, the burden of advance will be borne by the poor and the disadvantaged and not the rich and the affluent, and the character of advance will be determined and directed by the IMF and World Bank, with all their paraphernalia of Budget control and monitoring located in Delhi. The kernel of the philosophy inspiring it is that the festival of the rich must be enabled to be larger and larger so that the crumbs falling from their table in the mouth of the poor become bigger and bigger.

We are the progenies of the Congress which was sworn to fight these trends. Even in its Congress-I incarnation it has not done away with the basic tenets of the old Constitution which proclaim crusade against them. Its election manifesto with stress on poverty alleviation, social justice, self-reliance and balanced regional development, bringing down prices and unemployment does not permit them. The country's Constitution with democratic socialism as its pole-star enshrined in its Preamble does not sanction them.

And yet to claim that we continue to adhere to the Congress policies which are based on the Gandhi-Nehru tradition is to show as much indifference to truth as Sahara shows to water. To us who had actively participated in the evolution of a certain ethos of our polity and economy and had lived and grown with it, it is fratricidal and subversive of everything that gives sustenance and strength to the nation—*swaraj, swadharma* (or ethos and genius), *swavlamban,* socialism.

The "de-ideologisation" which is being engineered will hand over the baton to casteism and communalism and other divisive forces. At one stroke the Planning Commission and the National Integration Council are rendered vacuous or irrelevant.

Mr Prime Minister, you have adopted a prescription without a diagnosis, selected physicians who do not know our Constitution, embarked on a road whose historic milestones have been abolished and leads to nowhere, fallen a prey to *elite populism* that blares the bugle for market forces, deregulation, decontrol, liberalisation and all the rest of it, ignored the lessons thrown up by the Soviet Union and Eastern European countries which first yielded to the elite populism and are now desperately seeking the Third Way approximating the Gandhi-Nehru values, misread the developments in the world and looked for the train in yesterday's time-table.

When the erstwhile communist countries with popular support for their political reforms and, what is more noteworthy, with their discipline and law-abiding nature (not yet fully destroyed) are now landed with the so-called 'reforms' in the worst possible economic crisis, the fate that awaits us is clear, if we are hellbent to pursue that course. We have had *glasnost* all the while with *perestroika* taking place in the dimension of freedom and peaceful means—and they did take place quite a lot though not for the benefit of the vested interests. The market forces were always largely free, and the intervention of the state was minimal.

Such controls and regulations as the state operated were dictated by social needs and peaceful growth, to which no sensible man could take any objection. In fact, it is such regulatory functions and interventions of the State which have made Korea, Taiwan, Singapore the show-pieces of development to which the government so avidly looks and the Finance Minister applauds as models. But this aspect is deliberately fudged and omitted impairing the government's approach and objectivity.

It is clear the long tradition of *glasnost* in the country has brought about a political constellation which cannot stomach these changes. The Left parties have raised the banner against them, the middle ones like the JD, SJP are girding up their loins, labour has already held massive demonstrations and even the BJP is reluctantly joining the fray with the RSS goading them. The deafening silence in the Congress-I is now steadily being broken.

Warning signals have already been hoisted. All the crucial indicators—growth, employment, export prices—are disturbing and might continue to be grave, on government's admission, for at least two-three years, a transitional period necessary for structural adjustment. All this is bound to fuel agitations that are building up.

The conditions in the Russian Federation have become so intolerable that responsible people are characterising the new reforms as "economic genocide" and have, in fact, called for retreat.

We cannot turn a blind eye to these ominous developments and out-Gorbachev Gorbachev himself in damaging both polity and economy. Please pause and think. Don't allow the situation to go out of hand. Pull back from the brink. Redress the balance. Restore the consensus.

And to this end, the following steps may be taken urgently:

(i) A convention of Congressmen like the Ooty seminar lasting for a week may be held to hammer out an alternative. This alternative programme should be discussed at all levels of the Congress to evolve a consensus inside the Congress in the first instance, and make every Congressman part of the national purpose and effort. Thus equipped, the organisation can prepare the country for hard work and sacrifice.

(ii) The Congress blueprint should be intensively discussed with all political parties, social and constructive organisations, economists and other academics of eminence, to evolve a national consensus through this national debate.

(iii) Finally, it should be discussed and adopted by Parliament. This is the way to get on with the job. There is no other way. नान्यः पन्थाः अयनाय ।

I would have suggested the basics of an alternative approach, as my long association with planning always keeps me in an illusion that I can do so. But that would not have much meaning and worth for the essential thing is national consensus on the issue, and a monologue cannot be a substitute for it. And there is also the disheartening fact that though alternative suggestions have been offered by eminent economists and planners—certainly more capable than me—they have been contemptuously brushed aside.

I hope you will excuse my giving vent to feelings in this forthright manner, perhaps justified by the situation which can't be permitted to be graver.

रखियो गालिब मुझे इस तल्खनवाई में मुआफ,
आज मेरे दिल में कुछ दर्द सिवा होता है ।

With regards,

Yours sincerely,

Shyam Nandan Mishra

Spectre of Destabilisation

ARUN KUMAR

The Union Budget for 1992-93 has been hailed for many firsts. Two of these are critical to India's economic health. First, the scheme relating to the import of gold into India by returning Indians; and second, the partial convertibility of the rupee. These are steps which will lead to a closer integration of the Indian economy into the world economy. Even if this is considered desirable from certain standpoints, if the economy gets destabilised, the country would be grievously hurt. To understand this, it is best to understand the government's best scenario case.

The gold scheme is supposed to check the smuggling of gold into India which, according to estimates, has been of the order of 250 tonnes per annum and costs the nation roughly $3 billion per annum in terms of lost foreign exchange. It is expected that the price of gold in India will come down as the suppply of gold through legal channels increases. This, it is argued would make smuggling of gold less lucrative and reduce the loss of foreign exchange.

◆

THE partial convertibility of the rupee is supposed to achieve several goals. For exporters and others bringing in foreign exchange into India, a premium would accrue on 60 per cent of the foreign exchange they bring in and sell in the free market. This would be an incentive to exports and to bringing back foreign exchange proceeds from abroad. The attractiveness of diverting these proceeds of the *havala* market would be lowered.

The scheme forces the importers to buy their requirements from the free market. The disequilibrium in the foreign exchange market would reflect in the premium on foreign exchange in the free market. The demand for foreign exchange would fall. In other words, there would be a corrective mechanism to limit imports to the availability of foreign exchange.

Concessions have been offered to investments by foreign mutual funds and pension funds. It is hoped that the MNCs will invest in India and thereby increase foreign exchange availability. Some Indian companies are also expected to raise equity abroad and bring in foreign exchange. Thus, foreign exchange availability for imports and travel abroad would be determined by exports and inflows on capital account and invisibles.

It is hoped by the policy-makers that these steps will stabilise the foreign exchange markets and the rupee-dollar parity would settle to some reasonable level. This would be unlike the present when the *havala* market constantly destabilises the foreign exchange market. It is also hoped that illegal transactions in foreign exchange would end and the country would have enough foreign exchange. How realistic is this?

The first and foremost thing to note is that India is short of foreign exchange if the economy is allowed to do as it pleases. Till now there were two markets, a legal and an illegal one. Availability of foreign exchange was in deficit in both and that is why the rupee continuously depreciated in the last three years. In the illegal market, the demand from smugglers and those wishing to keep capital abroad was larger than the supply from drug traffickers, those who were cornering remittances and those indulging in under- and over-invoicing of exports and imports. The *havala* market rate kept rising.

In the legal market, the supply was always short of the demand. So, demand spilled over to the illegal market. The premium in the illegal market led to a diversion of funds from the legal market to the illegal market. This reduced supply in the legal market below what it could have been and forced the government to depreciate the rupee.

While supply may go up, demand for foreign exchange would shoot up. It has been observed in India and many Third World countries that more the channels for circulating black incomes, more is the black income generation. Black incomes have a link with holding of gold and with flight of capital from India.

With the permission to bring in gold, the distinction between legal and illegal gold would be impossible. A lot more of black money can be held in the form of gold and more conveniently. This would also be inflation-proof as compared to holding it in the form of rupee. Some of the savings in white may also be held in the form of gold. The demand for gold would then rise.

It is clear that even at the prevailing premium, the demand for gold was high. It is not that gold was purchased because of supply of gold through smuggling. It was the other way round. Gold was smuggled in

The author is a Reader at the Centre for Economic Studies and Planning, School of Social Sciences, Jawaharlal Nehru University, New Delhi.

since there was demand which fetched sufficient premium over the international price. So, while supply will rise, demand for gold would rise even more. It is also likely that the price of gold in India would get linked to the rupee-dollar parity and would rise and fall with it. Would this make smuggling of gold unprofitable?

At the lower price of gold, smuggling would remain profitable. The risk of smuggling would decline. Smuggling would partly be legalised. Given the leaky nature of Indian Customs, only a fraction of the gold brought in would be declared. When even banned items enter India, permitted goods would be able to enter easily without paying duty. It is known that when banned electronics goods are brought in and caught, only the packaging or the cartons are destroyed while the goods enter the country.

The gold price difference between India and international markets would equal the duty plus some profit for the traveller. If this profit is small, then the traveller would not bring in gold. He would bring dollars and sell them in the free market. A 25 per cent margin is likely to obtain between the international and Indian price of gold. This would be sufficient for the smuggler whose risk would now be negligible. In effect, the smuggling in of gold and *havala* market would continue.

In any case, the legal flow of gold through returning Indians would be a fraction of the increased demand for gold. Smugglers would provide the rest and this would be larger than at present since the price would be lower and demand would have risen.

Flight of capital in the new framework of flexibility would be easier. Capital is held abroad for a variety of reasons. The Indian economy is not out of the woods and it is safer to hold capital outside. A change in government could see the rules change and the end of convertibility. People were taking out capital not because the rate of profit outside was higher but it allowed them a flexibility of operation and provided status.

If devaluation of the rupee is taken into account, then the rate of return on capital held abroad in rupee terms was perhaps greater. This factor is likely to remain valid when one compares India's rate of inflation with that in the advanced countries. With inflation rate likely to accelerate, devaluation will continue apace. Thus, unless the interest rates in the Indian economy are kept high, flight of capital would not only continue but could increase.

It is quite likely that gold in the free market would command a higher premium than foreign exchange in the free market. People may then prefer to bring in gold rather than foreign exchange. Gold entering the economy is not foreign exchange available to the government. If this was not so, India would have no shortage of foreign exchange since individuals in India hold an estimated $60 billion of gold in the country. Any inflow of equity capital by the MNCs and Indian companies would be more than matched by outflow on account of purchase of machines, consultancy, raw materials and intermediates.

With income distribution worsening and speculation and slow-down in production, flight of capital would increase. Foreign pleasure trips and purchase of real estate abroad, etc. would increase. The outflow of foreign exchange in a liberalised atmosphere has been known to increase in other countries too. As a consequence, the inflow of foreign exchange in the economy is likely to be reduced rather than increased.

◆

AS stagflation deepens, it is speculative activity rather than productive activity which will become more profitable. Partial convertibility to stem the outflow of capital will force India to keep interest rates high (as argued above) and this will deepen stagflation. The attractiveness of speculation in real estate, secondary share market and foreign exchange markets (worldwide it is known to be speculative) would rise. Gold and foreign exchange entering the economy would also add to liquidity for speculation.

Import intensity of the economy would rise in a liberal regime. Goods would be bought from outside which command a premium in the Indian economy. More essential goods would not be brought in unless their prices rise. In effect, inflation would be fuelled by shortages. Pressure on government to release its reserves would then rise. However, in a deteriorating situation, the government would be loath to intervene, as in the past.

In effect, an overall shortage of foreign exchange will fuel a depreciation of the rupee. This would lead to an increase both in the price of gold in India and demand for gold and create further shortage of foreign exchange. Flight of capital would continue. Black income generation would rise and fuel demand for gold and foreign exchange. Import intensity would rise causing demand for foreign exchange to rise leading to further pressure for devaluation. Devaluation would force prices to rise and lead to further devaluation. With liberalisation, even a lower fiscal deficit will lead to a higher leakage of demand from the national economy and cause the BoP deficit to worsen. Several wheels within wheels would set up vicious circles of destabilisation of the currency and the Indian economy.

If the country a) had sufficient reserves to intervene and reverse expectations and b) could curb the black economy and the demand for foreign exchange and gold, then the steps taken could have yielded stability. In the present circumstances, this seems unlikely. There is no escape from destabilisation as long as more and more concessions are given to the rich, as in the Union Budget 1992-93, whose links are increasingly outside the Indian economy. ■

Role of Interest Groups

KISHOR C. SAMAL

Though maximisation of net benefits from fiscal operation is the objective of the voters in general, the role of fiscal interest groups is vital in the democratic process. Fiscal interest groups are powerful factors in the making of a Budget. In India, various taxpayer groups organise to represent their interests and put great pressure on the Union Finance Minister to modify fiscal instruments to suit their interests. A fiscal system should take account of the strategic role of multiple interest groups and the fiscal decision based on the concerns of these interest groups may be realistic.[1]

In India, besides backdoor pressures of some interest groups and groups of individuals, economists, trade unions, farmers' representatives and industrialists are openly invited by the Union Finance Minister before the presentation of the Central Budget to discuss their interests, objectives and suggestions. But representatives of some organised groups such as the students, teachers, scientists and government employees are usually not invited. Moreover, this year though the economists were invited, no economist with Left leanings was included in the list.

In this paper we will discuss how far the suggestions particularly relating to taxation made by the economists, industrialists, farmers' representatives and trade unions during the pre-Budget consultations with the Union Finance Minister are incorporated in the 1992 Central Budget.

Tax Structure

Both the economists and trade unions demanded that the share of direct tax in the total tax revenue be increased. Further, the economists suggested that this can be achieved by doing away with various exemptions. Accordingly, several routes for seeking tax exemptions under Sections 80L, 80CCA for any investment in Jeevan Dhara and Jeevan Akshay Annuity Plans of the LIC and 80CCB for investment in equity-linked saving schemes have been closed in the 1992-93 Central Budget. Moreover, the trade unions wanted exemption of income tax upto the annual income of Rs 50,000. But, though it is proposed to restructure the personal income tax with lower rates of taxation with a narrower spread between the entry rate and the maximum marginal rate and a minimum of tax incentives, the exemption limit of personal income tax is enhanced from Rs 22,000 to only Rs 28,000. Three tax rates slabs are being introduced with 20 per cent applicable upto Rs 50,000, 30 per cent on incomes upto Rs 1 lakh and a maximum rate of 40 per cent on incomes above Rs 1 lakh. This is on the basis of the Chelliah Committee Report.

The author is a Reader, Post-Graduate Department of Economics, G.M. College, Sambalpur (Orissa).

In contrast to the economists and trade unions' suggestions, the industrialists asked for more concessions and exemptions. They wanted abolition of wealth and capital gain tax and restorationof investment allowance and accelerated depreciation.

In case of corporation tax, there is no change in tax and surcharge. There is no restoration of investment allowance and accelerated depreciation in the 1992-93 Central Budget as demanded by the industrialists. However, there is a provision to carry forward the depreciation allowance. It is proposed that in respect of the assessment year 1992-93, the quantum set for carried forward depreciation and investment allowance in case of companies where such amount exceeds Rs 1 lakh shall be limited to two-thirds of such amount and the remaining one-third will be allowed to be adjusted in the assessment year 1993-94. Artificial ceiling in regard to certain business expenses are also liberalised.

Though as desired by the industrialists, the wealth and capital gain taxes are not abolished, some benefits are given in this sphere on the basis of the recommendations of the Chelliah Committee. Taxable capital gains will be computed by allowing the cost of assets to be adjusted for general inflation before deducting from the sale proceeds. This is a regressive step since it favours unearned income, whereas no indexation is allowed in case of earned income, particularly salary income. Further, the wealth tax will distinguish between non-productive and productive assets and investments in productive assets such as shares, securities, bonds, bank deposits, mutual funds will be exempted from the wealth tax. Of-course, this is on the basis of the Chelliah Committee Report as well as due to the pressure of the business lobby.

It is to be pointed out that though a variety of tax incentives are used to implement social and industrial policy objectives in the developing countries, there are inconsistencies of these tax incentives with the stated policy objectives of the governments.[2] Investment incentives through the tax system include tax holidays, investment tax credit, tax rebates, lower tax rates, investment allowance and accelerated depreciation allowance. An important role is played by properly designed investment incentives in stimulating investment. However, administrative discretion often discourages potential investors. Further, restoration of investment allowance and accelerated depreciation allowance in India, as demanded by the industrialists, will encourage capital-intensive technology creating further unemployment. Hence the Finance Minister has taken a correct step of not restoring these allowances in the 1992-93 Central Budget.

Rationalisation

The economists and trade unions suggested simplification of tax laws. Moreover, the economists were in favour of rationalisation of tariff rates, plugging loopholes in the tax system and gearing up tax administration to boost revenue collection. Similarly, the industralists wanted to ensure better compliance from the tax-payers rather than raising the tax rates.

In fact the success of the tax policy changes depends mostly on the administrative capability in collection of revenue through fair and efficient enforcement. Of course, the political will is most essential. In recent times, all efforts to reform the tax system in the developing countries emphasise simplification of the tax structure and administration.[3] In line with this, the Union Finance Minister said in his Budget speech: "A moderately progressive tax structure combined with strong enforcement is the best way of encouraging honesty and voluntary tax compliance."

To rationalise the tax structure the Finance Minister has taken various steps in the 1992-93 Central Budget such as (i) treating the partnership firms as a separate tax entity and doing away with the taxation of the same income in the hands of partners; (ii) planning to set up the national court of direct tax, settlement commission for dealing with custom and excise disputes and an appellate tribunal; (iii) abolition of licensing control on production and manufacturing under the Central Excise and Salt Act 1944; (iv) reduction in the number of duty slabs to four in case of the auxiliary duty structure of the customs; (v) reduction of multiplicity of rates of excise on cotton yarn and cellulosic spun yarn; and (vi) switching over from specific rate to ad-valorem mode of levy wherever feasible, beginning with the major non-ferrous metals.

Tax Evasion

One common feature of the developing countries including India is tax evasion. Given the degree of tax evasion in these countries, it is inappropriate to assume that income taxes are fully borne by the income tax-payer. Tax evasion usually involves bribery of officials. Under a hierarchical bureaucratic system, senior officials with higher income and wealth receive a large portion of the bribes, alongwith professionals acting as middlemen. Thus, there is a redistribution of income from middle-class businessmen and others to high-income group elites. This is diametrically opposed to the conventional incidence theory.[4]

Though the economists and trade unions did not discuss the theoretical aspect of tax evasion with the Union Finance Minister, they simply wanted deterrent action against tax evasion. But the industrialists and farmers' representatives did not raise these questions. On the other hand, the trade unions demanded strong steps to curb the growth of black money in the economy and criticised the amnesty schemes to woo the black money holders. The trade unions are justified in their criticism of the amnesty schemes for black money, particularly the Voluntary Disclosure Scheme. The Direct Tax Enquiry Committee criticised these schemes since the VDS favours only the fraudulent and dishonest persons at the cost of honest and law-abiding tax-payers. The Comptroller and Auditor General (CAG) in its latest report on the VDS has also mentioned these habitual offenders and tax dodgers laundering large amounts of black money at a nominal cost to themselves.

But in the 1992-93 Central Budget, no concrete step is taken to check tax-evasion and generation of black money. Of course, the income of minor children (except incomes of child artistes and wage incomes of minors) is proposed to be clubbed with that of the parent to plug loopholes which account for substantial leakages of revenue. On the other hand, every passenger will be allowed to bring upto five kilograms of gold and the import duty on such gold will be Rs 450 per 10 grams. This step may help to check smuggling gold into the country. But this is a step to help indirectly the black money holder in foreign exchange to bring this into India in the form of gold through their connections. The Gold Bond Scheme will also help the black money holder.

Presumptive Tax

There is also an innovative measure to levy a presumptive tax of Rs 1400 per year on shopkeepers and other retail traders with an annual turnover of below Rs 5 lakhs to enable them to avoid the difficulty of maintaining the detailed account book, filing a complicated tax return and going through the normal assessment procedure.

However, the economists suggested a steep tax on self-employed professionals like chartered accountants, doctors, management consultants, architects and so on. On the other hand, the industrialists wanted a flat tax on traders, shopkeepers and self-employed professionals. Though the industrialists' suggestions in this respect are partially fulfilled, no step is taken to apply presumptive tax on self-employed professionals. Even the presumptive tax in case of traders and shopkeepers is not properly implemented. There should have been a distinction between different categories of traders and shopkeepers to apply presumptive tax. Under the presumptive tax system the tax administration should look at individuals through certain easily observed criteria, such as, (i) ownership of flat/house recently constructed, (ii) ownership of a motor vehicle for personal use, (iii) a residential telephone connection, and (iv) annual electricity consumption in excess of certain amount. But the 1992-93 Central Budget has taken 'turnover' as a criteria for imposing presumptive tax. 'Turnover' of a traders/shopkeeper is not easily observable and is subject to manipulation. To make a fair assessment, it would have been better to classify traders/shopkeepers into, say, three categories: (a) trader/shopkeepers only with residential buildings; (b) traders/shopkeepers with recently constructed buildings, residential phone connections and electricity consumption beyond Rs 250 per month; and (c) traders as in (b) but with a motor vehicles for personal use. Thus if the first category of traders would be asked to pay Rs 1400 per year, the second category should be asked to pay a higher rate and the third category a still higher rate of presumptive tax. The same principle should have been applicable to self-employed professionals.

Agriculture / Rural Sector

Almost all the representatives—economists, farmers, trade unions and industrialists—wanted to widen the tax base by taxing agricultural income. By bringing agricultural income into the tax fold, the government could have escaped the criticism that it favours the rich and puts a heavy burden on the poor in the process of carrying out the economic reforms. Moreover, broadening the tax base of the existing income taxes by including agricultural income would increase revenue and improve the simplicity and neutrality and equity of the tax system. But there are institutional and political difficulties associated with bringing agricultural income into the tax net.

An alternative to agricultural income is land tax which was also discussed at the World Bank Conference on Tax Policy in Washington in March 1990. But the design of land tax is not flexible enough to deal with instability in agricultural incomes. Progressive tax rates on land holdings are very difficult to administer. Land taxes in the developing countries have not been effective in attaining non-revenue goals like transferring resources from agriculture to non-agricultural sectors, discouraging speculative land use and assisting in land reforms.[5] In India, land tax is a redundant tool in tax policy.

So, income tax on agricultural income is the only solution to mop up the surplus generated in the properous agricultural areas. There is a case for presumptive income tax on agricultural income on an objective measure of farm productivity. Land area, soil quality, irrigation facilities and use of agricultural inputs are the best indicators of farm productivity. But it is politically difficult to tax the rural rich who are the vote-banks in the rural areas. And the Union Finance Minister is very much aware of this political difficulty. So, in the 1992-93 Central Budget there is no provision for agricultural income tax on the ground that it is a State subject. Nor is there any proposal for an alternative to the agricultural income tax.

Thus while favouring the rich farmers, there is a heavy burden on the poor in the rural areas. Budgetary allocation for rural development and the Jawahar Rozgar Yojana has gone down. Since prices of foods and cereals have risen very rapidly, the rural poor will suffer more. Moreover, the budgetary deficit of more than Rs 5000 crores, additional excise and Rs 3200 crores reducation of subsidies and the railway freight hike will further push up the prices. For political stability and the success of economic reforms, instead of reducing the anti-poverty programmes, the government should expand these programmes which certain modifications to check leakages.

Export and Import Duties

Only the industrialists wanted lowering of the project import duties. While they favoured liberalisation of technology imports, the farmers' representatives wanted removal of obstacles in the way of agricultural exports.

The farmers' demand for removal of the aforementioned obstacles has not been taken into consideration whereas the demand by the industrialists has been taken care of, though the system of exim scripts is abolished.

By lowering the ad-valorem rates of basic plus auxiliary duties of import duties (including of specific duties), customs duty is reduced from a maximum of 110 per cent. The general duty on capital goods including project imports and machinery is reduced from 80 per cent to 60 per cent. In case of capital goods for projects, import duty on electronics is reduced from 60 to 50 per cent, on coal mining and crude petroleum refining to a lower uniform rate of 30 per cent on other capital goods by 10 per cent.

Reducing tariff[6] is expected to reduce revenue. The proposed restructuring of customs duty together with other changes in customs duty in the 1992-93 Central Budget results in a net loss of Rs 2023.35 crores. Various kinds of fiscal adjustments would be required to offset the revenue consequences of tariff reductions in India where import duties represent around three-fifths of the value of imports.

The adjustment is made to both excise tax as well as countervailing customs duty to make the tax system more trade neutral. But the Finance Minister in the 1992-93 Central Budget has raised additional resources from excise only to the tune of Rs 2210.90 crores to offset the revenue loss from restructuring of customs tariff.

Other Sectional Interests

The Finance Minister has also succumbed to the pressure of some vocal sections. Thus, in the 1992-93 Central Budget, we find: (i) withdrawal of the provisions relating to tax deducations as source in respect of interest on term deposits with banks and commission payments under the pressure of the commercial banks and various members of Parliament; (ii) withdrawal of the expenditure tax on airconditioned restaurants due to several representations of middle-class people and small establishment restaurants in cities and towns; (iii) provision of "one rank one pension" for defence pensioners due to the movement of ex-servicemen backed by all the major political parties as well as to please the people of Punjab; and (iv) exemption of income tax on compensation received by the victims of the Bhopal gas disaster due to the lobby of various voluntary organisations.

The Finance Minister has also shown some sympathy to women by increasing standard deductions from Rs 12,000 to 15,000 in the case of working women having a total annual income upto Rs 75,000 and favours to the old, handicapped dependants, authors, playwrights, artists, musicians, actors and sportsmen by giving various concessions in the sphere of personal income tax.

IMF / World Bank Pressures

It is true that for the various minor and major changes in fiscal structure the Finance Minister is heevily influenced by the suggestions of industrial captains disregarding the advice, given by the trade unions and farmers' representatives. Most of the changes effected in the 1992-93 Central Budget are in tune with the Chelliah Committee Report and suggestions made by the industrialists. However, most of the suggestions of the Chelliah Committee favouring corporate and industrial sectors are incorporated in the 1992-93 Central Budget.

Moreover, the major and radical changes made in the Budget are due to the pressures of multinational and transnationals through their watchdogs, the IMF and the World Bank. The major conditionalities of the IMF and the World Bank for their loan to India are: privatisation, liberalisation and opening up of the economy to capitalist countries and proper pricing and interest rate policy.

Hence under the pressure of the two multilateral organisations, the 1992-93 Central Budget has opened up the Indian economy by (i) partial convertibility of the Indian rupee by which 40 per cent of foreign exchange remitted will be converted at the official exchange rate and the remaining 60 per cent at a market determined rate; (ii) delicencing of all imports; (iii) major simplification of trade policy; (iv) easier importation of gold; (v) restruc-

Emergence of Central Asia and Its Relevance to India

RASHEEDUDDIN KHAN

Central Asia has suddenly emerged to a new life of sovereign identity and geopolitical importance, in the wake of the cataclysmic changes in the now defunct Soviet Union. Its new relevance in international politics is engaging the eager attention of policy-makers and analysts in the context of the changing equations of power.

Let us first recapitulate the geo-historic setting of Central Asia as a distinct civilisational belt. Since ancient times, it has had strong socio-cultural ties, on the one hand with Turkey in the west and with Hindustan subcontinent in the south. The archaeological excavations at Sugdian in Tajikistan reveal many aspects of similarity with Harappa. The Buddhist links during the times of the Kushana and Kanishka exhibit strong socio-cultural affinity with South Asia. The migrations of tribes to India has mainly been from and through the trans-Oxus region (the Amu-darya basin) and the Khwarizm area—right from the early epochs of the pagan Aryan, Yue-chi, Saka tribes to the medieval period of which witnessed the Turanian *qaflas* (groups) of Muslim Uzbek, Turkoman, Tajik, Mughal and Pathan tribes, moving to the fertile plains of India. The famous Silk Route across the Pamirs and the fabled 'golden road' to Samarkand still conjures memories of primordial commercial transactions, romance and adventure between Asian regions. The bazars, the hawkers, the *chai-khanas* (teashops), the smell and tastes of *samosa*, the *kababs*, the *nan* and the *pulav*, the songs, music, and dance, and the style of living, etiquettes, pattern of inter-personal compassion, and outlook on life—all these bind them with us in special ties of fraternity and commonality. Central Asia is a different region, but not a strange region to us in South Asia, because so much of it is familiar and predictable, due to long and close historic relations.

The author, a distinguished academic and former member of the Rajya Sabha, is the Director, Indian Institute of Federal Studies, New Delhi. He was a member of a non-governmental delegation sent by the Government of India to Uzbekistan and Kazakhstan (January 25-February 2, 1992) to explore the prospects of interaction of the independent Central Asian states with India. Headed by the former Union Minister, Ram Niwas Mirdha, the delegation included the erstwhile Foreign Secretary, S.K. Singh, Congress-I leader and noted journalist, M.J. Akbar, and Professors Devendra Kaushik and Javed Ashraf of the Jawaharlal Nehru University, New Delhi.

◆

PUTTING Central Asia in the larger Asian scenario, we must remember that no continent of the world, is as big in its territory and population and as diverse and distinct in the culture, civilisation, ethnic composition and social patterns of its sub-regions, as Asia is. It is not often realised that all the religions of the world originated in Asia, and that it has also been the cradle of most of the ancient civilisations of mankind as well. Asia is indeed a mega-continent with at least five identified subcontinents—East Asia, South-East Asia, South Asia, West Asia and Central Asia. Each subcontinent had made great contribution in the development of human civilisation, in the ancient and medieval times, until they were overrun by different Western colonial-imperial powers in the late eighteenth, the nineteenth and the mid-twentieth centuries.

The British, Dutch and Americans dominated the East, the French and the Dutch colonised South-East Asia, the British established their sprawling empire in South Asia (with few French and Portuguese pockets), the Ottoman Turkish Empire dominated West Asia for centuries and then was succeeded by the British and French spheres of influence after the First World War.

Since the end of its medieval glory, Central Asia with its major Khanates of Samarkand, Bukhara and Khiva came under the expanding overlordship of Czarist Russia. As Lenin had put it, the Czarist Empire was a 'prison house of nationalities', numbering more than a hundred. After the October Revolution, 1917, while their colonial status was formally sought to be removed, but in practice, again to use

Lenin's own phrase, the 'big power chauvinism of Russia', overshadowed the autonomy and national pride of the region, through compulsions for ideological conformism, political centralisation and imposed command-and-control integration of economy, production processes and raw material utilisation, etc. This situation, however, had suddenly and dramatically changed in 1991, with the rather unexpected dismantling of the Soviet Union, due to quick procession of events—the failure of Gorbachev's regime to work out a new Union Treaty for the continuation of the Soviet Union on new terms; the August 1991 coup and its negative consequence on the Soviet multi-nationality federation; and the blatant assertion of separate Russian identity by Yeltsin, etc.

While the subjugated countries in other four parts of Asia acquired political independence, as a consequence of the decolonisation process, set in motion by the end of Second World War on the collapse of the Western colonial system, Central Asia remained an integral part of the reinvigorated Soviet Union, which had in the same phase emerged as one of the two superpowers, due to its nuclear capability.

Four formations emerged as a consequence of this dismemberment—namely, the three breakaway Baltic republics of Lativa, Lithuania and Estonia, the Caucasian republics of Georgia, Armenia, Azerbaijan and Moldavia, which are witnessing anarchic conflicts and confusion in the entire region west of the Caspian; the three Slav republics of Russia, Ukraine and Belarus which have entered into an ad-hoc pattern of cooperation and the five Central Asian, Muslim dominated republics of Uzbekistan, Kazakhstan, Turkmenia, Tajikistan and Kirghizia.

The new collective name of Commonwealth of Independent States given to the former Soviet Union is organisationally and substantially quite ambiguous and unclear. It is neither a union, nor a federation, nor a confederation, nor even a clear economic and security formation. It has no legal status, no formal and defined structure of coordination. It is at best an *ad hoc* transient arrangement susceptible to a variety of interpretations about its role and character. In the UN and its agencies, the Russian federation is being recognised as the successor state to the Soviet Union. In the diplomatic area of issuing of visas etc. for all the republics of the former Soviet Union, the successor Embassy and Consular missions of Russia are acting as a clearing facility. The rouble still continues as the common currency; and Aeroflot and the Railways as the common means of transport. Even the defence structure has also not been entirely dismembered, notwithstanding some formation of militia in the new sovereign republics and some agreement on the nuclear weapons system.

◆

THE new leaderships in the Central Asian republics, obviously appear bewildered and overwhelmed by sudden realisation of their heavy responsibilities for nation-building. They are groping for light and searching for avenues of expeditious and comprehensive economic growth. They need considerable moral, political, diplomatic and above all tangible economic support and cooperation from many countries, if the present chaos and breakdown in economy and dislocation of their policy is to be rectified, and stability and legitimacy restored.

There is a great vacuum to fill in Central Asia due to the sudden collapse not only of the highly integrated and interdependent Soviet socialist economy and centrally directed market system, but also due to the disbandment of their larger regional organisation, the COMECON. In the wake of this situation several countries, singly and jointly are jockeying for position of pre-eminence to help them build what is called a 'market-friendly' economy. Taking advantage of the manifest ambiguity and contradictions in the economic programme and perspective of the new leaderships in these sovereign republics, powerful global economic interests, represented by governmental agencies not only of the advanced metropolitan countries like the US, France, Britain, Germany and Japan, but also of the new economic dragons of Asia—the Republic of Korea, Singapore—and China, even Israel, together with several TNCs are probing the prospects of obtaining specific projects, investment areas and possible trade concessions. Close on the heels are the efforts of neighbouring Muslim regional powers—Turkey, Iran, Pakistan, Saudi Arabia and the Gulf states—to win favours. The close ethnic affinity of Turkey, and religious affiliation of all of them, is a primordial factor in their favour in seeking economic cooperation.

This is a period of perilous transition for Central Asia. The new states are seeking, in broad strokes, radical change from the highly centralised and stultified state-dominated economic structures, known earlier as the socialist strategy of development, to a sort of mixed economy (though not of the

Indian model) but one in which the achievements of social welfare—mass education, full employment, health-care, housing, cheap public transport system, etc.—could be preserved and reconciled with private initiative and enterprise that is expected to release the productive energies of the people. But even for this 'dream', there is no pragmatic blueprint. It is still in the realm of vague slogans and pious wishes. They are painfully aware of the 'evils' of socialism (or shall we call it the Stalinist model of distorted socialism), but they are blissfully unaware, and indeed ignorant, about the necessary infrastructure and prerequistes, pitfalls, complexities above all the exploitative edge of even the revised and modified modern capitalism. We do hope that from socialist illusion to capitalist illusion, would not be the course of their tragic destiny of disappointment.

It is in this context that India's future course of relations with the Central Asian republics will have to be examined and recast in a systematic manner with projections of probable alternative scenarios. They are revising their domestic policies and perspective, as well as their approaches to international politics, trade, commerce, diplomacy, cultural values, security and defence-related issues. It is necessary, indeed imperative, for us in India to relate and re-evaluate these changes in terms of our own national and regional interests, keeping in mind the larger goal of peace, stability and security covering South, Central and West Asia and the need for strengthening the process of secular-democratic nation-building.

◆

DURING our visit to Tashkent, Samarkand and Alma Ata (January-February 1992) as part of an unofficial goodwill delegation sponsored by the Government of India to Central Asia, to convey the good wishes of our people and administration and assurance of our deep interest in promoting mutually beneficial relations in several fields of collective life, we realised how significant and pre-eminent is India's position and possible role in their scale of priority.

The five Central Asian republics with which India has already decided to establish full-fledged diplomatic ties are: *Uzbekistan* (Pop.: 21 million), *Kazakhstan* (17 million), *Tajikistan* (16 million), *Kirghizia* (5 million), *Turkmenia* (4 million). This is symbolic of our deep concern for their sovereign existence and for their desire to give a socio-economic content to stabilise the foundation of their new identity. For paucity of time, our delegation could only visit the two larger republics of Uzbekistan and Kazakhstan in its ten days sojourn and meet top political and cultural leaders—Prime Ministers, Deputy Prime Ministers, Foreign Ministers, Ministers of Construction, Culture and Education, Information, Heads and Professors of the Academy of Sciences and Universities, members of the Presidiums of Friendship Societies, few media persons and religious leaders. It was obvious throughout our discussions at all levels that India enjoys a place of pre-eminence in their consciousness not only because of long historic ties and common heritage, but especially due to two other contemporary factors, namely, our close friendship and cooperation with the Soviet Union (of which Central Asia was a part) for the last four decades, and during that period, our special concern for the Asian republics as indicated in the fact that Jawaharlal Nehru had invited them as participants in the Asian Relations Conference in March-April 1947, New Delhi, and then so clearly articulated in his speeches during his very first visit to the Soviet Union and Central Asia in June 1955. Secondly, our secular democratic structure of governance recognising the equal rights of our multi-ethnic and multi-religious population coincides with their own perspective of nation-building—a fact significantly underlined by the Deputy Prime Minister of Kazakhstan, Dzoldasbekov, when we met him.

The Prime Minister of Uzbekistan, Abul Kasim Mutalov, set the tone of our discussions when he said with considerable conviction that they are 'very proud of friendly India', and its role in 'regional and world politics' and that they look forward to cooperation with India in many sectors of their development plans. That was the reason that the very first visit of the Uzbek President, Islam Karimov, was to India in the middle of August 1991. He said: "I will start my foreign visit by going to the big Asian country—India." Similarly, the Kazakh President, Nursultan Nazarbayev's first official visit was to India, in the third week of February, when he signed five agreements outlining the general scope of our bilateral cooperation.

The possible agenda of cooperation was spelt out by the Foreign Minister of Uzbekistan, Ubaidullah Abdurazzakov, when he said: "We need considerable help of India in many spheres—economic, political, scientific, technological, cultural, etc., especially in areas of managerial services, investments and banking sectors, market economy problems, service sector and telecommunications."

Equally keen are the educationists in working out agreements for promoting cooperation in higher education and certain areas of joint research. The Rector and Professors of Tashkent University and members of the Presidium of the Academy of Sciences—where a beautiful painting of Al-Biruni now adorns the Committee room—and the Minister of High and Secondary Education of Uzbekistan, Dr Shaukat Alimov, mentioned that in some fields of knowledge they have practically no expertise, and it is in these areas that they would seek effective cooperation with India. Already they have established close contacts with Indian scientists in applied and fundamental research, especially in physics, electronics, solar energy research, etc. Now they would like to extend cooperation in management studies, industrial studies, computer sciences, international law and organisation, social sciences like economics and political science. They are on the verge of recasting their educational system, and would like India to advise them especially from its own experience of running Institutes of Technology and Institutes of Management, as well as the entire gamut of social science studies.

◆

SIMILARLY, the Al-Farabi University in Alma Ata, named after the famous medieval scientist, philosopher and encyclopaedist, and established in 1936, proposes to introduce degrees on the pattern of BA and MA in India, and is planning to revise the content and perspectives of their textbooks, especially in social sciences and history. They consider India's experience of much relevance to them, as it has had, as they put it, the advantage of having synthesised Western knowledge to the specific requirement of transforming an Oriental civilisation to modernity. The Al-Farabi University would like to explore prospects of joint research collaboration with India. They have joint research project in cosmic radiation with the US, and in other fields of sciences, with Germany, France, Scandinavian countries and China.

The Kazakh Information Centre is a collective of journalists who are eager to establish fruitful contacts with media persons in India. Their news agency, *Kaytag*—a counterpart of the Russian *Tass* agency—is interested in establishing direct contacts with the Indian news agencies—PTI and UNI.

The Kazakh Friendship Society, housed in one of the most modern buildings in Alma Ata with elaborate facilities for conferences, meetings and cultural performances, etc. runs an India Club, called *Shanti*. The members of this club, under its charming and energetic secretary, Madam Zaitoon Masuma, have trained amateur artists in Indian dances, music and arts. They would like some dance *guru* to visit them, and teach dance techniques to the eager youngsters. They plan to establish a cinema hall for the exhibition of Indian films and video cassettes, which are tremendously popular and also to set up a library on Indian literature, culture and civilisation. The President of the Friendship Society, Madam Zeenat Ameerkhanov, underlined the fact that "our people have deep feelings and respect for Indian culture, and have great fondness for your films and music".

Almost identical sentiments were expressed in our pleasant and frank meeting in the Uzbekistan Union of Writers in Tashkent, which has been in existence for over 60 years, and with its over 700 members played seminal role in the intellectual life of the people. Their President, Jamal Kamal, spoke of the inspirational role of India's classical and modern literature, and its impact on Uzbek literary traditions.

A measure of their fondness for India can be seen in the fact that an authentic translation of *Ramayan* in the Uzbek language was done a long time ago, and the complete collected works of Rabindranath Tagore are already translated. Most of the writings of Jawaharlal Nehru—much admired and loved as a leader and politician of resurgent Asia—are already available and some more are being currently translated. Their eminent old poet, Shukrallah, told us that the poetry of Mirza Bedil, Ghalib and Iqbal is widely known in Uzbekistan. Reverting to the theme of commonality of humanism, ethics, goodness and peace in all religions, he said that for more than 60 years several books on the world's major religions and prophets have been published by Uzbek authors.

The writers have been very critical of the distortions made in their national identity by what they refer to, with obvious bitterness, as Russian colonialism and imperialism that entered Central Asia about 135 years ago, and despite radical changes and revolutionary slogans after the October Revolution, 1917, continued to maintain a posture of domination as evidenced by a deliberate attempt at 'Russification' of their culture, language, script, name and nomenclature in the name of socialist solidarity and integration of the Soviet Union.

They said it was almost like a situation where a whole nation was living in conditions of 'house-arrest'. They emphasised that they would now like to rebuild their society, polity and economy in conditions of sovereign independence, according to their own heritage and genius.

◆

TWO major concerns seem to dominate their endeavours at this point of their history. One, to stabilise the foundation of a productive, efficient and demand-fulfilling economy, and two, to build a secular, democratic state-structure in their multi-ethnic society.

The disintegration of the Soviet economy, due to its manifest incapacity and inadequacy of the alternative socialist strategy of industrialisation in providing better, more efficient and globally comparative consumer products, has left them in a quandary. They have to work out two transitions simultaneoulsy—transition from an integrated all-Union Soviet economy, managed by the central command and administration system, mostly from Moscow, to an indigeneous national economy, capable of responding to the urgent basic demands of its citizens; and a transition from a bureaucratically managed economy to a mixture of market-friendly and planned-priority pattern of economy. As of now no comprehensive blueprint for such a transformation seems to have been worked out.

On the ground level, however, any visitor to Central Asia, as to China, would be struck by an interesting indigenous phenomenon and institution, which may be called *bazar culture*. This is in sharp contrast to the total elimination of private market system in Russia and Eastern Europe. The *bazar*—the traditional market-place, with its origins in pre-industrial, barter-oriented feudal times—still persists, will all its noises, smells, bargaining transaction, etc. as the rudimentary lfie-line of basic supply and demand of essential goods in food and clothing for the people. Despite all the state controls under socialist dispensation, the *bazars* have remained a fairly open, competitive and mostly privately operated parallel economy. In Tashkent, near the Tillya-Sheikh mosque in the old part of the town, and in Samarkand, in the shadow of the famous Bibi-Khanam (wife of Timur) mosque, together with state-managed departmental stores called *GUMs* and *SUMs*, the traditional *bazar* have also coexisted, supplying fresh vegetables, fresh fruits and dry fruits brought regularly in horse-carts by nearby farmers and having garmet shops, provision stores, tailors, barbers, shoe-makers, etc. One might even say that systems may come and systems may go, but the *bazar culture* in Central Asia goes on forever. Indeed even Stalin and his ghosts could not haunt out of existence the perennial oriental *bazar* in Central Asia, which remained a safety-valve against the vagaries of state-run stores.

In pursuance of building a secular-democratic polity, they do face the possible threat of religious fundamentalism, especially due to their neighbourhood with Iran, Pakistan and Saudi Arabia, from where revivalist influences do emanate. But, as of now, there is no objective reason to exaggerate this fear. Most of the Muslims in Central Asia, together with Azerbaijan and 13 Autonomous Republics within Russia (Bashkiria, Buryat, Kabardino-Balkaria, Daghestan, Tataria, Checheno-Ingushetia, Chuvash, Yakut, Abkhasi, Adzhar, Kara-Kalpak, Nakhichevan and Karachai-Circassia) accounting for about 50 million people are imbued with secular orientation and enlightened outlook.

◆

THE American media and a section of its leadership has assiduously propagated the bogey of an 'Islamic arc', an 'Islamic bloc', and that too with nuclear capability, that would threaten regional and global peace. Senator Pressler, during his recent visit to India and Pakistan, has even alleged that there is the prospect of sharing of nuclear technology between the Central Asian republics and other Muslim countries, especially Pakistan. But on close examination of ground realities, and based on our own discussions and impressions in Tashkent and Alma Ata, one can state that the Americans and the Jewish press are again indulging in building a fanciful and perverse facade of what may be called Islamic 'demonology' as a possible adversary of their strategic interests in the region, and in the bargain scare India and secular forces in Asia. When questioned on this issue by our delegation, the Foreign Minister of Kazakhstan, T.S. Suleimenov, categorically refuted the allegation of any understanding or agreement with any country including Pakistan, for sharing of their nuclear technology or capability. He said they had already denied it officially, and it is sheer propaganda. This was further confirmed during President

Nazerbayev's recent visit to New Delhi.

There is no such political, diplomatic or strategic monolith called the 'Islamic bloc', and there is no prospect of such an aggregation emerging in the background of the recent wars between Iraq and Iran, Iraq and Kuwait and Saudi Arabia, Pakistan and Afghanistan, etc., not to mention the perennial Sunni-Shia schism that doctrinally divides Iran and Saudi Arabia, and Iran and Pakistan. It is well known that since the Kemalist revolution of 1920, Turkey had never been associated with this sort of religious pan-Islamic solidarity for common political goals. The Central Asian republics, with more than half a century of socialist orientation marked by hundred per cent literacy, access to advanced scientific education, recognition of equality of men and women, and positive public role of their emancipated women in many sectors of activities are most unlikely to emulate either Iran or Pakistan, much less Saudi Arabia. Their leadership is predominantly against any effort to use religion as a vehicle of political power.

Of course in the process of building a new national identity, when you go back to the roots to discover your heritage, the pervasive presence of religion is all too apparent, especially in traditional festivals, marriage and death rites, inheritance laws, inter-personal ethics, primordial outlook on life and the world, etc. But this aspect of religion as a sub-stratum of culture, social life and primordial ethics is different from religious fundamentalism. It should be remembered specifically that Central Asian Islam has been a great civilisational force marked by rationalist traditions and secular learning for centuries.

As an illustration it may be added that in no region of the global spread of Islam, from Morocco to Sinkiang, so many scientists, innovators, philosophers and encyclopaedists have flourished as in Central Asia, in the medieval period. They had been, however, erroneously and ignorantly referred to by some Western scholars either as *Arabs* (only because they wrote in Arabic—the then prevalent language of intellectual discourse) or as *Islamic thinkers* (only because they were born Muslims). Some of the world famous pioneering scientists and rationalists were *Musa Al-Khwarizmi* (d.840), the famous mathematician, who translated Sanskrit works in mathematics and astronomy, and introduced the Indian decimal system, hence mathematics is called *Al-Hindsa*—the science of India; *Al-Fargani* (d.860), astronomer and engineer; *Abu Nasr al-Farabi* (d.950), scientist, philosopher, encyclopaedist; *Abu Ali Ibn-Sina* or *Avecenna* (d.1037), the greatest name in medical science, the author of the *Canons of Medicine*, which for 700 years was the main text in Europe; *Abu Rehan al-Biruni* (d.1048), historian, geographer, mathematician, astronomer, and author of the most comprehensive book on India, *Kitab-al-Hind* (Book of India); *Mirza Ulugh Beg* (fiftheenth century), astronomer, mathematician, ruler of Samarkand, uncle of Emperor Babar whose famous observatory became the model of Raja Jai Singh's obsevatory at Jaipur and Delhi.

◆

IN this backdrop Islam in Central Asia is a mosaic of at least four streams of Muslim consciousness—the *rationalist-scholarly* scientific Islamic tradition; the *humanist-compassionate* Sufi tradition especially of the Naqshabandi, Suhrawardi and Kubrawl *silsilas;* the *socialist-secular* contemporary synthesis between Islamic heritage and socialist ideals; and the *traditional-madrasa oriented* conformist Islam. In such a mosaic of Islamic traditions, and given the orientation of the existing power-elite who have a stake for their own survival in keeping the secular-civil structures intact, it is most improbable and unlikely that Central Asia would either emulate Iran, Pakistan or Saudi Arabia in its political orientation, both in domestic and international politics. The Foreign Minister of Uzbekistan, Suleimanov, said: "We are not a religious state, though most of our people are Muslims." The bogus projection of 'Islamic fundamentalism' acquiring a contiguous territorial base, pan-Islamic unity and strategic solidarity, is the latest instance of deliberate disinformation propagated by interested power-groups. Why nobody speaks of the openly revivalist Russian Orthodox Church, with its slogan of Mother Russia (which had recently celebrated with great fanfare the millenary festival of Christianity), seeking to build a Slav-Christian imperuum with Ukraine and Belarus, in collusion with the Roman Catholic clergy and the Pope in Europe. For argument's sake one might as well speak of Christian fundamentalism, spanning Western and Eastern Europe, as a threat to peace and security. But this would be equally fanciful and unrealistic.

The Central Asian republics naturally give the highest priority to their basic concern for building a viable economic system. Every offer made to them, from any country, irrespective of that country's internal politics and their other motives in doing too, is welcome, because 'beggars are not choosers'. Between September and December 1991, Turkey played host to three Presidents—Niyazov of Turkmenia, Karimov of Uzbekistan and Nazarbayev of Kazkhstan, and President Turgut Ozal himself visited Alma Ata in March 1991. They also cultivated Kirghizia and Azerbaijan. Turkey signed a widerange of bilateral agreements with each Central Asian republic mainly in trade, economy, culture and educational cooperation. Most significantly, Turkey has agreed to provide financial and technical assistance for the modernisation of industrial enterprises. Iran had despatched its Foreign Minister, Ali Akbar Velayati, in November-December 1991 to expand the existing economic and cultural relations, especially in banking, insurance, transportation, tourism and higher education. They offered to open air-links and extend port and transit facilities to these land-locked states.

Pakistan also went in top gear, by sending a 20-member high-level delegation in November-December 1991, comprising parliamentarians, academics, journalists, public men representing trade and industry, and government officials, under their Minister of Economic Affairs, Sardar Asif Ali. They offered to different Central Asian republics several facilities like joint ventures, commercial credits, food supplies, medicines, cement factory, telecommunication system, offers of new trade routes for commerce, use of port facilities, opening of railway lines connecting Central Asian cities to Karachi, use of river navigation on the Indus, use of roadways and airlinks, etc. An estimated expenditure of $ 4-5 buillion, spread over a period of eight to 10 years, has ben envisaged, if appropriate agreements are signed. As a consequence of this visit, the leaders and media of Pakistan were euphoric in proclaiming that Pakistan had achieved a breakthrough in its relations with the Central Asian republics". Yet, in a revealing manner the leader of the team in his exclusive interview to *The News* of Pakistan (January 9, 1992) also admited most significantly "that Pakistan's Afghan policy could create an obstacle in ties with the Central Asian republics". He admitted about Uzbek "concern related to the Afghan situation". He mentioned that "Tajikistan is worried over our Afghan policy", and that "an extremely conservative Islamic Government will not be acceptable to the Tajik population of Afghanistan". He added that "the leader of Kazakhstan, Nursultan Nazarbayev, expressed exactly the same fears and concerns" about Pakistan's Afghan policy. Sardar Asif Ali also stated that the Central Asian republics "have a unified policy towards Afghanistan", and admitted that "by sending arms to the Kabul regime (of Najibullah) a signal to Pakistan has been sent". He added ominously that "if the Afghan stalemate continues... these countries may become hostile towards Islamabad because of their own security problems." In the light of these quotations, nothing more be added to negate Pakistan's exaggerated claim of a 'breakthrough' in its relations with the Central Asian republics. Economic transactions need not change political approaches and basic policy orientation.

◆

FRANKLY, we could clearly see that in the minds of the leadership of Uzbekistan and Kazakhstan there are many reservations about Pakistan as a state, as a polity, and more so about its rather narrow religion-dominated orientation in national and regional politics. Therefore, they have some hesitation in responding even to Pakistan's suggestion to join the Economic Cooperation Organisation (ECO) of which Turkey and Iran are other members, and more than that to accept membership of the Organisation of Islamic Countries (OIC), despite their predominantly Muslim population.

Saudi Arabia has been also pumping money for the repairs and construction of mosques, and publication of religious books, in thehope of winning support of the conservative Sunni section of the people.

Our clear impression has been that they have strong ethnic, linguistic and cultural affinity with Turkey. There are undercurrents of Pan-Turkic nationalism, but even that in a loose confederal form, even in its patten of close cooperation between the Central Asian states themselves. They would have a secular basis of solidarity, and not a form of Islamic fundamentalism, which has been so repugnant, on the one side, to the Kemalist traditions of modern nation-building in Turkey and on the other, to the main ethos of socialist transformation, which anyhow remains the foundation of contemporary Central Asian Muslim societies. The sources of inspiration for the new Turkic identity, based on secular polity, raionalism and modernity, are the personalities of statesman like Mustafa Kemal Ataturk, philosopher like Zia Gokulp, and the women's lib leader like Khalida Adib Khanum. Gokulp said: "Belong to the Turkish nation, the

Muslim religion and European civilisation". Ataturk while presenting the new civil code for adoption in 1926, based on Swiss law, declared: "We have decided to accept modern civilisation and its living principles without any condition or reservation." Khalida Adib Khanum in her lectures in Jamia Millia Islamia in early thirties spoke about "the meeting of the East and the West in Turkey—the birth of a new civilisation of enlightenment".

It should be recalled that a dynamic Central Asian Communist leader, Sultan Galiev, had spoken in the Comintern in 1928 of the distinct Turkic identity and about the need to build a pan-Turkic republic within the Soviet Union. Stalin not only opposed this proposal, but saw to it that Sultan Galiev was denigrated as a bourgeois-nationalist, and eventually liquidated.

It is quite manifest that in the consciousness of the leaders of Central Asia, Turkey and India loom large as preferred Asian neighbours, with whom they would like to build multiple and stable contacts. Next to Turkey, of all the Asian neighbours, Uzbekistan and Kazakhstan have the warmest sentiments towards India. We have a great historic opportunity to grasp and to play an innovative role by working out tangible plans of cooperation, to be worked out on specific areas by specially constituted committees of experts. We can help build a comity of secular-democratic states in Central Asia for regional and mutually beneficial cooperation as a counter to the policy of confrontation, that is the game that the religious fundamentalists would like to play.

There is need for high level ministerial and representative non-official delegations to visit all the five republics at the earliest, as a follow-up to the understanding already reached for mutally beneficial relations. The moot question is: Shall we respond to this challenge, and help build a region of considerable political and strategic relevance to our national and regional interests or by default and delay and unimaginative prevarication, allow us to be marginalised by inimical interests and political adversaries, that will upset the balance of power in our part of the globe? ■

SAMAL: Budget

(Continued from page 14)

turing of tariff rate, sweeping cuts in customs duties on a large number of commodities including capital goods, project imports, etc. as well as full exemption of customs duties on a few goods such as glazed newsprint, etc. resulting in a net loss of Rs 2023 crores; (vi) permission to foreign investment in the Indian capital market and in the critical infrastructure sector including power, hydrocarbon, oil and gas; and (vii) promise of a further reduction in administrative controls of E E R A over companies exceeding 40 per cent foreign equity and also non-resident Indians.

Various other steps have been taken by the Finance Minister in his Budget to liberalise the domestic economy by giving greater role to the private sector such as (i) abolition of government control on capital issues including premium fixation; (ii) allowing the private sector in infrastructure including the power sector; (iii) permitting the new private sector mutual fund to operate in the capital market; (iv) giving more concession in capital gains and wealth tax and no change in the corporate tax structure; (v) liberalisation of financial sector on the basis of Narasimham Committee by allowing a larger role for the private sector in banking, reduction in statutory liquidity ratio and cut in floor level of interest rates on commercial advance by one percentage point; and (v) further sale of equity of Rs 1000 crores of public sector undertakings even after disinvestment of equity holding of the PSUs to the tune of Rs 2500 crores.

Other steps on the basis of the IMF conditionalities are: reduction of subsidies on export, food and fertiliser in the name of proper pricing policy and a cutback on spending on rural development, social and poverty alleviation programmes.

Thus in the game between different interest groups in India, the industrial captains won but in the larger game between two players, that is, the local capitalists and multinationals, it is the transnationals who won the match with their bulldogs, the IMF and the IBRD. In the process the rich will gain and the burden of adjustment will be borne by the poor. ■

Perestroika and After

A Critique of Developments in former Soviet Union

PIJUSH SOM

This article was written in December last just before the complete disintegration of the USSR. In view of its abiding relevance, it is being presented here.

—Editor

The recent developments in the USSR and Eastern Europe have had painful effects not only on Communists but also on socialists in general. Socialism is not only a body of doctrine but also a political movement. Historically, socialism is prolific of its aims and methods. Socialists belong to opposing schools pursuing different aims and methods such as the Syndicalists, the Guild Socialists, or the Communists. The noted philosopher, Joad, has rightly said:

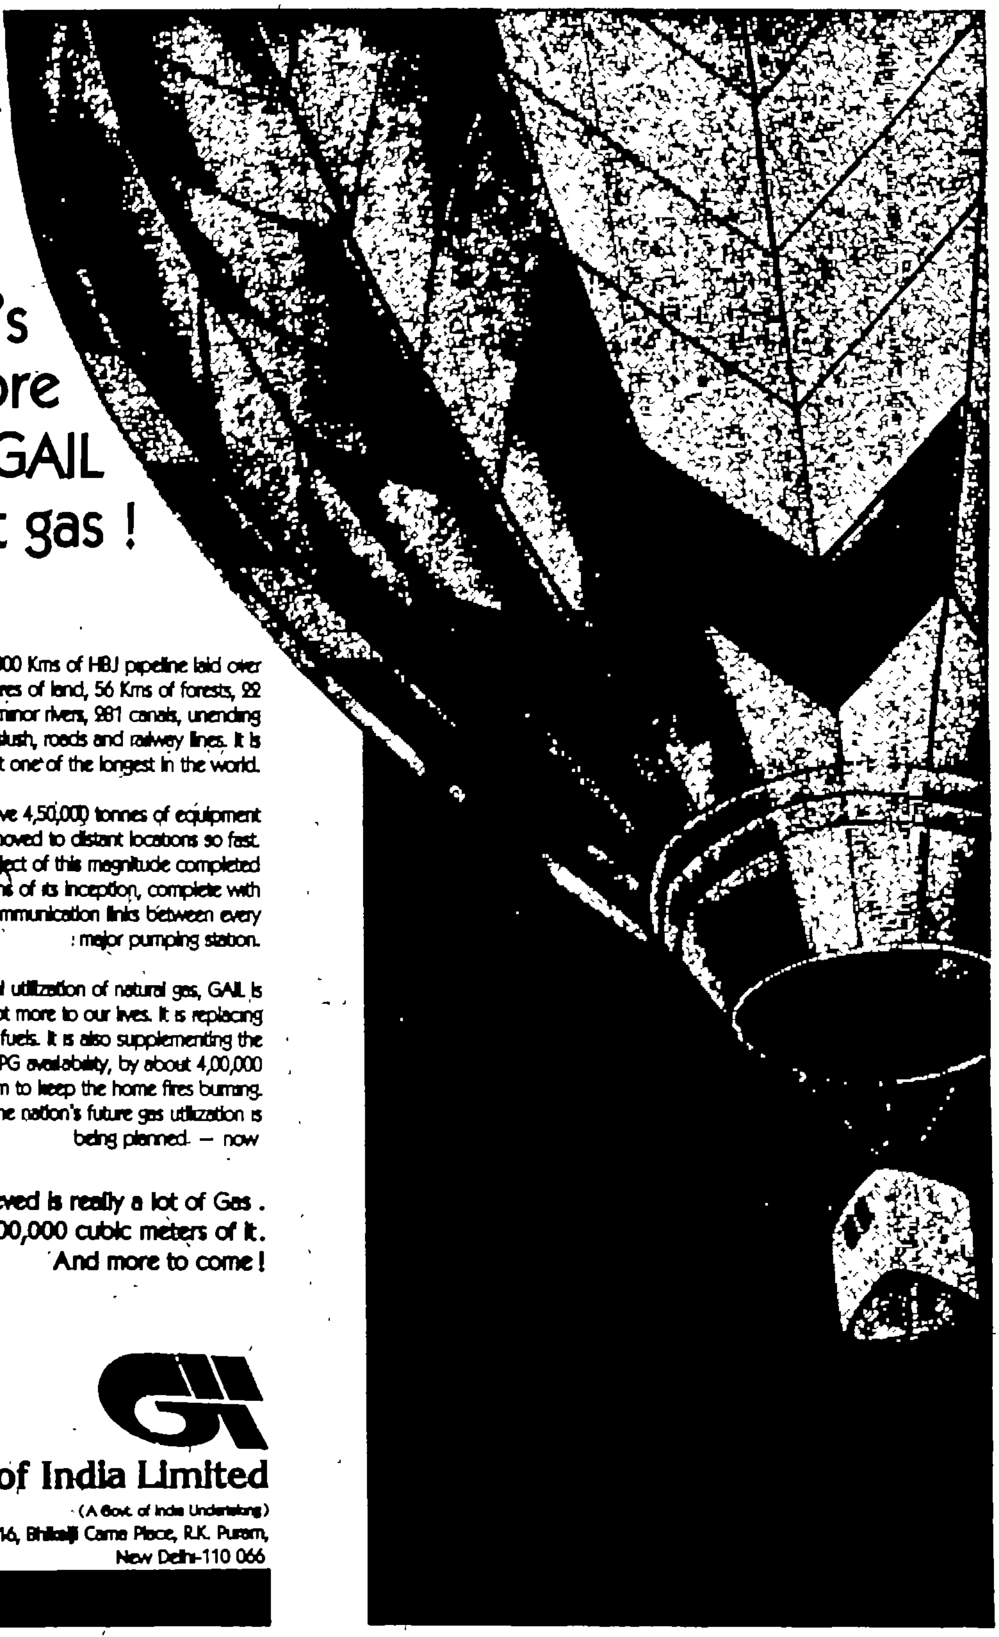
> As the advocates of socialism are very numerous..., the literature on the subject is enormous, with the result that it is hard to say in what exactly it is that socialism consists. Socialism, in short, is like a hat that has lost its shape because everybody wears it.

Ideology versus "Realpolitik"

Be that as it may, Karl Marx is considered as the father of scientific socialism. The 'Theory of Value' and the materialistic conception of history are the pillars of his theory. The influence of the concept of class war, as developed by Marx, had a deeper impact on the thoughts and actions of the Communists. A critique of the Theory of Value in the context of the changing scientific-technological scenario and its impact on the management and organisation structure of production has not been as popular in the communist movement as the concept of class war. The sense of euphoria with the success of communist revolutions in Russia and China within the time-frame of three decades perhaps did not allow fresh thinking on the impact of the rapid techno-economic changes in the so-called capitalist countries after the Second World War. This is due to the nature of revolutionary politics in Russia and China where personal ambition, coterie rule and intrigues became no less relevant than the economics of the production stage. But the former have been always considered irrelevant in Marxian theory. As it happened, the spin-offs of the revolution and civil war made these factors more relevant to the sustainability of the concept of "communism in one state" than the foundation of economics. For, the "communist state" is not an import of the Marxian theory and is a contradiction in terms.

Prof Som, a noted civil engineer, is a former Dean, Faculty of Engineering and Technology, Jadavpur University, Calcutta. He is presently the Vice-President of Science for Society, Calcutta.

The Marxian theory of historical determinism is presumably based on a few case studies on the past social changes. It is a speculative construction of the future stages of social change from the capitalistic society to a classless one. It is an induction from the particular to the general and, therefore, an attempt to describe the future society as a type. In experiments with communist revolutions we are shown much deviations from what had been foretold. For example, the revolution, according to the Marxian prescription, is to occur as soon as economic conditions are ripe for its occurrence. If it is right, then the revolution should have occurred first in Germany. But it occurred in Russia where, according to Lenin, the preconditions for the socialistic management of production were absent. The next revolution took place in China which was far behind the industrialised liberal states. Again, history does not establish that the advancement of capitalism in liberal states has sharpened class war to the point of an explosion. On the contrary, the recent explosion in Russia after the announcement of *perestroika* and *glasnost* has proved that the shortest route to modern capitalism is via communism. The Marxist theory and its various interpretations to present it as a comprehensive description of future social changes have not proved to be absolutely true. Clearly, the obfuscation of the people's mind during the communist revolution and civil war do not allow



There's
a lot more
to GAIL
than just gas !

It is over 1800 Kms of HBJ pipeline laid over 5100 hectares of land, 56 Kms of forests, 22 major and 69 minor rivers, 281 canals, unending stretches of slush, roads and railway lines. It is in fact one of the longest in the world.

Never before have 4,50,000 tonnes of equipment and pipes been moved to distant locations so fast. And, a project of this magnitude completed within 19 months of its inception, complete with satellite communication links between every major pumping station.

By optimal utilization of natural gas, GAIL is adding a lot more to our lives. It is replacing conventional fuels. It is also supplementing the country's LPG availability, by about 4,00,000 tonnes per annum to keep the home fires burning. The nation's future gas utilization is being planned — now

**All that GAIL'S achieved is really a lot of Gas.
30,00,000,000 cubic meters of it.
And more to come!**

scientific scepticism about the Marxian theory to grow. Devoid of this scientific scepticism, the Marxian theory has been gradually reduced to an idea. If it is true to suggest that ideas play no major role in "realpolitik", that is, in determining the course of political events, it is idle to debate whether some ideas are better than others.

After the revolution Lenin did not have much practical help from the teachings of Marx and Engels to evolve the economic and national policy in Russia. Lenin's thoughts in the Russian context were concretised, *inter alia*, in his new economic policy (NEP) which had a momentous shift towards the evolutionary socialism organised under the worker's state. Lenin took a position between the communist revolutionary thought and the idea of the collectivist state advocated by the evolutionary socialists whose ideals were best stated in the British Labour Party pamphlet, *Labour and the New Social Order*, published in 1919. This radical modification of Lenin's outlook on communism under the working class state differed materially from the views and expectations of the pressure groups born out of revolution and civil war. They had a stake in the position of power and control achieved by means of the revolutionary class war. The October Revolution had involved this risk, which the evolutionary socialists will not like to take. History cannot be erased and Russia found its leader after Lenin's death to make her tryst with destiny.

After Lenin's dealth in 1924 the struggle for power continued for three years between Stalin and Trotsky over the choice between the former's "communism in one country" and the latter's "world revolution". After the failure of communist revolutions in Germany and Hungary in 1919, Stalin's thesis gained more support from the pressure groups within the party and Trotsky was eventually outmanoeuvred. The Stalinist era began. The NEP was abandoned. Whatever Stalin thought and did during 1928-53 is a subject of criticism today. To judge the ethics of power exercised by Stalin one should also bear in mind the existentialist sermon that "existence is the essence of values". Let us examine the factors governing the existence of the communist state during the thirties.

Stalin in the Historical Perspective

Hitler became the Chancellor of Germany in 1933. He banned the Communist Party and took measures to suppress it in Germany. To seek protection from the German threat, the Soviet Union joined the collective security of the League of Nations. When the Munich Agreement made Stalin believe that Britain and France were not prepared to fight against Hitler, the Soviet Union in 1939 signed a non-aggression pact with Hitler leaving Poland as a buffer state. Thus during the thirties Stalin was in search of security. He had no natural ally in international relations. He was buying time to set his own house in order. He was compelled to maintain the forced stability in the Soviet Union for rapid industrial growth. This enabled him to fight aggression from the West, that is, Germany. Stalin's policy achieved this goal in a remarkable manner for an agrarian country like Russia which had been under Czarist rule till 1917.

Stalin came to absolute power after Trotsky's defeat in 1928. He died in 1953. Assuming the impact of his policy having continued for a decade after his death, let us examine the industrial growth in the Soviet Union during 1929-1963 comparing her productions of coal, steel and electricity with those of the USA, the UK and Germany.

	USSR	USA	UK	Germany
Coal (million tonnes)				
1929	50	500	270	180
1963	520	400	210	150 *
Steel (million tonnes)				
1929	15	65	10	16
1963	80	110	20	30 *
Electricity (billion KWHs)				
1929	25	80	25	60
1963	400	1050	170	170 *

*Figures are for West Germany

Stalin's Five Year Plans were responsible for this staggering success of industrial development within three decades of which the last one recorded a phenomenal growth. In agriculture, Stalin's policy of collectivisation organised farms upto 10,000 acres with mechanisation. Use of farm machinery, introduction of better methods and development of marginal lands, elimination of private ownership of land and collectivisation of land released peasant manpower from the land to join the labour force required in mines and factories for industrial advancement. Almost all children got school education for being converted into competent industrial workforce with indoctrination in communist beliefs. Despite his failure in the agricultural sector, Stalin could enforce his dictatorship successfully because of the following material conditions:

(a) Hardship and shortages, lack of personal freedom and obedience to the authority had been the characteristics of life in Czarist Russia. These were perpetuated by the Communists more vigorously for industrial development.

(b) In the early period of the post-revolutionary era the common people of Russia enjoyed a higher standard of living and hoped for a better future which was believed to be threatened by the emergence of Hitler.

(c) Development between two world wars and the consequent international relations engendered by the Rome-Berlin axis in Europe made Stalin's dictatorship permanent in the "realpolitik" of saving "communism in one state". For there is reason to believe that immediately after the revolution the USSR, which had no tradition of liberal democratic government within its multi-ethnic vast territory, could only opt for a dictator to achieve the phenomenal industrial development to face Germany which attacked Russia in 1941. Indeed there was no bluff in perceiving the threat from Germany.

Therefore, Stalin's transitional dictatorship requires a study in the historical context of the October Revolution in the backward state of Russia which encountered immediately after the revolution a nexus of hostile international relations leading to the attack by a very powerful industrial nation like Germany. To eulogise Lenin's conceptual NEP and decry Stalin for his means to achieve "communism in one state" do not constitute a correct assessment of the post-revolutionary scenario of international relations dominated by force and anti-communism. After the Second World War, Stalin's dictatorship became more rigid on account of several reasons which are being discussed below.

The Second World War proved to be a major watershed in international relations on several counts:

(a) During the War and afterwards the USA clearly abandoned the principle of isolation from European politics enshrined in the Monroe Doctrine.

(b) The US intervention in European politics with vigorous militarism and aid programmes like the Marshal Plan was aimed at resisting the advancement of communism in Europe.

(c) The last hope of hardline European Communists in securing the overrun of Europe by Stalin's army after the fall of Berlin was strategically emasculated by the Yalta Agreement and the subsequent developments of the NATO and Aid Plans.

(d) The impact of the dominoe theory on US political strategists dictated Truman's policies of containment and Cold War against the USSR. The fallout of the Cold War in the Third World made the US reactions to the political developments there anti-USSR. The world became truly bipolar. The threats of a nuclear war and arms race escalated during the Cold War.

(e) The technological dimension of international relations increased to such an extent that the transnational corporations (TNCs) dealing with informatics, chemical and heavy industries influenced government decisions in their own interest in the non-communist states. The resources—both human and physical—of the free world were being organised on a global scale. The TNCs controlled the flow of funds in R & D intensive production technologies, the secrets of which were strictly guarded. The scope of R&D and transfer of technology through intra-firm arrangements alone were dictated by the TNCs in several countries of Europe and the Third World on the basis of the comparative advantages of political economics. By contrast, the technological challenges of the TNCs and their governments, of which the USA was the most dominant till the eighties had to be faced singularly by the Party-state of the USSR whose resources were made tenuous by stretching it for supporting communist interests in the Third World and the COMECON countries as well.

In the context of these developments, Stalin's dictatorship became absolutely rigid to gain military strength based on high technology. This was achieved at the cost of the human factor and liberalism. It is one thing to be a good Communist, but it is completely different to resolve the contradictions of a "communist state" as its head when challenged by a superior technology provided by big corporations working in collaboration with their governments.

Consumerism

Militarism apart, the USSR increasingly faced the challenge of consumerism in the affluent societies of the West and the USA. And consumerism in these countries was supported by the technological spin-offs of informatics, chemical engineering and space programmes—all built around military goals but utilised by the innovative entrepreneurs in a free market catering to the public. By 1980s the main characteristics of the free-market economy of the liberal states emerged as follows:

(a) In the field of heavy industry, chemicals and pharmaceuticals, and informatics a few big corporations are supported by governments in the form of loan financing, market control and tariff regulations.

(b) The production of goods and services in consumer goods' market are unregulated. Entry and exit of entrepreneurs from the consumer goods market are determined by market forces. The profligacy of energy demand and economic surfeit characterises this market. Consumerism becomes responsible for pollution and degradation of environment which grows alarmingly. Liberty in the affluent societies is equated with their governments' capacities to underwrite the social cost of consumerism with an unregulated free-market economy.

The convergence between the socialist system of the USSR and the capitalist one of the liberal states in regard to the first characteristic is complete in principle. In regard to the second characteristic, the divergence between the two systems is attempted to be bridged by means of *perestroika* and *glasnost* in the USSR. Prof Galbraith's analysis in favour of this argument needs a deeper study to understand the impact of *perestroika* and *glasnost* on history.

Infirmities of Perestroika

Gorbachev's *perestroika*, that is, the restructuring policy, has several infirmities:

(1) It did not resolve the issues related to nationalities in the interest of the Soviet republic. On the contrary, it exploded the Stalinist myth that the October Revolution, unlike the French Revolution, made the concept of bourgeois nationalism irrelevant to the socialist state.

(2) The implementation of *perestroika* in a socio-economic-political structure governed by a command system precluding free market in any sphere of life for about seven decades was not judiciously planned. The slogan of *glasnost* and *perestroika* in the extant socio-economic conditions engendered amongst the Soviet people a madness without any method.

(3) The emergence of the political instability pursuant to *perestroika* should have been easy to visualise. *Perestroika* and *glasnost* are aimed at weakening the Party-state which was responsible for the planning and control of heavy industry, chemical engineering, informatics, mining, utilities, etc. Who was expected to fill up the vacuum after the fall of the Party-state? Foreign TNCs are not expected to immediately come to the rescue in an unwholesome social situation. Free market and indigenous big corporations cannot be expected to grow by wishing for them after announcing *perestroika*. Neither could the Party survive nor did the free market come into existence to serve the people already belligerently divided along ethnic and regional lines. The results are disastrous.

(4) *Perestroika* suffers from a 'technology fix' fuelling the desire for production and consumption of the metropolitan culture in the affluent West. By contrast, the urban crisis and the 'technology fix' are pushing the failed children of capitalism in urban areas of the liberal states towards socialistic ideas. *Perestroika* suffers from an illusion too.

Therefore, what we observe as the outcome of *perestroika* is disintegration of the communist states in the USSR and East Europe. *Perestroika* and *glasnost* do not resolve the contradictions of the communist state and people there do not know as yet where they would go from here. Freedom is easier to shout about than to practise in life.

Lessons

The lessons of the absurd drama of Gorbachev's restructuring "socialism in one state" are:

1. Society is pluralistic. Social groups intersect with economic classes. The same economic class does not imply same interests of social groups belonging to the class. Social groups have linkages with their members across the class boundary. Pluralism cannot be ironed out by totalitarianism.
2. Given the pluralism the contours of social thoughts give rise to the polynodal morphology in social perception, anticipation and participation in socio-economic and political activities. Democratic centralism is incompatible with this social model of participatory actions and is tantamount to command bureaucracy.
3. In the context of the technological revolution there is an irrational quest for "labour productivity" by substituting capital and energy for human labour. This is bound to lead to unsustainable levels of resource use and environmental degradation as well as unemployment. Less profligacy in energy demand and economic surfeit will lead to less damaging ways of production, consumption and disposal of waste. These will be fully consistent with full employment because these will be more rationally labour-intensive. Sustainable global economy will need people's participation based on scientific-technological awareness and not advertisements of the media making continuous propaganda in favour of high-tech but useless consumerism. Socialist leadership and regulations which care for all are necessary to avoid militarism and consumerism both of which are net-energy inflationary and unsustainable in the long term.
4. New humanism in the age of 'technology fix' must be imbibed by the people who should then ask their governments to recognise a threshold in energy consumption beyond which society succumbs to technological processes with the marginalisation of both nature and man. Capturing the power of state has been the main concern of a political party. Unless the society is imbued with human values, care for the environment and ecology without economic surfeit as the only expression of high-technology, the state power will corrupt everyone from top downwards.
5. Pursuant to the technological revolution in super-techno societies after the Second World War the centres of power are being concentrated in several TNCs. They can capture centralised organisations like a highly regulated collectivist state, closely coupled insular party system, and military dictatorship to use them by proxy for delivering technologies, products and patterns of

consumption without the appropriate socio-economic context, especially in the Third World. Metropolitan culture gains primacy with the transfer of these irrelevant technologies in economically backward countries. This heightens the existing core-periphery contradictions which gradually destroy the cooperation and collaboration of the Party system with the people. There is a great need to evaluate the appropriateness of technologies for transfer by means of participatory action research (PAR) involving scientists, technologists and the relevant social groups using the socialist party as a forum.

6. In the Third World technology should aim at self-reliance of the people. This can be achieved by tailoring technology through functional literacy of target groups. The use of informatics for the decentralised modes of production, information transactions, and small scale entrepreneurial development with science and technology should be the policy for technological upgradation of the society. Borrowing high technologies and foreign capital in an unregulated economy will push the poor and highly populated countries of the Third World into a socio-political wilderness where the TNCs and local compradore class will exploit the people. It must be borne in mind that technology is socially neutral. We must use it as it serves the people's purpose.

7. To weave the various social groups and voluntary organisations without fear or favour to develop fellowship for social services should be the first concern of a truly socialist party today. To depend on the omni-competent Party-state for social, cultural and economic activities will lead to a socially unwholesome situation where self-reliance will be a far cry. No amount of *perestroika* and *glasnost* at a later date can yield social integrity from this de-humanised Party-based passive social order. Power of the Party-based command system must not be equated with a virtuous social order. As Socrates says that virtue is knowledge, the socialists must be imbued with the organised knowledge of all aspects of human existence before they can organise society with humanism.

8. Socialist developmental urge for resource management should be governed by the humane principle: we have enough to meet the needs of people but not their greed. This is the condition of our freedom and fellowship in society. Without them individuals will degenerate themselves in a rat-race for survival in a consumerist society where no restructuring is feasible.

9. Science and technology should be applied to upgrade the traditional technologies and to decentralise functionally new economic activities in small and medium units, as far as practicable, with environmental care and ecological development. These units of production in a vast country like India will form through a system of functional representation the Regional Economic Council to determine "What, How, and for Whom" of production, manners of exchange and distribution. The Regional Political Council will organise executive and judicial powers to sustain the economic activities of the people and to maintain the socio-cultural integration. These centres of economic and political powers are to be federated in a large country at the national level. The role of the socialists will be to orchestrate these developments with a holistic approach and to ensure that the organisation of power be linked with the economic and socio-cultural activities of people with self-determination at the neighbourhood level. ■

Gender, Poverty and Cats on a Pilgrimage

MRINAL PANDE

> India has invested and continues to invest far less in its women workers than in its working men. Women are less endowed with productive resources... all of them could bring higher returns to their labour. (*World Bank Country Study on Gender and Poverty*. December 1991).

When strong advocates of sovereignty of the market begin to project themselves as even stronger advocates of the rights of women (especially the poorest ones), my traditional alfactory lobes begin to smell a rat. The common Hindustani proverb comes to mind—*Sau, sau choohe khai ke billi Haj ko chali* (having polished off a hundred mice the cat leaves on a holy pilgrimage).

The above study on gender and poverty in India is salient proof of how, in the name of pro-women policies, women as human beings in the feminist context may be used as integral parts of a new international aid-system. It also illustrates how the traditionally low-visibility, high-risk feminine occupations, such as running a home and raising families, could be objectified in feminist contexts and then neatly coopted to justify high-visibility dole systems for the poor in the Third World countries. In objectifying women, the researchers lay the foundation for objectifying all social and personal relationships. What it feels to be a wife or a daughter or a daughter-in-law in the poverty-ridden Indian (particularly rural) contexts, and 'raising' the level of the 'consciousness', therefore, acquire a value for higher than that of demographic or economic statistics, and sophistry often replaces scientific data.

In contrast to the observations of the earlier (1991) *World Bank Development Report* which says that "markets in developing countries cannot generally be relied upon to provide people, especially the poorest, with adequate education..., health-care, nutrition and family planning services", the Gender and Poverty Report of the Bank says smoothly: ".... Market forces have great potential to influence gender ideology and to increase the perceived value of women." It then goes on to conclude that economic success for women will improve their own lives and those of all Indians For this end, women's access to goods and services, to productive assets and to factor markets must be improved and brought probably at par with that of the Indian male's. It even presents a generalised theory of how the 'inside-outside dichotomy' in the Indian society has rendered almost all Indian women invisible and forced them to stay inside their homes, where social custom has been exploiting them mercilessly, and how in contrast the Indian male who has uninhibited access to the 'outside' (and all its fringe benefits like access to the markets, goods and information) has hogged all available resources and aid.

Generalisations like those are used to promote the ultimate view that the economic environment in countries like India must be altered through new public policies, so that women's dependence on household processes may be reduced, and that "market forces should be allowed to influence the boundaries of culturally acceptable women's activity". With this, the urgings of the new international market-equations translate themselves effortlessly into urgings for restructuring of Indian families, as per the market requirements. It figures. If more women can be pursuaded to exchange their traditional family-based occupations for paid jobs in the new restructured economic system, they are far less likely to insist that their families hang on to their lands or looms or potter's wheels, or demand domestic bread when the market is offering imported cakes.

◆

THE experience of women activists shows that in the market the terms of oppression are not only dictated by history, culture and sexual and social divisions. They are also profoundly shaped at the site of oppression, and the way the employers and the employees negotiate, construct and establish their relative positions vis a vis power and profit.

A good example of this is the garment industry in our export-oriented free trade zones, which has been generating jobs for rural women in Gujarat and Maharashtra. On a visit to one such zone in Kerala this writer found that there the industry capitalists, instead of raising the levels of women's consciousness and earnings, further exploit their traditional submissiveness and go on to define skills, set wages (far lower than the stipulated minimum) and organise work-hours in ways that deprive poor rural women of any genuine chance for bonding or acquiring a status within the industry as regular workers (who could raise awkward questions and demands). Similarly, in the Dharavi slums in Bombay, the members of the

National Commission on Self-Employed Women in the Informal Sector (of which the writer was also a member) found that both the national and multinational companies that produce consumer goods such as toothpaste, toilet soap, *agarbatties* and *papads*, have increasingly and most blatantly been taking advantage of cheap home-based female labour in the slum areas or our metropolitan cities for fishing and packaging of their goods—at a fraction of what it'd have cost them otherwise. These home-based women workers, whose families are hit the hardest by economic recessions and factory-retrenchments, find the idea of work available at their doorstep so alluring, that they even accept the pitifully low wages and high rejection rates for finished goods, as also the overcrowding of their hovels with cartons and dangerous flammable material, without so much as a murmur of protest. The Shramshakti Report of the Commission recounts these encroachments of market forces upon the worlds of both the home-based and free-trade zone female workers' lives quite clearly. Yet the Gender and Poverty Report displays a selective amnesia when it refers to Shramshakti, and implies that increasing women's economic productivity anyhow shall affect their status or survival in a noticeably positive manner, and increased household incomes shall automatically mean increased freedom of speech and action for them. Industrial investments are thus equated, with the help of sophistry, to present the vision of a colonised economy as an aid to women's liberation in India.

Whether in sub-Saharan Africa or India, while analysing poverty and suggesting developmental strategies to counter it, it has been the standard practice for the country studies prepared by foreign donor agencies to condemn the mismanagement of the countries' economies by their post-colonial native governments, and their tradition-ridden societies. Equal emphasis and space are rarely, almost never, devoted to delineating how the colonial past and the Western style capitalist models of growth may also have contributed their mite to the socio-economic and ecological mess in which many of the Third World countries find themselves today. Studies such as the Gender and Poverty Report understandably choose to move, not along the lines of deductive analysis (where both the exploiters and their victims must have an identity), but along a generalised, sentimental and facile ideology. The ultimate aim is not to indulge in introspection and chart out a parallel model of growth and development for Third World countries with their specific historical pasts and presents, but to exonerate the Western models of development of all responsibility for their steady impoverishment:

> .... The evidence is overwhelming that access... who gets what. is closely related to gender in the Indian society ... part of the cultural definition of the female in India is her association with the inside, the home and the countryard where the family is cared for This is in contrast with males...

◆

SUCH, it's-them-not-us, explanations of economic and ecological disasters that have wrecked women's lives, simply will not do. Literate or otherwise, we Asian women know a lot more about being colonised and also how the whole system of colonisation in ex-colonial countries operates. In the last fortyfive years, most middle class mothers in India, Pakistan, Sri Lanka and Bangladesh have struggled with the idea that the only way their children can get reasonably good jobs is if they wean them away from their mother-tongues in infancy, send them to English-medium schools; and later help them apply for jobs abroad even though it may mean losing them forever. At some point or another, we have also looked after unfortunate relatives whose minds and personal lives have been severely damaged by traumatic experiences they underwent during their stays as 'excludable aliens' (a term coined by the Reagan Administration officials) abroad. Yet the male-career trajectory in our countries keeps moving closer (restructuring by restructuring) to the locomotives of the West.

Even women themselves, who have, at some point or another, worked for foreign donor-agencies which offer a dual pay system—one for the natives and another for their own—have raised their voices, only to be told that their subordination to the bosses in the workplace is defined by their position as natives recruited locally.

How can we then accept the reductionist account of women's oppression that denies the personal, everyday encounters that working men and women of the Third World have with the market forces, at both the collective and institutional levels?

There is an orthodoxy in the West-perfected social sciences which devalues the testimony of those engaged in social relationships and which claims an almost inviolate objective access to the entire world. Those of us who question this, risk being called romantic idealists who refuse to come to terms with the brute reality of the social and economic lives of Indian women.

Historically, women have been oppressed and continue to be oppressed; but historically we also know that to the extent world markets are constructed along racist and sexist lines, without a global restructuring, both men and Whites shall continue to accrue unfair advantages here. Inasmuch as men mostly hold the levers of political control and means of production both in India and the donor countries, domination of one sort may continue to serve as a paradigm for another. ■

Charting Unconventional Course

The following reports appeared in China Daily, *a newspaper published in English from Beijing, on February 28, 1992 and March 13, 1992 respectively. These give a measure of the extent to which China is currently charting an unconventional course eschewing Maoist orthodoxy. These also provide irrefutable evidence of the Chinese reformers' success in isolating their "Left" critics inside the country in the wake of the worldwide collapse of Stalinist totalitarianism which had masqueraded for long as "socialism".*

—Editor

Socialist China Mustn't Totally Reject Capitalism

Modern Chinese history leads us to the conclusion that socialism, not capitalism, is best for China.

But how a socialist China should look at capitalism and, more importantly, make use of the better side of capitalism for its own advantage, is of vital importance to the country, now in the fourteenth year of arduous but impressive reforms.

A front page article in the *People's Daily*, by Fang Sheng, contends that modern Chinese history has taught us that China, an economically backward country long ruled by feudalism, can only become strong and prosperous by learning from contemporary capitalism instead of rejecting it completely.

He said China can use some methods and measures commonly practised by capitalist societies to step up economic reforms, and to embody the superiorities of socialism. Excerpts follow:

As far as our country's economic construction is concerned, taking advantage of the part of capitalism that's useful to us means we need to develop foreign trade, introduce advanced technology and better management, and make use of foreign funds.

It also means we can absorb some of the economic theories, and make use of those economic policies, methods and measures that comply with the laws of mass production and commodity economy.

The scientific and technological achievements of civilisation are the common treasures of mankind. Socialist countries can take advantage of these just as much as capitalist societies can.

The way China looks at the capitalist world now is the result of a long process of cogitation.

Today, not many people reject the import of foreign funds and technology.

Yet this was quite unacceptable before China began to open up its doors to the outside world and reform.

In those days people were so rigidly dogmatic that anything practised by capitalist countries was feared as capitalistic and spurned.

Hostility between capitalism and socialism during those days was part of the cause.

In the past, when we talked about capitalism, we talked about it as a man-exploit-man system and nothing more. And while Chinese economists did a good job of criticising Western economic theories that whitewashed the capitalist system, they seldom ventured to study the theories, methods and measures that actually work for socialised mass production under a commodity economy.

Today, China can step up its economic reforms by adopting "capitalist measures" and still retain the superiorities of socialism.

These measures include stock markets, mergers, contracts, bidding and leasing, to name a few.

These are called "capitalist measures" for three reasons.

First, they are for the development of a commodity economy, which was once branded as equivalent to capitalism.

Second, they were in use long before the birth of socialism. Therefore, people are under the illusion that these measures are peculiar to capitalist countries.

Third, our text-book version of economics merely talked about them as part of the artifices of exploitation and hence peculiar to the capitalism.

Actually, they are not necessarily capitalist but can be used by any social system.

If we label them "capitalist" and reject them, we have only ourselves to blame. It is as much folly as that of some Soviets who, after the October Revolution, wanted to destroy the railways of the country because they were "bourgeois" railways of Czarist Russia.

A silkworm can get enmeshed in a web of its own spinning. A person can get his own hands and feet bound by doing the same. China should not do this again—it should take what's useful and good for its economic construction, regardless of the name.

As China makes more and more contacts with other countries, and learns from them, it will make mistakes. Sometimes undesirable influences of the capitalist world get in. Some people fear too much that bad influences from the capitalist world will undermine the socialist system.

A question immediately pops up: Is it worthwhile to open the window and let in fresh air, though some flies will come in as well?

Yes, it is worthwhile.

A lot of people are so overwhelmed by so many new ideas suddenly flooding in that they are unable to distinguish between good and bad as quickly as they should. But this can be cured through education, raising the people's standard of taste.

Actually, it can best be achieved by opening our windows wider to the outside world so that the people can learn more about other peoples and gradually and soberly learn to make sensible judgments. Absorbing the better part of the cultures of other peoples to enrich ourselves is the best way to safeguard our sociaist culture.

But closing the door again would be the wrong way—leaving aside the fact that it is impossible, anyway.

As an old Chinese saying goes: No one stops eating for fear of choking.

So China will not close its door and windows and suffocate just to keep out some petty flies.

Taking advantage of capitalism and stepping up economic reforms is the only way to make China strong. Closing the country to international exchanges will only keep it weak. ■

Polit-Bureau Meeting Vows to Accelerate Opening, Reforms

China stressed reform and open policies at the plenary session of the Political Bureau of the Central Committee of the Communist Party of China (CPC), held in Beijing on March 9 and 10.

Presided over by Jiang Zemin, the meeting stressed that it is imperative to firmly carry out the Party's basic line of making economic construction the central task and adhering to the four cardinal principles and the policies of reform and opening to the outside world.

Yesterday all major newspapers in the capital and throughout the country carried the news story on their front pages.

The Polit-Bureau said China should seize the current opportunity to accelerate the pace of reforms and opening to the outside world, pushing forward the economic construction and continuing to march forward along the road of socialism with Chinese characteristics.

The meeting said that to liberate and develop the productive forces is the basic task of the Chinese Communist Party as it leads the Chinese people in building socialism. Therefore, it is imperative to unswervingly adhere to taking the economic construction as the central task, holding fast to the four cardinal principles, reforms and opening to the outside

This is the most valuable experience the Party has gained in leading the Chinese people in practice since the Third Plenary Session of the Eleventh Central Committee of the Chinese Communist Party under the guidance of the ideas of Deng Xiaoping of building socialism with Chinese characteristics, the meeting said.

And it is also the main cause for the great changes that have taken place in socialist China in the past dozen years.

So long as the Party firmly grasps the basic line of "one central task and two main points" (economic construction, four cardinal principles, and open and reform policies) and will not waver in it even for one hundred years, the country will be able to maintain long-term stability and be hopeful.

The meeting emphasised that reform and opening to the outside world should be carried out in a bolder way and one should dare to make innovations and experimentations. It is necessary to futher emancipate the mind and adhere to the principle of seeking truth from facts. We should not only develop the productive forces under the condition of socialism, but also liberate the productive forces through reform.

To judge whether a move is "socialist" or "capitalist" will depend mainly on whether it will benefit the development of the productive forces under socialism, the enhancement of the comprehensive national strength of our socialist country and the promotion of the living standard of the people, the meeting said.

The pace of reform and opening to the outside world should be accelerated.

"For what we regard as correct, just try it and go ahead daringly," the meeting said.

Planning and market are both economic means. It is necessary to be good at applying these means to accelerate the development of the socialist commodity economy, the meeting said.

Those attending the meeting agreed that it is also imperative to be bold in absorbing and learning from all the achievements of civilisation, and in absorbing and learning from the advanced management methods of other countries in the contemporary world, including the developed countries in the West.

The 1990s are a crucial period, the meeting said. So people should have a clear view of the situation and take the opportunity to do a solid job, strive for efficiency and accelerate the rate of economic growth, in order to reach a new stage of economic development.

Science and technology are the first productive forces, the meeting stressed. In speeding up the rate of economic growth, it is necessary to rely on science, technology and education.

The meeting pointed out that China should pay particular attention to throughly investigating and studying the vital problems that affect reform and construction so as to form strategies and policies for the future and conscientiously organise their implementation.

The meeting discussed this and made necessary arrangements. Leaders at all levels should guard against formalism and bureaucracy and devote more of their energy to doing down-to-earth work, it said.

The meeting called on all the Party members, especially leaders at various levels, to conscientiously study the series of expositions of Deng Xiaoping on building socialism with Chinese characteristics and further enhance their consciousness of generally carrying out the Party's basic line.

While keeping vigilance against "Right" deviation, the main attention should be paid to guarding against "Left" deviation, the meeting said. It is necessary to strengthen the construction of advanced culture and ideology and the construction of democracy and legal system so as to consolidate and promote political stability and unity. ■

Collapse of USSR and the Marxist Utopia

AJAY KUMAR

There are many implications of the recent happenings in the Soviet Union. One of the most important is that now fullscale installation of the democratic framework in the country will be comparatively less difficult. Earlier, despite the reforms of Gorbachev, democratic changes could not be carried out fully on account of the firm grip of the communist organisation on different segments of society. The mass-force released in the process of retaliation of counter-revolution has simultaneously destroyed many obstacles on the path of democratic changes. Now it can be hoped that there will be spread of democracy in every sphere of life and society. This not only signifies the triumph of democracy but also reveals the demise of the people's faith in socialism. Moreover, it establishes the market economy and consumer culture as the 'new idol', to be worshipped by one and all and that makes the capitalist circles in the world jubilant. The major part of the world economy which was beyond the reach of the capitalist market till now has suddenly swung towards that market.

The way the Communists had made socialism synonymous with dictatorship, repulsion was bound to be generated. But the questions which need serious consideration in this regard are Has the ultimate goal of human progress been achieved? Is this the final stage of development? Is it possible to fulfil the aspirations of the masses through the means adopted by the countries of Eastern Europe and the Soviet Union? The answer to these questions lies in the history of the modern industrial civilisation and the movement for socialism.

The very concept of socialism came into existence as a concept of ideal society to get rid of the problems which had their origin in the after-effects of the Industrial Revolution. Right from the beginning of the nineteenth century, Utopia was advocated as a rightful solution to the problems caused by the Industrial Revolution. The objective of almost all Utopians was to seek immediate relief from the tyranny of large-scale exploitation and unlimited hours of work in the polluted atmosphere of the factory. They held responsible the inhuman greed of the capitalists to garner huge profits from the pitiable conditions of the workers and their exploitation on a large scale. According to their line of thought, the system based on community or cooperative forces was the predominant element rather than the capitalist system. Among these thinkers Saint Simon, Charles Fourier and Robert Owen are particularly noteworthy. Robert Owen of Britain had also tried to run the industry at New Lanark in Scotland on cooperative lines on an experimental basis. But after a few unsuccessful attempts he gave up his hope and started stressing the need for labour struggle and workers' trade unions. Then came the lineage of the anarchist Proudhon, Marx, etc. Marx severely criticised the Utopian socialism and gave a new theory of his own communism and called it scientific but actually his imagination of communism was also a Utopian concept. The new theory of communism envisaged unity of the modern industrial society on the basis of equality and fraternity on the lines of primitive communism.

Whether this primitive communism of Marx ever existed or not is today debatable but as far as the concept of running the modern international industrial system on the basis of equality and fraternity is concerned, the very experiment has utterly failed. Finally, it has been established that the modern big industrial and commercial sectors, irrespective of their form of ownership, either public or private, can be managed only by the team of free-wheeling managers and bureaucrats.

One of the chief merits of the capitalist market system is that in this system the industrial and commercial sector always functions under tremendous pressure to maintain the efficiency of the services because of the so-called universality of the consumer, that is, the freedom to choose the best and cheapest product in the market. And this trend of the market forces them to cut down the expenditure heavily, especially the expenditure on the number of workers and on their welfare measures which are not necessary for the development of the concern but have become essential otherwise. This makes the market system of economy better equipped and far more efficient for inter-market rivalry and competition than the so-called socialist system, managed from one single centre and ruled by the bureaucracy. Being free from the pressures of competition and managed under strict central control in this system hardly any need is felt to cut down the administrative cost of production (expenditure on bureaucrats) and improve the quality of production and services to the customer. This way the Marxist-inspired Utopian economy which came into existence neither satisfied the fraternal feelings of the workers nor the consumer's urge for better and cheaper products which were available to large segments of population in the capitalist system. So it is obvious that the seeds of disintegration of Utopia lie in its inner-contradiction with the character of modern industry.

◆

MARX was so convinced of the necessity of socialism that he failed to take notice of other negative aspects of modern industry. Truly speaking, Marx was actually bewitched by the miracle of the ascending industrial society but other contemporary thinkers were clearly visualising the flaws of this civilisation as well as its inhuman and devastating aspect. Among those who challenged this civilisation on moral grounds the most important was the art critic, John Ruskin, a contemporary of Marx. Mahatma Gandhi was deeply influenced by his moral thoughts. William Morris of Britain who drew his inspiration from Ruskin denounced modern industrial goods on aesthetic grounds and in comparison praised the value of medieval goods produced by tradesmen. He said that art and artisanship are identical and in its creation man's satisfaction and delight of creativity must be expressed. Morris was a socialist and was greatly influenced by the thoughts of Marx; even then he clearly pointed out the basic weakness of the industrial process of production, towards which the Marxists never paid any attention. The modern industrial civilisation even at the height of its development utterly failed to give due attention to the pleasure of creativity in the process of production. Consequently, the hollow men tried to fill the void of life created as a result by the goods of entertainment and enjoyment and that is why the modern industrial civilisation is closely linked to consumer culture.

The criticism of Morris came in the nineteenth century but with the beginning of the twentieth century there emerged a whole series of counter-Utopian criticism on the industrial civilisation. In this series the most important are the novels of Aldous Huxley: *Brave New World* and *Ape and Essence*. In the first novel there is the picture of a future society (2500 AD) where men are produced in the laboratory with only those hereditary qualities which are essential for his concerned profession. This has been provided as the cure of illogicality of the men of the present industrial society which forces man to do that work which is against his natural desire. For this, different types of Alfa, Beta, etc. men are produced who have a natural inclination for their profession like the society of bees. This way all the possibility of differences of opinion and revolt in society has been buried right before they came into existence. The thinkers were kept away from the contact of the masses and confined to faraway unknown islands because in original thinking lies the seeds of dissatisfaction and disagreement in society. It seems to be a rehearsal of *Gulag*. But industrial society needs science, so science devoid of all its originality is kept alive like the art of cookery. In it we can clearly see the reflection of the present industrial society which quells the voice of revolt and moulds independent and original thinking of the general masses according to the liking of the privileged class of society through various means of communication.

In *Ape and Essence*, the probable culmination of this civilisation has been shown in the form of a shattered world after an atomic war and people worshipping the devil instead of God. The great priest of this civilisation rationalises it by saying that after the Industrial Revolution the power of God started diminishing, the devil became stronger day-by-day and after the atomic war the devil's rule has been finally established and that's why worshipping the devil is the only and right choice. If one compares the values of Christian religion with those of the modern industrial society one will find the logic of the great priest completely true. In the Bible it has been stated that one cannot worship God and money power (god of wealth) simultaneously and the very basis of the present industrial society is the unsatiable urge for hoarding money and the selfish motive. In it lies the biggest anomaly of the Western society which claims to be truly Christian. Probably this very aspect of Western society was in the mind of Mahatma Gandhi when he denounced that society by calling it the "devil's civilisation".

The dreadful capability of this civilisation to make the people mentally prisoners has been distinctly painted in George Orwell's counter-Utopian novel, *Nineteen Eightyfour*. Though the background of the novel is the author's first-hand experience of Communist functioning during the civil war in Spain and the knowledge of Russia under Stalin, the picture painted in *Nineteen Eightyfour* is a befitting description of any modern society. The only difference is that today's big concerns are better equipped with the invisible and scientific technology to control the minds of people than those imagined by Orwell in his novel and thus now there is no need to apply the cruel methods of Stalin and Hitler as in the past or those of the dictators of the Third World at present. The German youths who are opposing the present set-up in their country live in constant fear that the government might prepare a record of their activities with the help of computers and all that happens in a society which is democratic through and through, and encourages the market system of economy! Violating the secrecy of personal life influencing the people's choice and their way of thinking through the advertisement industry is not the attribute of dictatorial rule but the inherent merit of the present industrial system

In short, it can be said that with the collapse of the USSR and the developments in Eastern Europe the very experiment of Marxist Utopianism, which sought to rescue the world from the problems resulting from the Industrial Revolution has ended. But still the solution to the current problems of the present industrial society is nowhere in sight. In Eastern Europe and the USSR, poverty and shortages of goods have further complicated the problems. Besides the problem of mental bondage, there are other grave problems too like the problem of environmental pollution on a large scale, the severe exploitation of natural resources and the danger of their extinction. For these problems the market economy and consumer culture are solely responsible. The new set-ups which are evolving in the USSR and Eastern Europe are also not going to provide solution to these pressing problems of the human world These can be only solved by bringing an overall change in the very outlook of man, his vision of development and aims of life

Undoubtedly, Marxist Utopianism has failed in Russia but still it is relevant in many parts of the world because there remains something important in it In the initial phase of the industrial civilisation some of the prosperous capitalist countries ended exploitation and reached a stage where it became possible for them to provide an easygoing life to large segments of their populations But here it is to be noted that their prosperity came at the cost of exploitation of three-fourths of the world population In these countries exploitation is still going on unabated in the same fashion which once characterised the exploitation of Europe and attracted its people towards the Utopian concept of Marx. For the poor people of these countries Utopianism is still relevant which leads them only to a dark future. Political parties like the CPI-M are still not ready to break away from Stalinism because they know it well that in a poor country like India a solid mass-base can be built on the basis of Marxist Utopianism

Nevertheless, the struggles for a just world that Marx had conceived can emerge victorious only by traversing a road beyond the Marxist Utopia ■

COMMUNICATION

Throttling Dissent

The recent ransacking of the office-premises and the murderous assault on some staff-members of a Bengali daily (*Aajkal*) for publishing a letter from a reader regarding the alleged past misdeeds of a godman must be condemned strongly by all who believe that violence and other forms of intimidation have no place in a democracy.

It is unfortunate that the forces which blatantly propagate that they know the ultimate, the undisputed and the unchallengeable knowledge are gradually taking possession of the centre-stage. Sad indeed would be the day when such Khomenisque reaction to eliminate the voice dissent (rather to ensure abject obsequiousness) would be the rule in our society.

NIKHIL: India-Pakistan

(Continued from page 4)

years later, it is the same glimmer of hope that I felt as I sensed the feelings of elation at Pakistan's victory in the streets of Calcutta.

Hardheaded politicians will dismiss all this as just a passing sentimental effusion which has no place in the stern realities of confrontational politics in which two neighbours are involved—armed alert on the Line of Control, the JKLF, the Khalistani infiltrator in Punjab and the Hizbul secessionist in Kashmir, the *Hindutva* and the Islamic assertion, and then the nuclear bomb. We have built forbidding walls of hatred between ourselves, and our governments do not hesitate to make an exhibition of this antipathy before the world. We have by mutual consent introduced a visa system by which our citizens have to report to the police every few days as if we are suspected criminals. The visa-holders from distant lands are allowed to move about freely in our two countries, but not the nationals of the two neighbours. We pile up huge arsenals of deadly weapons and frankly declare that our threat perception comes from each other more than from anybody else We make a complaint to distant powers about each other conspiring to have the nuclear bomb, but we do not sit down and talk it over between ourselves.

The partition that divided India was the product of fear and folly, arrogance and insensitivity; for which we can blame our leaders, but that is not going to undo an act of history. To think in terms of undoing that partition is today not only unrealistic but may turn out to be dangerous. What as realists we can do and must do is to boldly bring our two peoples together without hurting the sovereignty of either country. When the entire world is in a state of ferment and convulsion, when mighty totalitarian structures are collapsing without a whimper, and millions upon millions are on the move in search of new moorings, new identities, we, the two largest peoples in this region, the proud inheritors of the same history, have also to think hard and bestir ourselves to bury our arms and abjure our fears, prejudices and misgivings, and respond faithfully and abundantly to the irrepressible urge of our peoples to live in peace and harmony—share our moments of joy and help to mitigate our pangs of sorrow and deprivation.

It is said that when a people wills it, it can move mountains. On every issue that divides our two countries, have we not reached a blind alley? The torments that beset us, haven't we had enough of them? If Kashmir is the stumbling block, isn't it time to think of new ways of looking at it? The mess that we have both made in our respective parts of this paradise on earth, should make us hang our heads in shame. We have spilled blood in plenty, we have squandered crores and we both have lost the trust of the people of that picturesque Valley. Isn't it time that we acknowledged our bankruptcy and sought new ways of bringing peace, and listened to the people right there? Can India's sovereignty be asserted only by the gun? And can Pakistan's glory be enhanced by ceaselessly stoking a low-intensity war which can never be won?

There is abundant fund of goodwill and far-seeing wisdom in our two peoples to work out new designs of enduring amity. And out of that shall emerge the true confederation of heart and head of the two independent countries, the neighbours that bear the stamp of a great heritage of History's richest civilisations. ■

MARCHING AHEAD FOR PROSPERITY TO FARMERS THROUGH COOPERATION

The National Cooperative Marketing Federation of India Ltd. (NAFED) is the apex organisation of Marketing Cooperatives comprising 29 State Federations and nearly 6000 Primary Societies in India.

NAFED undertakes marketing of primary and processed agricultural commodities such as oilseeds, cotton, pulses, tribal produce, fresh and processed fruits and vegetables, onion, potato, poultry and agricultural inputs etc in India and abroad, with its network of four Regional Offices and 32 branches located in the Country.

NAFED is the Nodal Agency designated by the Government of India for undertaking price support operations in 16 commodities and also market intervention operations in some commodities

Apart from a whole lot of other activities NAFED also

●

OPERATES FRUITS AND VEGETABLES PROCESSING FACTORIES AT DELHI, VELLORE AND JABLI. ALSO RUNS COLD STORAGE, GODOWNS, AND OIL PROCESSING UNITS IN THE COUNTRY.

●

UNDERTAKES MANUFACTURING AND DISTRIBUTION OF AGRICULTURAL INPUTS SUCH AS TRACTORS, AGRICULTURAL IMPLEMENTS, BIOFERTILIZERS ETC;

VOL XXX NO 25 SATURDAY APRIL 11, 1992 Rs 5

POLITICAL NOTEBOOK

In the Land of Ram

The fact-finding team comprising members of Parliament and the National Integration Council has returned to the Capital after a day's trip to Ayodhya Its task was to inspect the site of the disputed Babri Masjid-Ram Janmabhoomi complex where demolitions of several temples in recent days have once again brought into sharp focus the Ayodhya problem—and with it the larger issue of communal harmony—on the national plane Several members of the team categorically stated that they were "neither satisfied nor convinced" with the UP Government's explanation on the demolitions The leader of the delegation, S R Bommai, conveyed the same opinion by stating that the "UP Government could not satisfactorily explain or answer queries of the team members"

It was quite expected of the UP Government to present its version of the demolitions which boils down to the assertion that the steps taken on that score did not violate the court orders. And that is precisely what the two members of the BJP Ministry in UP conveyed with characteristic emphasis. However, they did not place before the team either the relevant court orders including stay orders by the Supreme Court and the Allahabad High Court Nor did they present the site plan they want to develop as the Ram Katha Park The delegation has asked the State Government to furnish those details at the earliest

Reports by informed journalists on the team's visit provide an insight into the BJP-VHP's command performance during the trip As one report in a Delhi daily by a correspondent closely following the latest events at Ayodhya disclosed, till April 6 the security arrangements at the complex had threatened to surpass those of the former UP Government during the *kar seva* of October 1990; but on April 7, when the team visited the spot, those arrangements simply vanished into thin air

> At the site itself, no non-member, including presspersons and VHP and BJP activists who had been issued special passes, was checked by the police. Going a step further, the VHP let loose hordes of its supporters inside, giving the place the ambience of a picnic rather than a serious fact-finding mission, which it was intended to be
> (Radhika Ramaseshan in *The Pioneer*, April 8, 1992)

And this by a State Government whose Chief Minister has openly confessed in the State Assembly that the UP administration had spent Rs 26 lakhs on security arrangements for the BJP chief in 16 districts of the State during the much-trumpeted *ekta yatra* before it turned out to be a damp squib!

It was also pointed out how aides of the Faizabad MP belonging to the BJP, former wrestlers themselves, had ousted the *mahants* and priests at the so-called Ram Janmabhoomi temple thereby forcing the *mahants* to lament over the marginalisation of the religious leaders by the VHP elements

These are all of immense significance So also is the point that the entire land around the temple having been levelled, no clue or trace remained of the original shrines and structures, although former Chief Minister N D Tiwari was quick to notice the sea-change that had been brought about within a brief time-span

On the whole, the team's visit, though belated, has not been in vain The slogans raised against Syed Shahabuddin and the State Government's opposition to some

members visiting the mosque in Fatehganj that had been rocked by a bomb blast eight days ago only exposed the BJP-VHP's guilt complex, if not their obvious intention to further communalise the issue. The BJP delegation's visit to the complex after the tour of the fact-fiding mission (which the party had refused to join for obvious political reasons) has also to be seen in the same light

The Centre as well as the secular forces in different parties have to move with utmost caution so as not to allow the communal elements to exploit the situation to their advantage. But there is no alternative to the exercise of strict vigilance. It is in that context that the demolitions have to be viewed. While taking every care not to fall into the booby trap laid by the protagonists of the *Hindutva* theory the Union Government must take firm measures against any move capable of not only shattering communal harmony but also placing our entire secular cultural ethos in jeopardy.

A resolution of the seemingly intractable problem is possible only if the standard bearers of Hindu communalism retract from their rigid postures and desist from attempting to demolish the Babri mosque in the name of Ram. They must be made to realise that such an attempt would be a tribute to neither Ram nor Hinduism.

April 8 *S.C.*

NAGALAND

The Sordid Game

HARISH CHANDOLA

The tiny State of Nagaland rattled the mighty Centre twice in the past week.

First, on March 27, when the Governor, M.M. Thomas, dissolved the State Assembly upon the advice of the Chief Minister, Vamuzo, after it had been in existence for three years only, and appointed Vamuzo as the caretaker Chief Minister without the Centre's consent.

Then, on April 3, when the Centre took over the administration of the State by imposing President's Rule under Article 365 of the Constitution without, and possibly against, the recommendation of the Governor, and dismissed the caretaker government of Vamuzo.

After the adoption of the budget on March 27, it became apparent that the Vamuzo Government was going to go because of defections from his ruling Naga People's Council (NPC). The Chief Minister alleged that the Congress leadership at the Centre was engineering defections to bring its own party into power in that State.

That defections were going to take place was confirmed by Vamuzo on April 2 when he dismissed seven of his Ministers. This was a day before he himself was to meet the same fate at the hands of the Centre.

On March 27, the leader of the Opposition, S.C. Jamir of the Congress party, flew to Delhi with a list of 11 members of the NPC who had decided to leave the party and join the Congress to enable it to form the government. He had hardly reached his destination when he heard that the Governor had dismissed the Assembly, ending that possibility.

◆

THE game of totally unprincipled politics had been honed to absolute perfection by Nagaland. By playing it, the State on March 27 had presented a legal and constitutional crisis never before experienced by the country.

The game is not a Nagaland innovation. It was started and played by *Ayarams* and *Gayarams* in Haryana and elsewhere before.

In Nagaland, they call it "a game of numbers", avoiding the words *Ayaram* and *Gayaram*, which the people there think are Indian

The beginning of this game in Nagaland goes far back. But let us look at its latest round, in which the Chief Minister there, Vamuzo, defeated the Congress party and the Central Government in one go decisively.

The last round of elections to the 60-member Nagaland Legislative Assembly was held in January 1989. In them, the voters had totally eliminated the independent candidates. They were responsible for shortening the life of previous State Governments by shifting their support from one party to another for gains.

This time, they had elected 36 Congress candidates and 24 of the Nagaland People's Council (NPC).

Hardly a year had gone by, when the Congress party split over fights for leaves and fishes, and 12 of its members announced that they were going to cross over to the NPC.

The magic number of 12 was arrived at in order to prevent the Speaker from disqualifying those leaving the Congress, under the anti-defection law. If one-third members of a party decide to leave it, that is accepted as a split; less than that attracts provisions of the anti-defection law and disqualification. The Congress had 36 members in the Nagaland Assembly and the 12 made up the required one-third for a split.

To forestall that, the Congress expelled two of its

MLAs from the party, reducing the number of those who broke away to 10, which was less than the one-third, and so the Speaker disqualified them from the membership of the House.

In the reduced Assembly of 50, the Congress, left with only 24, became the minority party, and the NPC, with its 24, plus the two coming to it after their explusion from the Congress, the majority.

So, it formed a government under the Chief Ministership of K.L. Chishi.

It was then the turn of the Congress to take up the toppling game. It used Vamuzo, a former Finance Minister and an ambitious man, who had been defeated in the Assembly election by M. Vero, to cause a split in the NPC. It promised him the Chief Ministership and Speakership of the House. And so he with a few of his NPC supporters joined the 24 members of the Congress to form a coalition government. His man, Thinocho, became the Speaker.

Trouble within this uneasy coalition came to the fore a few months later, when the Centre banned the underground organisation, the National Socialist Council of Nagaland, which both sides were wooing. The Congress accused Vamuzo of advising the Centre for the ban, and Vamuzo, the Congress.

The coalition collapsed.

Ten Congress MLAs remained with Vamuzo, and the Speaker, Thinocho, revoked the disqualification of the 10 whom the previous Speaker, T.N. Ngulie, who had joined the Vamuzo Ministry, had disqualified. The NPC thus assumed a strength of 34.

Now it was for Vamuzo to face the threat of defections over the sharing of benefits. The Deputy Chief Minister, K.L. Chishi, and Dr V. Sakhrie formed a group of 12 and split from the NPC.

The new Speaker then used the same trick played by his predecessor a year ago, accepting the expulsion of the two K.L. Chishi and Dr V. Sakhrie, from the NPC, which enabled him to disqualify the other 10, because they did not constitute the one-third needed for recognising a split.

The Assembly was once again reduced to 50 members; 24 belonging to the Congress, 24 to the NPC, with two, K.L. Chishi and Dr V. Sakhrie, unattached. Whichever party obtained their support would become the majority, and both sides claimed them.

The Governor then called a special session of the Assembly for a headcount.

To avoid a defeat, the Speaker, Thinocho, disqualified five Congress members on the ground that they had earlier committed themselves to defect from their party and join the NPC.

Now, it was for the Congress Legislature Party to complain if their members defected and to get them disqualified under the anti-defection law. But it did not do so, and the Speaker, belonging to the NPC, on his own disqualified the five members. The Congress strength was thus reduced to 19.

Meanwhile, the 15 disqualified members went to the Guwahati High Court against the order of the Speaker. The High Court in early March upheld the Speaker's decision. The 15 then appealed to the Supreme Court, which was to give its verdict shortly.

With the 15 MLAs thus remaining disqualified, in the Rajya Sabha elections from the Nagaland Assembly constituency, the NPC candidate, Vizol, was declared successful on March 27, defeating his Congress rival, Asangba Sangtam. The same day the Nagaland Assembly passed its annual budget, with a deficit of over Rs 140 crores.

The budget had hardly been passed when rumours began circulating that 13 NPC members were going to defect. Vamuzo accused the Minister of State for External Affairs, Eduardo Falerio, who had been sent to Kohima to get his party candidate elected to the Rajya Sabha, of threatening the Assembly members with imposition of President's Rule in Nagaland if they did not elect the Congress nominee.

Vamuzo said this created conditions for defections from the NPC.

Before that could happen, Vamuzo advised the Governor, M.M. Thomas, to dissolve the Assembly and instal a caretaker government with himself as the Chief Minister. The Governor accepted his advice, without consulting the Centre.

The constant defections, disqualification of members and the revocation of that disqualification had created a very unstable situation in Nagaland. There was no doubt that the Vamuzo Government would have fallen, either as a result of defections, or because of the possibility of the Supreme Court deciding against the order of the Speaker on the disqualification of the 15 members of the House. If they came back to the Assembly, the Congress would become the majority party, and the Vamuzo Government would be dismissed.

To forestall that possibility, Vamuzo asked the Governor to dissolve the Assembly and set up a caretaker government.

Now, the Governor took the excuse for his decision that on the day Vamuzo gave him the advice, he had the majority in the House. Had he lost the majority, the Governor would have recommended the imposition of President's Rule, under Article 356 of the Constitution.

◆

THE people of Nagaland do not want elections in such quick succession. The State had elections to the Assembly in December 1987. Because of defections, the government fell and there were elections two years later, in January 1989. And now there will be elections for the third time in four years. The people there are tired of them.

Politicians too are not looking forward to them. The constituencies in Nagaland are small, between 5000 and 10,000 voters. But given the state of corruption

A Historic Transition Unfolds

K. NATWAR SINGH

The author, the former Minister of State for External Affairs, has just returned after a trip to Afghanistan. His article presents the latest scenario in that war-ravaged country.

—Editor

In happier times Afghans, nonchalantly used to declare, "we are at peace with ourselves only when we are at war with each other."

Alas! For thirteen tragic, blood-soaked, brutal years the Afghans have not known a day's peace. One of the monumental blunders the USSR committed was to send its troops into an independent non-aligned country. Worse still, they stayed too long, abused and loathed though they were. I vividly remember Mrs Indira Gandhi telling the, hardly coherent Brezhnev to pull out of Afghanistan. To no avail. I remember President Castro saying to me in Havana in 1988 how the Soviet invasion of Afghanistan had all but wrecked Cuba's Presidency of the non-aligned movement. On the other side, Pakistan and the West used the *mujahideen* as *mercenaries* and brought misery to the Afghan people. Some estimates put the death toll at two million. Tens of thousands of children have been orphaned, young brides widowed. The rehabilitation of millions of Afghans, the rebuilding of the country, the reconstruction of the economy, the resuscitation of a viable political and acceptable instrumentality is a monumental task. At long last the process has begun. The count down in Kabul started at a leisurely pace. Now it is progressing at a breath-taking pace.

◆

I was in Kabul last week as a guest of President Najibullah. I had long conversations with him and my dear friend Foreign Minister Abdul Wakil. I arrived at a most exciting and historic time. Momentous events are unfolding in and around Kabul. It was also a saddening experience. But gloom under any circumstances is a useless emotion. While the past cannot be wished away, the future is far more important.

A very dramatic event occurred in Kabul last month. President Najibullah's statement that he would step down to pave the way for a political settlement sent shock waves in Kabul, Islamabad, Teheran and Washington. The USA and Pakistan had made President Najibullah's removal a pre-condition for discussion on a political settlement. The last USSR soldier left Afghanistan on 15.2.89. The West and Pakistan had been certain that Najib would not last more than a month or two after the Soviet withdrawal. Well, he is still there, thirtyeight months later. India was almost alone in saying that Najib was no light-weight push over and would hold out.

What the *mujahideen* and their powerful backers could not achieve, has been accomplished by Benon Sevan, the UN Secretary-General's energetic and politically astute Special Representative for Afghanistan, through quiet, behind-the-scene diplomacy. Not only did he succeed in persuading Dr Najibullah to issue his self-denying statement, earlier he had also hammered out the five point UN Plan.

The five-points are:

1 The necessity of preserving the sovereignty, territorial integrity, political independence and non-aligned and Islamic character of Afghanistan.

2. The recognition of the right of the Afghan people to determine their own form of government and to choose their economic, political and social system free from outside intervention, subversion, coercion or constraint of any kind whatsoever.

3 The need for a transitional period, details of which have to be worked out and agreed upon through an intra-Afghan dialogue, leading to the establishment of a broad-based government

   (a) The need, during that period, for transitional arrangements acceptable to the vast majority of the Afghan people, including the establishment of a credible and impartial transition mechanism with appropriate powers and authority (yet to be specified) that would enjoy the confidence of the Afghan people and provide them with the necessary assurances to participate in free and fair elections, taking into account Afghan traditions for the establishment of a broad-based government.

   (b) The need for cessation of hostilities during the transition period.

   (c) The advisability of assistance, as appropriate, of the United Nations and of any other international organisation during the transition period and in the electoral process.

4. The necessity of an agreement—to be implemented together with all agreed transitional arrangements to end arms supplies to all Afghan sides, by all.

5. The recognition of the need for adequate financial and material resources to alleviate the hardship of the Afghan

For an Alternative to 'Globalisation'

UPENDRA BAXI

This is a synopsis of the S.M. Joshi Memorial Lecture by the author, Vice-Chancellor, University of Delhi, on "Globalisation: A World Without Alternative?", delivered on April 1, 1992 in New Delhi. —Editor

The formative era in which S.M. Joshi struggled and lived was a time when oneself was proud to be called an Indian: he brought to our "wounded civilisation" many a transformative hope. While the old causes, values and goals which he cherished remain tremendously important today, we all feel that the world has so swiftly and dramatically changed as to deprive our memory of S.M. Joshi and his times of all historic plenitude for the future.

What has caused this disorientation and reorientation towards the world? How is it that many a fighting faith of yesteryear seems to us deeply incoherent or problematic? How is it that we have moved so suddenly from a worship of a plural heterogeneous world to obscene sycophancy of unipolarism? And how is it that the dreams of unipolarism of a solitary superpower threaten to become a nightmare for the world of nations, especially of the Third World? How is it that we can understand the possibility of near-universalisation of earlier forms of McCarthyism, even in the land of Lenin? How is it that our languages, and with these our vision of the world, have changed?

Perhaps, this change, all of it, may be located in the notion of "globalisation" often described as comprising "all those processes by which the people of the world are incorporated in a single world society."

◆

THE processes of globalisation are not new. But one may distinguish at least three historic processes or stages of "globalisation". The first long phase of "globalisation" accomplished colonial imperialism, over long stretches of time and space throughout the world. The contemporary second phase of "globalisation" is marked by international efflorescence of concern for human rights and standards of international justice which will chasten the arrogance of sovereign power everywhere. The third phase of "globalisation", running concurrent with the second, has been marked by a steady rise of forces of late capitalism, so actively foreseen by Karl Marx in *Grundrisse*, manifesting multinational hegemony and the dominance of international financial institutions both emerging as suprastatal centres of authority.

The second phase of "globalisation" was indeed dramatically different from the colonial/imperial phase. In the halcyon of decolonisation and self-determination of most peoples of the Third World and the emergence of the United Nations system as a prime weapon of the weak, "globalisation" signified a new vision of the human future. This vision was concretised steadily in the sixties and seventies by epochal enunciations of human rights. Thus, "globalisation" in the second phase signified the articulation of a new culture and ethics of power, both nationally and internationally.

Since the inaugural Universal Declaration of Human Rights, developments in recognition of individual human beings against and over state power are, indeed, remarkable. Not merely do they protect and promote basic human rights, categorised as civic, political, economic and cultural rights of individual human beings but we see a steady expansion of conferment of basic human rights to specific human collectivities or groups such as women, indigenous peoples, racially discriminated, physically disabled, mentally ill and dispossessed peoples, migrants and, most recently, children. Equally remarkable are articulations of rights to self-determination, economic and cultural rights of individual human beings, right against apartheid, right to environment, immunity from genocide, right to peace and the most recent declaration of the right to development of people and states. These enunciations truly mark the advent of a new culture of collective democratic rights of people.

The new culture of globalism also saw that human rights were not directed only against state power; increasingly, they were addressed to formations of civil society, wielding power over people. The little known UN Declaration of 1975 concerning Scientific and Technological Progress in the Interest of Peace and for the Benefit of Mankind urges states to so deploy science and technology or to avoid "flagrant violations of the Charter of the United Nations" and eliminate "inadmissible distortion of the purposes that should guide technological developments for the benefit of mankind". Similar in spirit are the Tokyo Declaration of 1971 addressed to the medical profession in dealing with situations of torture, cruel, degrading and inhuman treatment, and the 1982 General Assembly Proclamation of the Code of Medical Ethics, the UN Committee on Crime Prevention, code of conduct for law enforcement officials, lawyers and judges, the 1986 Ottawa Declaration on Health for All, and the movement for a new international information order. All these measures address and involve autonomous professional groups as bearers of basic duties to the peoples of each nation and of the world.

As if this was not enough, the culture of globalisation addressed itself to the task of enuntiating visions of social progress, imbued with standards of international justice in relations and among states, for example, the 1969 UN Declaration on Social Progress and Development in addition to enshrining and enriching the principles of Panchshilla (termed in international law literature as the Nehru Doctrine) proclaimed the duty for developed countries to provide for "greater assistance on better terms", requiring specific dedication of one per cent of the GNP as minimal "aid volume target" as well as "the general easing of terms of lending to the developing countries through low-interest on loans and long grace periods for the repayment of loans" and the assurance that the allocation of such loans will be based on "strictly socio-economic criteria, free of any political considerations."

◆

WE understood, till recently, by globalisation a realisation of the culture of "globalism". In the spirit of globalism in the mid-eighties globalisation appeared as a description of

> those values which take the real world of five billion people as an object of concern, the whole earth as the physical environment, everyone living as the world citizens, consumers and producers, and with a common interest in collective action to solve global problems.[1]

"Globalism" seems to be thus

> a very concrete universalism, moved by the actual sight of starving children in Ethopia or by the data on malnutrition in Bangladesh.[2]

But "globalism" in this sense has received a massive setback ever since the incoherence of American economy, with billions of dollars deficit, has come to full view. The humane languages of globalism stand eroded by languages of Super-301, structural adjustment programmes (cruelly emerging in an acronym as SAP), trade retaliation, debt problem; gone are the languages of the New International Economic Order, Sustainable Development, Right to Development so prominent in collective United Nations enunciations.

The passage from "globalism" to "globalisation" is marked by discursive practices where collective interdependence becomes collective dependence of South on North; where consumption needs of industrialised societies begin to enjoy ontological priority over the minimum basic needs of the wretched of the earth in the Third World; where resilient-market: friendly liberal ideologies provide the dominant visions of human futures on the eve of the twentyfirst century.

◆

THE present phase of globalisation is characterised by three features. The first is the erasure of the discourse on globalism; second, the emergence of new terms of discourse; third, the transformation of our vision of the world and of our common future.

As to the first, it seems that the entire UN discourse on human development stands obliterated by the current cacophony on globalisation. The fact that the UN's Declaration on Social Progress—calling for expansion of international trade "based on principle of equality and non-discrimination and the rectification of the position of the developing countries in international trade by equitable terms of trade..."—should be lawlessly forgotten by international financial institutions is perhaps understandable. But the amnesia of the leaders of the South providing critical leverage for negotiations is unpardonable.

The amnesia of the leaders of the South of the rich heritage of the UN standards for international justice and equality is unpardonable. It was the UN and the leaders of the South, who contributed so marvellously to the emergence of these enunciations. What has changed about the world so recently that we are made to feel obsolete when we approach these standards of the international rights justice today?

In the same vein, the entire Indian constitutional discourse and its languages of social justice are suddenly made to seem totally irrelevant to a vision of a future India and I would not be surprised if very soon we hear powerful pleas to rewrite our Constitution with a view to legitimise new practices of power oriented to achieving of globalisation. But the Indian Constitution was an heir to the tradition of a whole new culture of globalism, which is civilisationally precious.

Second, "globalisation" processes bring us to the threshold of a new political and civic culture, indeed to a point of basic transformation in the languages of politics. The soft evocative languages of Indian politics which invoked symbols of "socialism", "secularism", "social justice", "human rights" have all but disappeared in a matter of months, to be replaced by hard languages of economic/technocratic management of power relations and structures. India continues to be in peril. The threat emanates not from alternate visions of India and of the world, but from fiscal "deficit", adverse balance of payment, deregulation, privatisation, wasteful and inefficient management and, above all, empty state coffers. Key decision-makers tell us to look at hard and harsh realities which no longer allow us to recourse to soft ideological options and posturings. The recovery of India for Indians depends on sound management and restructuring of Indian economy, hopefully in globally competitive terms.

At this rate, political discourse in India will soon become almost wholly an economic and economist discourse, excluding from its domain even those practitioners of politics who do not grasp the niceties of fiscal, monetary, development and international economics languages. The privileging of these languages undoubtedly ushers in a new mode of exclusionary practices of knowledge and power. The distance we

Jharkhand Movement at Crossroads

AMAL CHANDRA KUMAR

The more than half a century old Jharkhand movement has not only acquired the dubious distinction of being one of the oldest movements in the country but also stands at the crossroads today. Jharkhand, the land of forests, has time and again given rise to various social and political groups, championing the cause of the local people against exploitation by the outsiders. The present movement of the tribals of the south-central part of the country for a separate State of Jharkhand is in many ways a continuation and extension of their heroic tradition of struggle against British imperialism and local feudalism. It is basically a protest movement against the exploitation of the indigenous tribal people by the outsider *dikus*. To quote the election manifesto of the Jharkhand Mukti Morcha (JMM) in 1980, "we want Jharkhand free from exploitation, a Jharkhand where those who work will eat and those who loot will go". But today the Jharkhand movement has assumed the same position with which it was initiated in 1983 with the formation of the Adivasi Mahasabha. Today the movement is struggling hard to maintain its distinct ideology and organisational identity. It is, therefore, the right time to examine the mechanisms and processes by which the ethnic consciousness of the tribals and the militancy of the movement have been to a large extent successfully neutralised.

Interestingly enough, today Jharkhand means different things to different people depending on their specific needs. To the rural people, Jharkhand means restoration of their rights over lands and forests and an end to the exploitation by the *mahajans*. For the unemployed, Jharkhand represents a dreamland where only locals will get jobs.

The Jharkhand movement has faced several ups and downs in its life. In the year of 1949 at a conference of the Adivasi Mahasabha held in Ranchi, the Jharkhand Party was formed and Jaipal Singh was elected its President. He gained popularity by demanding a separate Jharkhand State. He declared that Jharkhand was the land of the Adivasis and the non-Adivasis had exploited the Adivasis economically and politically, and there was little hope for their regeneration as long as the intruders remained in Jharkhand. He even advocated violence to oust the intruders and achieve the goal of separate statehood.

In the initial years of the movement the Jharkhand Party showed four distinct traits: (a) thinking and activity of the urban-oriented, (b) dominated by the Christians; (c) predominance of two major tribes of Ranchi, that is, Murdas and Oraons, and (d) sectarian behaviour against the non-tribal population in the name of tribal solidarity. Gradually ethnicity was replaced by regionalism and the militant movement gave rise to an organised political party.

In the first general elections of 1952, the Jharkhand Party fought the election and won 33 Assembly and three Lok Sabha seats from Bihar alone which gave a new impetus to the movement in and outside the Assembly. In the year of 1954, the party demanded a separate State of Jharkhand comprising the districts of Chhotanagpur, Santhal Parganas and parts of Gaya, Sahabad, Bhagalpur and Monghyr districts of Bihar, some parts of Mirzapur district of UP, Surguja district of Madhya Pradesh and the districts of Keonjhar and Mayurbhanj in Orissa. But the demand for a separate State was rejected on the ground of lack of viability of the region as a linguistic unit.

In the general elections of 1962, the Jharkhand Party won only 20 Assembly seats in Bihar. The developmental activities and industrialisation under the first two Five Year Plans in the Chhotanagpur region removed the tribal people temporarily from the agitational path. In 1963, due to the lack of farsightedness of the leaders of this movement, the Jharkhand Party merged with the Congress which proved to be a severe blow to the movement and ushered in an era of confusion in the politics of the Chhotanagpur region. The party leaders soon realised their mistake and started reviving the old party declaring the merger as illegal. But lack of any unified political group of the tribals confused the movement. A number of splinter groups claiming to be the real Jharkhand Party appeared on the scene but none of them could further the cause of the suffering tribals as they were infected by mutual bickerings. The movement regained its strength only after the formation of the Jharkhand Mukti Morcha (JMM). It not only demanded a separate State, but a State free from class exploitation and decided to recover alienated lands from money-lenders and big peasants in north Chhotanagpur. It also widened its base by embracing the mining and industrial workers. Thus an attempt was made to bring the workers and peasants closer on a common platform.

In 1986, the All Jharkhand Students' Union (AJSU) was formed by the tribal students taking a cue from their counterparts in Assam. Gradually the movement achieved some degree of maturity after the intellectual participation. It has in its ranks today a host of young academics who not only have studied the socio-economic problems of the region in depth but are well equipped to analyse the situation scientifically and argue their case quite logically. The movement thus has come out of its emotional phase and can today boast of a strong intellectual base of its own.

Meanwhile, in the ninth Lok Sabha elections of 1989 and the subsequent Assembly elections of 1990, the JMM won six and 19 seats respectively in Bihar.

◆

TODAY, the Jharkhand movement is not only a tribal movement, a large number of non-tribals are participating in the movement. This quantitative expansion has led to the qualitative dilution of the movement. The non-tribal entrants are more often contractors, moneylenders and other dubious elements. They are not content with being mere followers, but have become local leaders and on several occasions proved to be more powerful than the prominent tribal leaders. Issues and problems of the tribals, namely, exploitation-discrimination of tribals in every sphere of socio-political life, land alienation, *mahajani* exploitation, sexual exploitation of tribal women, the general looking down upon the tribal way of life, dominance of regional and national languages and culture over those of the tribals, the crisis of cultural identity, etc. have been almost lost sight of by the movement.

Moreover, in the course of its long existence, the Jharkhand movement has slowly been transformed into a movement for the 'development' of tribals much along the same way as that of their non-tribal neighbours which is, according to some experts, the ideological victory of the dominant communities over the tribals within the movement. Whenever the movement became militant the government responded in terms of development. The tribals are being made to increasingly clamour for developmental projects. Today they only talk about the entitlement of tribals to development.

Therefore, from ethnicity via development to regionalism—the movement has travelled a long path in the ideological road towards integration and assimilation with the dominant communities. From being a movement of tribal autonomy and identity it has been transformed into a movement for decentralised administration and for redemarcation of State boundaries. Perhaps this is one of the reasons why the Central Government has recently taken note of the movement.

The Union Home Minister, S.B. Chavan's statement in Parliament in December 1991 has not only helped to focus public attention on the issue once again but also unintentionally stoked the flames of the temporarily dormant Jharkhand movement and further roused the aspirations of the region's people to manage their own affairs in a meaningful way. Responding to a question, the Minister stated that the Centre may not be averse to the formation of a Jharkhand State for tribals if the States concerned—Bihar, West Bengal, Orissa and Madhya Pradesh—agreed to such a proposal.

The Home Minister's statement is actually directed towards some other unstated purposes. In the first place, it is seemingly an exercise in passing the buck to the concerned State Governments in order to evade the Centre's responsibility for the non-fulfilment of the Jharkhand demand. Interestingly, all the four States have non-Congress rule. It is also a fact that none of the various ruling parties in the concerned States are inclined to cede their territories of the tribal dominated mineral rich areas to facilitate the formation of a Jharkhand State excluding the Bihar Government which is somehow favourly inclined towards the Jharkhand issue. Only in Bihar, the legislative assembly has passed a bill envisaing the constitution of an Autonomous Council for the Santhal Parganas-Chotanagpur region, no other State has so far taken any initiative to grant some form of autonomy to these tribal populated regions. Till it threw the ball in the court of the concerned States, the Congress at the Centre too has been rejecting the Jharkhand demand.

Once again militancy is in the air. Agitations, bandhs, economic blockade have been the vehicles for demanding either statehood or at least autonomy for the tribal belt. The call for Jharkhand bandh and economic blockade by the militant AJSU from March 1 has upset the whole government machinery of that area. The Centre's suggestion for talks is endorsed by all political parties, the JMM, the AJSU, the JPP, etc. and a call to forget their differences and strive unanimously for their goal is being voiced.

Suraj Mandal, the leader of the JMM, is not ready to accept less than the status of Union Territory for the Chhotanagpur-Santhal Pargana region. The leaders of the JMM and AJSU think that only after that, the region will get developed. The UT will have its distinctive tribal cultural identity.

Today, from local Congressmen to the Marxist-Leninist groups—all agree that one cannot politically survive in this region without identifying with the demand for a separate State. Certainly, a separate Jharkhand State can never be the panacea as it is believed, but undoubtedly its creation will open new vistas for advancing the people's cause. Today the Jharkhand movement stands more for a regional State formation than for ethnic self-determination of the tribal masses. It is concerned more with the question of boundary of the proposed State rather than with the main issues of ethnicity and exploitation. The movement is once again facing a great dilemma because of its internal contradictions. ■

Face of US Offensive

KEWAL VARMA

The referendum in South Africa marks the end of one kind of imperialism and the beginning of another. Most of us in the newly-independent states had earlier thought that the end of imperialism would be marked by democratisation of the world order. The United Nations General Assembly also reinforced these hopes for some years. But today history seems to be playing a cruel joke; our hopes of a more equitable world order are being dashed. The emergence of a unipolar world portends a global order that is more inequitous than what we have been used to since 1947.

The US has been trying, directly and through the international institutions, to impose unfair terms on the developing countries, India included. This is in many ways reminiscent of the treaties which imperialism imposed in the eighteenth century. Since India was a direct colony the unequal terms were all-embracing. But in the case of semi-colonised countries like Japan, China and Egypt the treaties ensured free access to their markets, extra-territorial judicial rights and veto on their defence capabilities.

Today India is being singled out by the US in its bid to impose its own world order because New Delhi has been most active in the movement that sought to consolidate the autonomy of the developing countries. Thus a rather unfair treaty on a strategic issue like nuclear capabilities is being imposed on India. Washongton is forcing it to surrender the nuclear option by coercing New Delhi to sign the non-proliferation treaty when Pakistan, Tibet and Central Asia have nuclear weapons.

According to a position paper of the Pentagon which has been blessed by President George Bush, this treaty will put an end to the "hegemonic aspirations" of India. Suppressing India's nuclear capabilities will send the right signals to deter Germany and Japan from acquiring nuclear weapons. This will then ensure the undisputed supremacy of the US.

◆

NOT only the US State Department, the IMF and the World Bank are also pressuring India to scale down its conventional defence capabilities. Though this has not been included as one of the conditionalities for their loans to India, the multilateral agencies have secured an informal undertaking to this effect from the government. This is being done at a time when Pakistan has announced that it would substantially increase its defence budget and spend more hard currency to acquire sophisticated equipment from abroad. Under the circumstances, India will have to willy-nilly fall back on the US in the event of any threat to its security and integrity.

There is an attempt to attack India on key economic areas as well. For instance, we have been forced to give better treatment to foreign banks. But Indian banks are obliged to lend to priority sectors at lower interest rates, albeit by charging higher interest on loans to non-priority sectors to cover the losses on loans to priority sectors. But since foreign banks will be under no compulsion to lend to these key sectors Indian banks will never be able to compete with them. They will simply be wiped out if free entry is allowed to foreign banks.

Another sector where unfair terms are being imposed is power. Judging by its plant load factor, the centrally-owned National Thermal Power Corporation is one of the most efficient undertakings. It has been crippled because the State Electricity Boards do not pay their dues and the Central Government does nothing about it. The Centre has, however, guaranteed foreign companies a fixed rate of return of 16 per cent. Since foreign companies will import their equipment, the Bharat Heavy Electricals Limited will die a slow death. The BHEL had won 89 per cent of the World Bank sponsored international tenders and had thus attained global standards of efficiency. But in the past one year the BHEL has not received a single order; by next year it will be using only 25 per cent of its boiler capacity and 45 per cent of its turbine capacity. It cannot even enter the export market because the world over power equipment is sold on suppliers' credit, and the BHEL cannot arrange for this credit without government support.

The situation is quite reminiscent of the eighteenth century when the developing Dhaka textile industry was gagged to make way for foreign textiles. The Indian railway was also built on the basis of a guaranteed rate of return which Dadabhai Naoroji labelled as one of the elements of his famous 'drain' theory. Karl Marx believed railroads would lead to the industrialisation of India. That did not happen because the British investors imported even tiny nails at inflated prices. Today, equipment for the power sector is being sought to be imported and the domestic infrastructure for producing these will have to be dismantled.

The Dunkel Draft of the GATT's Uruguay Round of trade negotiations and its clauses on patents is another unfair term that is being imposed on India. The frequent threats by the US trade representative, Ms Carla Hills, to use Special 301 against India is the crudest form of arms-twisting that the country has been subjected to since independence.

◆

INDIA is facing this multi-pronged offensive sponsored by the US when the domestic situation could not be any worse. The change in the balance of global power also does not favour us. Our economic survival at the current rate of aggregate consumption depends heavily on foreign assistance. And the nation is just not prepared to bring down its level of consumption for a better future.

The Budget also indicates that this government has shied away from curbing consumption. Chandra Shekhar, who has been making the maximum amount of noise against the sellout to the IMF-World Bank, was asked recently what he would have done had he been in power. With an air of bravado the former Prime Minister replied: "I would have gone to Doordarshan and asked people to bear with me and sacrifice for the country." Perhaps anticipating that people gave him only five Lok Sabha seats in the last elections.

People are in such an apathetic mood that a call to nationalism from any quarter does not evoke much of a response. The BJP tried in its own way through the *ekta yatra,* but did not meet with success. What is stranger is the arugment among increasing sections of the intelligentsia that the IMF and the World Bank are within their rights to impose conditionalities. What they do not realise is that the IMF and the World Bank are not commercial bankers, and their conditionalities go much beyond ensuring repayment of loans. The conditionalities seek to promote a particular kind of socio-economic order which the US is trying to impose.

But how to respond to the new international and domestic reality? In the eighteenth century, countries like China and Egypt succumbed to provocation and challenged imperialism prematurely. They had to pay a heavy price. India too met with a similar fate when it challenged British rule in 1857 without being adequately prepared. Only Japan responded in a cool and calculated manner. It first consolidated its inherent strength and by 1906 it was in a position to effectively challenge colonial authority and dismiss the unfair treaties that had been imposed on it. India, China and Egypt took roughly half a century longer to get out of the clutches of colonialism.

The present situation also calls for cool, calculated and skilful handling. We may have to swallow the unfair terms and conditions being imposed on us. But with vision we can strengthen our position and assert our status in the global arena. At the same time we must do everything possible to ensure that the national pride is not badly wounded. Even if nationalism fails to move the people at present, it has not lost its relevance. But do we have the leadership that can face up to the complexity of the present situation? ■

New Directions for India's Foreign Policy

ERIC GONSALVES

Political systems have evolved more in the twentieth century than ever before in recorded history. Hereditary sovereigns and empires have had to make way for nation-states. The last few years have seen a radical restructuring even of this world power structure. This makes it necessary to examine new realities in depth in order to chart a course for the future for India's foreign policy and to restore the broad consensus on which it has always been based.

It is understandable that the fundamental changes required from earlier mindsets have caused some knee-jerk objections. These are sought to be justified on the grounds of "consistency" or "principle". It should, however, be remembered that the acid test of any policy is that it serves the national interest in the world in which we have to live.

The first new dimension is the end of the Cold War. Although this should be welcomed unreservedly by every supporter of non-alignment, the fact is that most Third World countries, including India, did use Cold War leverage in dealing with their bilateral problems. These opportunities have disappeared. It is equally true that partners in the single remaining alliance will also find themselves dealing with a more unpredictable and unrestrained superpower. With total alignment or non-alignment becoming obsolete, shifting alignments on issues are likely to characterise the future scenario. All nations have to adjust their attitudes. If the non-aligned movement is to survive at all, it must hark back to its original purpose of working for a tension-free international environment in which all nations have their place in the sun. To do this in the post-Cold War scenario, it will have to become universal and coterminous with the United Nations or disappear.

The second dimension is that relationships will be determined by power equations with greater economic than politico-military content. This means on the one hand, more cold-blooded North-South attitudes, with the South more marginalised; and on the other hand, having little choice but to integrate with the global economy.

The author, a reputed Indian diplomat who has now retired, was India's Ambassador in Brussels and as the former Secretary of the External Affairs Ministry led the Indian delegation to the Sino-Indian border talks. He was also Director of the India International Centre, New Delhi till recently.

Following the Gulf war, concern is being expressed about the world being managed by global policemen. This is likely but not in the expected guise. The Northern group of countries which has been loosely labelled as the "Vladivostok to Vancouver Group" is now in overall control of most international organisations and is the primary source of resources, technology and markets. This leverage will be utilised to seek to reduce both external and internal tensions by pressure for disarmanent, reduced defence spending, confidence-building and good governance. The consensus statement at the recent Security Council outlines the broad approach, and case studies of Iraq and Yugoslavia indicate its operation on the ground.

India's attitude to these developments cannot be negative. Peaceful resolution of disputes, coexistence, confidence-building, peace-making and peace-keeping, priority for development over armament, universality of democratic societies have all had the highest priority on her agenda, and this will continue in the future. They hold the promise of a better world. However, we do have a duty to our non-aligned conscience and our position as a major and responsible regional power, to ensure that unreasonable Northern solutions are not imposed on the rest of the world.

The third dimension is that the relative marginalisation imposed on develolping countries by the post-Cold War scenario can only be countered by more effective regional cooperation. Even the rich are building up regional blocs.

◆

SOUTH Asia needs to hasten to put substance into the SAARC. Not only should it move from those peripheral issues that unanimity has permitted it to consider to effective economic cooperation. Given the asymmetry between the size of the various members, the larger ones will have to provide some concessions—India most of all. The organisation must also find a way to consider political and security matters. This can be done informally at first until confidence is established.

Confidence-building in South Asia has to deal with several difficult issues between India and her neighbours. Ironically, with Nepal and Bangladesh one major issue is utilisation of the waters of common rivers, whereas this has been settled with Pakistan. Ethnic tensions and migration are another common problem. India and Pakistan were able to set most of this behind them after the mass transfer of population following partition. But the tension between India and Pakistan continues and although outright conflict has been avoided since 1971, it does escalate regularly to dangerous levels. The public in both countries appears to be unwilling to support an outright military conflict. In recent days there is evidence of disenchantment in Pakistan even with the low-intensity support to dissidents in India. The resource crunch on both sides has also brought about considerable rethinking. In a rational discussion, the security threats are being recognised as less and less real. How then do we set about building the necessary bridges, removing the very real distrust first, and disarming or marginalising the vested interests? To those who have participated in the Indo-Pak dialogue, the immensity of the hurdles is clear. But there is no alternative and some optimism may be discerned in the increasing participation in this dialogue. Moreover, might it not be better to make our own agenda before the aid consortium begins to make it for us?

The US-USSR dialogue over the last twenty years is instructive. Private and quasi-official discussions without publicity were used to lay the groundwork. Mutually balanced force reduction was the basis of agreement. Implementation was based in verification. For India and Pakistan the agenda must now include both conventional and nuclear weapons.

Kashmir is also a matter that we have to settle under the Simla Agreement. State interventions by both India and Pakistan have made the situation in the Valley more and more difficult to manage. To stand pat on old positions in the light of developments in neighbouring Central Asia could move both of us in the direction of becoming irrelevant. Attempts in the direction of a joint determination of the future by the political elements in the Valley together with India and Pakistan after attaining a degree of tranquillity seems to offer the only viable way to proceed.

Any stable arrangements between India and Pakistan require a broad consensus in the two countries. This is impossible as long as elements in either country seek to use Indo-Pak issues for domestic advantage. The suicidal nature of this attitude in the current situation needs to be appreciated—an uphill but necessary task to be undertaken by the genuine statesmen and intellectuals in the leadership. It is equally important to appreciate that any effective dialogue must cover all elements who exercise power—generals, bureaucrats and politicians regardless of protocol.

What it s in common among the problems between India and all her neighbours is that they have been resolved when there has been a will to compromise. They have become intractable when the two sides have sought to obtain their maximum demands. If all can revise their approach, the river waters problem in the east will become more amenable to solution. As with the Indus Waters Agreement and other riverine disputes we should not rule out the services of an interlocutor.

Sri Lanka has still to find its own solution to giving its Tamil minority adequate political autonomy within an unitary polity. It is, however, suggested that much greater economic and cultural cooperation, particularly between South India and Sri Lanka, might provide a better environment for Sri Lanka's necessary political efforts.

◆

A new factor is that for the first time in 40 years our unique neighbour China is in the throes of some uncertainty about her domestic evolution and her position in the international firmament. She has now accepted her developing country status and is looking for resources, technology and markets like the rest. The end of the Cold War and Tiananmen have also served to isolate China and place her on the defensive. India's willingness to continue to improve bilateral relations and to stand by its commitments in the 1954 Treaty regarding Tibet must, therefore, be welcome to the Chinese leadership. Enhancement of the bilateral relationship will continue. It must expand into all spheres including dialogue between the military establishments and on nucleair questions. we can now assume Chinese disinterest in direct involvement in subcontinental problems as shown by the current attitude on Kashmir.

The boundary question remains to be settled. But both the governments seem prepared for some further delay. Perhaps the lessons of Europe will be appreciated by Asians in due course. If Germans and Poles in 1990 can voluntarily accept borders imposed on them by the victorious powers in 1945, it should be possible for the status quo maintained in our neighbourhood for 30 or 40 years to be accepted as final frontiers with some adjustments.

A settlement providing for adequate autonomy in Tibet will also be necessary if the border is to remain tranquil.

Another reality is the steady economic progress made by all parts of Asia and their growing incorporation into the global economy. Once there was Japan, then the four tigers. Now the ASEAN, Hong Kong, Taiwan, South Korea and even South-East China have ceased to be poor countries. India has all but ignored this development. However, many of them are showing renewed interest in India. In some ways Taiwan and Korea are more effective partners for our current industrial development than Japan, Germany and America. We need to undertake much greater efforts to relate to these countries and also to Australia. All the Asian sub-regional groupings must be made active partners with the SAARC to resolve together trans-border problems of the future such as environment, fisheries zones, sea lanes, etc.

Japan is now both an economic and technological superpower. But as she has as yet drawn up no unique political agenda, she takes no direct initiatives. Nor does she want to raise the level of hostility already directed against her from the United States on economic grounds. Beyond the existing relationship to take over where the NIEs have ceased to be competitive in the Japanese market offers further attractive opening.

A major new factor is the collapse of the Soviet Union. Even if the CIS becomes an effective entity, which is rather uncertain, the world will have to deal with a number of successor states whose territory and jurisdiction cannot be taken as final for some time. In the mid-term and long-term both the new republics and the rest of the world are searching for the most advantageous new matrix of relationship that they can ensure. The Slavic republics seem more interested in a Western linkage. The trans-Caucausian republics are rent with internal strife. The Central Asians are inevitably influenced by their Russian mentors and their own inclination towards the West. But their need for more broadbased domestic political support makes them also turn to Turkey for ethnic reasons, the Pacific rim for economic reasons, and to Iran and Saudi Arabia for Islamic reasons. Pakistan has instinctively sought to use the religious bond to build up a new economic and political constituency. However, although the present elites need to strike some Islamic postures, they would also regard fundamentalism as a very serious threat. Any attempt to embroil them in outside quarrels would probably be counter-productive. India has had an ongoing relationship with this region since time immemorial. We also had a good relationship during the Soviet period. We need to build on that foundation stressing that what we want is an overall constructive relationship that includes South Asia, Afghanistan and Central Asia, and indeed which excludes none. Our experience in building up a democratic political system and in opening up a controlled economy would be more useful and relevant for their future planning than that of almost anyone else.

This could also be true for Russia and Ukraine. However, for the present Russia seems to be looking mainly Westward. Ukraine has shown more friendly attitudes. Our major concerns should not be just the legacy of the Indo-Soviet relationship. Certain problems have to be assessed. Can we continue to obtain the necessary defence supplies till we diversify our sources? Can we continue the trade exchanges in the new circumstances? There is clearly obvious benefit to economies short of foreign exchange to continue a barter system until they can substitute more normal exchanges. One could even consider gambling some further credits if the barter arrangements are secure. But still we must preserve and work hard with each republic separately looking more at the future than the past.

◆

THE remaining constant factor is the USA, almost the only remaining superpower. Most of its allies and antagonists have been adroitly brought together in the UN and elsewhere to deal with questions of conflict resolution. Somewhat disconcertingly for some in India, we find ourselves working quite often along with this establishment. However, as explained above, this is inevitable in a post-Cold War situation where alliance linkages do not distort attitudes, and stability is viewed in regional and geographic terms. Revisions in the US attitude on subcontinental questions taking a much more balanced view between India and Pakistan are sufficiently evident. One should also anticipate the increased pressures to reduce tensions and conflicts and for the US to directly intervene in confidence-building exercises as an "honest broker". The US determination to obtain its ends in any bilateral economic relationship by pressure tactics will probably increase unless restructuring of its economy is undertaken—which is unlikely. However, rather than invoking principles our interests may be served by negotiating for the best deal we can get. The American market will be one of the most valuable and it can provide many quid pro quo that we need.

A factor with growing importance is the Europe of 1992. This will become the single largest economic entity in the world and India's largest economic partner. South Asia is the most logical complementary partner in the developing world. As integration takes place, there will be shifts in power and authority from France and Britain to Germany and the Central and Northern Europeans. We need to be prepared for and even to exploit this new situation. Germany has shown considerable goodwill. It is necessary to build concretely on the present united foundations.

A sad fact that has to be faced is the weakness of our economic thrust abroad. There is too great an obsession with multilateral institutions and issues to the detriment of what is most important, namely, promoting the export of goods and services and bringing in technology collaboration and investment. Multilateral agreements and resolutions have their uses. But nothing can substitute for markets that are lost or not exploited. In addition to this necessary revision of priorities, it must also be borne in mind that without a strong growing and competitive economy at home, no country can survive in the international marketplace.

Yet another new factor is that the climate for global disarmament is becoming more stringent. Already one may assume that large cuts will be made in the US and CIS forces. Britain, China and France have refused to join in this exercise. But pressure, at least in the democracies, to abandon weapons of mass destruction will mount. The nuclear weapon powers are clear that the trend should be towards less, not more, weapons and weapons states. All non-signatories are under pressure to sign the NPT and almost all have succumbed. India has been correct in advocating a comprehensive global nuclear disarmament as the best option. We cannot, however, stand still and merely reiterate that stand. Rather, we should take the initiative to say that the distinction made in the NPT has become obsolete and that all powers should gradually become equally subject to the same regime. France and Britain should be able to give up their weapons immediately. The Chinese may require some assurances from the Russians and the Americans. With some changes, the proposals made by Rajiv Gandhi at the special UNGA session on disarmament are worth pressing.

An encouraging factor is that the United Nations is at last able to undertake the role envisaged for it in 1945. It must be helped to do so by making its decision-making more democratic and also more effective. The Security Council needs to become more representative and more responsive to the General Assembly debates. By convention, the veto need never be used. For operational decisions even in peace-making and peace-keeping, delegation to the Secretary-General and the Secretariat will be necessary. The Military Chiefs of Staff Committee needs to become operational. North-South questions, environment and all other global issues should now be dealt with at the UN and it should become capable of doing so to the satisfaction of its members.

If the big powers are agreeable not to dominate the UN, the smaller powers should also not seek recourse to the tyranny of the majority and should act with responsibility. Often, like others, India has supported resolutions not because of conviction, but because they were sponsored by the Arab group or the African group or G-77 or the NAM, etc. We have just corrected another similar stand on not having diplomatic relations with Israel without the many adverse results that were predicted. How to make the UN more effective is being debated around the globe. With our depth of experience, India should be actively associated with this process. The key to a successful conclusion is that members must concede some sovereignty to the organisation and the more powerful must accept more democratic decision-making.

The last reality is that ideology is not dead. Democracy is now the ruling political system in most countries and bids eventually to become universal, as it provides the most effective form of representing the individual and his aspirations. Group pressures may allow fundamentalists of different kinds to hijack a democratic system for some time. It is a matter of satisfaction that despite many difficulties and vicissitudes, India has nurtured this system since independence. We must strive to make it universal. This was Nehru's vision for India and the world.

While looking forward, there are some values from the past that need to be recalled with some urgency—not just in the field of foreign policy, but in almost every aspect of national life. In the last one or two decades there has been a steady erosion of the importance of professionalism and the value given to professional inputs. In dealing with the rest of the world, no nation can afford to rely on instinct or impulse. Jostling self-seekers and sycophants do not provide unbiased and unwelcome but realistic inputs. Hiding behind secret labels can only foster delusion. Overall political direction can and should come from the elected leadership, but only after informed and serious debate, taking into account the expertise and judgement accumulated in the foreign service, the academic community, the media, those in the external economic sector and all those connected with external security. ■

Postures and Realities

ASHWANI MAHAJAN

Amidst far-reaching, sudden and discrete changes, this Budget has brought a buoyant movement in the stock market, a jubiliant mood in the industry as also foreign capital, but the poor are feeling cornered due to their eroding purchasing power as well as fear of loosing their bread itself as a result of reduction in food subsidy in real terms and its abolition altogether on sugar. The middle class' reaction is subdued a little due to the restructured income tax.

In the present Budget the Finance Minister has explained his objectives: his short-term objective is to set right the foreign exchange position and his medium-term objective is sustained economic growth with a higher rate of employment. These are to accompany a strict vigil on inflation. In the following paragraphs an attempt is made to provide an analysis of the legitimacy of such claims by the Finance Minister. An attempt has also been made to look into the charge of the Opposition: it is a 'salesman's budget' in which the Finance Minister has tried to sell the sovereignty of the country.

Improving Foreign Exchange Position: Short- and Long-term Measures

As could be seen from the data which our 'skilled' Finance Minister provided in the Budget, our foreign exchange reserves have increased from Rs 4388 crores to Rs 11,424 crores during the last 12 months. Readers would appreciate that this increase is partially due to the new remittance scheme (Rs 2132 crores) which was another 'Voluntary Disclosure Scheme' (VDS) and partially due to the IMF's loan and its conditionalities which are an open secret now. The Finance Minister himself admits that the industry has suffered heavily due to the cut in imports. Then what is the reason for being so much jubiliant about the improvement in the foreign exchange position?

Now let us come to the long-term measures to bring about fundamental changes in the foreign exchange position. Partial convertibility of the rupee, allowing the NRIs to bring in the yellow metal in order to plug the illegal channels, the Gold Bond Scheme, cuts in imports duties on various items, etc. are some of the drastic steps which our courageous Finance Minister has taken in this regard. Critics blame that the Finance Minister has done nothing more than folowing the World Bank/IMF in further devaluing the rupee by bringing about partial convertibility and drastically cutting down the import duties. How far this would really solve the foreign exchange crisis is a question only the future can answer, especially in view of the fact that the export performance has been dismal despite the earlier devaluation (a fall of about six per cent in the overall exports during the last six months before December). The Gold Bond Scheme is another 'Voluntary Discloesure Scheme'. Is it not pertinent for the honest taxpayer to ask this government: for how long shall we keep on rewarding the dishonest black money holders with one or the other schemes?

The official circles claim that cutting down import duties would make our exports more competitive, as it would go a long way to provide a more fair cost schedule to our export-oriented units. If the past is any guide, this move is not going to record much success. In anticipating export performance, we must understand our realities. The performance of exports in 1990-91 shows that two-thirds of our total exports came from applied agricultural products, cotton textiles and yarn, jute goods, leather goods, readymade garments, handicrafts (including gems and jewellery), and less than 20 per cent came from the modern industries. A significant factor in this is that except in respect of gems and jewellery, the import content of our exports is negligible. How much increase our Finance Minister expects in 20 per cent of our exports? It is a pity that in the last 42 years of our exercise of budgeting, planning and policy-making, we have not understood this reality fully.

It would have been better if our Finance Minister had proposed measures for improving the lot of our traditional exports by trying to realise their problems

The author belongs to the Department of Economics, PGDAV College, University of Delhi.

and making them more presentable to the developed world. Why does our Finance Minister forgets the fact that during the 1980s, the increase in our external debt from $ 20 billion to more than $ 70 billion, as a result of our 'opening up' to the world and liberalisation of our imports, could not set our external balance in order. This has only created huge white elephants in the name of export-oriented units (which export very little) with a high import content. The proposed reduction in duties are seemingly an effort to sustain such industries.

Growth and Employment

The Finance Minister in his usual fashion spoke at length about growth and a higher rate of employment generation as a medium-term objective which he seeks to achieve by keeping inflation at a low rate. Growth has been the major concern of our planners and Finance Ministers, and the modus operandi was the growth of PSUs by setting aside huge funds in our Plans (53 to 54 per cent in each Plan). It was through growth that self-reliance, social justice and modernisation was sought to be achieved. (No doubt some efforts wer also made to attack the problem of poverty directly with hardly any dent on poverty as a whole). Inflation and high rate of growth of unemployment was the price which we paid for a little growth of per capita income (only 1.3 per cent) in the last 42 years. Neither self-reliance nor social justice is in anyway visible in the Indian economy and the modernisation that has been achieved is also a distorted one. How the present Budget seeks to achieve these cherished goals is sought to be examined in the present analysis.

The Finance Minister puts it like this: We start from a deep crisis of foreign exchange. Several short-term measures were required to be adopted to set things in order. Now, he can go on to the path of sustained economic growth after improving the foreign exchange position. What instruments he has in his hands for attaining long-term economic growth? It seems that under the influence of the World Bank/IMF, he does not have much to say about the domestic sector, except for export-led growth via concessions in import duties to make Indian exports more competitive. For domestic industries he has hiked up the excise duties. The domestic organised sector is zooming high for lifting controls on capital issues, freeing mutual funds from income tax and so on. But these peripherel measures would ultimately be beneficial if and only if the industry really shows progress which even the Finance Minister is not very sure about. Even the stock exchange boom can be sustained if the industry really performs as per the rates of equities achieved in the stock market.

Industrial growth depends upon both the demand and supply factors. The automobile industry and many other industries are faced with the problem of recession in demand resulting in less than full capacity utilisation. Increase in excise duties will aggravate their problems even further.

Regarding agriculture the Finance Minister relies heavily on the import of seeds, rice planters, etc. as he proposes the abolition of import duties on seeds and reducing it significantly for rice transplanters. Agricultural equipments produced indigeneously do not attract the Finance Minister's attention. No significant effort has been made to encourage R&D in agriculture. Political compulsions force him to set aside Rs 5000 crores for fertiliser pricing and subsidy including alternatives for restructuring the subsidy. In the meantime the concerned committee has recommended strongly for continuation of fertiliser subsidy for small and marginal farmers and has cautioned against its total abolition. The Committee has further recommended only a gradual reduction in subsidy to maintain the uptrend in agricultural production.

Although the Finance Minister spells out employment as one of the main objectives of medium-term, no new scheme for employment generation except the same old Jawahar Rozgar Yojana has been announced. The Finance Minister was rather busy to make provision for those who are going to face the onslaught of the new policies through massive joblessness. As a result of the ambitious plan of privatisation of the public sector units, thousands are feared to lose their jobs. To avoid opposition of a major kind from the trade unions the Finance Minister has made provisions for them in advance Otherwise there is nothing in the Budget which could generate additional employment of any significant degree—neither the highly mechanised foreign capital which he intends to invite nor the so-called export-oriented units which he intends to establish.

Social Justice

Fear of rising unemployment itself is a big hurdle in achieving social justice. The only consolation is the continuation of food subsidy. But the Finance Minister fails to provide for the buffer stock of sugar. In the absence of subsidy on sugar, the poor consumers are going to be worst hit in the event of any fall in sugar production. (Thank God this year production is expected to be good.)

Inflation

From the time the new government has taken over, inflation has been one of its principal headaches. The controversy over the Congress-I election manifest's claim to roll back prices within 100 days of assuming power and the Finance Minister's rejection of the idea is still in the minds of the Indian people who are keeping their fingers crossed about the ability of the government to control inflation even in 1000 days. Drastic cuts in food subsidy and abolition of sugar subsidy in the current financial year leading to a spurt in the prices of food products fuelled by 'petroleum' price hike has added to the miseries of the public. The Finance Minister's persisting interest in curbing inflation by making provision for food subsidy, revamping the public distribution system, and a significantly low budget deficit are of course worthy of compliments. But efforts to contain inflation are going to receive a setback by a virtual devaluation of the rupee via partial convertibility, increase in excise duties, a drastic cut in the Statutory Liquidity Ratio leading to the additional capacity of banks to create credit and thereby increasing money supply.

Arguments of export competitiveness and convertibility of the rupee cannot work very long. Ultimately these measures must show results if they are to sustain themselves. With the dismal performance of the industrial sector all hopes lie on the agricultural performance (which itself is dependent on the monsoons). Till date exports have not responded to devaluation last year; rather exports recorded a fall of six per cent in the last six months. Let us keep our fingers crossed and wait for the next few months and watch how partial convertibility of the rupee works, how much gold Indians bring home through legal channels and how much gold the Union Government is able to tap through the gold bonds.

A final word. While diverting from the old policy, and going for structural adjustments, the present government should have *opened up* within India and initiated a 'national debate'—instead of *opening up* with the World Bank—on our acceptance of the concept of structural adjustment. ■

Unworkability of 'Trickle-Down' Strategy in India

GIRISH MISHRA

The strategy of trickle-down entered the lexicon of economists before it came to be hotly debated in the context of economic transformation of the newly liberated countries in the 1950s and 1960s. The concept of trickle-down "based on the theory that economic benefits to particular groups will inevitably be passed on to those less well-off" was mentioned for the first time in economic literature by *Antioch Review* (No. 192, Summer 1944), which pleaded for the adoption of its philosophy in all strategies for the development of agriculture and business. Five years later, however, President Harry S. Truman came down upon it with sharp words. As reported by *Baltimore Sun*, he stressed:

> We have rejected the discredited theory that the fortunes of the nation should be in the hands of a privileged few We have abandoned the 'trickle-down' concept of national prosperity.

With the victory of the Republicans in the presidential election, the US Administration resurrected the "discredited theory" of trickle-down and rehabilitated it. The Eisenhowever administration made it permeate the tax programme. With the Cold War rising in its full fury, it came to be hawked by the US-controlled and funded international agencies and research institutes at home and abroad. It was adopted as a convenient device to persuade the newly liberated nations not to work for any restructuring of socio-economic relations at home and a change in the international economic relations. It was devised to win over the vested interests in newly liberated countries which were apprehensive of the ascendancy of "socialistic ideas".

One may look back to find how the trickle-down philosophy came to be praised by the protagonists of status quo in our country. From the Forum of Free Enterprise to the Swatantra Party and the Bharatiya Jana Sangh—all sang songs in its praise. They opposed land reforms, abolition of privy purses, founding of a public sector to provide stimulus to economic development and import substitution. One must not forget that it was the Maharaja of Darbhanga, a big pillar of the Hindu

Mahasabha, the ancestor of the BJP, who had got the Bihar Zamindari Abolition Act declared null and void by court. Prof Balraj Madhok, heading the Jana Sangh, had tried to block the nationalisation of banks in 1969 because it aimed at depriving the big business houses of their control over savings of the people and their use for their narrow interests.

Even though the philosophy of trickle-down has been advertised from time to time with a great deal of fanfare and backing from the World Bank and the US agencies, it has never found favour with our national leadership. As early as 1933-34, Jawaharlal Nehru had rejected the essence of this philosophy and emphasised:

> Nothing is more absurd than to imagine that all interests in the nation can be fitted in without injury to any. At every step some have to be sacrificed for others.

He went on to add:

> We cannot escape having to answer the question, now or later, for the freedom of which class or classes in India are we especially striving for? Do we place the masses, the peasantry and workers first, or some other small class at the head of our list?

Let us give the benefits of freedom to as many groups and classes as possible, but essentially who do we stand for, and when a conflict arises whose side must we take? To say that we shall not answer that question now is itself an answer and taking of sides, for it means that we stand by the existing order, the status quo.

His successor, Indira Gandhi, categorically demanded a change in the existing arrangement of international economic relations while she strived hard to bring about socio-economic restructuring at home. She rejected the trickle-down philosophy when she stated in the course of the second Raul Prebisch lecture:

> When, as a result of the Bretton Woods Conference international institutions were set up, problems were not looked at in their totality nor was the changing world political situation taken into account. These institutions were meant primarily to promote the interests of advanced countries At that time the majroity of today's developing countries were not independent, so that their legitimate interests were unrepresented and internal contradictions inherent in the system soon became apparent. This basic structural flaw distorts the functioning of those institutions. It is not surprising that they have failed at the very first crucial test. What was initially supposed to be advantageous to the developed but not specially helpful to the developing had turned out to be bad for both. Hence the urgency and need for radical restructuring.

◆

THE trickle-down theory, in fact, sees development as purely an economic phenomenon and ignores the need for restructuring socio-economic relations. The emphasis is mainly on maximising the rate of growth of the GNP which is supposed to lead to percolation of the benefits to the masses in terms of employment opportunities and incomes. To quote Michael P. Todarov:

> The main preoccupation was therefore to get the growth job done while problems of *poverty, unemployment and income distribution* were of secondary importance.

While many countries opted for the trickle-down strategy, India did not fall for it. The Nehru-Mahalanobis model which formed the basis of the Second and Third Plans did address itself to distributional problems. It emphasised the need to lay stress on education, health and land reforms. Mahalanobis was very candid on the question of land redistribution:

> Such redistribution would not necessarily lead to an increase in productivity but it may still be worthwhile because of the social and political benefits which would accrue from it.

The first chapter of the Third Plan, written by Nehru himself, stated:

> The essential problem here is to reduce the spread between the higher and lower incomes and to raise the level of the minimum.

Both Nehru and Mahalanobis and, later Indira Gandhi, did not want de-emphasising of institutional changes. The Nehru-Mahalanobis model rejected the idea that the top ten per cent or for that matter any particular income group should be given primacy in economic development. According to Prof. Sukhamoy Chakravarty:

> There was no necessary presumption that a high income stratum was necessary because it served an importnat role in the accumulation process. The 'bearers' of the accumulation process did not have to belong to a specific, well-defined socio-economic class or stratum.... It was believed that a sharp increase in the size of the public sector financed by initial savings out of taxation would tend over a period of time to socialise a greater proportion of the flow of current incomes through increased production and productivity of the public sector. Along with a steady growth in the productivity of agriculture and in small and village industries, fuller employment at an adequate wage level could be reached, *sooner or later*. Even Mahalanobis's four-sector model, with emphasis at one extreme on heavy industry, whose ownership was to be very largely vested in state hands according to the Industrial Policy Resolution of 1956, and priority at the other extreme on cottage and decentralised sectors with a presumed potential for large-scale labour absorption, was, after all, based on a variant of the same logic.

The strategy of the trickle-down came to be seriously questioned and its appropriateness to the developing countries doubted at the end of the 1960s when, in spite of achieving the UN-prescribed growth targets, a large number of developing countries failed to better the lot of their masses even by a bit. No dent was made into the problems of unemployment and poverty. Consequently, special poverty alleviation programmes came to be formulated. People started talking of direct state intervention and frontal attack on poverty to be integrated with the strategy of economic development.

The protagonists of the trickle-down could shed their mood of despondency and demoralisation when Margaret Thatcher in Britain and Ronald Reagan in the USA assumed power. They tried to minimise the role of state in economic development and de-emphasised the distributional aspect. Top income groups were supposed to be the engine of economic growth and the maximisation of the GNP was accorded the prime importance. Talking of them, a British journal wrote the other day:

> Neither was a great reader of political history, but both governments were saturated with the same economic and political philosophy, culled from old free-market prophets like Adam Smith and new ones like Friedeich Hayek and Milton Friedman.

◆

NOTWITHSTANDING the trickle-down strategy of economic development, the gap between the rich and the poor in the USA has widened and the incidence of unemployment has increased. To quote a report in the *Economist:*

> Two long-term trends worry Mr and Mrs Average: stagnating real wages, and growing gap between rich and poor. Since the first oil shock in 1973, the real wages of most American workers have stagnated or fallen. And the number of Americans with income classified as "middle class" has declined. According to the Census Bureau, their share of the population fell from 71.2 per cent in 1969 to 63.3 per cent in 1989.

A detailed survey of the movements in national income and wealth distribution since 1977 published only a few days ago by the congressional Budget office shows that though 60 per cent of the increased national income during the Reagan years went to the richest one per cent. There was no percolation of the benefits downwards. The poor became poorer.

> The poorest fifth of the country, whose average income is $8400 a year, saw their incomes decline by nine per cent
> The next poorest fifth, with an average income of $20,100 a year, saw their incomes decline by one per cent.,
> The next poorest fifth, with an average income of $32,700 saw their incomes rise by a modest four per cent in the Reagan 'boom'. The next fifth, with an average income of $47,900.. saw their earnings rise by nine per cent over the 12 years
> The richest fifth, with an average $109,400 a year.. saw their incomes rise by a heartening 29 per cent. But the richest one per cent of the nation, with an average $559,800 a year, saw their already lavish incomes soar by 77 per cent. (*Guardian Weekly,* March 15).

The number of people applying for unemployment benefits has gone up from 7.1 to 7.3 per cent. Obviously, Reagan had said: "a rising tide raises all boats" and the increased wealth and incomes of the rich would benefit those who were down below, stands refuted. Bill Clinton of the Democratic Party is fully justified when he says:

> The Reagan-Bush policy of trickle-down economics was a fraud, a damnable lie, and a miserable way to cheat our poorest people.

◆

IN our country, for quite some time, a lobby is active in pushing the trickle-down strategy down the throat of the government. It holds that the money allocated to poverty alleviation programmes and social services is a waste and there should be no emphasis on distributional aspects. The government should stress only the maximisation of the GNP. It believes that investment and production should be oriented mainly towards the top ten per cent. Once, their incomes rise, they will employ more people directly or help generate employment opportunities indirectly. They will, for example, need ACs which in turn will generate employment opportunities for those connected with their production and maintenance. In agriculture, without bothering about the existing inegalitarian property relations, growth of production should be ensured whose benefits would percolate downwards and poverty would gradually vanish. One of the chief proponents, Dr M.S. Ahluwalia, occupies a very influential position in the decision-making structure. Similarly, there are several others who have been inspired by Michael Lipton whose paper (World Bank Staff Working Paper No. 597) is strong justification of the trickle-down strategy. If these people are allowed to have their way, it would pose a big danger to the Congress and the poor would be completely alienated and social tensions are bound to mount. One must not forget what Prof Sukhamoy Chakravarty has said:

> ... we need to strengthen the planning process in a strategic sense, because.. there is nothing in economic theory that would suggest leaving things to market forces alone. A spatial 'trickle down' strategy is unlikely to work fast enough in a large and heterogeneous country like India.

We must not lose sight of what has happened in the USA.

It is heartening to note that the Prime Minister has put his foot down on the question of food subsidies and rural development and poverty alleviation programmes. ■

ENERGY
LIFELINE OF THE NATION

For over three decades Dasturco has been totally involved in energy conservation, its efficient use and management.

Dasturco has incorporated energy-efficient processes and equipment in all projects handled by it. To optimise energy use. To reduce energy consumption and to cut costs. To recover and re-use waste energy.

To cite only a few recent projects:
- Visakhapatnam Steel Plant
- Tata Steel modernisation and expansion
- Sunflag Iron and Steel Company
- Misurata Iron and Steel Complex, Libya.

Also in alloy steel, mini-steel, direct reduction, ferro-alloys and other energy-intensive sectors.

And computerised energy management, as at Visakhapatnam Steel Plant.

Ambedkar as a Builder of Modern India

BASANTA KUMAR MALLIK

On the occasion of Dr Bhimrao Ramji Ambedkar's birth anniversary on April 14, we are publishing the following article.

—Editor

Dr Bhimrao Ramji Ambedkar was one of the very few Indians who launched a ceaseless struggle to change the course of Indian history and contributed phenomenally to national upliftment in pre-independent and independent India.

"One man one value" was the most egalitarian message of Dr Ambedkar. To him, "political democracy cannot last unless lies at the base of it social democracy".[1] Social democracy was his lofty contribution for the growth of modern Indian society. He was the chief architect of the Indian Constitution. He left a lasting impress on and shaped Indian polity by laying emphasis on liberty, equality, fraternity and justice to each and every citizen of the country.

In the present paper, there is an attempt to discuss the contribution of Dr Ambedkar to build the nation and modern India.

Dr Ambedkar launched a social movement from the twenties to the fifties to secure human rights for the exploited Indians and alongwith this movement he actively participated in all the deliberations of Constitution-making from the Montford Reforms (1919) to the Cabinet Mission Scheme (1946). He was called upon to give evidences before the Southborough Franchise Committee, set up in the light of Montague-Chelmsford Reforms. Discussing the various constitutional aspects of India Dr Ambedkar advocated a "government by the people" rather than a "government for the people". To him, "a government for the people but not by the people, is sure to educate some into masters and others into subjects". To be specific, he said:

> It is not enough to be electors only: It is necessary to be law-makers; otherwise who can be law-makers will be masters of those who can only be electors.[2]

Thus in 1919, Dr Ambedkar demanded extension of political power to the grassroots level of society irrespective of caste and class, creed and colour.

Supporting the nationalists' demand of "Home Rule" for India, Dr Ambedkar argued that every individual irrespective of caste, creed and colour must have his share in the "Home Rule". In this light he observed:

> It was the duty of the advanced classes to put all on social equality. For everybody recognised that home rule was as much the birthright of a Brahmin, as that of a Mahar.[3]

To him, the extension of adult franchise—that is, the right to vote—alone was not sufficient to ameliorate the deprived condition of the Depressed Classes. Therefore, he demanded separate electorates and reserved seats for them in proportion to their population. He advised the Untouchable leaders that they should not be nominated by the government; rather, they should be elected by the Untouchables themselves. The non-Brahmins as a class (Backward Classes) are subjected to the social and intellectual domination of the Brahmin Priesthood and may therefore rightly advocate separate representation,[4] he observed emphatically.

Although Dr Ambedkar was responsible for enabling the Untouchables as an indispensable community to share power and dignity in the country, he made a notable contribution towards the growth of the constitutional system by giving evidence before the Simon Commission (1928) on May 17, 1929. He submitted the following provisions to the Commission:

1) There should be no separation of Karnatak or Sind from the Bombay presidency.
2) The Legislature should be wholly elective through adult franchise. Under no circumstances the Executive be made irremovable.
3) All class and communal electorates should be abolished except for Europeans Reserved seats should be provided for Mohammedans, Depressed Classes, Anglo-Indians and to the non-Brahmins only if the franchise continues to be a restricted one The number of reserved seats shall be fixed on the basis of population.
4) There should be no second chamber in the province.
5) The Legislature should have power of appointing and removing the President, of defining its privileges and regulating its procedure. The Legislature should have power to move a motion of "no-confidence"[7] and to alter the Constitution subject to certain conditions.

The author is a Research Scholar, Centre for Historical Studies, Jawaharlal Nehru University, New Delhi.

6) There should be complete provincial autonomy. The division of functions between the Central and Provincial should be reconsidered with a view to do away with the control of Central Government, now operating through the system of previous sanction and subsequent veto.
7) The Section 2 of the Government of India Act which obscured the position of the Crown in relation to the governance of India to be deleted
8) Civil services should be Indianised accompanied by different scales of salary and allowances. In the course of Indianisation of services arrangement should be made for the fulfilment of the claims of the Backward Classes. There should be a distinct Provincial Civil Service and the Secretary of State should cease altogether to perform the function of a recruiting agency.[5]

The patriotic zeal of Dr Ambedkar has been reflected in all the demands put forth before the Simon Commission. He urged the Commission to treat the Depressed Classes as a distinct community, entirely different from the Hindus. He wanted their political interest to be safeguarded through constitutional provisions.[6] Dr Ambedkar's arguments were indeed convincing and thought-provoking.

◆

THE Round Table Conference (1930-32) held in London to discuss constitutional matters was a major breakthrough in the history of the freedom movement and the constitutional development of India. The statesman-like stand and patriotic deliberations of Dr Ambedkar at the Round Table Conference shall ever be cherished by his countrymen. He criticised the British Government for not adopting any steps to uplift the Untouchables during the last 150 years of their colonial rule in India. He was of the firm opinion that the British Government was not able to redress the grievances of the people of India and that was only possible by a *Swaraj* Government. To him, the bureaucratic form of government in India should be replaced by a democratic form of government and in this light he said before the assembly of world delegates:

> We must have a government in which men in power will give their undivided allegiance to the best interest of the country. We must have a government in which men in power, knowing where obedience will end and resistance will begin, will not be afraid to amend the social and economic code of life which the dictates of justice and expediency so urgently call for. This role the British Government will never be able to play It is only a government which is of the people, by the people and for the people that will make this possible[7]

Dr Ambedkar did not want a government that would signify a mere change of masters. To him, the Legislature was to be fully and really representative with a responsible Executive. He put forth a very vital point deeply concerned about the fate of the Depressed Classes as well as the Indian nation. He observed:

> As members of a minority we look to the Central Government to act as a powerful curb on the provincial majority to save the minorities from misrule of the majority. As an Indian, interested in the growth of Indian nationalism, I must make it plain that I am a strong believer in the Unitary form of Government. This Unitary Government has been the most potent influence in the building of the India nation.[8]

The courageous views and the pragmatic approach of Dr Ambedkar made him a towering personality in the Round Table Conference and he warned the British Government that no Constitution would be workable which was not acceptable to the majority of the people. He fearlessly said:

> The time when you were to choose and India was to accept is gone, never to return. Let the consent of the people and not the accident of logic be the touchstone of your new Constitution, if you desire that it should be worked.[9]

From this patriotic standpoint of Dr Ambedkar it was quite plain that he wanted a strong Central Government not only to save the minorities from the misrule of the majority, but also to hold the nation united and integrated. The Conference set up nine sub-committees to look into various constitutional matters in detail and Dr Ambedkar served on the Federal Structure Committee, the Minority Committee and Sub-Committee, the Provincial Constitution Sub-Committee, the Service Sub-Committee and the Franchise Sub-Committee,[10] with the great luminaries from India and England who decided the fate of Indians and the nature of the Constitution.

Dr Ambedkar demanded common citizenship, universal adult franchise, free use of common and civic rights, and adequate representation of all classes in Legislature and government services. In the Provincial Constitution Sub-Committee, he asked for complete provincial autonomy. To him, provincial autonomy must also consider provincial questions of all-India character, undefined powers must be left with the Central Government, and protection for the interests of the minorities and the Depressed Classes must be assured. The evolution of the conception of a United India and definite emergence of the Depressed Classes in the political picture of India were the achievements of Ambedkar's eloquence.[11]

The Government of India Act, 1935 was born out of the proceedings of the Round Table Conferences held in the 1930s. Most of the constitutional thoughts of Dr Ambedkar appeared in this Act for which he rose prominently both among the intellectuals and statesmen of the world. He organised the labour movement and also the Independent Labour Party of India during 1936-37. In 1937, he was elected to the Bombay Legislative Assembly and took up the economic problems of the peasants, agricultural labourers and the workers coming from all sections of society.[12] It must be noted that in the first popular provincial assembly Ambedkar was the first legislator of India to introduce a Bill for the abolition of serfdom of agricultural tenants. On different occasions, he dealt with the problems of landless labourers, small holdings, abolition of *khoti* and *mahar watan*, collective farming, land revenue, currency system, universalisation of education, modern means of birth-control, and abolition of landlordism to mention a few. He was deeply committed to the cause of the working class and their security. He worked as a Labour Member in the Executive Council of two Viceroys, Lord Wavell and Lord Linlithgow. The "Labour Charter" propounded by him in the Viceroy's Executive Council on September 2, 1945 subsequently became the basis of the labour welfare scheme in the Indian subcontinent.

◆

DR AMBEDKAR became a Labour Member of the Viceroy's Executive Council on July 20, 1942 and resigned in June 1946. That period, though short, was remarkable in the history of labour legislation and welfare in the country. It was during this period that the Factory Act was amended to ensure holidays with pay, the Indian Mines Act and Mines Maternity Benefit Act were amended to provide larger benefits and better facilities to workers. Dr Ambedkar defined the demands of the labour for food, clothing, shelter, education, cultural amenities and health resources. He laid emphasis on equal treatment for labour, whether industrial or agricultural labourers.[13] However, it was during the same period that a really important piece of legislation was passed concerning the terms and conditions of employment. But it was the constitution of Statutory Welfare Funds, Joint Labour Management Committees, establishment of Employment Exchanges and the breakthrough in the field of "Social Insurance" for which Dr Ambedkar will be long remembered.[11]

During this time the Central Waterways, Irrigation and Navigation Commission (CWINC) was set up and the Commission continued to work under the Department of Labour until the bifurcation of Ministry in 1946. In addition to this a Forced Labour Commission was also set up. The question of finding suitable persons to head these Commissions was no easy task. It was not that engineers or civil servants from England or America were wanting. Dr Ambedkar, for reasons purely patriotic, was in favour of filling these posts by Indians. Finally, he invited Dr A.N. Khosla, a prominent engineer, to head the Central Waterways, Irrigation and Navigation Commission[13] and V.V. Giri (who later became the President of India) to head the Forced Labour Commission [16] Purely patriotic was the work of Dr Ambedkar and he believed that the growth of the nation and modern India could be possible only by Indians themselves.

As a Labour Member and in additional charge of Irrigation and Power, Dr Ambedkar inaugurated a new policy of utilisation of water resources for the prevention of flood and development of the country. He held Multipurpose River Valley Conferences in Calcutta on January 3, 1945 and August 11, 1945 and discussed with the representatives of the Bengal and Bihar Governments about the Damodar River Valley Project.[17] A similar kind of conference he also presided over in Cuttack on November 8, 1945 and discussed about the Mahanadi River Multipurpose Project.[18] The projects were first of its kind with the objectives of: a) flood control, b) navigation, c) irrigation and drainage, d) soil conservation, and e) power generation. However, it is a pleasure to note that the Mahanadi River Valley Project led to the construction of the Hirakud Dam of Orissa and it stood as a remarkable contribution of the plan and policy of Dr Ambedkar. According to the recommendation of Dr A.N. Khosla, the spot of the dam was selected to be at Sambalpur and Dr Ambedkar took the final decision about the Hirakud Dam after holding discussions with the Governments of Madhya Pradesh and Orissa in 1946. The plan and design of the dam was prepared during the period of Dr Ambedkar, but the work could not start because of the country's attainment of indepencence in 1947. It started in 1948 and was completed in 1956.[19] Such was Dr Ambedkar's unparalleled contribution towards laying the infrastructural foundation of modern India.

Dr Ambedkar placed a memorandum before the Cabinet Mission (1946) asking for a provision to be made in the Constitution for the election of Depressed Classes through separate electorates. He also stressed the importance of a new settlement, emphasised the need for a Settlement Commission, demanded adequate representation in the Central and Provincial Legislatures, as well as Executives, in the Public Services and on the Public Service Commissions, federal as well as provincial, and urged for earmarked sums for education of the members of the Depressed Classes. The main feature of the memorandum was that it demanded the inclusion of these safeguards in the new Constitution.[20]

◆

DR Ambedkar's greatest contribution to his motherland is the Constitution. He was the chief architect of the supreme law of the land and he played a significant role in shaping the structure of government and Indian polity as well. While towering personalities like Jawaharlal Nehru, Sardar Patel, Dr Rajendra Prasad, C. Rajagopalachari, K.M. Munshi, Alladi Krishnaswamy Ayyar and a galaxy of jurists, statesmen and leaders of various sections of people moulded the founding Deed, Dr Ambedkar was the Chairman of the Drafting Committee. The enactment was complete on November 26, 1949 and came into force on January 26, 1950. The Sovereign, Democratic Republic of India thus sprang into existence on January 26, 1950. Presenting the Draft Constitution to the Constituent Assembly Dr Ambedkar made a scathing observation that the Assembly established political democracy in India but left out social and economic democracy which were the essence of "Social Justice". In his words:

> We must make our political democracy a social democracy as well. Political democracy cannot last unless there lies at the base of it social democracy. What does social democracy mean? It means a way of life which recognises liberty, equality and fraternity as the principles of life.[21]

Dr Ambedkar sincerely endeavoured to build a modern Indian society by making it "casteless" and "classless" through the constitutional principles. He was deeply concerned over economic and social exploitation. According to him, peace, happiness and prosperity would be a dream for India unless there was a structural change in society and economy. In the same address he warned:

> On the social plane we have in India a society based on the principle of graded inequality which means elevation for some and degradation for others. On the economic plane, we have a society in which there are some who have immense wealth as against many who live in abject poverty.. ... How long shall we continue to live this life of contradictions? How long shall we continue to deny equality in our social and economic life? If we continue to deny it for long, we will do so only by putting our political democracy in peril. We must remove this contradiction at the earliest possible moment or else those who suffer from inequality will blow up the structure of political democracy which this Assembly has so laboriously built up.[22]

In fact, political democracy without social and economic democracy is a double deception. Dr Ambedkar's anger and bitterness were justified.

The most creative contribution for the liberation of womenhood of India made by Dr Ambedkar shall long be cherished by posterity. The iconoclast in Dr Ambedkar, who publicly burnt *Manusmriti* in 1927, was himself the chief instrument in giving to Hindu community another *smriti* or the law of living in conformity with the requirements and needs of modern times. He rejected the orthodox scriptures of Manu and compiled the "Hindu Code Bill" giving socio-religious equality for men and women, for which he was called the "modern Manu". But it was unfortunate that the time did not favour the ardent advocacy of Dr Ambedkar to change the order of life from social ostracism to the path of progress. A man of conviction and courage, Dr Ambedkar resigned from Nehru's Cabinet on that score.[23] However, his vision of equality not only between men and men, but also between men and women is yet to be translated into practice.

Another important contribution of Dr Ambedkar to Indian progress was faith in a constitutional order and working for its change. The 'civil disobedience methodology' would be a Grammar of Anarchy, he thought. He was a burning nationalist who condemned the British for its deportation of Tilak and Savarkar and the repressive India Press Act, 1910. So did he criticise British bureaucracy and their deceptive political reforms. More than any Indian it was Dr Ambedkar who fought for the philosophy of social equality and the indictment, not merely of the caste system, but also of the stratified systems of inequality.[24]

Besides drafting the Constitution, Dr Ambedkar's contribution to national unification is highly noteworthy. Speaking on the occasion, he said the princely states could not have an existence apart from the Indian Union. The people of India have declared themselves for the Union and that decision must be given effect to immediately.[25] He also strongly urged upon the Hyderabad and Travancore states to join with the Indian Union.[26] He remarked that India would not recognise the princely states' independence nor accord them the status of an independent state. The only way by which the Indian states could free themselves from Paramountcy would be to bring about a merger of their sovereignty with the Indian Union.[27] Thus Dr Ambedkar's lasting contribution to build the United Modern India shall long be treated with profound honour.

◆

SUMMARISING his evidence before the State Reorganisation Committee he said there could be either 1) one State, one language or 2) one language, many States. He advocated acceptance of the second proposal which was for eliminating the disparity between the different States.[28] The vision of Ambedkar finally came to be translated into practice and various States were organised with one language. Criticising the attempt to create the linguistic provinces, Dr Ambedkar said:

> A linguistic State with its regional language as its official language may easily develop into an independent nationality. The road between an independent nationality and an independent state is very narrow. If this happens, India will cease to be the Modern India we have and will become the Medieval India consisting of a variety of States indulging in rivalry and warfare.

> How can this danger be met? It is to provide in the Constitution that the regional language shall not be the official language of the State. The official language shall be Hindi and until India becomes fit for this purpose, English. One language can unite people. Two languages are sure to divide people. Culture is conserved by language. Since Indians wish to unite and develop a common culture it is the bounden duty of all Indians to own up Hindi as their language.[28]

However, in the Draft Constitution, he made Hindi in *devnagari* script as the national language and the Lion capital with *Ashok Chakra* as the national symbol of India.[29] He wanted the country to project the mission of peace and universal brotherhood through her historic symbols.

Dr Ambedkar suggested that a second capital of India to built from the viewpoint of southerners and the defence of India. To him, Delhi was a vulnerable place. It was within bombing distance of the neighbouring countries. Secondly, the feeling of the southern people was that the capital of their country was far away from them and that they were being ruled by the people of northern India. The first consideration was, of course, more important. From that point of view, he thought that Hyderabad, Secundarabad or Bolarum might be chosen as the second capital of India. According to him, this would facilitate the easing of tension between the north and the south.[31]

Dr Ambedkar was a social revolutionary and an eminent political thinker. He denounced the traditional values and established new ideas. To him, law was the guardian of liberty and equality, and all citizens were equal before the law. He tried to seek harmony between people and the legal power of the state. So he visualised the need for an Independent Judiciary to safeguard the rights of all individuals. His whole theory of democratic organisation, to use the language of Montesquieu, may be characterised as the theory of "Checks and Balances".[32] Dr Ambedkar's liberalism was combined with a radical nationalism. His ethics were utilitarian, his scale of value was determined by the usefulness of an action towards the establishment of equality in social order. His loyalty to India was as great as his hatred for the orthodox values of the Hindu society. An eminent educationist, economist, jurist, constitutional expert, a versatile genius and, above all, a nation-builder, Dr Ambedkar was deeply inspired by the most enlightened philosophy of *prajna, samata* and *karuna* and embraced Buddhism to revive an egalitarian world social order. His acceptance of Buddhism was an unparalleled example of his patriotism, which ultimately became a blessing for millions in Indian society. Had he accepted any other religion, it might have created a political problem.

Dr Ambedkar's life was a saga of struggle for human rights and dignity. His patriotic contribution to the cause of freedom at the Round Table Conference and his statesman-like stand in the Constituent Assembly will long be cherished by all the freedom loving people of the world. However, his pragmatic approach to India' social and political problems enabled him to become one of the greatest patriots and nation-builders in the twentieth century. ■

NATIONAL INSTITUTE OF ADULT EDUCATION

(An autonomous institution under Govt. of India)

The National Institute of Adult Education (NIAE) invites applications for two posts of Fellows in the scale of pay of Rs 3700-125-4950-150-5700.

The persons selected to the posts will be expected to provide academic and technical resource support for the implementation of Adult Education programme in the following areas:

- Human Resource Development
- Learning and Curriculum
- Communication and Media
- Research and Evaluation
- Comparative Studies
- Foundations of Adult Education
- Management and Planning

Educational Qualifications for Direct Recruits

Uniformly very good academic record with a doctoral degree or equivalent published work. Evidence of substantial contribution to educational innovations, design of new courses and curriculum. About five years experience (excluding period spent in obtaining Ph.D. degree) of teaching and/or research.

OR

Uniformly very good academic record with at least three years experience in research/innovation oriented activities in Adult Education or allied spheres, with at least five years experience at senior level in Education, or Rural Development, or Administration, of which at least three years should be in Adult Education or allied spheres.

Age for Direct Recruits

Preferably below 50 years. Relaxable in the case of persons possessing exceptionally high qualifications or experience in the area of Adult Education.

Qualifications for Deputation/Transfer

Persons holding analogous posts in Universities/Institutions of higher learning/research, or persons fulfilling qualifications and experience prescribed for direct recruitment.

Applications on plain paper may be sent to Registrar, National Institute of Adult Education, 10-B, Indraprastha Estate, New Delhi-110002 latest by 30th April, 1992.

Women will be Worst Hit

MODHUMITA MOJUMDAR

This article was presented by the author, a well-known columnist, at a conference on Debt Crisis, Globalisation and Social Justice organised by the People's Institute for Development and Training in New Delhi (March 27-29, 1992).

—Editor

India faces a serious debt crisis—not merely because of the policies on the economic front pursued during the brief tenure of the past two governments, but in the main because of the lopsided socio-economic programmes and colossal financial mismanagement that has been a steadily growing feature over the past four decades and more during most of which we have had a Congress Government at the Centre. During this period, increasingly since 1947, lip service has been paid to Gandhi, the Mahatma, and there has been ritual spinning of yarn on the *charkha* at Rajghat every October 2 and January 30; but, right from Day One, there has been no intention of following the socio-economic pattern for our society that the Father of the Nation had visualised for a Free India.

One cannot, perhaps, blame Nehru for it—since he did not have our advantage of hindsight—but he had led the country to the pursuit of the Big and the Brash, mistaking it for the Beautiful. While the middle class that forms a bare 10 per cent of the population hankered for more and more dazzling new consumer goods, well-meaning national leaders sought to imitate the Soviet model in order to lift the country up through a mix of big industries and big irrigation projects—Nehru referring to the large dams and smoke-belching factory chimneys appreciatively as the "temples of modern India".

Land reforms have been only on paper. Indeed, the much-vaunted Green Revolution, which was mainly confined to Punjab and western Uttar Pradesh, has created a new class of big farmers while virtually exterminating the small and marginal farmers and leading to the pauperisation of the bulk of the 80 per cent of our people who live in villages. We were able to build up large foodstocks, and even export rice and wheat, only because a very large number of our people went to bed hungry—unable to buy enough cereals for meeting their basic needs. Along with this, there has been lopsided economic growth with easy money to be made on articles that cater to the artificially created needs for luxury products among the top 10 per cent of our society. The rise in our GDP would have been more and steady as well had the domestic market for industrial goods been as large as our population warrants. This means not just poverty alleviation programmes like Food for Work and so on that we have occasionally had—with the tanks dug and the roads built in a lean season being allowed to go into disrepair as soon as the acute crisis was over—but real generation of employment that would create its own momentum of growth and development in the true sense of the term. The main problem has not been the public sector industries (though these too have been grossly mismanaged), but the private generation of wealth which, as we have seen in all these years, does not really trickle down in any significant manner to bring about greater equity.

In addition to this, our industrial and irrigation projects have created a pollution problem and ecological imbalance; an imbalance that is growing with our fast-growing population and rapid deforestation owing to the increasing demand for timber mainly among the affluent urban section—leading to a cycle of drought and floods and a grave threat to the land, particularly in the Himalayan region and other hills, as well as a dangerous silting up of tanks and river beds.

In order to ensure this dubious kind of development, the Indian Government has been borrowing with increasing recklessness from foreign banks—the IMF and World Bank, as well as their various windows. Now, in order to have still more of the same, and to service those debts, the Government of India is frantically trying to obtain hefty loans from the same creditors. It seems that the commercial banks will not give India any further loans. Hence desperate measures are being adopted to obtain what the Fund-Bank will give, no matter that strings are attached to them. It would seem what the "national shame" of being a defaulter in the matter of repaying our loans would be far more than the shame of surrendering our economic sovereignty to basicaly the USA, operating not only through the IMF and the World Bank, but also now, through the GATT which has suddenly assumed a role that never was its. Instead of treating them with the contempt they deserve, New Delhi is actually considering the Dunkel prosposals and going through the exercise of seeing its way to fit India into the scheme of things visualised for this nation by Arthur Dunkel.

◆

AFTER the collapse of the Soviet model, our leaders seem to have hit the panic button. In a way, Prime Minister Narasimha Rao and Dr Manmohan Singh are right: there is a kind of consensus among all our political parties on the basic mix that the present government is offering our people. And that mix was evolved in the Nehru years—a mix for which nobody seems to have an acceptable alternative. This is, in the main, due to our cultural bankruptcy. Iron curtain or no, the Soviet Union had sought to model itself on the capitalist pattern—envying the glittering lights of New York and Paris, and trying through state capitalism to provide the kind of obvious prosperity of the West and providing no substitute for the consumer culture that went with it. What our leaders did was to try and reproduce this very model, without paying the kind of price that the USSR had paid for even this shadow capitalism. Our political as well as intellectual leaders wanted to be patted on their backs by both the USA and the USSR—and fell between the two stools. Now, with the USSR having crumbled, we are attaching ourselves like limpets to Washington and the West. This does not amount to globalisation. Genuine globalisation would have been to increase our trade and other ties with the countries of the South—many of them prosperous but without the kind of technological competence that India has today. Indeed, the present economic policies of New Delhi do not represent hard options—although their effect will be harsh on the majority of our people. They are the obvious options—representing soft, economic thinking and an inability to learn from past mistakes and failures—our own and that of others (recession and mindless destruction of the environement are only two of the many problems facing the Western nations)—or to innovate.

Especially at a time when our leaders are harping on the need to provide a better deal to women and the girl child, it is ironical that policies that would harm women the most are being pursued at the behest of the IMF and the World Bank. Our Prime Minister has bravely proclaimed that food subsidies will not be snatched away—no matter what the World Bank says. However, the administered issue prices of commodies available in the fair price shops have been increased and may be raised further. On the other hand, little or nothing has been done to prevent hoarding, blackmarketing of cereals and sugar by owners of the so-called FPS, or to ensure a certain minimum quality of the stuff sought to be affloaded on the people through these shops. Given the fact that in India, as of now, it is the woman who is solely responsible for the running of the household, feeding her family and taking care of her children, with the man being neither physically nor emotionally involved with domestic and parental chores, it is she who is going to be the hardest hit in the coming months.

The people have been asked to tighten their belts and undergo hardships in the interest of the nation. But the nation means its people including women. and what further sacrifice is expected of the Indian woman who is already starving and watching her children wither away due to malnutrition—brought about through sheer inadequacy of food intake? For it is simply not a question of the mother being ignorant of the virtues of a balanced diet, as the UNICEF, WHO and our own Health Ministry would have us believe, but a simple question of stark hunger.

Even if the country's economy bounces back to an even keel, even if the miracle of the average family budget becoming a well-balanced one happens in the next two years, what about the millions of children who face starvation, ill-health and death in the intervening period? Any period of crisis is particularly hard on women and children. This is true of all man-made and natural calamities. The present times are a period of agony and their lasting effect on the physical and mental health of the majority of Indian women cannot be brushed aside. Women, after all, constitute nearly one-half of our population.

The agony of a mother who sees her own child wane away for lack of food, however, has not moved our leaders all these years and is unlikely to bother Dr Manmohan Singh too much. A few land *pattas* here, a sewing machine or a blanket there—and these very women will be coaxed to see the government as a benevolent and paternalistic one. As long as politicians are assured of the votes of the illiterate masses, they could not care less about

(Continued on page 33)

Bearing the Brunt of Structural Adjustment

K. RAVI SRINIVAS

For the other half of humankind, the eighties brought little cheer as the global economic crisis, particularly the debt crisis of the Third World, and structural adjustment policies resulted in drastic cuts in government spending in various sectors especially in health.

The fact that 'Adjustment without Human Face' will bring only disastrous consequences for millions of poor women and children was highlighted by the UNICEF in its annual reports. But the crisis is far from over and the structural adjustment programmes are pursued in many more countries including India. Recently, the newly appointed Chairperson of the National Commission for Women expressed her concern about the impact of the liberalisation policies on women.

Women and the World Development Series: 'Women & The World Economic Crisis'; prepared by Jeanne Vickers, 1991; Zed Books Ltd, London/New Jersey; pp. 146.

This book discusses the finance and trade policies, the debt crisis, the meaning of structural adjustment for poor women and children and the initiatives taken by various UN agencies, grass-root organisations in various countries, and how the women encountered the issue. It provides examples from Ghana, Jamaica, Philippines, Mexico and Zambia on efforts of the women to face this crisis. It also explains that in the developed nations too women are the worst hit by the governments' reduced allocations on health and social security schemes and recession. Thus, be it the developed nations or the developing ones, it is the women and children who bear the brunt of structural adjustment.

This book is quite relevant in the Indian context as the government is going ahead with liberalisation and structural adjustment programmes. The experiences of women in the Third World countries where structural adjustment programmes were implemented under the guidance of the World Bank and the IMF are discussed in detail in this book. It should make us aware of the sinister implications of the programmes. But the tragedy is that this aspect has not been given the importance it deserves, neither by the media nor by the Opposition parties. Recently, WEMOS, a group on women and pharmaceticuals, released a report according to which the reduction in public health programmes in the Latin American nations has resulted in an increase in epidemic diseases. It is clear that in the long run the consequences of structural adjustment programmes, which ignore the real needs of people, will be disastrous in terms of health, education and public welfare.

This book will be very useful in understanding the issues and the implications for women. It is free from jargon and the use of graphics, cartoons and illustrations make it all the more readable.

It contains a bibliography, addresses of women's groups and other institutions which are involved in these issues. It can be used by women's groups to conduct workshops and seminars. Even a layperson will benefit much by reading this as it demystifies the structural adjustment process and raises important questions about trade, aid and development.

This book forms part of a series of books developed by the UN/NGO Group on Women and Development and published by Zed Books. The series examines various developmental issues from the women's perspective. For example, other books in the series discuss Women and Environment, Women and Health, Women and Disability, etc. The UN Non-Governmental Liaison Service offers these books at no cost for interested individuals and organisations from the Third World. ■

Effective Dramatisation of Gulf War

SHABNAM

To mark the first anniversary of the Gulf war, a special meeting was organised by the Modern Languages Department of the AMU, Aligarh; the subject of discussion being "War, Theatre and the Third World" with special reference to *Sehra-e-Aazam*, a play by Zahida Zaidi.

The convenor of the meeting Dr D. Murthy introduced the subject underlining the changing concept of the Third World. After the end of the so-called Cold War, he pointed out, the Third World had become a soft target of imperialist onslaughts; and in view of the changed international scenario it should be re-christianed as the Second World.

Opening the discussion Prof Zahida Zaidi remarked that the vital relationship between theatre and war was as old as the history of theatre itself. Greek tragedy had a prolonged war as its background. War is quite central to Shakespeare's tragic and historical plays as to the plays of his other contemporaries. Indeed innumerable examples of a war moulding the action of a play can be found in world drama through the ages: for the confrontation of two opposing forces, wills or personalities, which is often elevated to a conflict between good and evil has always held a special attraction for the theatre. But drama and literature, she pointed out, that emerged after the Second World War, had a different connotation. Its basic shared quality was its anit-war stance, it was essentially a literature of protest. Her play, *Sehra-e-Aazam*, she claimed, was also an anti-war drama of protest with the difference that it had been written from the Third World point of view and was perhaps the first drama of its kind about the Gulf war.

The Gulf war, she asserted, was more like a world war in its scope, intensity and far-reaching implications, and was unprecedented in its cruelty, bloodshed and wholesale destruction. Human values were some of its first casualties and misuse of language and media touched dizzy heights. But while the ruling cliques of all shades and hues joined hands with an aggressive superpower and the UNO became a hand-maiden of American imperialism, people registered their protest everywhere. Particularly the people of the Third World saw it as a vicious attack on their freedom, identity and aspirations. She had tried to absorb all these and several other related themes in her play, she said. But it was not a realistic drama, she pointed out. It was rather a fantasy in which historical facts were presented in the tantalising guise of fiction with a view to give them a universal emphasis. Seen from another angle it was a terrible tragedy projected as a political satire. She said she had used the central characters of Samuel Beckett's masterpiece, *Waiting for Godot*, as chorus characters in this play. They reflect the bewilderment, suffering and helplessness of the common man and also bring in an element of human warmth and sanity in this spectacle of hellish madness.

Prof Asloob Ahmad Ansari remarked that *Sehra-e-Aazam* was a powerful drama with its own coherence and artistic integrity and should be very effective if produced for the stage. He said the horrors of war and sufferings of people were depicted very vividly in this play and the chorus of Beckett's characters was highly imaginative and appropriate. It not only reflected the sentimente of the common man but also provided a structural principle in this play. The play, he pointed out, dramatised a conflict of good and evil but on the whole the force of evil was more dominant and articulate. Perhaps the absence of Behram from the stage was responsible for this impression. On the other hand, the speeches of Emperor Cactus were too long and he dominated the action throughout. He further pointed out that the author was perhaps too intensely involved in the experience and at times has not been able to maintain an artistic distance.

Prof Sajida Zaidi, the next commentator, throwing light on the Gulf war said that it was not only a political war to demolish and dominate a part of the Third World but also a psychological war to strike terror in the minds of Third World people and to crush their spirits—a war to demonstrate the absolute power of American imperialism. She said the war has not ended but continues in other ways and the Third World people should assert themselves to counter the unholy designs of the imperialist powers. She said Zahida Zaidi had very effectively projected various problems arising from this war including the breakdown of values and degradation of language. But the chorus of Gogo and Didi was too passive to project the strong protest of the people all over the world.

Miss Anwar Jahan Zuberi remarked that the role of media in this war was most callous and hypocritical. While the eye of a suffering bird was flashed again and again on TV screen there was no projection of immense human suffering and widespread destruction. She said the play, no doubt, dramatised the clash of good and evil but she did not agree with the view that the forces of good were too weak. As in Karbala, she said, Yazid achieved a military victory but the moral victory belonged to Imam Husain. So in *Sehra-e-Aazam* the victory of Emperor Cactus was dubious and incomplete and it comes out very well in the symbolic scene of Behram's beads. She said another important point that the play incorporates is the inadequate and hypocritical role of the so-called peace-makers which comes out very well in the scene entitled "The Drama of Peace".

Mrs Amina Kishore, another participant, stated that in her opinion the absence of Behram from the stage was a significant device. We see this character not just as an adversary of Emperor Cactus but as a symbolic figure embodying Truth or the conscience of the Third World. She said the chorus of Beckett's characters also lends a universal significance to a historical situation, and was a good example of literary transformation.

Dr M. Subramanyam pointed out that this war was a consequence of weakness and withdrawal of the Soviet Union and its recent collapse invests the Third World with additional responsibilities.

Summing up the discussion Prof Zahida Zaidi conceded that some of the speeches of Cactus were too long and she had shortened some of them in her English translation of the play. She said she was no doubt intensely involved in the situation but she tried to achieve an artistic distance by the use of irony, chorus and other alienation devices. She said the absence of Behram in *Sehra-e-Aazam* was quite deliberate. She also agreed that the victory of Emperor Cactus was dubious and deceptive and the forces of good cannot be crushed completely. She said Gogo and Didi were symbolic characters borrowed from a dramatic masterpiece and they could not be made more dynamic; but she had projected the strong protest of the people in other ways also and it was a constant theme in her play. ■

From Romanticism to Practicality

A Fresh Look at Indo-Russian Relations

V. OVCHINNIKOV

In an article in Pravda *on February 21, 1992, the well-known political commentator Vsevolod Ovchinnikov calls for closer economic, trade and political ties between Russia and India.*

—Editor

It is hardly surprising that the recent meeting of the Organisation of Economic Cooperation (OEC) in Teheran created a certain uneasiness in India. Now that apart from Iran, Pakistan and Turkey, the former Soviet republics of Azerbaijan, Uzbekistan, Turkmenistan, Kirghizia and Tajikistan have become members of the OEC, and Kazakhstan has acquired the status of an observer, Delhi fears that this "Islamic Common Market" will radically alter the situation in the region—a change, moreover, which will not be in India's favour.

If the USA is trying to halt the growth of Iran's influence in the Middle East, India sees in what has been happening above all a gain for her chief opponent, Pakistan. Delhi perceives an anti-Indian trend both in the creation of an economic bloc—with Islam as the connecting link—and the plans to involve the former Central Asian republics of the USSR in the Islamic Conference Organisation (ICO). Indians know from experience what the explosive mixture of Islam and politics can lead to. The partition of British India on communal lines turned millions of people in the dismembered provinces of Bengal and Punjab into refugees. And in Kashmir a conflict on similar grounds has been smouldering for half a century, sometimes flickering and sometimes erupting with renewed force.

India's fears are quite understandable, though in my view, somewhat exaggerated. The interest shown by the Central Asian republics and their close neighbours in each other in the new conditions is but natural; just as natural is the pull towards regional integration which we observe at present all over the world. This is all the more so as Turkey has recently become the initiator of the Black Sea zone of economic cooperation, and Iran has proposed the creation of a similar zone in the Caspian Sea basin. However, in both these cases it is not only the Islamic states who are sought to be involved as participants.

The Teheran meeting drew attention to the political processes taking place in the zone extending from the north of the Indian borders to the south of the Russian borders and—judging by everything—that has become the last drop filling the cup of anxiety in relations between India and Russia. The disintegration of the USSR and Russia's intention to review the bilateral treaty of 1971, which obliges us to come to the aid of India in case of aggression against her, the disruption of trade and economic relations, including even the supply of military equipment, the disputes regarding loans and the rupee-rouble exchange rate—all this has been little by little hacking down the tree of "special relationship" which had spread its branches wide during the first years of *perestroika*.

The Delhi Declaration with its call for a non-nuclear non-violent world was considered in its time as an impressive example of New Thinking. As contrasted with Soviet-Indian relations, relations between Russia and India, it appears, are fated to be less emotional and more pragmatic. The first reactions to the proposal to leave out Article 9 in the Indo-Soviet Treaty were negative. But now commentators in Delhi more and more ask themselves the question: against whom do we need Moscow's support? The Chinese have normalised their relations both with the Russians and with the Indians. The same can be said even more strongly about the Americans. So far as Indo-Pakistan confrontation is concerned, after the withdrawal of the Soviet army from Afghanistan, Washington has become noticeably cool to Islamabad and has started actively pursuing the course of rapprochement with Delhi, including collaboration in the military field. We are, therefore, witnessing a basic change in the political landscape in the whole of South and West Asia.

But to admit that relations between Moscow and Delhi have "come down to earth", to approach reality as it is, does not at all mean denying their priority significance in the foreign policy of the two countries. Russia ought to cherish its relations with India, safeguard and develop the ties it has inherited, and should not allow the impression to grow as if India has receded to a second place in our relations.

After the end of the Cold War, the long-term strategic interests of Russia and India coincide. Both countries are interested in the multipolar structure of the world whose components would balance each other's influence. In the economic sphere the interdependence of the two states remains. India will for a long time need our military technology and supply of spare parts, and Russia will need consumer goods from India. In the international arena too Moscow and Delhi have been collaborating fruitfully for a long time. With her growing external debt and her predominantly raw material exports Russia, like India, is interested in the restructuring of the international economic order, in resolving the other global problems which tthe developing South poses before the developed North. And this too is a field where interaction is necessary.

One would like to hope that "Westcentrism", which at present characterises Russian diplomacy, will give way to a more balanced and farsighted policy. While carrying on an active dialogue with the capitals of the "Big Seven", we ought not to forget about Delhi. Even if there be less political romanticism and greater practical calculation in our mutual relations, their importance for the basic interests of both the Russians and Indians will grow all the more. ■

(Translated by Ravi M. Bakaya)

MODHUMITA: Women's World

(Continued from page 28)

their genuine will-being. Patronage in small doses, rather than sincere concern, seems to be that which pays dividends, as far as they are concerned.

With large-scale retrenchment of people from government service and public sector jobs in the offing, the axe will obviously first fall on women wage-earners. As well as this, women will be the last category to whom meaningful self-employment opportunities will be made available. For, women are generally taught how to sew, knit and embroider or to make jams, jellies and pickles. These are not products for which there is a ready market at present in the villages and the packaging and promotional expertise as well as the marketing network that will help sell such stuff in the towns and cities is totally absent. Women could be made employable by teaching them skills like masonry, carpentry, plumbing, weaving, basketry and so on for which there are ready markets—but most such skills are considered the preserve of men alone by extension workers and others, including voluntary agencies, who are charged with the task of improving the lot of women. Indeed, a bane of our lopsided kind of development has been that it has dislodged women from their existing position in the village economy. While women have traditionally stored grain, looked after poultry and so on, modern methods of storage, poultry, animal husbandry, etc. are taught only to rural men, not to the women-folk. In the coming months and years, this trend will only become more pronounced. Whichever way they try to turn, women will find their manoeuvrability drastically circumscribed. ■

Releasing on Ambedkar Jayanti

FROM UNTOUCHABLE TO DALIT

Essays on the Ambedkar Movement

by ELEANOR ZELLIOT
345p.; Rs.320

This is the most comprehensive study of the Ambedkar Movement by a scholar whose works have appeared in different specialist journals on social sciences. It covers the evolution of the Dalit awakening taking into account subjects like the history of the Mahar movement, tradition and innovation in contemporary Indian Buddhism, and the cultural context of the concept of the Dalit campaign.

Professor of History at Cerleton College, Northfield, USA, Eleanor Zelliot has written over thirty perceptive articles on the Dalit Movement.

Another Vital Book

INDIA INVENTED
A Nation-in-the-Making

by ARVIND N. DAS
215p.; Rs.180

This book seeks to examine the concept of India with all its particularities (with their changing natures) as well as in terms of the general features that create the idea of the Nation. Among the latter are civilisational heritage spanning various religions and cultures, different models of socio-economic existence, varieties of technological stages, constitutional provisions, forces of economic nationalism and, most important of all, the struggle of its people for a sovereign republican, democratic society. Arvind N. Das, Editor (Research), *The Times of India*, known for his provocative writings, feels that if practice has subverted the ideals of republicanism, it is perhaps time to devise another method of actualising the ideal.

CHANDOLA: Nagaland

(Continued from page 3)

there, each candidate has to spend between Rs 30 and 50 lakhs in the elections. They no longer have the money for that for the third time in four years.

The money situation is also very tight in Nagaland now. Central funds for both budget and plan expenditure to the State are not increasing in the same manner as in the past years. The number of educated has increased, and the growth of jobs has not kept pace. For a tiny State there are already too many people holding government jobs. Private jobs are just not available. Well over 87 per cent of its people live on agriculture.

Ministers and officials have already cornered the easiest means of making extra money.

The biggest source is the sale of foodgrains and other essential items allotted to the State by the Centre. For instance, in 1991 the State had lifted 130,000 metric tonnes of rice from the Food Corporation of India godowns for distribution, at not more than Rs 2.50 a kilogram

Besides the towns, Dimapur, Kohima, Tuensang, Mon, Mokokchung, etc., the villagers neither need nor receive this subsidised rice. The requirement of the towns does not exceed 25,000 tonnes a year. The rest, and sometimes the whole lot, is sold outside the State at as much as Rs 12 or more a kilogram.

The Supply Minister's commission from this is one rupee a kilogram, which comes to over Rs 1 crore a month. Of course he would share this money with officials involved in the game and spend some of it on his own and party politics.

Then, last year the State lifted 74,500 tonnes of wheat, allotted to it by the Centre. The people in Nagaland are rice-eaters. Except for a handful of bakeries using a couple of thousand tonnes, the rest of it is sold outside, at several times the prices at which it is given to Nagaland. The same is true of sugar, edible oil, kerosene, cement, iron and steel, etc.

K.L. Chishi, who was the Chief Minister over a year ago, had said in a public meeting in Kohima that the ministerial commission from the sale of the centrally-supplied items was Rs 2.25 crores a month some three years ago.

Chief Ministers have been overthrown in fights over the sharing of this bounty. The one who shares most lasts longer.

Then there are other government departments, which make millions by giving out contracts for the supply of hundreds of thousands of items the state does not need. The most prominent among them are the PWD, public health engineering and medical. Most of them order substandard products, because the Ministers' and officials' commission on them is the highest.

Newspapers in Nagaland print stories of this corruption. *The Weekly Journal* of Kohima of November 22, 1989, printed a story of how "Rs 4.5 crores had been paid to some suppliers of spurious and substandard medicines and equipment", between November 10 and 15 that year. The paper said that the money was sanctioned on November 10 "as per order No MED-4/59/91/EX/IT and signed by the Secretary, Health and Family Welfare, Mr E.T. Sunup".

The PWD and public health engineering godowns in the State are choked full of water-pipes, fittings, valves, wash and toilet bowls and engineering items, which never used and are rusting away. These had no relation with the requirements of the State. They were ordered because there was a commission to be earned.

One has to go around Nagaland to see the palatial properties bought and built by Ministers and officials who were the same as the other villagers a little over a decade ago. The children of a large number of them study abroad or at the most expensive institutions in India. The caretaker Chief Minister has his daughter studying in the United States and his son undergoing anti-drug treatment (detoxification) in Hong Kong.

But then one cannot blame them. Making money, however one can, is the new political culture of India. The Nagas, new to it, have not lagged behind in catching up. ■

NATWAR SINGH Afghanistan

(Continued from page 4)

> refugees and the creation of the necessary conditions for their voluntary repatriation, as well as for the economic and social reconstruction of Afghanistan.

This plan was given credit support by the West and Pakistan and the Soviet Union. The UN General Assembly by its Resolution 45/12 of November 7, 1990 authorised the Secretary-General to try and implement the UN Plan.

The UN Plan could not be fully implemented so long as Dr Najibullah and the Watan Party remained at the helm. Ever the consumate political strategist, Najib has put the negotiating process in a tail-spin. This wholly unexpected turn of events has had a sobering effect in Islamabad and Washington. Both see Najib as a symbol of stability. Alarm bells have now begun to sound about the emergence of a "fundamentalist" Afghanistan. If the UN peace process was to flounder and with Najib gone, Afghanistan could split on tribal and ethnic lines. That would spell disaster for Pakistan. The demand for an independent Pushtoonistan would be revived with force and vigour. The Baluchis would follow the Pushtoons!

But for the success of the UN Plan the cooperation and support of President Najibullah was crucial. Now that this cooperation has been fully extended, Benon Sevan has paved the way for the cessation of hostilities. Additionally, he has worked another package which includes a general amnesty, human rights, and UN guarantees to ensure the sovereignty, territorial integrity, political independence and the non-aligned and Islamic character of Afghanistan. Kabul, Islamabad, Teheran, Riyadh, Moscow, New York and Washington have all agreed The *mujahideen* too have fallen in line. So has King Zahir Shah.

How is a smooth and peaceful transition to be achieved in a society as violence prone as the Afghan? As I grow older, I realise the ultimate futility of all human arrangements and plans. I also realise that to throw up our hands and do nothing would be foolish and unwise. So, go on human beings must and do their best.

◆

AFTER my stay in Kabul I have returned conscious of one stark reality. *Every Afghan is tired and exhausted. All yearn for peace.* They want the guns silenced and the apparatus of state rediscovered, put together and set in motion. The first step will be to hold an *ijlaas*, of about 100. The names apparently have been agreed upon. The *ijlaas* will, if all goes well—and it is a big IF—recommend the establishment of an all-party coalition interim government. The *ijlaas* is to provide as wide an expression of the national opinion as possible in the existing circumstances. The *ijlaas* is to be held later this month or in early May in Vienna, Geneva or Kabul. The Interim Government will, from the beginning, lead the country to free elections. This is a perilous undertaking in a country where warlords and tribal chiefs decide and dispose off. How to get the democratic process moving is a great challenge. Everyone is keen to have a go at it having tried the dictatorship of the Communist Party.

What happens to Dr Najibullah and his Watan Party? He steps down. Most likely a collective leadership will emerge in the party, which is the only organised evenly spread political and administrative instrumentality in Afghanistan. It hopes to play an important role in the Interim Government. The Watan Party is not faction-free but it does have a structure and men of experience.

With the collapse of the Soviet Union, the Afghan problem began to look different to the US and Pakistan. Fears of fundamentalism surfaced. Fears of Afghanistan splitting into three worried all its neighbours. Afghanistan has to be kept one and secular.

Does India, a traditional and historic friend of Afghanistan, have any role to play at the moment? Frankly, the answer is: no. This is mainly due to our keeping aloof from the Afghan problem since 1989. To jump in now would be unseemly, unwise and unwelcome by the UN, the USA and Pakistan and Iran. All we can do is to support the efforts of the UN, maintain and strengthen our links with all segments of Afghan society, seek fresh avenues of trade and aid, impress upon Pakistan to open the highway from Wagha to Peshawar and beyond. Now our humanitarian assistance goes to Kabul through Odessa on the Black Sea. We should participate in the rebuilding of Afghanistan to alleviate the wretchedness in which a great majority of Afghans live. We must never forget that for India the entire region from the Pamirs and the Hindu Kush to the Mekong is of relevance. My vision of the SAARC includes a democratic Afghanistan and a democratic Burma.

Finally, let us hope and pray that from now on Afghan history will be written in ink, not in blood. What Afghanistan needs is a reassertion of *douceur di vivre*—the sweetness of life. ■

BAXI Alternative to 'Globalisation'

(Continued from page 6)

have travelled in a few months time can be best gauged by the disappearance of a sovereign Indian political metaphor: the foreign hand. The "foreign hand" was a powerful discursive entity in Indian politics. But to say today that the face of India that is Bharat is smitten by a huge foreign hand would evoke very little response from the media and the masses, much less an amused smile on the faces of the *cognoscenti*. So would the possible slogan: "The foreign hand is dead; long live the foreign hand!"

Third, with the erasure of the discourse on globalism and with the power of transforming the languages of practices of power, of course, marches the new vision of the world as one long chain of supermarkets and a constellation of shopping arcades redefining individual human beings to a mere consuming animal or machine. In this vision, the space for plurality shrinks and the pressure for homogenisation in market-friendly ways mounts. In this vision, large sections of the wretched of the earth are expendable. Already we are told by Jacques Atteli in his recent book, in effect, that we must write off the billions of peoples in the South as "millennial losers". Thus Africa is a "lost continent" while Latin America is progressively becoming a case of "terminal poverty".[3]

The new vision of ~~"globalisation"~~ is Social Darwinism updated for the next century; already strategic and military analysis is moving towards eradicating all possible threats from the millennial losers and terminal poor. The shrinking of human vision is of the same order, as of the first phase of "globalisation", and needs to be combatted.

It is this vision of the world which we must combat because through the promise of greater freedom it enslaves us all. We have to recover the spirit of the fifties and the sixties which celebrated "globalism" if we have to find an alternative to "globalisation". And we have to start that quest by rejecting the maxim "North knows Best" and repudiating new charters of domination by a fresh agenda of struggle. ■

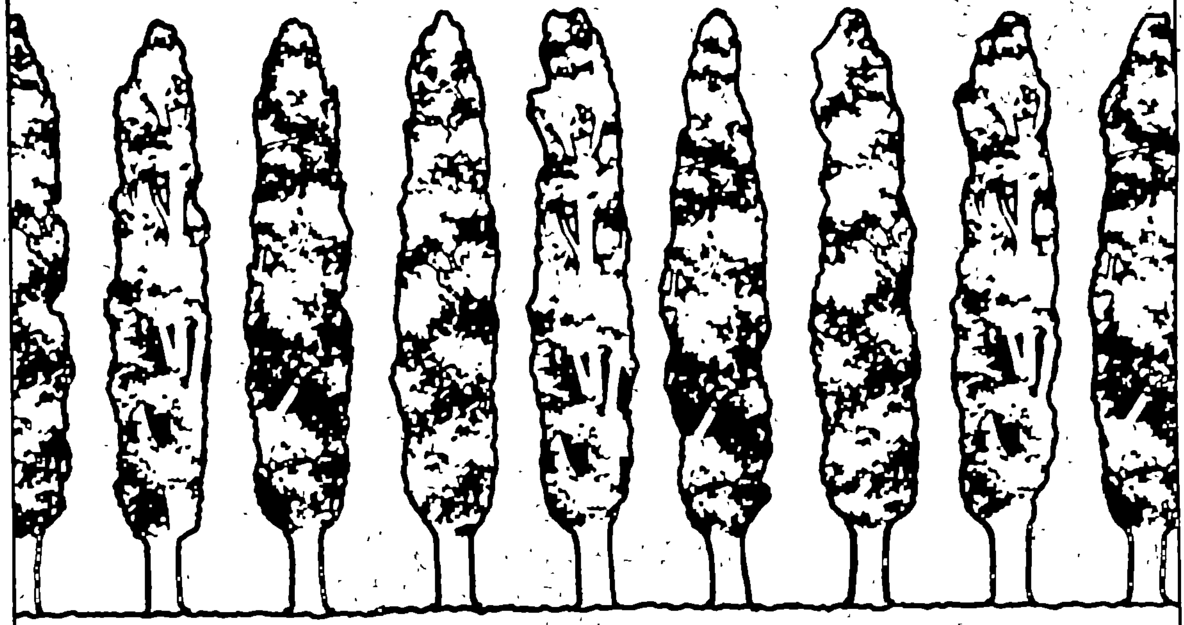
SAIL HAS MORE THAN A MILLION PLANTS



ONLY NINE OF THEM PRODUCE STEEL !

Even that may not be enough!
SAIL continues to play an even more crucial role in the restoration and preservation of the environment.
By employing the latest technology.
By developing specialised expertise in environmental management.
By conducting a $ 3.3 million environmental study to identify and locate critical areas requiring corrective action.
By 2000 AD, SAIL is scheduled to implement 850 environmental preservation measures in and around its plants and mines.
Today SAIL renews its pledge to give back to Nature what it takes to build a better tomorrow.

EDITOR'S NOTEBOOK

Confusion worse Confounded

It takes a long time for the mountain in agony to produce the mouse One would certainly not like to suggest by any stretch of imagination that any of the members of the just constituted Working Committee of the Indian National Congress could be equated with the rodent species, nor would like the present Congress President to claim to be a mountain by his own right

And yet one cannot help getting the feeling that when a party President takes one full month to form his high command—and that too with four vacancies yet to be filled out of twenty—he is bound to be regarded by the public at large as one who has lapsed into dithering in forming a team which normally should follow almost immediately after a Congress session. Then, the manner of striking out two senior members from the elected list and then to induct them in the nominated list is something really extraordinary and defies all principles of elective functioning

For one thing, has the Congress President the right to strike out the name of anybody who has been duly elected by the open Congress session, the highest body inside the party? On what ground could Arjun Singh and Sharad Pawar be dropped out of the elected list and then taken back in the nominated list? No provision of the party constitution invests the party President with such prerogative to treat the elected list in a cavalier fashion. Apart from the irregularity involved, this amounts to belittling the sanctity of any election.

If this is meant to demonstrate that their standing in the party is now cut down since they would from now on, figure only in the nominated list, this would indeed be an absurd proposition. For one thing, there is no difference whatsoever between an elected and a nominated member once the Working Committee is formed--they become all equal in the eyes of the party and the general public, and the party President too is not permitted to betray any difference in treating them.

It is said in some circles that Narasimha Rao was disturbed at the emergence within the party of a so-called syndicate jointly ventured by Arjun Singh and Sharad Pawar, the two contenders for the Prime Ministerial *gaddi* last year. This argument is hardly tenable because all reports from careful observers at the Congress session make it abundantly clear that no such syndicate was secretly formed at Tirupati. What is likely to have happened was that the two contending factions led by Arjun and Sharad came to a quiet understanding to ensure that their respective lists were not defeated by their internal rivalry; in other words, they might have forged an electoral ceasefire, a sort of deal which even political adversaries often strike in the election session

Granted that the party President was seriously upset by the spectre of a

frightening syndicate at Tirupati which he felt may threaten his leadership, one has to question in all seriousness whether this is the way to bring about its liquidation. Rather, such a tampering with the electoral process might provide his challengers, if any, with an alibi that the party President needed to be checked in order that there is no arbitrariness in the functioning of the party as such. If Arjun Singh has promptly issued a statement swearing loyalty to the leader, that does not necessarily mean that everything would from now on be lovely in the garden.

The confusion over the formation of the Congress Working Committee has been worse confounded by this latest mess by the party President. There was a fresh breeze of morale uplift for the rank-and-file Congressmen when Narasimha Rao insisted on inner-party elections, however faulty they might have been. And he himself claimed with good reason that this way the party would be put back into normal functioning. That was why many were taken by surprise when at Tirupati the party President, immediately after the poll results were announced for the ten elected seats in the Working Committee, expressed his anguish that the elected list did not include any woman member nor anybody from among the Scheduled Castes and Scheduled Tribes. As the party President he was expected to respect the verdict of the poll and not turn an instant critic Moreover, he himself was invested with the power to rectify the imbalance by including the left-out categories in the list of the ten members due to be nominated by the party President.

Instead, the bizarre game of resignations followed, the lead in it having been given by one of the elected known to be closest to him. A totally uncalled for impasse was created by the party President's *obiter dictum*, and then after a month of cogitations, he has come out with a lopsided verdict which instead of clarifying the atmosphere is bound to make things worse To put it briefly, nothing has been done in the eleven months since his becoming the President of the Congress to so undermine the morale of the party as a whole as this patent mishandling of the issue of forming the new Working Committee.

◆

ONE need not go into a minute examination of the biodata of the new members of the Congress Working Committee. However, it is rather strange that after making so much song and dance about balanced representation, there should be more than one member from the same State. Is not Antony adequately equipped to represent the Kerala point of view and is Karunakaran needed to supplement him—or, more likely, to negate him? Could not Sharad Pawar represent Maharashtra on his own, is Shinde needed to provide the counterpoint? And is Janardan Poojary, the father of the so-called loan *mela* technology, so necessary to reinforce the party's leadership? These and some other questions are bound to trouble many a Congressman. And such misgivings within the party will by no means enhance the position of the party President.

It may of course be argued that the question of the formation of a new Congress Working Committee is an internal matter of the ruling party and should not bother the wider public which is concerned with Narasimha Rao's functioning as the Prime Minister of the country. This is far from tenable as an answer. For one thing, the health of a ruling party is always a matter of interest and concern to the country as a whole, the more so when it does not command a majority in Parliament, thereby imposing upon other parties an added responsibility of scrutinising its capacity to run the government.

Secondly, the formidable agenda of unresolved problems facing the nation demands that there has to be utmost confidence in the capacity of the government in tackling them. Kashmir, Punjab, Assam and the North-East, and Tamil Nadu, apart from the spread of communal bitterness and tension—all are beset with crisis situations of unprecedented magnitude. In tackling them the government has displayed no perspective whatsoever The government's approach betrays a day-labourer's mentality—how to manage somehow till the next morning In such an environment, when the leadership of the ruling party is found to be engrossed in petty rivalries and squabbles and messes up the very simple principles of political functioning, one can easily imagine its deleterious impact on the public mind. Such issues of inconsequence as spending a month of precious time to search for a Working Committee of the ruling party cannot but lead to the sapping of the nation's confidence in the government itself.

One does not feel happy in making sharp criticism of Narasimha Rao. This is not because one should be scared of attacking the Prime Minister of the country, but because he commands a lot of respect by his intellectual qualities and wide political experience of more than four decades. Consciously avoiding the hi-fi flamboyance of some of his predecessors in office and the anarchic waywardness of some others among them, Narasimha Rao earned in the last one year of tension and turbulence, a lot of goodwill and with it, has roused expectations. It is in this background that any lapse into political vacillation—as the Working Committee episode has shown—is bound to provoke both frustration and exasperation. With his congenitally democratic temper, one feels the responsibility to spotlight on any failing on the part of a leader occupying the very seat of power. Not to do so will be doing him an injustice as one would fail in one's obligation to be the watchdog of democracy, no matter however inadequately.

This country expects much more from Narasimha Rao in his capacity as the Prime Minister as also as the President of the ruling party.

US Poses Foreign Policy Dilemma for India

MUCHKUND DUBEY

Since the early 1980s, India has been pursuing a well-planned policy of improving and strengthening relations with the United States. There has been a steady progress in this endeavour despite the vicissitudes to which relations between countries like India and the United States are inevitably subjected.

The process acquired a new momentum after the end of the Cold War when the governments of the two countries decided to leave behind the misunderstandings and the reservations of the Cold War years and take a fresh look at the relationship in all its aspects. Consequently, interactions between the two countries at all levels increased sharply. Both countries took unprecedented measures betraying no tinge of the Cold War, to assist each other, and a host of new moves and initiatives were planned for the future, including the now much controversial joint naval exercise.

During the last few weeks, the relations between the two countries have been severely strained because of a series of unilateral actions taken by the US Administration against India. None of these measures are totally unexpected, given the penchant of the US Administration to pursue its interests singlemindedly. However, the quick succession in which they have followed each other and the total insensitivity that they betray to India's goals, policies and priorities, has intrigued and dismayed all those who have put some stakes behind and worked assiduously for the improvement of Indo-US relations.

What has the US Government done to India in the recent weeks? About three weeks ago, we got the news that the United States pressurised Russia to suspend the most crucial part of its long-standing agreement with India for cooperation in space technology, that is, the transfer of rocket engine technology Now in the face of the declared Russian intention not to scrap the deal, the United States Administration has threatened both Russia and India to impose penalties in the form of preventing the transfer to these countries of technologies from the United States and its allies, in space and, maybe, even in other areas

Besides, the United States through a Presidential decree has taken retaliatory action against India under Section 301 of its Trade and Competitiveness Act, and has withdrawn tariff concessions under its Generalised System of Preferences, on pharmaceutical and chemical exports from India. The US Administration has threatened to take further unilateral measures in the field of trade until all US demands for opening up the Indian market for US goods and services and for the protection of US patents, are conceded. Thus both the demand and, consequently, the threat are open-ended.

At the same time, pressure on India to adhere to the discriminatory NPT regime has been stepped up. For the first time, there is a real danger of sanctions being applied against India in order to compel it to accede to NPT. In its editorial on April 28, 1992, the *New York Times,* which on matters like these not too infrequently reflects the position of the US Administration, has called for "undertaking an international embargo on investment, aid and trade, specially in arms and technology". The editorial then very significantly suggests that the obligation imposed on India by the recent changes in world politics, to go global in its political and economic relations "is a source of potential leverage for all countries with an interest in nuclear-free India".

The US action to withdraw the GSP concessions on pharmaceutical and chemical exports from India is clearly unilateral and an unabashed resort to bilateral coercion to serve its national interest. It is an attempt to impose its domestic law on other countries in wanton disregard of its international obligations. The US pressure tactics to compel Russia to renege on its agreement with India to transfer rocket engine technology is even more arbitrary and high-handed. The agreement with Russia does not by any means constitute a violation of the Missile Technology Control Regime (MTCR), which incidentally is a fundamentally flawed and discriminatory arrangement among the nuclear "haves" and a few of their allies. It is well known that India has been paying large sums of money for getting its communications, weather, resources and educational satellites lofted into geo-stationary positions. The transfer of cryogenic engine technology will give us the means to launch our vehicles for purely civilian purposes and hopefully to compete with other space powers in the vehicle launching business.

Given the high level of India's space technology, this is a legitimate economic and commercial aspiration. Even if it is conceded that the cryogenic engine is dual-purpose, we cannot accept any agreement the effect of which is to deny access to modern technology, to

Professor Dubey who is teaching at the Jawaharlal Nehru University, was until recently the Foreign Secretary of India. A slightly abridged version of this article appeared in The Times of India.

A CHINESE VIEW

Indian Reform: The Only Way Out

ZHANG XIAODONG

The following article appeared in the May 4-10, 1992 issue of Beijing Review. *It is being reproduced from that journal in view of its relevance in terms of understanding how Chinese look at India's ongoing economic changes*

—Editor

Prime Minister Rao said that the current economic reform is pursuing the goal of self-reliance in a changed situation. He stressed that India, which falls short of funds and technology, must open its door to absorb foreign capital and technology. The Indian economy can no longer afford to insulate itself from the outside.

India's Narasimha Rao Government, which emerged after unprecedented violent elections last June, has brought political stability to the country. However, the economic upshot of the long-standing political turbulence is severe. By the time Prime Minister Rao took office, foreign debt had amounted to US$ 70 billion and the financial deficit stood at US$ 6-7 billion. The inflation rate surpassed 13 per cent. Rao acknowledged that the economy was in a total mess.

Jamia Agitation

It is a matter of deep regret that the agitation engulfing Jamia Millia Islamia has been protracted largely because of the interference of a junior member of the present government. The political link between the President of the Jamia Students Union and the concerned Minister has paralysed academic life on the campus, besides placing an individual's basic right to dissent in jeopardy. Were it a matter of Muslim opinion, as is being made out by vested interests, the agitation would have spread throughout the country and not been localised to what is essentially a power struggle launched by those who feel threatened by the new appointments within The Vice Chancellor's conduct so far is academically correct and dignified.

We feel that the Prime Minister and the leader of the party, P.V Narasimha Rao, has an obligation to ensure that his Ministers remain out of university affairs and the situation is diffused

Prof Amrik Singh: Nikhil Chakravartty Prof G P Deshpande: Maimoona Mollah, Anuradha Chenoy: Seema Mustafa

Obviously, it was imperative to revamp the country's economic policy. The government, in the first three days of July last year, devalued the rupee twice by 20 per cent, bringing it close to the exchange rate on the free market. New Delhi plans to make the rupee convertible in the world market in three to five years. The devaluation move was designed to stimulate exports and discourage imports.

Another target is to trim budgetary deficit. Last July's budget saw considerable cuts in the administrative expenditure of the Central Government departments, and subsidies for some goods and exports were cancelled. In addition, the tax rates for many luxury consumer goods were raised. These measures have helped reduce the deficit to 6.5 per cent from 8.5 per cent in the gross domestic product of the previous fiscal year.

Most important, a new industrial policy has been adopted. All sectors, with the exception of a few strategic and defence-related departments, are opened to private business. No sanctions are required for building new enterprises or expanding enterprises, except for some commodities. The government has removed restrictions on monopoly and trade introduced in the 1950s, allowing more room for private enterprises to manoeuvre in economic activities. A "memorandum system" has been introduced in state-owned enterprises to reduce administrative interference in their operation. Twenty per cent of shares in profit-making state-owned enterprises will be sold to institutions or individuals. The government allows foreign shares to rise from 40 per cent to 51 per cent in 34 priority sectors. Foreign business can now operate those enterprises whose products are

(Continued on page 35)

Wandering in Space

Some Thoughts on India's Space Programme

V. SIDDHARTHA

On March 24, the core vehicle of ISRO's Advanced Satellite Launch Vehicle (ASLV) plummeted into the Bay of Bengal. Some eight years earlier, the first launch of its forerunner—SLV-3—met a similar fate. Many who had watched both events would have been struck by the difference between the psychological 'ambience' of that time and the contemporary mood. In 1979, the ISRO contrived to varnish the SLV-3 launch failure with the verbal paint of a "partial success"—the words used in the public announcement. Nobody was taken-in. Both the ISRO's effort and the failure invited derisive comments.

In contrast, the terse, clear, no-varnish announcement following the failure of the ASLV-mission is a testimonial both to the self-confidence that the space programme has acquired, and to the maturation of attitudes of Parliament and the public towards advanced-technology enterprises of the ISRO kind—a maturation that emboldened the ISRO to make its announcement in plain language.

We often forget that even thirty years after the space age truly began, the development and regular use of space launch vehicles remains a risky business. We were reminded of this two days after the ASLV failure, on March 26—when a 'work-horse' launch vehicle of the United States—an Altas-Centre—failed. We in India take the fruits of technological enterprises—overwhelmingly borrowed from others in the world who have taken the friendless roads before us—so much for granted, that we rarely get a measure of that sparsely-populated path. The table below provides some measures of the loneliness of the long-distance space-farer and a measure of the high mortality among his early children.

Even among the many well-wishers and admirers of the technical quality and administrative competence of our space programmers, there is a sizeable proportion which still believes the programme to be a cover for a military-oriented missile and satellite programme. Why, they ask, is this programme (and its forebear, the atomic energy programme) so important for us? Why is India in space? When Abdul Kalam, the ex-Project Director of SLV-3, moved from the ISRO to the Defence R&D, it was widely said that the 'cover' had finally been blown. Missiles were what India was really after. All this talk and programme about 'peaceful uses' of outer space was just so much eye-wash.

Is it an eye-wash? The ISRO's programme is wide-open to Parliament. It continues to stand on peaceful legs, which have not genuflected—not yet, at any rate. The ISRO's launch-vehicles are *already too big* for missile application. There is of course a separate substantial missile development programme—in Defence R&D. "But don't tell me the two sets of bright boys (and girls) don't speak to each other." Of course they do. Indeed, the lament of many is that they don't converse a great deal more—but that is another story.

The ISRO's space *applications* programme, on the other hand, has significantly fewer detractors. Communications, television and remote-sensing are services which are benign in their potential. They can be un-benign in their function if we foolishly misuse and mis-apply them. There is, most distressingly, much evidence that we are doing just that in communications and television. Remote-sensing is still too remote except for a

social collective—of some sort—to harness and use. But with the cost of advanced data handling and image-processing coming down to well-within what the private corporation can afford, the opportunity exists for the private misappropriation of its potential.

The scientific community paid out of the public purse is—to use an ISRO expression—a "bought-out" component of our polity. The events of the past two years within our scientific community must cause alarm. The individual and collective behaviours of the ageing, but hanging-on-for-dear-life, leadership within it are not examples to the younger, more-enlightened, less-afraid segments of the community. *Deja Vu*? Was not something very similar said a decade ago? Indeed it was. What is so saddening is that the un-afraids at the first launch of SLV-3 are the much-afraids at the first launch of ASLV. The paralysing permanence of collective genuflection; of collective abdication; of collective sycophancy is what we should ponder and lament; after all, we can always build another ASLV. ■

Satyajit Ray: His Films, Our Lives

ASHOKE CHATTERJEE

The passing of Satyajit Ray brings to an end an era not only in the history of Indian cinema and of contemporary Bengal, but equally in the lives of so many in his country and beyond—all those for whom his creations have become a part of the fabric of their existence. The feelings of Ray's characters are their own most personal experiences, the images of his camera their own memories and hopes. For those of us whose lives he entered so completely, it has often been difficult to know where Ray left off and where we began. I remember my first encounter with the cinema of Satyajit Ray, almost forty years ago. Not *Pather Panchali*, but *Aparajito*, viewed in a small dark theatre half a world away from home. It was to change my life, by defining for the first time my little space within the universe of man. Like the Biblical assurance, that I had once seen darkly, Ray now brought face to face. In retrospect, every adult commitment I was to make was rooted in Ray's truth, which became one's own.

I was to spend the next decade in the city of the master and to fall clumsily in love with it in something like his way. Ray, or Manikda if one dared familiarity, was the beacon of those years, each marked by another of his works and the inevitable Calcutta polemics on what was great or what was trivial about it, sides joined even before a viewing, just as at football matches at Eden Gardens. If Calcutta was Ray's soul, he was its passion and its addiction. On lucky occasions, one could watch him at work in the ramshackle studios of Tollygunj, from where his vision addressed the world. Ray's booklined study on Biship-Lefroy Road was a place of pilgrimage, as well as of social one-upmanship, if one's comings and goings were noticed by Calcutta's cogniscenti. It was here that important encouragement first came to me for a mission that was to engage me for many years: to document the life and work of another genius, the dancer Shanta Rao. Later, his own favourite work, *Charulata*, became for Shanta what so many of his films have become for many around the world: an expression of personal values most deeply held—each of Satyajit Ray's films linked inextricably with some drama of actual living: a designer in Los Angeles reliving through *Aranyer Din Ratri* the dilemma of her own existence, an executive in Bombay stunned by the uncomfortable relevance of *Pratidwandi* and *Janaranya* family in Milan for whom the story of Apu and Durga in the *Trilogy* was an experience to be carefully shared with each growing child. Even when he was less successful, Ray left legacies of supreme importance, as in his documentary on Balasaraswati, the only evidence we now have of a genre of Bharata Natyam which has nothing to do with showmanship. Watching these two great Indians at work together at Gemini Studios was to touch the essence of quality: the uncompromising pursuit of excellence by creative spirits incapable of hype or exhibitionism.

Awards, tributes and film scholarship Ray received in abundance. Yet no analysis of his technique can explain the true nature of his poetic imagination. It was Ray's empathy that made him one with his craft, with his audiences and with the lives he touched and changed in such a special way. It came from his ability to love, and to express and share that love. It was this that made Satyajit Ray so special. He gave utterance to what seemed beyond words, giving voice to the deepest thoughts and longings of his people. Generations to come will know through Ray what it was to be an Indian and a citizen of our times. To have lived in his time and in his India is a privilege which the passing of Satyajit Ray no longer permits us to take for granted. ■

For a Sustainable Development of NGOs

VIBODH PARTHASARATHI

After the report of the World Commission on Environment and Development in 1989, nations agreed that the goal of the Earth Summit would be to set all countries on the path of Sustainable Development. While this phrase has become the buzzword among academics, technocrats, governmental officials and activists the world over, confusion has set in because of the multiplicity of its interpretation.

As one would expect, each interpretation would depend upon how the crisis pertaining to the ecology of the earth is perceived. While the South views the global environmental damage as the doing of the North, the North in turn states that things may have been much better if the domestic economies of the South had been managed efficiently. Therefore, to the leaders from the industrialised North, Sustainable Development signifies the growth and expansion of their economies within certain ecological limits so as to keep the planet healthy and inhabitable for the future generations. For the South, Sustainable Development means, to quote from *The Report of the South Commission*, "the need for compatibility between growth and the preservation of the environment and to warn against a narrow-minded and short-sighted approach to development and economic modernisation".

However, at the Earth Summit there is yet another "block" which seeks to voice its opinion—the Non-Governmental Organisations (NGOs) from the world over. These are institutions which had hope for the future, as, it was on the "other" side—a forum which was to be the true voice of the people. Ideologically, the NGOs were considered as a loose collective of critical questioning and constructive opposition to the all-powerful state and corporate interests. Their efforts were directed at breaking the hitherto strong North-South, East-West divide to unite all potential forces truly concerned with the present and future quality of life on earth.

The author, a free-lance journalist, is an environmental activist.

The real colours of this so-called NGO community have been reflected during the multi-crore, multi-conference countdown towards the UNCED. For instance, while the above mentioned phrase of Sustainable Development is still undergoing countless re-interpretations, it is sad that most of the NGOs the world over have blindly taken to this buzzword. Instead of drawing up an alternative to the UNCED, both in terms of spirit and substance, they have not only joined the Rio bandwagon but also centered their arguments around this holy phrase. Indeed, most NGOs see the Earth Summit as a long-awaited platform to prove who is the Greenest of all!

In India the drive towards the Earth Summit has attracted the so-called NGOs ranging from nascent one-person "groups" to obscure youth women organisations. This drives into oblivion the handful of NGOs sincerely engaged in working towards, or at least attempting, an alternative human ecology. What is worse is the fact that both the government and NGO delegations to the UNCED—that's what the once activists of the latter have reduced themselves to—have turned a deaf ear towards the voice of the people's movements in as far as their expectations, if any, from the UNCED are concerned. This is most shameful as it comes from the people involved in these mass movements—whose focus ranges from "green" ecological to "red" labour struggles, and from "blue" anti-nuclear campaigns to the all-encompassing truly feminist groups—that these "activists" have been able to launch themselves into the Hall of Fame of global NGOs. The latter is a reference to the proposed International NGO Forum as part of the '92 Global Forum for the Independent Sectors' to be inaugurated in the Flamengo Park in Rio on June 1.

◆

THE NGOs themselves were more than willing to be present in the UNCED process, most of all at Rio itself. This is due to the fact that billions of dollars will definitely emerge as the primary, if not only concrete, spin-off from the Earth Summit. Under the banners of "our common future" and "save the planet", the first stage will be financial commitments to the "cause" at Rio itself, and in the second stage as aid packages or soft loans in the following time periods. For Indian NGOs this seems to be rather irresistible, as, after the SAP programme by the WB it has become possible for the latter to directly fund NGOs in India, as is being done in certain other Third World countries.

This is nothing but a definite manifestation of the NGOs involved in the Earth Summit having been co-opted by the state—individually or as a "sector". This intellectual appropriation of the NGOs by the state has been either through their respective national governments or by international regimes in the guise of a global transnational government such as the UNDP, World Bank, UNEP and, of course, the UNCED. Few people know that the '92 Global Forum' was initially funded by the UNDP, and is currently sponsored by an arm of the UNCED—the International Facilitating Committee—while sincere efforts are on to look for private sector sponsors. The very fact that the UNCED has a high profile NGO Liaison Unit goes to reflect the extent to which the UNCED think-tank has gone to woo these so-called NGOs. It is unfortunate that many NGOs who had a genuine commitment to the issue have fallen for the trap and together with the other ones have agreed to be collectively christened as the NGO Sector as far as the Earth Summit is concerned. Thus, first we had the government/public sector, as a quasi-opposition developed in India the corporate/private sector, and now as an Opposition to both (at least that was the spirit during its genesis) has emerged towards Rio, we have the NGO/Independent sector.

Journalism Fellowship

The 1992-93 Journalism Education Trust fellowship is now open. Any working journalist is qualified to apply. The chosen candidate will be able to pursue a research project under the M.Phil programme of the Centre for Development Studies at Trivandrum, leading up to a JNU degree. The Fellowship provides Rs. 1200 a month for up to 16 months for those who wish to complete the degree course plus a contigency grant of Rs. 3000 for books and travel.

Those who are interested may write immediately for prospectus and application forms to

The Centre for Development Studies
Ulloor, Trivandrum - 695 011

Completed applications should reach the Centre not later than May 25, 1992. The course commences on September 1. All applications will be processed and final selections made by the Centre.

Authorised Trustee, J.E.T

The UNCED, on its part, has done well to maintain in the eyes of most of us the facade of NGO presence right throughout the countdown to the Earth Summit (Prep. Coms., etc.) as well as in Rio itself. Such an act of bringing in the "other" voice is essential for any regime if it wants to appear democratic and achieve universal acceptance. In the specific context of Rio, to create an illusion that the Earth Summit was a product of years of effort at the grassroots level, and that the UNCED is sincere in its efforts as validated by among others, the NGOs, it is of critical importance to incorporate NGOs from the world over. To create this mirage and win over the opposition from within, the international elite with the pretext of global environmentalism UNCED coined the magic word Sustainable Development—a carrot which most NGOs failed to resist.

Such semantics combined with a dominant media rhetoric, leaves many questions unanswered. While using the phrase Sustainable Development the questions to ask are: Sustainable vis-a-vis what and, Development for whom? Is the UNCED for the further development of the North's neo-colonial hold over the South, this time under the garb of "Our Common Future"? Or, to sustain the increasing marginalisation of natural resources by the governments in the South from their people? Or, to encourage the Sustainable Development of the NGOs towards socio-political inactivity? Surely, the Earth Summit at Rio will prove it, one way or the other. ■

Lessons From Stockmarket Scam

ARVIND N. DAS

Two hours of frenetic trading on the last day of February sent Bombay Stock Exchange Sensitive Index (BSE Sensex) soaring from 2830.9 to 3017.7 as brokers and bankers chased the chimera of the brave new world promised by the Budget Shortly after that, M.J. Pherwani, Chairman of the National Housing Bank (NHB), a fully-owned subsidiary of the Reserve Bank of India (RBI) pronounced: "The present boom in the market is the beginning of an economic miracle." The Finance Minister, Dr Manmohan Singh, added to the mood of optimism in the quickly decontrolled share market by saying that "the market had to be freed from too much policing and a daddy-knows-best attitude".

The Sensex soared to 4467.32 on April 22 and the somewhat feeble attempt of the Securities and Exchange Board of India (SEBI) to tame the frenzied brokers failed to neutralise the superstitious fervour of speculators. It looked like a never-ending bonanza. Those who forecast that the Sensex would touch 10,000 by the turn of the century appeared to be unduly conservative: many predicted that the figure would be crossed by the end of the year itself.

Today, Pherwani's miracle has turned gilt-edged securities into a scam. The CBI is policing stock-brokers and bankers. And the Big Brother in the Reserve Bank, if not the best-knowing daddy in the government, is watching as the financial institutions, banks and brokers seek to extricate each other from a massive mess. In the meantime, the Sensex has plunged to nearly the same level as it was at the close of the Budget day and sustained market intervention by the government agencies, a series of regulatory measures and reimposition of control mechanisms are striving to prop up stock prices. There are indications of massive fraud, criminal malfeasance, banking default and private misuse of public funds. The Finance Minister himself, a little more chastened than 75 days ago, has had to admit that there has been a "systems failure in the banking industry".

There is, understandably, a lot of effort being made to restrict the investigation into the securities scam to mere scratching the surface. It was in fact argued right when the scandal broke that since the concerned bullish broker had paid the State Bank of India (SBI) the Rs 600 crore or so that he owed the bank, the matter should be dropped in a spirit of "forgive and forget".

Apart from the fact that later revelations show that the scam was not limited to one bank, an interesting legal question arises in this context. It needs to be answered as to who should be the beneficiary of the profits made from illegally acquired resources even after the original sum is returned to its rightful owner. In this case, the Rs 600 crore was surely used for speculation and massive gain by the broker. Now even if the money has been returned to the SBI—it is another matter that the refund itself has evidently been carried out through a series of illegalities—does the gain from speculation continue to remain with the perpetrators of the illegality?

The need to investigate and identify the factors that led to such illegalities amounting to a "banking systems failure" has been emphasised. However, what has not been as cleanly acknowledged is the need to fix responsibility for the "systems failure" in the same manner as Justice M.C. Chagla had done when he investigated a relatively much smaller-scale misuse of funds of the Life Insurance Corporation by the Mundhra concerns. The scam has both a criminal and a political dimension as the banking sector in India is still not autonomous of the government. Even the full implementation of the recommendations of the Narasimham Committee will not enable the banking sector to work against the overall political will. In any case, the recommendations have not even been substantially implemented as yet. In the mean time, major banks—Indian and foreign—and financial institutions including a fully owned subsidiary of the RBI have blatantly violated the RBI directives issued in July 1991 on framing suitable investment policies to ensure that operations in securities are conducted in tune with acceptable (read, honest) business practices.

The securities scam involving thousands of crores of public funds has brought to light several other aspects apart from the issues of criminal liability and political culpability. It has also highlighted the enormous arrogance of the major speculators which had led them to act in defiance of SEBI and use public resources of private gain in the most blatant manner where only cupidity has matched the stupidity of those who hold public moneys in sacred trust.

◆

IT has also a much wider significance. It has revealed that the boom in the share market is a reflection more of unbridled speculation rather than of healthy capital accumulation which can be used for productive purposes. It is significant that the boom has coincided with a period of economic downturn, industrial decline, stagflation and little new investment in productive assets. There has been trade largely in old scrips and that too at such a frantic pace, without critical consideration, that even the equity of sick companies has been bartered at enormously high prices. To take just one example, shares of a company with negative book value of Rs 207 shot up during this period from a level of Rs 120 to Rs 750! It was as good a case as any in the much maligned public sector of good money chasing bad.

There has been a positive development too in a manner of speaking. In duration of a few months, the total investor population of India burgeoned to 150 lakhs and there were estimates that it would swell to 400 lakhs by 1995. This, of course, also means that many, many investors are switching from gold and land and preferring investment in stocks. This can be a healthy trend provided their investment is protected and their asset preference is safeguarded by those in whom they have reposed their trust. Since, among other factors, the lopsided price-earning ratios of Indian scrips is unlikely to attract a flood of foreign investment, the fate of Indian industrialisation is dependent in large measure on the confidence of the small investor.

Does your copy of **Mainstream** reach late or sometimes not at all?

The postal service is not in our hands but we would like to see **Mainstream** *in your hands.*

YOU CAN HELP US BY:

- Typing your name and address clearly so that there are no errors in addressing your copy
- Quoting your subscription number in your complaint letter to Manager, *Mainstream*, F-24 Bhagat Singh Market, New Delhi-110001 Perhaps your subscription has expired
- Writing for a replacement copy within six weeks of the date of the issue which has been misplaced.

This confidence can be maintained not by promoting the superstition of speculation but by realistic and effective fiscal and banking policies. For instance, the securities scam should serve finally to lay to rest the unwarranted assumption that lending to the 'priority sector'—agriculture rural development, etc.—is more risky than advancing credit to well-heeled speculators. Studies of banking have repeatedly demonstrated that the oxen financed under IRDP have proved to be more bankable than the bulls of Bombay.

The scam should also teach the lesson that it is not a mere attack of economic indigestion curable by liquidating uneconomic ventures. Instead, unless urgent remedial action is taken—and not only by keeping the market up artificially so as to off-load public sector shares at prices high enough to meet the ways and means constraints of the Finance Ministry the scam could turn out to be the first symptom of a wasting fever which can debilitate the whole nation, deprive it of its productive strength by turning accumulation into speculation and aggravate the resource crunch.

At the moment, however, it appears that instead of taking appropriate lessons, measures are being improvised through the agency of the RBI and CBI and are being focussed on the symptoms. There is little probing diagnosis and no surgery to get to the root of the disease. The cry is for economic reform, but the government is instead holding out a handful of palliatives. While some think that all will be well if only the financial institutions buy a sufficient number of stocks, others continue to labour under the superstition that when you buy common stocks, you buy the future, if not also the present.

The substitution of social rationality by economic theology leads inexorably to fiscal superstition. It is necessary to rise above such a counter-productive regression to shape policies which suit the concrete realities of India. The price for not doing that may be enormous and the windfall gains cornered by a few favoured speculators may entail a cost for the future of India itself. ■

Uruguay Round of GATT Negotiations

Threat to Consumer Sovereignty in Third World

SUDHA SACHDEVA-DHAR

"An unprecedented power grab is underway within the Uruguay Round negotiations of a new version of the General Agreements on Tariffs and Trade (GATT)",[1] said the noted American consumer advocate, Ralph Nader, to 500 consumer activists and officials at the Thirteenth World Congress of the International Organisation of Consumers Union (IOCU) in July 1991.

Being critical of the IOCU for its pussy-footing role in supporting the general thrust of the GATT, Nader criticised the GATT proposals in the area of intellectual property, "which call upon all countries to adopt the US style patent, copyright and trademark laws". He said, "These changes, as proposed, would strengthen the monopoly power of multinational companies in high tech fields such as pharmaceutical and chemicals, drive up the prices of drugs, etc., for the Third World consumers and devastate the Third World's fledgling high technology companies. For the Third World, even more than for the industrialised countries, nothing less, than the chance of economic self-determination--the ability of citizens to exert control over their economy--is at stake in the GATT negotiations."

These statements appear almost prophetic in the light of the draft proposals presented by Arthur Dunkel, the Director-General of the GATT in December 1991 and the likely impact these proposals would have on the consumers in the Third World. The Dunkel proposals have been made in response to the wide negotiating mandate that the Uruguay Round had adopted, incorporating several new areas.

For the first time in the Uruguay Round negotiations, the GATT took up three new areas, namely,--TRIPs (Trade Related Intellectual Property Rights), TRIMs (Trade Related Investment Measures) and Trade in Services ostensibly aimed at increasing the strength of multinational corporations (MNCs) in the global economy. The inclusion of these new areas would have inimical consequences for the developing countries for they threaten the existence of domestic industries in these countries. An immediate impact of this nature of displacement of domestic industries in the developing countries would be on the consumers in these countries. This is because larger access opportunities for the MNCs in the markets of developing countries being the ultimate objective of the negotiations,[2] the decisions arrived at in the negotiations have a direct bearing on the nature of markets, nature of goods and services allowed to be produced both by the indigenous and foreign manufacturers, the channels of distribution and promotion adopted, the terms of availability and the price at which these can be purchased by the consumers in these economies.

The author is a Lecturer in Consumer Economics, Department of Community Resource Management and Extension, Lady Irwin College, New Delhi.

According to the consumer sovereignty model, the 'consumer is the king' in an economy. He is the cause and ultimate of all production in the economy. Goods and services are produced to satisfy consumer wants. He casts his money vote in favour of those goods and services that satisfy his needs and wants most, and does not cast his money vote for those that do not meet his requirements at a given point of time. Through this process, the consumer has the very important role of commanding and guiding the kind of goods and services that are to be produced in an economy for his consumption.

In reality, however, consumer choice is never autonomous and nor are the consumers completely sovereign. Forces other than consumer demand determine the kind of goods and services being produced in an economy, their quantity and the prices at which they are made available to the consumer. If the consumer was actually sovereign and all production was taking place for satisfying consumer wants and needs leading to consumer welfare, the need for consumer movements would not have arisen.

◆

AN elaboration of the position of the consumer in the economy is provided by John Kenneth Galbraith. According to Galbraith, "the initiative in deciding what is to be produced comes not from the sovereign consumer, who through the market, issues the instructions that bend the productivity mechanism to his ultimate will; but rather it comes from the 'great producing organisations' which reach forward to control the markets that it is presumed to serve and beyond, to bend the consumer to its needs."[3] These great producing organisations alluded to above are nothing but the MNCs. With these conglomerates spreading their wings for global markets to achieve maximisation of profits, emergence of well-established distribution channels, growth of advertising and media industries, increasing participation and control of the MNCs even in these industries for sales promotion has only resulted in bending the customers to the needs of the market. This is achieved by generating demand through the creation of felt needs for the goods and services produced and promoted by these corporations. The goods and services produced by these corporations are not always the ones that satisfy consumer needs the most, hence the consumer's interest gets pushed to the back seat. These tendencies are only going to get further strengthened and reinforced through the pressures exerted on the developing countries in the GATT negotiations.

The operation of the MNCs implies globalisation of the production and distribution mechanisms in the developing countries. Implications of this trend towards globalisation include the following[4]:

1. The primary objective of the MNCs is to maximise profits by exploiting the markets they operate in. They do this by entering into newer markets either through equity participation or through sale of technology. In both cases, the objective is to reap as much benefit as they can by charging high royalty payments for a maximum possible duration or entering into collaborations for use of their 'brand names' and 'trade marks'.

   Profit maximisation is also achieved through their participation in low tech areas of the consumer goods industry either through equity participation or with technical collaborations, and providing not the 'best' or the 'latest' technology. Further advantages are sought to be reaped by the MNCs through participation in franchise agreements with the small scale entrepreneurs of the host countries. These processes make the brands of the MNCs available in the markets of developing countries at a much lower cost of production, given the cheap labour of the small scale producer. High sales of these brands leads to a large outflow of profits from the host countries
2. Since the ultimate aim of all the MNCs is market access and the desire to command either total monopoly or a near monopoly position is the primary motive, these conglomerates also use high promotion expenditures to promote their brands. Gradually, the services like advertising also get transnationalised not only through equity participation but also by the fact that the MNCs are the largest users of this industry.

   Advertisements being the links between the producers and consumers for promoting products, the mass media as carriers of these advertisements also face indirect control of the MNCs as these corporations are normally the top buyers of media time.

   As a result, a situation arises where the MNCs gradually exercise control, either directly or indirectly, over the resources of the developing countries. The allocation of critical resources such as finance, raw material, land and manpower in these countries, therefore, get determined by the production priorities of these corporations and not by the development needs of a nation: its people and consumers.

This process has implications that are not just economic but are socio-economic and socio-cultural.

◆

THE tendencies arising out of globalisation, described above, were witnessed in India in the previous decade. The post-1983-84 period, in particular, witnessed an unprecedented increase in the number of new products and brands of consumer goods available in the market. This phase offered 12 brands of convenience food (including instant noodles, instant soups instant food mixes, jams, sauces, soft drinks concentrates), multiple brands of electronics, branded toys manufactured in technical collaboration, for example, Barbie dolls and Leo Toys, branded textiles like 'Van Heusen' shirts, multiple brands of consumer durables like washing machines, kitchenettes, cars and other automobiles, designer 'floor tiles' and wall tiles, all manufactured in collaboration with the MNCs or their affiliates.

The rapid introduction of new products and brands was also supported by the fact these corporations engaged in their production were also the top advertisers in the mass media. The billings of the avertising industry have been concentrated to a large extent with these corporations. For instance, during 1976-84, foreign controlled companies (FCCs)[5] in India accounted for more than 55 per cent of the gross billings of the advertising industry. Hindustan Lever, the all-time top advertiser alone accounted for 12-15 per cent of the billings. These trends have only strengthened further in the years that have followed.

Top buyers of TV time are also the MNCs and their affiliates and constitute a considerable share in the total billings of this important mass media. Thus, an increasing number of foreign brands have found an entry into the daily consumption basket of Indian consumers. The extent of their participation in the daily lives of Indian consumers is illustrated in the commentary enclosed in Annexure-I. The apparent effect of this domination by the MNCs, either directly or through their affiliates, has been the promotion of a consumerist life-style and the introduction of a global consumer culture which was not in conformity with the developmental framework of the economy.

From the consumer's point of view, the implications of the above process are enormous. The more important of these are:

- With the emergence of monopolies or near monopolies in the consumer goods market, prices of the commodities get affected in a manner unfavourable to the consumers.
- The emergence of monopolies results in an increase in Restrictive Trade Practices (RTPs) and Unfair Trade Practices (UTPs), over which the consumers have no control.
- With an increasing stress on consumerist life-style, the consumers are forced to purchase goods and services that are 'conspicuous' in nature[6], that is, those that do not represent their real needs and demand, but the demand for which gets generated through media images, sales promotion techniques and the demonstration effect of "keeping up with the Joneses". The net result is a drain of the consumers' pocket because goods and services required to satisfy his real needs are substituted by goods purchased for frivolous consumption and the returns from the money spent are low.[7]
- Consumers in developing countries can get affected due to a large participation of the MNCs in their markets also because of the uncertainty that might arise in the domestic availability and prices of goods as the MNCs tend to replace the domestic products with their own brands. Later, after establishing their brands in the market, they may choose to withdraw or restrict the production and distribution of these goods and leave the consumer in an uncertain situation charging a price not in relation to the product attributes.

The above trends of monopolies, increasing prices, non-availability or threatened availability, debasing of local production and distribution systems and rise in RTPs and UTPs would only get further reinforced if the proposals made by the GATT Director General as the Draft Final Text of the Uruguay Round negotiations, and which have, by and large, been endorsed by the developed countries, are accepted.

◆

IN the July 1991 G-7 Summit, the position of the developed countries in regard to the Uruguay Round negotiations was made more explicit. It was suggested in the Summit that the G-7 expected the developing countries to come forward in a big way to cooperate in formulating the agreements in the areas of markets access, agriculture, services and intellectual property rights in such a way that goods and services in the developed countries continue to find ready market in the developing countries.

The view that developing countries may have to rely on imports more than their domestic production has gained further credence in the TRIPs negotiations. In these negotiations developed countries have proposed that the conditions of working of a patent, that is, utilising the patent to set up production units, in a country granting patent should be altered. Instead of setting up production units, it has been proposed that importation of the product granted patent protection should be taken as fulfilling the condition of working. This condition implies that when a developing country grants patent protection to a foreign patentee, the latter would not be obliged to transfer his technology to the developing countries. These proposals are, therefore, aimed at depriving developing countries access to sophisticated technology which they require for their industrialisation. Instead there would be: (i) a tendency towards import of the products incorporating the latest technology, and (ii) an increasing number of foreign collaboration agreements entered into for promotion of foreign brand names and trade marks, in low priority consumer goods.

Suggested decontrol of foreign investment under TRIMs will bring in a much larger participation of the MNCs in the developing countries on terms that would favour the foreign investors more than that in the past. Through this process there would be strengthening of the tussle for brand monopolies which would give rise to a larger dependence on product promotion through advertising and not innovation as a technique for larger market shares. The result will be strengthening of foreign monopolies which would bring with it high prices for the consumers.

The quality of life of consumers in an economy is determined by their access to basic amenities like safe food, safe drinking water, sanitation, education and medical services, and price at which the services are offered to the consumers. In India, these basic amenities are provided by the state and hence the consumers can avail of these services at an affordable price. Further, consumers also have an access to easy credit through nationalised banks and security of risk converge through easy terms of insurance, again because these crucial financial services are state-owned. Participationof the MNCs in these crucial areas of services, which the GATT is seeking to promote, and their terms and conditions of supplying the same may not be suitable to the needs and requirements of the common man in the developing countries. The provision of these services is likely to suffer from the 'elite bias' given their high price. With increasing consumerism on the one hand and commercialisation of services on the other, the consumers would get totally marginalised and the possibility of affording a minimal decent life would get out of the reach of the common man in the country.

In agriculture, the proposed GATT rules aim at the reduction of subsidies, both to the producers as well as the consumers. This twin removal of subsidies would affect the poor in particular since this would have an adverse effect on the prices and availability of the agricultural produce. The reduction of subsidies would also constrict the flow of the benefits of Public Distribution System to the comman man. Again, freer global trade in agriculture, yet another objective of the Dunkel proposals, may not necessarily mean that the grains of right quality are available at the right price to consumers in the developing countries.

Hence, the overall developmental goals of the economy would be under the threat of getting totally submerged under the bandwagon of global consumerism strengthened through the provisions of the GATT. The implications of these changes, aimed at bringing about by a more liberal participation of the MNCs in the economy, would be far-reaching. Apart from causing displacement of local production and distribution causing larger unemployment, this process would add the additional dimension of distortion through its capacity to influence people's aspirations and life-styles, and the value systems of the invaded societies as a whole. Tensions between the different strata of society would increase on account of changes in the life-styles and the demonstration effect in the range of products and brands in the consumption baskets of the consumers. These inimical consequences would get confounded by the inevitable rise in unemployment, as mentioned earlier.

The implications of such a powerful process of soico-economic and socio-cultural changes on consumers resulting from the operation of the MNCs in the developing countries were recognised in several international fora during the past few decades. An important initiative was taken following this by the United Nations through adoption of the Guidelines for Consumer Protection' in 1985.[8] The objective of the code was to help the developing countries control the marketing practices of the MNCs.[9] A complete negation of these initatives are being witnessed in the GATT which is why the threat to the developing countries is even greater at the present juncture.

Where do we go from here

Given the serious nature of implications, the need of the hour is that consumers come forward in an organised and active manner to decide what is the kind, variety and quality of the goods and services they want to be made available to them for consumption, at what price, and under what terms and conditions of availability.

The current GATT negotiations as we have discussed above, can be viewed as an attempt to constrict consumer sovereignty. Instead of the consumer deciding about his consumption basket, the MNCs are sought to be given the priomordial role to decide what the society should consume. In this context, it is imperative for the consumers to inform and educate themselves of the issues involved and the implications on their future life-styles and the resource-use pattern of their societies.

Annexure-I

A Commentary on the extent of the presence of transnational brands in the daily lives of an Indian consumer

The penetration and participation of multinational corporations into our lives continues unabated throughout the day. It begins in the morning when we wake up with a morning cup of **Brooke Bond** of **Lipton** tea, served with Cadbury's **Bournvita Biscuits** or **Tasty Bites**, **Marie** and **Bourbons** from Britannia. Tea may be prepared by plugging in a **Philips** kettle, or in a **Borosil** corning kettle on a gas stove lighted by **Wimco** matches. This is followed by the brushing of our teeth with **Colgate, Close Up, Forhans, Ponds** or **Cibaca** tooth pastes spread on tooth brushes of the same brands. Using **Palmolive Erasmic** or an **Old Spice** shaving cream and a brush, the process of shaving is completed with the use of **Erasmic, Wiltech** or a **7 O' Clock Edgeteck** blades and razors from **Willman** or **Erasmic** followed by an after-shave lotion from **Colgate Palmolive, Erasmic** or **Old Spice.**

The choices available for bathing soaps range from the **Lux, Rexona, Liril** and **Pears** of the Hindustan Lever to **Dream Flower, Cold Cream, Herbal** and **Sandal** soaps of Ponds. We also have the choice of a beauty bath with **Palmolive** or **Lux Supreme** and for a complete antiseptic bath we have **Dettol** toilet soap.

Again, the choices for a head bath are also no less varied, ranging from the **Sunsilk Egg Shampoo, Sunsilk Shampoo with Conditioner, Sunsilk Amla** to **Halo, Ponds, Palmolive** and **Naturelle Herbal Shampoo**. For stubborn dandruff we have **Clinic Special** for help. The Operation Clean-up is completed in the morning with a sprinkle of **Ponds Dream Flower, Ponds Sandal** or a **Cuticura** talc, not to forget the option of **Liril** as well; coupled with the rub of **Vaseline Hair Tonic** or **Brylcream** in the hair.

How can we forget the special options for the babies who are bathed with the special **Johnsons Baby Soap** and massaged with **Johnsons Baby Oil** and sprinkled with the delicate smelling **Johnsons Baby Powder** specially manufactured for them. There is also a provision of **Johnsons Baby Lotion** to protect their delicate skin and **Johnsons Ear Buds** to clean their delicate ears.

Feeding the babies with **Nespray, Lactogen, Lactodex** supplemented with **Farex** and **Cerelac** and leaving them to play with **Barbie Dolls** and **Leo Mattel Toys**, we are ready for breakfast dressed in **Haiku Collection** of sarees and dress materials, or **Cezari** collection of suitings from Bombay Dyeing and **Van Heusan** and **Benetton** shirts accompanied by shoes and sandals from Bata—**North Star** and **Power Jogger** to name a few.

On the breakfast table again, we are served **Britannia Bread** toasted in a **Philips** toaster with a spread of **Kissan** jams of a savoury sandwich with a spread of **Maggie Chilli-Garlic, Maggie Hot and Sweet** sauce. This is, of course, accompanied by **Britannia** cakes and biscuits, all of which is washed down by a glass of cold coffee made in **Nescafe Shake** using **Nescafe Instant Coffee** or a cup using the **Rich Bru Instant** from Brooke Bond prepared with the **Every Day** dairy whitener from the Nestle's. Packing **Maggie 2-minute Noodles** for lunch with a dash of **Maggie** or **Kissan** sauces and ketchups, we are ready to move out for work made up in the latest cosmetics from **Ponds** and **Max Factor** and perfumes from **Charlie**. The array of face cream and lotions available is also not small ranging from the **Charmis All Purpose Cream** to **Nivea Lotion, Ponds Cold Cream** to **Cleartone, Clearasil** and **Fair and Lovely**.

We leave for work riding a **Maruti Suzuki, Hero Honda** or a **Yamaha 150**, or commuting in buses which use tyres made by **Dunlop, Ceat** or **Goodyear**.

We reach office punctually with the aid of a **Citizen** or an **Allwyn Seiko** wristwatch, wearing sparkling white clothes laundered with the **Super Rin** washing soap, or with **High Power Surf** of **Sunlight** washing powders. The clothes are laundered in **Savior** washing machines and treated with **Robin** fabric whitener for a sparkling whiteness. Of course, these clothes are stitched on a **Singer Sewing Machine**.

Reaching the office in a high-rise building with the help of an **Otis** elevator, we slump on the seats under the cool breeze of a fan from **GEC** or **Crompton Greaves** Sitting under the lights of **Philips** bulbs and tubes, we do the writing using a **Sheffers, Parker** or a **Cross** pen, the symbols of the elite. Working on the typewriters of **Remington Rand** and computers that depend on **IBM**, we drink the cold water from a **Voltas** water-cooler to quench our thirst. We may even enjoy the cool fizz of the products of **Pepsi** till such time that **Coca Cola** does not make its re-entry. Smoking cigarettes manufactured by the **ITC** we may go out for lunch in one of the hotels managed by the same company.

The evening is spent relaxing to the music provided by a **Philips** sound system and refreshing with a cup of **Cadbury's Drinking Chocolate**. Children take **Bournvita, Complan, Horlicks** or **Glucon** before going to play eating **Cadbury's Chocolates, Gems** or **Eclairs**. Here again, they can choose from **Cadbury's Milk Chocolates, Double Decker, 5 Star, Chocolate Pops**. They can even choose from the range provided by **Nestle's**.

Preparation for dinner starts with the grinding of masalas in a **Philips** mixer grinder, using 'Dalda' of Hindustan Lever or **Vital** of Britannia as the cooking medium. For the desserts what can be better than **Brown and Polson** Custard Powder and **Rex** Jelly served with tinned fruits from **Kissan**.

At dinner we switch on our **Philips** or **BPL-Sanyo** television to watch a programme sponsored by the makers of **Maggie, Vicks** and **Rin**, to name only a few. Retiring on a bed on a mattress and pillow made by **Dunlop** covered with a sheet and pillow covers from

Bombay Dyeing, we often resort to the help of a **Digene, Vocacil, Strepsils, Vicks-Action 500**, or a **Disprin** for a peaceful sleep. ■

NOTES

1. See, Mehta, S. Pradeep, "GATT Workshop: Free Trade Benefits Elude Consumers", *The Economic Times* New Delhi, July 10, 1991.
2. The GATT Director General, Arthur Dunkel, had indicated That the "philosophy of GATT is ....about market openings". In the global economy where the MNCs hold the key, it is quite clear who would be the eventual beneficiaries of the "market opening" that the GATT stands for.
3. See, Goden Leland J., and Lee, Stewart M., *Economics for Consumers*, seventh edition, 1977.
4. This point and the following discussion is based on the findings of a paper prepared at the Indian Institute of Public Administration for the project Impact of Multinational Corporations on India's Position in the International Division of Labour", under the Indo-Dutch Programme on Alternatives in Development. For details, see Sachdeva, Sudha, 'Advertising in India: Some Characteristics and Trends, **Working Paper No. 17, Corporate Studies Group,** Indian Institute of Public Administration, New Delhi, 1988.
5. Foreign controlled companies were defined, in the study being referred to here, as those companies in which the voting stock of foreign equity was 10 per cent or more in 1984.
6. *Ibid*. The following criteria were included in the operational definition of a commodity of conspicuous consumption in the Indian context. These were: (i) degree of essentiality; (ii) the comparative prices in relation to other unadvertised brands or natural substitutes available; (iii) the level of status associated and the resultant tendencies to emulate; (iv) the life-style it promoted--bloomers or otherwise, and the real consumer need; (v) the level of avoidable chemicals used; (vi) values associated with materialism, it was capable of promoting; and (vii) the nature of the products, whether alien or not, to the Indian life-style. Any commodity satisfying one or more of these criteria was considered as commodity of conspicuous consumption. For more details, see Sachdeva, Sudha, 'Role **of TV Advertisements in Conspicuous Consumption** unpublished dissertation, Department of Community Resources Management and Extension, Lady Irwin College, 1986.
7. The underlying principle of consumer welfare is that for every penny spent by a consumer in the market, the consumer gets a fair return only if he gets the right quality and quantity of goods and services needed by him at the right prices.
8. Mercial, Patrizio, "Consumer Protection and the United Nations, *Journal of World Trade Law*, vol.20, no. 2, April 1986.
9. *Ibid.*, p. 208, although the definite text did not mention "transnational corporations", the Guidelines were clearly intended to confer greater legitimacy to national and international campaigns towards stricter control of the MNCs.

Threat to Employment

JAYA JAITLY and SURENDRA MOHAN

Dignified and gainful employment of every adult individual should have been the cornerstone of all our development policies. Instead, our industrial policies threw people out of work. Our planned economy seems to have planned for unemployment as can be seen by these figures of the extent of unemployment:

End of 1st Plan	53 lakhs
End of 2nd Plan	71 lakhs
End of 3rd Plan	96 lakhs
End of 4th Plan	171 lakhs
End of 5th Plan	221 lakhs
End of 6th Plan	249 lakhs
End of 7th Plan	310 lakhs
Currently	355-370 lakhs

These figures hardly reveal the truth since they reflect only the registered unemployed in the mere 800 employment exchanges we have all over the country. Hundreds of millions among the landless cultivators, the tribals and others in the informal sectors of the economy hardly register in these offices.

Hence a more realistic figure would be much higher. The rate of growth of employment in the seventies was 2.8 per cent. It declined in the eighties to 1.7 per cent, having slid down to 1.5 per cent in 1982-83 to 1987-88. In the agricultural sector, this rate was only 0.95 per cent during the latter period. Full employment including the absorption of the backlog and the new entrants of around 90 million in this decade requires an average 3.5 per cent increase in employment during the decade. The growth rate of existing employment per annum or even less would continue to add massively to the number of the unemployed. Additionally, five crores could also be added to it because of the policies dictated by the IMF/World Bank.

It is significant in this connection that while the proportion of the usual, that is the annual unemployment to workforce increased from 2.77 to 3.77 per cent in 1983 to 1987-88, the percentage of daily unemployment fell from 8.25 to 6.09, thus emphasising that underemployment was changing into open unemployment in substantial numbers.

Jaya Jaitly is a political activist working among rural artisans in the unorganised sector.
Surendra Mohan is a senior leader of the Janata Dal.
This paper was presented at recent national seminar on the new economic policy.

While employment in the much maligned public sector went up by three per cent in 1975-85, employment in the private sector remained virtually stagnant. Automation, mechanisation, computerisation in areas where they displaced rather than added workers and heavy investment in capital intensive projects resulted in the spending of a hundred thousand crores to actually reduced 70,000 jobs since the liberalisation of the eighties in the private sector.

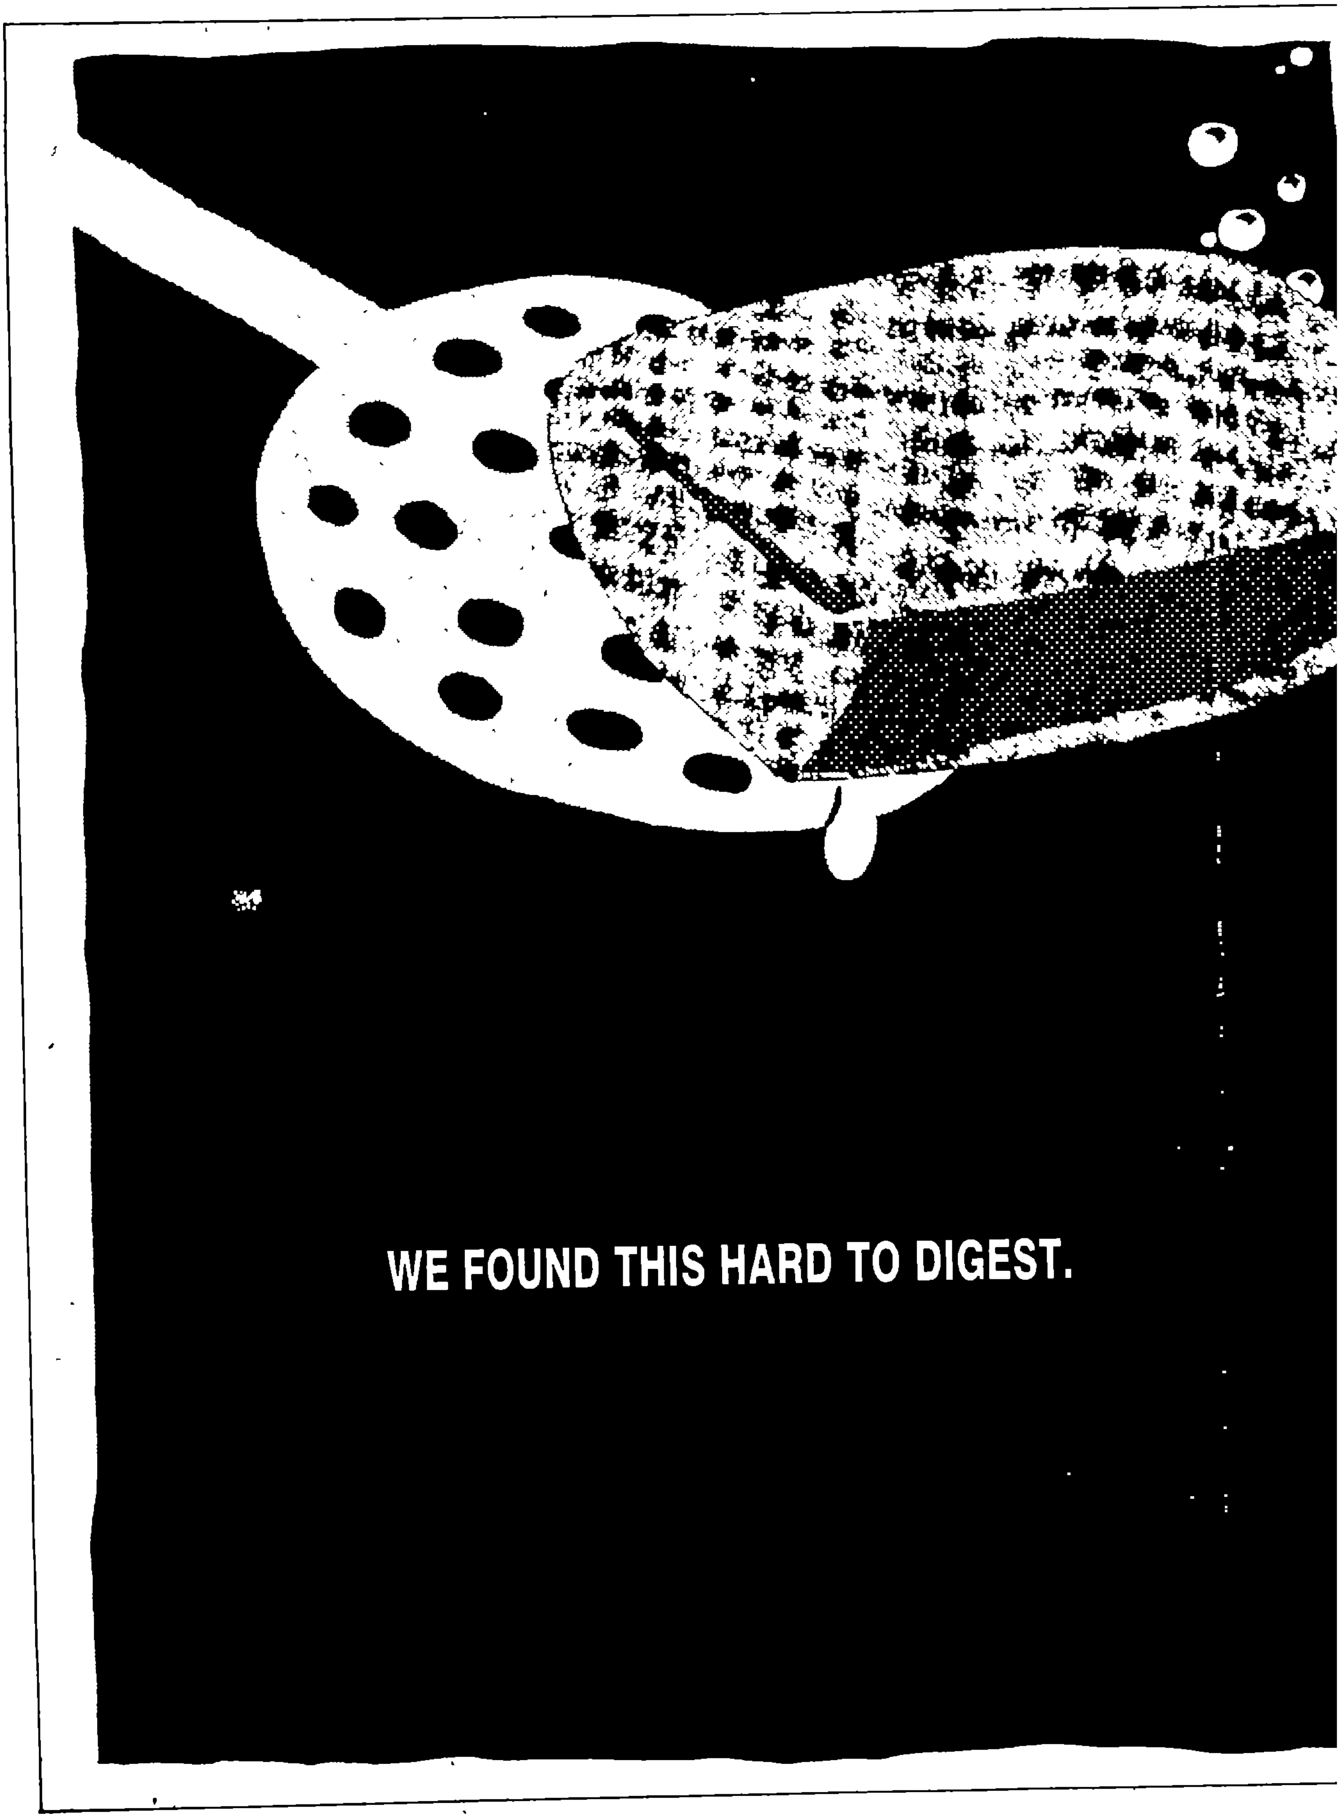
Into this critical situation is now injected the desperate remedy of "structural adjustment" for the sake of generating a mere two per cent of the GDP in terms of foreign resources.

What are these structural adjustments? They are conditions the IMF imposes before giving a large loan to a recipient country, viz., (a) the integration of the economy into the world economy, (b) curbing the role of the government, particularly the public sector, in the economy and (c) allowing the market forces to play a greater role.

"Joining the global market" means free entry of multinationals on their terms. While their brands, patents and products would obtain free access in India, we would neither have access to their technology, nor would Indians be allowed free access to jobs in the countries of these MNCs. Multinationals would be free to take over even the manufacture of goods made traditionally by our small scale, cottage and tiny sectors where 17 lakh units employ 1.2 crore persons. Most of these persons would be rendered idle. Labour intensive village industries would be wiped out in the same way as the Manchester Textile Mills in England wiped out our handloom weavers during the industrial revolution.

By reducing the role of the government, such objectives of our development planning as

(Continued on page 23)



WE FOUND THIS HARD TO DIGEST.

Today, Indian scientists have attracted world attention with their many achievements. The Green Revolution that was a big leap forward in making us self-sufficient in foodgrain production. The distinction of making India one of the first developing countries to use nuclear power for peaceful purposes. The satellite communication programme that linked every corner of our vast country and connected us to the rest of the world. Just some examples of how India uses science to develop relevant technology for the country's needs

For instance, there was a time not long ago, when soaps were made mainly from edible oils. But India really needed it for cooking. Hindustan Lever scientists took up the challenge. They researched processes for the upgradation of inedible oils such as castor, karanja and kusum for soap manufacture. Nowhere in the world had this been done. They thus proved that they were capable of providing solutions in the interest of the country's future. Besides saving almost Rs. 200 crores per year on importation costs.

1931 ★ DIAMOND JUBILEE ★ 1991

HINDUSTAN LEVER

At the Hindustan Lever Research Centre, over a hundred Indian scientists and engineers are constantly developing and adapting technology relevant to India's needs. They've discovered a high activity catalyst that is used in refineries. In the area of biotechnology, work led to the identification of a unique plant growth nutrient to improve crop yields. And their in-depth understanding of the biology of skin and hair has resulted in the development of new products.

As we build brands and venture into new businesses, we keep discovering the enormous wealth of India's intellect. It has helped us meet every challenge. And motivated our growth plans. We know we can set our sights far. To a future where India will be playing a dynamic role in the emerging world economy. We'll be proud to help her reach that goal. For we believe that if you have a dream and the determination, India will take you there. We have seen it happen. For 60 years.

India can. India did. India will.

Industry, Technology and Multinationals

J.D. SETHI

Those who are pillorying the Rao-Manmohan's economic policies should stop to address themselves three questions: First, what is new in the New Economic Policy? On serious reflection, it would be found that the current policy is an accentuation and a logical outcome of the policies of the last four decades. The new elements have been introduced rather dramatically in a short span of time and would not have provoked criticism had the time-spread been longer. After all, liberalisation and globalisation began more than 11 years ago.

Second, almost the whole of large scale Indian industry has been tied to foreign multinationals and technological regimes. India has less than 10,000 large manufacturing units and the number of collaborations signed are more than 15,000. It is difficult to pinpoint a single new major industrial unit to have come up with entirely Indian money, management and technology. The foreign brand consumer goods produced in India dominated the Indian market. The FERA laws have been the most useful instruments in the hands of the multinationals.

Third, India's science and technology policies has been so poorly organised, made so dependent on external knowledge and so much divorced from linkage with industry that except for selected areas, there is hardly any worthwhile R&D. Out of 5500 crores of rupees spent on R&D, nearly 5000 crores go for nuclear, space and defence research. There was no reason or motivation for the foreign collaborators to particpate in genuine technological effort. The science laboratories and establishments are producing junk. Despite very heavy scientific and technological establishments, the two remain distinct.

There has been massive confusion and dependence in Indian policy in respect of import of technology and domestic R&D. Even on paper, Nehru had a science policy but no corresponding technology framework. Indira Gandhi had announced a technology policy without a science policy. Rajiv Gandhi had neither. There is not much point in speaking about others. The critical point is that the foreign aid to which Indian industrialisation was tied as well as the continuation of the colonial structure thwarted the growth of indigenous science and technology. Both in theory and practice, we put too much emphasis on science and too little on technology, getting the worst of both. By contrast, over the last four and a half decades, Japan put all its eggs in the technology basket. After having acquired technological supremacy, she is now moving towards big science.

The author, a noted economist, is a former Member of the Planning Commission.

The continuous import of the same old technology, its heavy consumer bias, stiffling conditions of collaboration agreements, etc. are crippling our industry. The only effective defence against technological colonialism, namely, the development of our own science and scientists, technology and technologists, etc., has become a victim of this colonialism. Our scientists got recognition in their own land only after they were given recognition abroad. The entire atmosphere and organisation of research in India was designed to dovetail it to scientific developments elsewhere and had little relevance to the development of those technologies and such adaptation of imported one as would have been both commensurate with our own factor proportions and change in these proportions in desired directions.

Technology may be said to recognise to national boundaries. But there is as yet no such thing as its international application, except what the multinationals decide. Nominally each nation alone uses and develops technology by its own conscious deliberate action but not in reality. Technical change is one thing but a choice of a particular technique is quite another.

No wonder, that the multinationals have been making consistent inroads into Indian economy and the Indian policy responses have been so enimical to indigenous development that it seems the Government of India and the multinationals have converged to deny India the opportunity to exploit its technical manpower. Besides, there has been total confusion in science and technology policies.

◆

MORE than capital and other resources, natural and man-made, it is the growing technological gap between the rich and the poor that lies at the source of great world disorder. The new order threatens to make the situation explosive and condemn the poor countries to new economic and intellectual domination. Three distinct trends are noticeable. First, technological development in the Advanced Developed Countries (ADCs) has given rise to the power of collossal corporations. And it is these corporations which with their technological, financial and communication power have become both the makers of the goods and the makers of the desire for them.

Second, although high degree of specialisation, complexity of decision-making, risk and financial backing that make technological development take the organisational form of big corporations, beyond a certain limit these corporations break through national barriers to become multinationals. The present vehicle of economic domination by the North of the South is the multinational corporation. Over 4000 of these exist today, most have their headquarters in the USA but there are a growing number of others with headquarters in Europe and Japan.

Third, these corporations squeeze out small competing firms in the LDCs, evade local taxes through numerous devices, send large profits back to the ADCs, utilise capital-intensive technology that was once used in the industrialised countries, and successfully dump them in the LDCs.

The analysts of the multinationals, be they of Dependency and Interdependence theory, accept that "the power of the global cooperation derives from its unique capacity to use finance, technology and advanced marketing skills to integrate production on worldwide scale and thus to realise the ancient capitalist dream of one Great Market".[1] However, one of the important features of these companies is their "overwhelmingly oligopolistic character that is, they dominate in markets effectively controlled by a few buyers or sellers".[2] Their large size, control of technological and product innovation and differentiation, brands and patents, power over investment location, research programme, transfer prices, etc. give the multinationals political power to determine the range of oligopolistic global strategy and a common global control.

Earlier, in search for markets and profits the MNCs drove into the LDCs but later their main interests pushed them towards those areas which were trade oriented. The ADCs constituted the trade dominated area. The LDCs both welcomed as well as repelled them, depending upon their own evaluation. Those who welcomed them without safeguards came to grief because of the economic control exercised by the MNCs. Those who tried to repel them but also failed to develop their own science and technology also came to a sorry pass because they lost the trade leverage and ultimately had to reverse their negative attitude.

Multinational trading regimes may be in private hands as in the West, semi-public enterprises, again in the West, or full owners and controlled by the state as in the communist countries. Now these multinationals take recourse and finally work for countries which have reached a certain stage of development, not necessarily for the country of their origin. For countries below that critical level of development these multinational corporations may not work and are not known to have worked for. Instead, scales are reversed in order to control these countries. The restrictions they impose with respect to technological diffusion, export markets, domestic competition, etc. make them barriers to development because they create enclaves and a new dualism on an existing dualistic economy.

Even with a most favourable MNC package, the LDCs are not allowed to determine the appropriateness of commodity production and technological use. The net result was the perpetuation of domestic dualism of colonial era and this ensured profits for the MNCs. The MNCs determine the share of trade for the LDCs as prompted by their global strategies as well as the aforementioned dualism. Since the trend is towards greater trade integration among the ADCs for a variety of reasons, the LDCs trade loses its autonomous character. Thus the MNCs, with their control over resources, their oligopolistic power and their focus on the ADCs' economic development, etc. ultimately marginalises and Darwinises and LDCs first on trade and then through trade in the economic development of many of the LDCs, ironically by operating within the LDCs official policies.

We know that 75 per cent of the Western world's production comes from between one and two thousand firms. In the United States, 60 per cent of the national capital is in the hands of just two hundred firms. In France, where integration is considerably less advanced, 0.4 per cent of business enterprises, that is to say, 800 firms, are responsible for 47 per cent of total production. Similarly, international investments are the prerogative of a restricted number of firms: just 165 British firms are responsible for 80 per cent of overseas investments; in Germany 82 firms provide 70 per cent of foreign investments; three-quarters of United States external investment comes from 190 firms".[3] The general trend is that the rise of a few oligopolistic firms control anywhere between one-half to two-thirds of the total production.

◆

ANOTHER impact of the technological gap is the shift from turning old colonies as sources of raw material and markets for the goods of the metropolitan power, into a new instrument of control by the multinationals of the combined resources and markets of the many countries. But, more significantly, it is the transfer of light industries into areas of cheap labour that makes the new phase. Goods requiring sophisticated technologies are kept at industrial centres while those using limited technologies are spread out.

Prof. Meister has drawn attention to this and another allied problem. "The transfer of light industry to zones of cheap, competent and docile labour—as is the case today in South-East Asia—means a comparable reduction in the number of immigrant workers at home, and hence helps to diminish racial ill-feeling with its unfortunate consequences of industrial and social unrest. Similarly, on the model of tax havens the absence of anti-pollution legislation (or the floating therefore, the poor countries create real 'havens for polluters'—so as a new style of international division of labour is gradually coming into being, the rich countries keeping the highly capitalised industries with the clean factors to themselves, while the poor countries manufacture labour-intensive products involving dirty factories."[4]

In this milieu, it is becoming increasingly difficult for any single country to find national and indigenous solution for its socio-economic problem. (This inability leads to serious political complications.) It is not surprising that for decades both Washington and Moscow denounced the so-called narrow nationalism of the poor and newly independent countries which ware slowly sucked into every new economic order without their consent, an order which condemned them to live first in dependency and then in global slums. Even a poor country is forced to put all its eggs in the export basket. This is the practice today. It was not so ten or fifteen years ago even when the economic plight of these countries was unenviable.

Modern technological regimes are formed not by nations but by economic organisations and interests on the one hand and by scientists and technological experts on the other. Every nation tries to keep control on both because in the final analysis their competitiveness and productivity increases depend upon their control of technologies. Economic nationalism of the ADCs is most fiercely reflected in their national as well as MNC-alliance technological regimes. Even within the alliance system secretiveness, jealousies and desire for appropriation in respect of technologies remained a critical barrier to further integration. Unlike the international trading regimes such as the GATT and other organisations, there is no trading international technological regime. The day such a regime comes into being the monopoly of the control of a few powerful nations over the rest would be complete. At present only the EEC is moving in that direction. Before such a calamity comes down on the world from all sides, it is important that a more equitable, ecologically justifiable and aesthetically satisfying technological progress must be created right now.

Notwithstanding all the promises that the emerging technolgical regimes are making, they are neither able nor find it in their interest to reach out to the vast starving millions whose survival is jeopardised by the technological regimes themselves.

The prevailing technological and scientific regimes are dominated by the production of the weapon system on the one hand and those other technologies which are either focussing on consumer durables or on the information of the other. Of course, there are new frontiers of space bio-technology, genetics, etc. about which the world is still as much in awe as it is hopeful. It seems that the global economic system, knowledge order and the security system are now dominated by technological regimes in which economic, security and knowledge themselves become the components.

The choice before every nation is how to (a) formulate its own policies and (b) how to negotiate with multinationals. Ideas are free but their economic application is a costly affair, which people only as a nation can undertake. The case for economic nationalism as well as of genuine globalisation refers to laying down of investment and technological priorities and having by deliberate conscious choice a spectrum of techniques from the best downward.

But more important, as the Korean and the Japanese experiences teach us, will be each capacity to play one multinational against another; one developed country against another; and one international regime against another. It is a ruthless world and we have to resort to every conceivable method used by others to get designs and integrate them with our own with the help of scientists and technologists of which there is no dearth. We will also have to sell most of our research institutions to those Indian industrialists who alongwith the government would be ready to engage in this extremely complicated defensive-offensive strategy. ■

JAYA JAITLY & S. MOHAN: Employment

(Continued from page 17)

redressing regional imbalances, development of backward areas, progress in health and education and employment generation would be greatly affected. Cuts in investment in the public sector and privatisation of the existing public sector shall vacate areas of economic activity to favour expansion of the private sector and the MNCs. With firm indications of stagnation in the economy and reduction in employment in the private sector, the scope for employment generation would be limited to only high wage jobs catering to the middle class consumer—the so-called "service" sector—while other jobs will be drastically reduced. So long as prices rise, the reduction in employment is not likely to serve the purpose of releasing resources for generating alternative jobs elsewhere. Moreover, the tight money policy of the government and high rates of interest charged by banks by causing deceleration, have hit the more employment generating sectors as agriculture, small and medium industry.

The International Labour Organisation and the UNDP workshop held in late December 1991 predicted that 30-40 lakh people will be rendered unemployed in 1992-93 and 80 lakh to one crore people in 1993-94. The Railways, for example, are expected to gradually reduce their workforce by nine lakhs. The trend to make regular employment casual would be stronger and the incidence of poverty would increase since the unorganised and informal workforce would be hit the hardest. When only 10 per cent of our workforce is in the organised sector, the remaining 90 per cent will be dealt a double blow.

A look at the situation in South America will show what happens to a population reeling under a dramatic fall in real incomes and a loss in employment generation—the per capita GDP has fallen by 10 per cent over the past 10 years. In Argentina and Peru the fall has been as much as 25 per cent to 30 per cent. Real average wages in 1990 were only 68 per cent of the 1981 level in Argentina, 85 per cent in Brazil, 75 per cent in Mexico and 44 per cent in Peru. The Urban unemployment rates also increased substantially in almost all the countries. Can we afford it in India where unemployment figures are already so high? The answer must be an emphatic no.

The Exit policy announced by the government and denounced by the trade unions aims at abandonment of the government's responsibility to protect the workers from retrenchment by its refusal to take over the management of sick industrial units and permission for closure and lockout of such units. Even when there was no challenge by the MNCs to our industrial units in the past, industrial sickness attacked hundreds of large units owing to multinationals' competition and gross mismanagement. Apart from it, retrenchment was also resorted to, sometimes in the name of rationalisation. Now that there shall be harder competition for our industry as imports shall be free, industrial closures will grow. Technological modernisation in collaboration with the MNCs or owing to direct investments by the latter would also lead to retrenchments.

New technology has always brought displacement, particularly of unskilled, semi-skilled and women workers. Re-employment for those affected will be more difficult once multinationals take over.

The gap between exit and re-employment which is estimated at a minimum of three years does not address itself to the question of funds necessary for massive retraining programmes and relief in the interim period. Moreover, 10 per cent reduction of the Plan in crucial Ministries such as Rural Development, and Education and Health has already been announced, and it leaves little room for the government to manoeuvre vis-a-vis re-employment of laid off workers.

The Constitution of India guarantees special opportunities and reservation for Backward Classes in Article 15(4) and 16 (4) but this is only binding on the state, that is, the government jobs in the Central and State sectors, including the public sector. With a freeze or reduction in employment in government, and the replacement of State sector by private sector, the availability of such jobs for Backward Classes, Scheduled Castes and Scheduled Tribes would be adversely affected. As the private sector has no obligation to employ anyone who requires special opportunities and positive discrimination. Thus the concept of social justice envisaged in the Mandal Commission recommendations will be quietly but effectively negated. Since reduction in employment usually takes place at the low paid, unskilled and semi-skilled levels first, the first to go will be the depressed and Backward Classes who have hitherto had to man these levels of jobs because of social discriminations.

We have alluded to the adverse effects of the introduction of sophisticated modern technology, rapid destruction of the small sector in competition with the MNCs and the MNC assisted large industries. Even the medium sector could be seriously affected by tight money policy followed by the government, freezing of recruitment in the government sector, reduction of employment by 10 per cent in certain departments of the government and the Exit policy announced by it.

There is, however, a much bigger danger. The government has been presented a memorandum by Arthur Dunkel, Director General of the GATT. If the terms set in it are accepted, then certain developments will further depress employment. For one, the government will have to reduce allocations to some functions in order to bring Budget deficit below six per cent of the GDP. The government shall also be prevented from launching employment generating schemes in the future.

The GATT negotiators want Indian patent laws to be changed so that the MNCs are able to compete with Indian pharmaceutical firms. The latter which has provided us with basic life saving drugs and found large number of jobs shall suffer badly while medicines will become even more expensive. There is also the demand that foreign firms should be allowed in banking and insurance. These firms would attract Indian depositors and the deposits shall be used not by Indian investors but by them and preferably outside India. the prospects of employment generation by use of these deposits in indigenous industry will be diminished.

Agriculture is another area and much more vital for our economy and its capacity to employ the mass of the people. It has also to be opened to the MNCs for their imports, for creation of seed farms and for food processing. Change of patent laws in their favour will help this process. In particular, the change from patenting of the processes of manufacture to patenting of products, as demanded in the Dunkel memorandum, would mean that in respect of all the various varieties of seeds produced in seed farming, products in pesticides, weedicides, fertilisers and processed food products, which get patented by them. Indian manufacturers, big or small, shall be banned from producing them. It will thus block expansion of indigenous agricultural development and food processing for good. Patenting of products shall create monopolies and the prices of the products would also increase, thereby leaving very little in a person's pocket to invest.

Large investments by the MNCs in agriculture in order to capture our large market will help to capitalise it. A regime of very large farms will come up. The whole effort at land reforms and equitable redistribution of land, which had remained as an objective of state policy, shall have become unavailing. To the extent that this effort meant larger employment generation, this goal will be seriously compromised. The number of those employed in agriculture, particularly agricultural workers, marginal, petty and small farmers, will come down heavily while they will have nowhere else to go. It has already been pointed out that the rate of growth of employment in rural areas was 0.95 per cent in 1982-83 to 1987-88. This trend shall only be reinforced further.

Import to India of surplus agricultural produce and processed foods from developed countries would further affect the development of or agriculture and food processing industry. Our cultivators will get a raw deal, as also small enterpreneurs.

The evil effects of massive use of chemicals and synthetics in agriculture and processed foods are also becoming well known now. The MNCs are committed to massive introduction of these harmful techniques. Patenting of bio-techniques and genetic products and their unrestricted utilisation in agriuclture would prove detrimental to India's interest and to the health of the people. This will obliterate the use of alternative organic techniques traditionally followed in India. ■

Scope for Major Breakthrough

SYED ALI MUJTABA

A year after the return of democracy in Bangladesh, the BNP leader Begum Khaleda Zia is on her way for a full-fledged official visit to New Delhi. It is imperative that a rapproachment between the two neighbours takes place for the sake of regional peace and stability. The issues high on agenda are the problem of Burmese refugees and its implication on the Chakma tribals, the sharing of the Ganga waters, the Tin Bigha corridor, the Bangladeshi influx into India (mainly Assam and West Bengal), the New Moore Island, the arms buildup, economic relations, the SAARC, etc.

The repression unleashed by the Burmese Army on its ethnic minority is not a new phenomenon, but what makes the present situation more complicated is that this time the targets are the Rohingas from the Arakan. Mostly Muslims, they have been pouring into Bangladesh's Cox Bazar telling horrifying tales; and these are attracting the attention of the international media. It is a period of border tension between Bangladesh and Burma. The complexities of the issue are compounded by the fact that Bangladesh's overtures towards China to mitigate the problem were cold-shouldered. In such a situation there was no alternative but to look towards India. The possibility to defuse this tense situation will likely to figure prominently in the talks at New Delhi.

Related to it is the ongoing settlement of these refugees in the Chittagong Hill tracts, jeopardising the prospects of repatriation of the Chakma tribals stranded in Tripura. In 1989 a joint delegation visited the Bangladesh refugees camped in the North-East and there was a commitment from the side of Dhaka for a speedy settlement of these tribals. The case of Chakmas is now becoming weak with the new situation developing in Bangladesh on the Burmese front.

A major snag in bilateral relations is the sharing of the Ganga waters and construction of dams on the common river to augment water resources. An interim agreement on this water problem expired in 1988 and no permanent solution is in sight. Bangladesh has been pressing for the construction of a reservoir in Nepal but our stand is to have a link canal connecting Brahmaputra and Farakka through Bangladesh. Nothing has moved since the 1987 summit and the government at both the ends require a regional approach to settle their grievances. This visit would likely to see a major breakthrough on this score.

The author is a Research Scholar in the South Asia Division of the School of International Studies, Jawaharlal Nehru University, New Delhi.

The other major task for which a consensus has been almost reached is the handing over of the Tin Bigha corridor to Bangladesh after the epoch-making judgement by the Supreme Court of India. A lot of fuss is being made by the Right-wing forces and the Forward-Block but the present government is committed to fulfil its promises. The speedy conclusion of formalities will facilitate the movement of people from the Dahagrum and Angrapota enclaves to the Bangladesh mainland.

The Bangladeshi influx into India is lately assuming serious proportions. This too is likely to come up at the talks.

Another major hurdle between the two countries is to lead a joint survey to expedite the dispute over Talpaty or New Moore Island. Both the countries have also to make progress combating cross-border insurgency and maintain peace along their common South-East border. The two nations have to settle the land boundary agreement and sort out the delimitation of maritime borders. Our country's responses have been lukewarm and one has to wait and watch how much further progress is made after the conclusion of the negotiations.

◆

SINCE the assassination of Sheikh Mujibur Rahman in 1975, a significant shift is discernible in the political parameters of our neighbouring country. The arms buildup by Bangladesh under successive military regimes has ominous portents for this subcontinent. The growing tilt towards external military assistance is viewed apprehensively by New Delhi. Bangladesh is facing the dilemma of keeping the pulls and pressures of external and internal forces inimical to its interest and strike a balance in terms of regional security arrangements. Begum Khaleda Zia's electoral rhetoric of Bangla nationalism has to keep into account the enigma of a nation whose twists and turns in pursuit of individuality is thwarted by

Indo-centric expressions.

The Bangladesh leadership has to grapple with the colossal task of development. Khaleda Zia's priorities of market economy, industrial development and privatisation fall within the general trend of opening up the economies in South Asia. Both India and Bangladesh can make efforts to diversify and expand their economic cooperation through improved linkages. They can also rectify the trade imbalance by joint ventures, industrial investment and cooperations in technical know-how. The bilateral negotiations in New Delhi will see a new economic era dawning between the two countries.

The late President, Zia-ur-Rehman, visualised the fear psychosis of a small nation in South Asia and floated the idea of regional cooperation. The SAARC therefore has an emotional role vis-a-vis Indo-Bangladesh relations. But the latest trend of aborting the SAARC is not a healthy sign. If the SAARC fails in its letter and spirit it would give impetus to the already growing desire in Bangladesh to discard its South Asian obsession. This would be catastrophic from the standpoint of the interest of the subcontinent. Both India and Bangladesh have high stakes in rejuvenating the SAARC as a forum for building a healthy relationship among themselves.

In the wake of the evolving intra-regional world order, the United States is learnt to have accepted India's dominant role in South Asia. This is evident from its consent to the IPKF operations in Sri Lanka and the manner in which India handled the coup attempt in the Maldives. Besides, in the post-Cold War phase there are growing military linkages of the US with India. On the other hand, Bangladesh under the aegis of the BNP is heavily loaded in favour of America. This provides, according to some observers, a common ground for the two countries to come closer. In the wake of such commonality, would the amicable settlement of the Tin Bigha corridor issue lead to a perceptible dilution of the anti-India stand built by Khaleda Zia during the elections? The meeting of the leaders in New Delhi could provide the reply. The meeting may strike a new beginning in this direction.

The interaction between India and Bangladesh is fairly wide in the cultural, scientific and literary fields. A special endeavour is required to strengthen the bonds of friendship. The building blocks are movies, music and the game of football. Relaxation of travel facilities and the consequent intermingling of large number of people can build the bridge of fraternity. The meeting of the leaders in New Delhi is expected to bring about a major breakthrough on the contentious issues. This visit of Begum Khaleda Zia will be a big leap forward in cementing the historical ties which India and Bangladesh together share. ■

DYNAMIC TEACHING', addresses to teachers of academic Colleges, Universities and Students of Masters' and Bachelors' of Education.

The author suggests theory of Innovations: Gandhian Values, Community Work, Elementary Research, Knowledge Centre etc. In teaching devices he includes Project and Activity Method, Brain Storming, Audio-Visual Aids etc.

Caste and Women's Sexuality: A Look at Chundur and Chelkurthi

KANCHA ILAIAH

Caste has added to the complexity of the Indian social system. Women who suffer from inequality in every society face more complex problems and abnormal atrocities in a hierarchically divided society. Atrocities on women are common phenomena in every society as atrocities against women are part of the patriarchal relations. In addition to patriarchal atrocities, caste atrocities mutilate the physical and mental faculties of women in a far more brutal way. In institutions like *sati* and widowhood we find patriarchal power and caste domination inextricably intertwined. Let us not forget the fact that *sati* and widowhood, if not child marriage, were upper caste (Brahmin, Kshatriya, and in rare cases, Vaisya) practices.

For a variety of reasons, women in upper caste (*grihasutra* bound) families suffered more inequalities and more subtle forms of suppression than the women of working class/castes suffer at the hands of their own men. This is not to claim that working class/caste women do not suffer at the hands of their own men. Wife beating, for example, might be more prevalent among working class/castes than upper class/castes but the difference is that the working class/caste women have an outlet. As those of us born and grown in working class/castes know for sure that the working fields wherein they share their experiences and form into peer groups give scope for ventilating their anger and the peer groups provide a platform to criticise the atrocities of the husbands and the male members of the family. But the position of the upper caste women is different. Their distance from fieldwork and confinement to house isolates and stifles them though economically their lifestyles are far more richer than those of the working class/caste women.

We shall examine in this article the problems that Dalit, lower caste and upper caste women face in a socio-political situation where anti-caste struggles by the Dalit masses and casteist and hegemonic reaction of the upper castes to these struggles are on the increase. The Chundur incident of Andhra Pradesh where eight Dalits have been butchered by the Reddy landlords and police combine and three more are still missing, who are also suspected to have been killed in the same carnage, and the Chelkurthi incident, where Muthamma a Backward Class woman was stripped and paraded naked again by Reddys, provide a context to look at this question both from theoretical and practical points of view.

The author is Reader in the Department of Political Science, Osmania University, Hyderabad.

◆

PATRIARCHAL and male chauvinist cultures of the upper castes find expression in a strange manner during such caste carnages. In the case of the Chundur carnage, as in the case of Karamchedu in 1985, the justification of the carnage is quickly done through floating rumours that the Dalit men at Chundur attacked or humiliated or raped upper caste women. It is significant that the news that broke out 48 hours after the carnage took place (the carnage took place on August 9) mentioned that one of the main reasons for such brutal killings was the humiliation meted out to the upper caste women at the hands of the Dalit men. But no newspaper published specific cases of such incidents or investigated any of them later on. No report, including the pamphlet printed by the Bharatiya Mahila Seva Samithi (an upper caste women outfit), mentioned names of the men and women involved in such incidents. And yet it is now widely, especially among the upper castes, believed that this was the reason for butchering of eight persons who were then packed into gunny bags and thrown into the Tungabhadra drainage canal. This reason was repeatedly mentioned without mentioning a single woman victim's name from the upper caste. Why were the names of upper caste women who had been subjected to humiliation by Dalits not mentioned?

There are two possible reasons for this silence. First, not that there were no incidents that caused tension between the upper castes and Dalits involving man-woman relationships, sexual or otherwise. It is possible that Dalit men may have "teased" upper caste women. It is also possible, in the context of the social changes that were taking place in coastal districts, that Dalit men may have spoken to upper caste girls or women and began to make friends with them. Perhaps they made attempts to marry upper caste women. All these are possible. In a caste culture such incidents invoke the anger of the upper castes more than, let us say, the murder of an upper caste man by Dalits. Yet, neither men nor women of upper caste dare to specify the incidents by revealing the names of the upper caste women involved. This is because the upper caste women's sexuality is seen as something that is so sacred and so bound up with the honour of the patriarchal family that once the involvement is disclosed the upper caste men will not think of living with such women (if they are married) and if such women are not yet married, it is next to impossible to get them married to men of the same caste. Secondly, whether the involvement was with her own consent or forced up on her, for the upper caste woman it is impossible to live in her family after such an involvement is discovered.

The attacks against Dalits are being exposed but many cold-blooded murders of upper caste women who were suspected of having developed sexual relations with Dalit men are not even leaked out to the neighbours because the murder takes place within the "private domain" of the "sacred family".

The murders, if known, are justified by community members because in their view caste hegemony and women's sexuality are very closely linked and hence a woman who involves herself in such inter-caste relationship is responsible for destabilising the caste hegemony. In a casteist social structure, one of the symbols of upper caste hegemony is the control over women's sexuality. Women's sexuality, thus, becomes the main instrument through which caste hegemony is sought to be maintained. This is one of the reasons why the rumours of upper caste women humiliated by Chundur Dalitmen quickly mobilised the support to Reddy murderers. Cutting across the caste differences, the upper castes of the area not only supported the murderers, they formed an upper caste outfit called "Sarvajanabhyudaya Samithi" to defend the brutality.

◆

SEVERAL other examples of such murders of Dalit men by upper castes indicates the entanglement of caste and the control over the sexuality of upper caste women. The infamous incident of the burning alive of Koteshu, a Dalit *Jeeta*, twenty years ago by the upper caste landlords of Kanchikacherla of Krishna district is generally mentioned as one of the first incidents in a history of brazen atrocities on the Dalits in Andhra. The lynching was justified because Koteshu was said to have "developed sexual relations" with an upper caste landlady. In other words, a society not burdened by caste would merely say that the landlady and Koteshu loved each other. But the caste culture expects that love and affection on the part of upper caste women is something that should take place only within the parameters of caste. This principle, however, does not apply to the upper caste men. They can engage themselves in sexual intercourse with lower caste women, with or without their consent. On the contrary, even a normal conversation between the upper caste women and lower caste men, particularly with Dalit men, is seen as a crime. If any such thing takes place, the consequences are bound to be serious. The first thing that happens is that the man involved will be killed. In the 1960s, Koteshu was burnt alive precisely for this reason. As late as March 1990, yet another Dalit *Jeeta*, Arlappa by name, was killed by the landlords of the same village as he was said to have developed a close friendship with the daughter-in-law of a landlord; in June 1990 at Kothapulavandlapalli of Ananthapur district, a Dalit farm servant was burnt alive by the landlords on the same pretext.

The Chelkurthi incident is yet another milestone in a history of upper caste decadant culture. This took place exactly eight days after the Chundur carnage. If Chundur reflected the Reddy arrogance of Guntur district, Chelkurthi reflected the Reddy decadant of Nalgonda district. At Chelkurthi, a Reddy woman, Jayamma, and a Golla (BC) boy, Govindu, were said to have been carrying on a relationship for almost five years. As Jayamma's brother, Narayana Reddy, was blackmailing her, on August 4 both Jayamma and Govindu eloped and it was suspected that Muthamma, another Golla woman, aided the couple in eloping. Narayana Reddy (who is not a rich person at all) alongwith two other Reddys—Parvatha Reddy and Venkatarami Reddy—disrobed Muthamma, inserted chilli powder and stuck a stick into her vaginal track, and paraded her naked in the village for more than three hours. Muthamma has not yet recovered from the vaginal infection and wounds, thus caused in mid-September. Of course, the Chelkurthi incident alongwith the Chundur carnage rocked the entire state and Parvatha Reddy was later killed.

This incident brings to light that apart from the brazenness with which the upper caste can strike terror among the SCs and the OBCs is that the sexuality of women too has caste dimensions. If a Reddy woman loves a BC boy, the relatives of the boy have to face the consequences as Muthamma did. The harassment and rape of lower caste women by upper caste men is a common occurrence and even has social sanction. Assuming that the Chundur Reddys' claim is accepted, if the Dalit men harassed upper caste women, will the Dalit men be butchered? The caste culture believes that it should be so.

I am not suggesting even for a minute that the upper caste women do not have to pay the price for relationships they might develop with lower caste men. They will be tortured within the four walls of their home. They will be confined to the household, labelled as insane, tortured mentally and physically. In some cases they might even be killed. As we have discussed above, the news of such killings will not be leaked out and even if they do such actions, including murders, have the approval of the upper caste community. Even the parents of such women suffer silently rather than make them issues because entering into relations with lower caste men, particularly untouchables, is enough reason to be killed or tortured for the rest of their lives. What is more, since everything is hushed up, there is no way to confirm or bring to light the misery of such women. At least we know how Koteshu was burnt alive, Arlappa was killed, buried in the landlord's fields and how Muthamma was tortured but we do not know what happened to those upper caste women who developed relations with BC men willingly.

◆

THE much propagated Chundur Dalit misbehaviour with upper caste women was another stunt. Chundur is one of the best examples of growing anti-caste consciousness of Dalit masses. The Dalit youth in Chundur were fighting on many fronts against untouchability. They attempted to install the Ambedkar statue in the midst of the village, despite upper caste opposition; they insisted on sitting amidst upper caste people on festive occasions (or whenever there were street dramas) and on some occasions they succeeded. For example, they succeeded in installing Ambedkar's statue, they succeeded in sitting amidst upper caste folks at a street drama staged on Dussehra day in 1990. It is also possible that they were also trying to interact with upper caste women or girls. There were more educated youth in *Dalitwada* than in upper caste *wadas* (there are more number of graduates and post-graduates among Dalits than among upper castes at Chundur). In such a situation, college going Dalit boys naturally began to interact with upper caste girls in the train and bus journey from Chundur to Tenali (Tenali is 20 kilometres away from Chundur and for college education the students travel that distance everyday). Many Dalits would attempt to strike friendship with upper caste women and finally convert that friendship into marriage as a process of upgradation in the caste hierarchy. In rare cases, especially if the parents of the girls are poor and the boy is well educated and willing to marry the girl, the parents are willing to accept such marriages as such a process would get them out of the enormous burden of the dowry trap.

The parents of many Kamma women have allowed their daughters to marry Dalit men (in this regard the Reddys of Andhra are more conservative). But by and large the opposition to such inter-caste marriages comes from the rich upper castes because they see this process as an affront to their caste cultural hegemony. At Chundur every such inter-caste inter-action between Dalitmen and upper caste women is sought to be projected as sexual harassments or misbehaviour of Dalits towards upper caste women and in no single incident do they pinpoint to anyone particular because the upper caste girls who form alliances with Dalits will have to face social censure if the names are revealed. The village upper caste elite do not keep quiet if they decide to marry Dalits because the flow of upper caste girls into SC, BC families through marriage mechanism would create a crisis in the dowry economy of the upper caste (in Andhra Pradesh the biggest dowry market exists among the Kammas, Reddys and Velamas).

The dowry economy survives as a strong institution only when the marriage system operates within the restricted boundaries of caste. Once the gates are opened by decasteising the sexuality of women the monopoly of the upper caste rich, which survives through exchange of capital within the limited families, suffers a setback. If caste and the caste-based marriage system loosen their grip over the sexuality of women it not only puts an end to caste hegemony but also to the exploitative economic relations. A Dalit in the village is not only seen as an untouchable or a BC as lower caste but in market relations the upper castes are seen as givers and the BC and SCs as takers; the upper caste as supervisors and the lower caste working masses as the supervised and exploited (this does not mean that there are no Reddy, Velama and Kamma labourers but they are few in number. Of course, one hardly comes across a Brahmin labourer).

The market relations and social relations are closely interlinked. One maintains the other and if one changes, the other also begins to change. It is here that caste becomes a base as well as a super structure.In a society of caste hierarchy (in this hierarchy, as Ambedkar rightly pointed out, ascending respect and decending disrespect and inequality survives) and gender inequality (even among women, stature and respectability is based on their caste). Women's sexuality not only gets commoditised but the value of this commodity changes on the basis of their caste. Of course, the rate of male sexuality in the dowry market increases or decreases based on one's caste. Given the equal qualifications the rate of dowry depends on whether one belongs to the Kamma caste, or Reddy caste or Velama caste. The lower the caste one belongs to the lower would be the dowry that one gets. The punishments meted out to male members who interact with upper caste women also depend on their caste. Thus, if upper caste women are humiliated by lower caste men, caste justice demands capital punishment for such an act whereas if lower caste women are humiliated by upper caste men it is not regarded a crime at all.

◆

THE irony of the situation comes out quite clearly if we examine the upper caste male attitude towards lower caste women. Lower caste women normally go to work in the fields of upper caste landlords. By and large, the attitude of the landlord is that whatever wage he is paying for the day's labour should be regarded as inclusive of his control over her physique. Apart from the fact that he is entitled to abuse and humiliate her, he assumes that she should submit to his overtures. His economic social power in addition to his superior caste often forces the lower caste women to surrender herself, whether she likes it or not. In rare cases such upper caste landlords are attacked or killed by the lower caste people. Because they know that even if they succeed in killing such upper caste rapists the upper caste rich have the strength to attack lower castes, especially the women and the children. They can make the judiciary convict them. The upper caste men, as a rule, are released or given light sentences if found guilty.

Parvatha Reddy, one of the accused in Muthamma's case, had been earlier sentenced to life but was released with the support of a Reddy who held one of the nation's highest offices.

Take, for example, the relationship between upper caste men and untouchable women. The upper caste men refuse to drink the water carried by untouchable women, refuse to eat the food touched by them and if the body of an untouchable women touches them in public they bathe but, in private, as and when they want them sexually, they have to surrender themselves. In other words, their body is untouchable but their sexuality is not.

In rural Telengana, Dalit women invariably go every morning to clean the cattle sheds of landlords (in Telengana the majority of the landlords happen to be Reddys and Velamas) and it is usual practice that the upper caste landlord men rape these women at such times. Even when the women go to the fields they are in danger of being raped. However, not a single incident has come to light where those landlord's were killed by their own caste persons or forced to live with and support the Dalit women. On the contrary, the more such incidents he gets involved in, the greater would be his power. The reputation of having "taken many lower caste and untouchable women" only enhances his social power. The case of Indira, an SC girl near Tanguturu of Prakasham district, illustrates the point more clearly. Indira was a good looking girl who was employed in a private company. As she was earning some salary she was maintaining herself well. A Kamma landlord repeatedly sent feelers asking her to surrender to him sexually. The offer was to have illicit relationship with him but not to legally marry him. Indira spurned the offer. One day the landlord managed to catch hold of Indira and raped her and brutally killed her. Her naked corpse lay on the main road of the village for more than 24 hours. Neither the administration nor the upper castes bothered to remove the body nor to send a message to her relatives. The landlord was neither killed nor socially boycotted nor did the police arrest him.

Even today, after two years (the incident occurred in 1989) the culprit roams scot-free.

◆

THE attitude of the State is no better. At Chundur, for example, the Superintendent of Police of Guntur District justified the murders of Dalits accusing them of misbehaviour with upper caste women. He justified the police firing that took place on September 10 wherein Anil Kumar, the main witness of August 6 carnage was killed, by stating that the Dalit women pricked pins into the chests of policemen and grabbed their private parts. Would the Superintendent of Police survive even for a day, if he indulges in this kind of talk against the upper caste women? The SP, R.P. Meena, was a tribal himself yet he did not hesitate to describe the SC women as sexually aggressive and perverse.

At Chelkurthi, the police at first refused to register the case, in spite of the fact that Muthamma went to the police station and demanded that they must do so. The murderer of Indira was never arrested. On the contrary, the police, actively aided and abetted the brutal killing of innocent Dalits at Chundur. This kind of anti-women and anti-Dalit bias of the State makes the posture of the Indian States more complex and more dubious. Consequently, it is imperative that anti-caste organisations and women's movements should make for more concerted efforts to fight the gender and caste-based political system of the Indian state and society on many fronts. ■

DUBEY: India's Foreign Policy Dilemma

(Continued from page 3)

developing countries. For, this will amount to putting a freeze on their inudustrial and technological development, thus consigning them to an underdeveloped and subordinate status for all time to come. Moreover, in any regime which imposes a blanket ban on the transfer of dual-purpose technologies and equipment, the distinction between the commercial purpose to shut out outsiders from the market, and consign their economies to the pre-industrial stage of development, and the military purpose of preventing proliferation, generally gets blurred.

Is it not really ironic that while the United States put such a tremendous pressure on India to stop selling an experimental nuclear reactor to Iran, the only nuclear reactor in operation in Iran has been supplied by the United States? In universal disarmament agreements, there is no overall ban on dual-purpose technologies, equipment or substance. And whatever is not specifically prohibited is permitted. Each case of alleged violation is judged on its merits, depending upon the actual situation on the ground.

The US actions have given rise to widespread resentment in the country. The Parliament has been unanimous in demanding that India should not succumb to the US pressure and accept any threat or demand which amounts to an abridgement of our sovereignty. The suggestion has also been made that we should cancel the planned joint naval exercise.

The threatening posture adopted by the United States cannot but act as a dampener in our effort to bring about an all-round improvement of our relations with the United States. However, there is too much at stake in these relations for India to act peevishly. In such matters, we must have a longer-term view of our interest and not do anything for which we may have to regret later. The United States is too big an entity to be wished away from the realm of our foreign policy. Any unilateral action on our part to suspend activities which are in the nature of a positive-sum game is hardly the way of registering our protest or making our point.

The recent events have, however, confirmed our belief that after the end of the Cold War, the United States now sees threats to security coming mainly from the Third World countries. These countries have, therefore, become the main target of its determined bid to ensure that none of them emerges as a military power capable of even remotely challenging the United States' absolute supremacy over the world power structure. There should also be no illusion about the fact that the sole purpose of the United States in imposing its own version of a New World Order is to perpetuate its hegemony and that of its allies over the rest of the world and keep the Third World countries perpetually subservient to this alliance. But this is a grand design which will ultimately come unstuck on account of its own contradictions. In any case, it is the moral duty of India--and fully in keeping with its national interest--to raise its voice against this design and to see that it fails. To this end, India will have to, against all odds, mobilise the Third World countries and the like-minded countries from the North.

The outcome of our endeavour will, in the ultimate analysis, depend on the perception that the United States has of our resilience, our inner strength and our will power. The events of the past weeks have demonstrated the problems we are going to face if we follow a development strategy which in the name of globalisation, makes us increasingly dependent on outside forces, countries and institutions. In our attempt to globalise, we should not go overboard and, in any case, not beyond the point where withdrawal will spell economic disaster. We should follow a development strategy which while keeping our doors open to the wide world, is based primarily on our reliance on, and mobilisation of, our own human and material resources. This will mean greater stress on mass literacy, land reforms and employment generation. A strategy for self-reliant growth will call for greater reliance on exports, avoidance of measures which carry the risk of a sudden depletion of reserves, not creating import-intensive production structures and an absolute ban on foreign borrowing.

Finally, the United States should realise that India cannot share all its prejudices predilections, all its friends and foes. India cannot respect and promote, at the cost of self-abnegation, all its ambitions, including those which, in our view, have pernicious implications for the rest of the world. The United States Government should ask itself: "Is it the only basis to conduct relations with other countries?" ■

Baldev Singh

ASHOK PARTHASARATHI

The following is the text of a statement the author read at the condolence meeting held at the Nehru Memorial Museum and Library, New Delhi on May 5, 1992 to mourn the demise of Baldev Singh.

—Editor

Today, it is almost exactly two weeks since Baldev left us. Sometimes I feel it has been years; sometimes it seems a fleeting moment. But the void is deep and it is irreparable.

During one of the occasions, I was with him in the week of April 13, Baldev spoke reminiscently about the CSIR–the CSIR he loved so deeply–about its many vicissitudes, of its present position and of its future Driving back from the hospital that evening, his remarks took my mind back to the occasion in 1968 when I first met him in the CSIR. He was then the head of the Technology Utilisation Division at the CSIR headquarters and the burning issue of the day was the Review Committee on the CSIR which the government had set up under the chairmanship of the late Justice Sarkar. Baldev was deeply agitated by what he rightly saw as the attempts by interested parties to use the Sarkar Committee to pull down the CSIR, demoralise its scientists and discredit the Zaheer years.

When about two years later, I joined the Secretariat of the then PM, Mrs Indira Gandhi, one of the first matters put in my hands was the Sarkar Committee. This brought me into extremely close contact with Baldev and Rahman. With the appointment of Nayudamma as the DG, CSIR in August 1971 a major reorganisation and managerial modernisation of the CSIR was initiated in which also Baldev and I worked closely together.

Our shared conviction in and commitment to the development and more importantly utilisation of the indigenous technology drew us ever closer and we fought many a battle together in this area over the 1970-75 period. It was an exciting if challenging time. I remember being constantly impressed by Baldev's cool, logical analysis of policies and individual cases and his persuasive presentation of his position. As a result, he became the most widely known and respected scientist in the CSIR next only to Nayudamma in the halls and corridors of the government. But Baldev was always a scientist and he kept in close touch not only with all the CSIR laboratories but also with development in science and technology, particularly in his discipline in chemistry.

Over 1975-1984, I saw much less of Baldev because he took on international assignments relating to technology development and technology transfer, first with the UNCTAD in Geneva and Addis Ababa and then with the ESCAP in Bangkok. But the bond between us was deep and close.

I was delighted with his return home in 1984 and even more at his becoming a Professorial Fellow in this institution with the commitment to work on various facets of Nehru and Science and Technology. He was good enough to associate me closely in the preparation of both the books he brought out here--on Nehru and the Science Congress, and Nehru and Science in Parliament.

During one of our many conversations in the later phase of his illness, he expressed to me his great concern that the third book—on Nehru and the Development of Atomic Energy—which he had brought to the stage of only requiring a Preface, should be speedily completed and published. "As soon as I am well again, Ashok, we will take up the biography of Hussain Zaheer on which a draft already exists," said Baldev to me sometime in early March. It is a matter of deep resolve to me to see his wishes fulfilled in this regard. No better tribute can be paid to him.

Baldev was a wonderful person. Deeply human, he combined humility with a steely determination and an uncompromising commitment to a rational, secular India. His was not a case of saying one thing and doing another. His personality was too integrated and genuine for that. He was a deeply loyal friend, a committed comrade-in-arms and a superb son of India. We shall always remember you, Baldev.

■

The Scientist and the Man

The following is the condolence resolution adopted at the meeting held at the Nehru Memorial Museum and Library, New Delhi on May 5, 1992 to mourn the demise of Baldev Singh. —Editor

Baldev Singh was a scientist who combined a deep commitment to science with a drive for the development of technology and the rapid industrialisation of the country. A product of the national movement, he worked for the advancement and integration of science and technology with nation-building in the best Nehruvian tradition. Over the fifteen years, he was in the CSIR headquarters, he built up an excellent group of scientists and technologists versed in the multi-disciplinary skills needed to transfer and commercialise indigenous technology developed by our national laboratories.

His years in the UNCTAD, first in Geneva and then in Addis Ababa, and his tenure as the Senior Adviser on Technology to the ESCAP in Bangkok enabled him to communicate his abiding concern for the technological self-reliance of the South, to several other developing countries in Asia and Africa. His analytical studies for both those United Nations agencies have become major reference points in the world literature on technology development and transfer.

A colleague of the late Dr Husain Zaheer, the former Director General of the CSIR, Baldev put in a major effort in development of the Zaheer Science Foundation of which he was the Secretary. In a short span of five years, he placed the Foundation on a firm footing: intellectually, financially and in terms of programmes and activities.

His contributions to science policy studies during his tenure as a Professorial Fellow in the Nehru Museum and Library have already been reflected in two major works—one on Nehru and the Science Congress and the second on Nehru and Parliament. Three more studies—on Nehru and Atomic Energy, Nehru and Industrial Development, and Nehru and Education—were in advanced stages of completion when he was tragically snatched away from us.

But Baldev was much more than a fine scientist, technologist, and a science and technology policy-maker, manager and researcher. He was, above all, a wonderful person. Deeply human, with a most attractive humility, his concerns extended to the transformation of our ancient society into one based on the scientific temper and a strong commitment to secularism. These concerns, on which he wrote and spoke in many fora and on many occasions, brought him into contact with a wide cross-section of our intellectual community on whom his rational and persuasive arguments always left a deep impression.

Baldev Singh will be deeply missed by his numerous friends and admirers. He has left us a full life with a great deal to emulate and pursue further. We place on record our profound appreciation of the scientist and the man and convey to his family, particularly his wife Lalitha, a scientist in her own right, our deepest sympathy on the irreparable loss. ■

AN APPEAL

C. Achyutha Menon Foundation

Dear friend,

C. Achyutha Menon is no more; a matchless statesman, a humanist of impeccable integrity, a champion of the poor and the downtrodden, a writer of repute, he will be remembered for all time

We propose that a suitable memorial be instituted to cherish the message of his multi-splendoured life.

We request you to actively associate with the endeavour in this behalf and donate liberally to the fund being raised by the C. Achyutha Menon Foundation in furtherance of the above objective.

22-11-1991 Yours sincerely,
